CHRONOLOGY OF REMARKABLE EVENTS.

FROM DECEMBER 26, 1852, TO JUNE 23, 1853.

1852.—DECEMBER.

26.—The *Marco Polo* (a sailing-vessel) arrived in the Mersey, from Australia, having achieved the passage there and back in five months and twenty-one days on the homeward passage, she ran 316, 318, and 306 miles during three successive days; and on several occasions made seventeen knots an hour.—A storm, that commenced on the previous day, burst into a hurricane, which swept over the British Isles on this and the following morning, doing extensive damage, and causing several deaths. Along the coasts many vessels with their crews were lost.—The *Hercules* sailed from Campbelton with 800 emigrants on board, from the Islands of Skye, North Uist, and Harris; completing the number of 2000 sent from those parts to Australia during the half-year, by the Highland and Island Emigration Society.

27.—The various free exhibitions of the metropolis thronged with "Boxing-day" holiday-keepers: at the National Gallery, 60,000; and at the Vernon Gallery and Museum of Art-Manufactures, Marlborough-house, 70,000 visitors.

28.—The *Lily*, having 40 tons of gunpowder on board, blew up at the Calf of Man, where she had been wrecked, killing 25 persons who were on board.

29.—Died, in his seventy-third year, the Rev. Francis Hodgson, Provost of Eton College—a distinguished scholar, poet, and divine.

31. New Year's Eve celebrated at the Royal Edinburgh Asylum for Lunatics, by a series of theatrical amusements provided for the inmates; and the festivities were characterised by joyousness and general decorum: the Asylum publishes its own journal (the *Morning-side Mirror*), the contributors and printers being alike inmates of the institution.—A letter from San Francisco of this date gives a lively account of the success of Miss C. Hayes in the land of gold: diamond rings, fifty-dollar pieces, and gold nuggets were thrown to her on the stage, in lieu of bouquets; and after each concert she was escorted to her hotel with music, banners, and torches.

1853.—JANUARY.

1.—At Marylebone, St. Matthew's Church consecrated by the Lord Bishop of London.

3.—At Warrington Junction, a monster chimney (406 feet high) blown up by repeated charges of gunpowder: at the tenth discharge the fabric was rent from top to bottom, and the 3,500,000 bricks of which it was composed fell to the ground, without injury to any one.—A dreadful collision on the North-Western coal-train and a passenger-train: eight killed, two mortally wounded, and twenty badly injured.

4.—A festival given to the inmates of the Middlesex County Lunatic Asylum, Colney Hatch. The entertainment consisted of tableaux by the officers of the establishment, accompanied by music; also solo singing by several patients; dancing in character, Ethiopian serenading, &c., by attendants. The patients (527 of both sexes) partook of tea, cakes, fruit, and spiced beer; and afterwards danced together.—A grand banquet given to Mr. Ingersoll, the American Minister, at Liverpool: there were about sixty guests, among whom was the Earl of Derby.—At Olney, Bucks, seven houses and a number of labourers' cottages destroyed, by lighted lucifers being placed in the thatched roofs: two lives also lost.

5.—About 620 children of the Lamb and Flag Ragged School, Clerkenwell, regaled with roast beef and plum-pudding.

6.—Earl St. Germans sworn in as Lord-Lieutenant of Ireland.—The Burmese stockade in the Aung Pass (considered impregnable except by shelling) carried by a *coup de main*, by a small party of the Arracan battalion, under Captain Nuthall, without the loss of a man on the side of the British.

8.—The *Magdalena*, from the West Indies, arrived at Southampton with a freight of £50,000 worth of gold dust; and £1,700,000 in specie. This vessel brought intelligence of the yellow fever raging in the West Indies; and eight of her crew had died of it during the passage home.

9.—On this and the three following days the tide rose to a great height in the Thames, flooding the cellars and kitchens of the houses along the banks. At Kew the grounds were so flooded, that flocks of swans swam under the windows of the dwelling-houses.

10.—Horler, the murderer of his wife, hung at the Old Bailey.

11.—The *Australian* mail-steamer arrived at Plymouth, from Australia, with 222,293 ounces of gold, valued at £880,000, in freight; and £100,000 worth in the hands of passengers; it brought, likewise, the Royal Victoria Nugget, weighing 28 lb. 4 oz., a present to her Majesty from the Government of Melbourne.—Launched at Cowes, the steam-ship *Victis* (1000 tons burthen), constructed on the Messrs. White's "Improved diagonal principle."

16.—Foundation-stone of the Hospital de la Princesa laid at Madrid, in great state, by Isabella II.

17.—592,340 letters passed through the Inland-office.—Died, Mary Barton, known as the "old woman of Eilton," in her 122nd year.—The *British Merchant* ship, laden with oil, &c., on her passage from Cochin for London, destroyed by fire. Smoke was perceived issuing from her hold on the 11th; and, notwithstanding the continuous exertions of the crew, the fire increased until the morning of the 17th, when the flames flying upwards forced the master and crew into the boats which had been kept alongside in readiness; and they were received on board the *Roxburgh Castle*.—A commission *de lunatico inquirendo* held on the Earl of Eldon, and his Lordship pronounced to be of unsound mind.

19.—Intelligence received of great mortality on board the emigrant-ship *Ticonderoga* off Port Phillip heads: 120 passengers having died on the passage, and 200 lying prostrate with fever.—Investiture of the Duke of Northumberland and the Marquis of Londonderry as Knights of the Garter.—Died, the Earl of Oxford and Mortimer.—£100 paid for a Cochin-China fowl.

20.—The *Swift* arrived at Portsmouth, from the Pacific, bringing a freight in dollars, bars, and gold-dust, valued at 650,000 dollars: this vessel had been four years and a half in commission, and had sailed over 90,000 miles without losing a single man.—An immense fall of cliff (10,000 tons) at Dover.—The daughter of the late M. H. Hall, of Bridge Bottle-works, paid her father's creditors in full—twenty-five years having elapsed since the bankruptcy.

21.—Died, Dr. Pereira, celebrated as a physician, and as the author of several medical works of repute.

25.—Grand amateur concerts held at Newcastle-on-Tyne on this day and on the 27th: the proceeds (which were large) being devoted to the infirmary of that town.—The *Herald*, a merchant vessel, sunk in the Channel, from collision with a schooner; all on board, with the exception of one man, perished.

26.—Died, Earl of Tyrconnel.—Opening of St. James's Hospital, at Doncaster, founded mainly by Dr. Dunn.

27.—Intelligence received of Pegu having been invested by the Burmese army, and communication between it and the British forces cut off: a passage, however, was subsequently forced, Pegu relieved, and the Burmese driven back with great loss.—Died at Rome the Right Hon. John Parnell, Q.C.

29.—Died, Viscount Melbourne.—The civil marriage of the Emperor of the French with the Countess de Teba, performed at the Tuileries.

30.—The religious ceremony of the French Emperor's marriage celebrated with great pomp at Notre Dame.

FEBRUARY.

1.—At Stewkley, 8 p.m., a magnificent meteor seen, first appearing between Hyades and Orion, and becoming extinct a little to the east of Sirius.

2.—The annual meeting of the Seamen's Hospital Society: during the past year the number of in-patients on board the *Dreadnought* had been 2316, and the out-patients, 1554—seamen of all nations.

3.—Public entry of the new Viceroy (Earl of St. Germans) into Dublin, and cordial reception of his Lordship by the citizens.

5.—Died in his eightieth year, the Right Hon. David Boyle, Lord Justice General of Scotland, and Lord President of the Court of Session.

6.—Procession of the Bœuf-gras at Paris, on this day, and on the 8th, 9th, and 10th: more than usual display: in the fat ox named "Uncle Tom" this year.—Insurrection in Milan: a company of young men, armed with sword-sticks and poignards, sallied forth in the evening, threw themselves upon sentries and patrols, pressed upon the guard-house, assaulted the Viceregal Palace, and were only narrowly prevented from seizing the citadel: the rising was, however, speedily quelled, and the leading insurgents who survived hanged or shot.

7.—Dinner of the Artists' Annual Association for the Protection of British Industry and Copyright—Grand ball given by the French Senate to the Emperor and Empress, at the Palace of the Luxembourg.

8.—Left the Nore, for the Arctic regions, in search of Sir J. Franklin, H.M. sloop the *Rattlesnake*; having on board (besides ample stores and supplies for her own crew for three years) 17,000lb of preserved meats and soups, 15,000lb of preserved vegetables, 2000lb of pickles, 3000lb of cranberries, 1000lb of julienne, and an abundant supply of other anti-scorbutics.

9.—Mozart's Requiem executed (for the first time in England in its entirety) at Exeter-hall by the Sacred Harmonic Society, with great effect.

13.—Three soldiers of the 7th Fusiliers, stationed at Dartmoor Prison, Princetown, lost their lives in a snowdrift on Dartmoor.

14.—Illustrious wreck of the *Queen Victoria* (bound from Liverpool to Dublin) on the Howth Cliffs, near the Bailey Lighthouse, during a heavy snow-storm: 21 lives lost.—The intention of the Government with regard to law reform stated by the Lord Chancellor in the House of Lords: proposed consolidation of the "Statutes at Large" so that the statutes of the Legislature might be placed before the community in a compact form, and in *language perfectly intelligible to the whole community*.—Opening of the French Legislative Chambers in the Palace of the Tuileries.

15.—At noon, four parhelia seen at Kimbolton, Hunts. The same phenomena, with modifications, believed also at King's Cliffe, Hunts; and at other places in England.

16.—Dissenting demonstration at the London Tavern, at which 400 gentlemen, including 15 Dissenting members of Parliament, were present.—The two Houses of Convocation of the province of Canterbury resumed their sittings, by adjournment from the 17th of November last: an address carried up to the Throne with unusual solemnity: the Convocation being received with the full state of the Court.—Anniversary dinner of the Liverpool Chess-club, held at the Adelphi Hotel in that place; several distinguished players present, and some brilliant games played.

17.—Application made by the Queen's Proctor to the Judge of the Prerogative Court, on behalf of the French Government, for the original will of Napoleon Bonaparte: assent given.—The new schools in connection with the church of St. Thomas, Charterhouse, opened by Earl Granville, President of the Council.

18.—An attempt made by one Libeny, a Hungarian, to assassinate the Emperor of Austria, by stabbing him in the neck with a kitchen-knife.—Died at Dresden, in her eighty-first year, the Princess Pauline Wilhelmine Friederike Louise Fürstin von Pückler-Muskau, née Baroness Pückler-Groditz (ex-wife), Hon. Countess Callenberg.

20.—Abraham Miller, whose Indian name was Pishikee-Oosh-keeshik (or-eyed), died in Canada, aged 115: three days before he died he cut down a good-sized maple-tree for firewood.—A daring robbery committed at Macclesfield by five men, in masks, armed with pistols and bludgeons.

21.—Died, in London (whither he had come to settle the question of synodical action in his diocese), the Right Rev. W. G. Broughton, D.D., Bishop of Sydney.

23.—Arrival in the Downs of the *Three Bells* from Melbourne, with 77,803 oz. of gold, valued at £300,000, on board.—Died, Lieut.-General Sir A. Pilkington, at an advanced age.—Eleven fishermen of Lossiemouth (north of Aberdeen) drowned by the swamping of their boats, close to land.—Died at Nice, after a short illness, the Countess Dowager of Bedford, in her seventy-second year.

24.—Great destruction by a fire on the premises of Messrs. Pawson and Co., wholesale upholsterers, St. Paul's Churchyard: £10,000 in ribbons alone, and altogether property to the value of £50,000 destroyed.

—On the Great Western Railway, three luggage carriages of an express train having, by the breaking of a coupling-hook, been forced off the line, the foremost ran up an embankment in height of fifteen feet, and the following one, fell on the second carriage. It was necessary to force open the carriages to extricate the passengers. One of the directors was killed, and another had some of his ribs fractured and a shoulder dislocated.

25.—Died, Lieut.-General Sir W. S. Whish, aged sixty-six.—A shoal of bottle-nosed whales (about 200) appeared at Athlone, near the entrance of Loch Seaforth; some of which were killed and towed ashore.

26.—Slight shocks of earthquake felt at Forres and Strathglass.

28.—St. George's Church, Doncaster, totally destroyed by fire.—Died, Dr. Charlesworth, especially distinguished for his successful efforts in ameliorating the condition of the insane.

MARCH.

2.—Levee held at St. James's Palace by Prince Albert, on behalf of her Majesty.

3.—Twenty-eight couples (having wedding portions allotted to them, to commemorate the marriage of the Emperor and Empress of the French) married at Notre Dame, by the Archbishop of Paris.

4.—Died, Admiral the Hon. Sir T. B. Capel, aged seventy-seven.—An express train ran off the line on the Lancashire and Yorkshire Railway: two persons killed, four of four persons, and serious injury to ten others.—Inauguration of Gen. Pierce as President of the United States.

5.—First levee of the season held by the Speaker of the House of Commons.—Died, Sir E. Doughty, Bart., aged seventy-one.

6.—Discovery at the Observatory at Rome of a comet, presenting strong indications of identity with that of 1664.

7.—Direct transmission by the electric telegraph between Paris and London commenced.

8.—A collision on the Bristol and Birmingham branch of the Midland Railway; two carriages broken to pieces; two passengers killed on the spot, and others severely wounded: a verdict of "Manslaughter" found against the guard and under-guard of the train.—At the London and North-Western Railway Company's depôt for engines, at Long-sight, near Manchester, a boiler having given up a kidnapped British subject from the shed at the time, four were killed on the instant, and a dozen seriously injured.—Died, at Rome, in his seventy-sixth year, the Chevalier Restmer, late Hanoverian Minister at the Pontifical Court.

9.—Died, General Sir E. Kerrison, aged seventy-seven.—Levee held at St. James's Palace, by Prince Albert, on behalf of her Majesty.

11.—Kelch Moodah, chief of Medina, Sierra Leone River, refusing to give up a kidnapped British subject —conniving, also, at the slave-trade in defiance of treaty—a sharp fire of shot and shell was opened on the town of Medina, by H.M. brig *Teazer*, assisted by the gun-boats of the *Linnet*, which speedily brought the chief to terms.

12.—Died, at Paris, M. Orfila, in his seventieth year.—Died, at Bognor, Sir G. Sitwell, Bart., aged fifty.

14.—Died, at Vienna, suddenly, General Haynau, aged sixty-seven.

16.—Arrival at Plymouth, from Australia, of the Royal Mail steam-ship *Sydney*, with a freight of gold valued at £800,000.

19.—Alarming fire at Windsor Castle (her Majesty and the Royal Family having arrived there but a few hours); at one time threatening the entire destruction of this magnificent abode of Royalty; but which was happily limited to the north-eastern corner of the Castle—the Prince of Wales's Tower.—Fire at the Chinese Theatre, Whampoa, by which sixty females were burnt to death; many others being seriously injured.—A meeting of ladies at Stafford House, to consider of the transmission of the "Address from the Women of Great Britain and Ireland to the Women of the United States, on the subject of Slavery." The Address, with twenty-six folio volumes containing 562,848 signatures, were inclosed in a strong oaken case.

20.—A fire broke out in the deal yards at Cronstadt, by which damage was done to the amount of £65,000.

22.—The yearly ham fair (on this and the three following days) held upon the Boulevard Bourdon, Paris.—Died at Paris, John Tuesday Wright, Duke of Padua, a "distinguished soldier of the French Republic and Empire."

23.—An explosion at Arley coal-pit, Wigan, by which fifty-eight persons were killed: the bodies of several of the sufferers being blown into fragments.

26.—The annual fair in the Thames Tunnel closed, after five days' amusement, during which time 40,000 persons passed through the Tunnel.

27.—Faint shock of earthquake felt at Hereford and the neighbourhood.

28.—Reception at the Tuileries by the Emperor of the French of a deputation bearing a declaration from "merchants, bankers, traders, and others, of London," of assurance "of the earnest desire for long continuance of cordiality and goodwill between French-men and Englishmen."—Grand ball given to the French Emperor and Empress by the Legislative Body.—Testimonial dinner to Sir G. Grey, at Alnwick; at which a silver candelabrum and salver, subscribed for by 13,000 working men (electors) of Northumberland, were presented to the right hon. Baronet.

30.—Died, aged seventy-one, Mr. H. J. Conyers, known as the "father of the Essex Hunting-field."

31.—Tercentenary anniversary of the Bromsgrove Grammar-school—one of the thirty schools formed by King Edward IV.

APRIL.

1.—Died, in his eighty-fourth year, Mr. James Roche, of Cork; author of "Recollections of Sir Jonah Barrington," and other works.—Sale, by auction, of the "Nelson Correspondence," consisting of 300 letters written by Lord Nelson, and other documents, producing £501 8s. 6d.—Shock of an earthquake, of about two minutes' duration, felt at Portsmouth, and at the Isle of Wight, in England; also with great severity at St. Servan, and at other places in France.

11.—The *Duke of Sutherland* steam-ship screw wrecked at the entrance of the Aberdeen harbour; on which occasion Duncan Christie (steward of the steamer) acted most heroically: he was mainly instrumental in rescuing fifteen persons, mostly women; and was the last to leave the vessel, clinging himself to the warp only just in time to save his own life. Although within speaking distance of the shore, eleven persons perished; five men being also lost in a coble, in a vain endeavour to render assistance.

3.—Died, Lord Skelmersdale, aged eighty-two.

4.—The Bowyer Bell of the city of Edinburgh presented to the Earl of Carlisle.

6.—A new planet discovered in the constellation Sobiesky, by M. Chacornac, Observatory, Marseilles.

7.—Queen Victoria safely delivered of a Prince.

8.—The time-ball of the Electric Telegraph Company, Strand, caused to drop three minutes before the correct time (one o'clock p.m.), by a flash of lightning at Greenwich.

9.—Great festivities in Brussels and throughout Belgium, on account of the Duke de Brabant, Prince Royal of Belgium, attaining his political majority (his eighteenth year).—As Professor Liebig was giving a lecture on chemistry before the Royal family at Munich, a bottle of oxygen gas exploded, and the fragments of glass wounded the Princess Adelgunda of Royal party; the Professor also receiving a trifling injury.

—The Rev. and Highfield-house Observatory, near Nottingham, in the atmosphere of which Mr. Lowe had formerly noticed by Mr. Lowe—namely, a halo, with several mock suns and two prismatic portions of a circle, having the sun for its centre.

11.—Will of Napoleon I. taken from London to Paris, and deposited.—Reception of the Emperor, in the French National Archives.—Launch of the steam-ship *Wellington*, 131, screw line-of-battle ship, in which she was expected to attain a speed of ten knots an hour.

12.—Died, suddenly, Mr. J. Ward, aged seventy-five; having been twenty-seven years master-shipwright at the Dutch dockyards.—Foundation-stone of an extensive model lodging-house laid near Gray's-inn-lane, in the metropolis, under the auspices of the Society for the Improvement of the Condition of the Working Classes: contemplated cost of the building, £9,000.—Died, in his seventy-fifth year, Rear-Admiral Sir T. Fellowes.—Details of the explosion of two steel-pointed columns in O'Byrne's "Naval Biography."

13.—A silver vase presented to Mr. Scholefield, M.P., by the non-electors of Birmingham, as a testimonial of their respect.

16.—Opening of the Great India Peninsula Railway—the first in India.

18.—A paper on optics and mathematics read by Lord Brougham, at the Institute, Paris.

19.—First appearance in the metropolis of the new portrait *Rue and Cry*, received in Scotland-yard from the Manchester police.—Dinner on the anniversary festival of the Printers' Pension Society celebrated at the London Tavern; when subscriptions were received to the amount of £450—being the largest sum ever collected at a festival of this institution.

20.—A grand banquet (one of many) given to Mrs. H. B. Stowe, at the Music-hall, Edinburgh; at which a silver salver was presented to her, formed of the fruits of the "Uncle Tom Penny Offering"), to be appropriated by Mrs. Stowe for the redemption of the slave.

23.—Launch, at Pembroke Dockyard, of H.M. screw-steamer *James Watt*, of 600-horse power; and having an armament of sixty-one 32-pounder guns, seventy-eight 8-inch guns, and one 68 pounder pivot gun.

25.—St. Mark's Church, Regent's-park, consecrated by the Lord Bishop of London.

26.—Launch at Greenock of the *Atrato*, the largest ship in the world; the spar-deck affording a promenade of 350 feet by 38 feet.—Most damaging fire in the shipping on the eastern coast, attended by serious loss of life, occasioned by a succession of heavy gales on this and following days.—Died, General Sir T. G. Pontrenson, aged seventy-nine.—A demonstration in honour of Shakespeare, at Stratford-on-Avon: orations were delivered, odes recited, and a concert held: the proceedings of the day being wound up by a dinner.

27.—Died, at Paris, the celebrated poet and critic, Ludwig Tieck, in his eightieth year.

29.—Destruction of the steamer *Ocean Wave* by fire, above Kingston, Jamaica West: twenty-eight persons perished.—The Ocean Penny Postage established in Manchester (opened on the 26th) closed, with a gross amount exceeding £1000.

30.—Died, in his seventy-ninth year, the Very Rev. G. Butler, Dean of Peterborough, a man of great and varied attainments.—Consecration of St. John's Angell-town, North Brixton, consecrated by the Bishop of Winchester: this sacred edifice was built at the sole expense of Mr. W. Dorrell Farmer-hill, on ground granted by Mr. Angell, of Rumsey House, Wilts.—Explosion of gunpowder at a house at Wigan, by which three lives were lost; two servant girls and three children extricated alive, and but slightly hurt, from under the tottering ruins, amidst which lay three half-casks of gunpowder—one merely covered with a piece of coarse canvas; and an infant found upon a heap of rubbish at the back of the house as marvellously preserved.

MAY.

4.—Explosion of one of the boilers of the York-street Flax-spinning Company; by which two boys were killed, and five others seriously wounded.

6.—Died, at Micklefield, Yorkshire, aged 107, William Hurst, a farm-labourer: he could read a newspaper without glasses, and his memory was unimpaired, up to the period of his death.

6.—Presentation to M. Kossuth of the "Shakspeare Testimonial," at the London Tavern; on which occasion the illustrious Hungarian was most rapturously received by an influential meeting.—Died, aged eighty, Lieut.-Gen. Sir R. Arbuthnot; his military services had extended over a lengthened and important period.—A great chess meeting held at Manchester on this and the following day; at which several tough single games and "double consultation matches" were played; matters being pleasantly wound up by a dinner, at which Mr. Staunton gave a challenge to all the world.—Completion of the submarine electric telegraph from Dover to Ostend at one p.m.: a message being sent direct through to London announcing the happy result.

7.—Died, off Land's-end, Lady Dalhousie (wife of the Governor-General of India), on her return from India to England.

10.—Upwards of £50,000 raised by the sale of property in the Irish Encumbered Estates Court.—Consecration, by the Lord Bishop of London, of St. Ann's Church, Highgate; cost £7000; built and endowed at the sole expense of Miss Anne Barnett, as a memorial church to a deceased brother.

11.—Celebration of the 199th anniversary festival of the Sons of the Clergy: £3012 disbursed to the sons and daughters of clergymen during 1852.

12.—The Dublin Industrial Exhibition opened with great pomp and circumstance by the Lord-Lieutenant.

17.—A verdict of "Manslaughter" found by a coroner's jury, against the Directors of the York and North-Midland Railway, in relation to the accident occurring on that line on the 6th instant.—Laid, at Hull, the first stone of a public subscription library; also, with masonic honours, of a hall and museum for the Literary and Philosophical Society of that town.—The North Shore cotton-mill, Liverpool, burnt to the ground: loss estimated at from £50,000 to £60,000.—Information received of a frightful accident on the New York and Erie Railway (U.S.), caused by the carelessness of the engineer. Four passenger and two baggage cars ran off a drawbridge into the Norwalk River; and 24 persons were killed, being either crushed to death or drowned.

18.—A London cab, who had carelessly left a bag containing 1000 sovereigns in a cab, on hurrying to the Excise-office, found the cab-driver (Mr. Charles Neale), in the act of handing over the gold to the proper authorities.

22.—Death of Sir R. Comyn, late Chief Justice of the Supreme Court at Madras, aged sixty-one.

24.—Launch, at Blackwall, of the *Himalaya* screw steam-ship: 3550 tons burden, and engines of 700-horse power.—A verdict of "Manslaughter" brought by a coroner's jury against the Hon. F. Scott, M.P., and Mr. Beattie, in regard to a death which occurred on the 14th inst. on the South-Western Railway.—Discovery of a Roman sarcophagus near Haydock-grove, Mimms. Several sculptured stones belonging to sepulchral edifices of the same date found near the spot.—Death of Mr. Conway (in his eighty-sixth year), for many years editor and proprietor of the *Dublin Evening Post*.

25.—Completion of the laying down the submarine telegraph cable between Great Britain and Ireland, and a message despatched by means thereof to the Lord-Lieutenant.—At Hampstead, from ten a.m. to noon, the sun was seen surrounded by an iridical halo, presenting all the prismatic colours which are usually intersected by a silvery-white halo; the rainbow-coloured halo being reflected—thus forming three distinct halos.

27.—Died, Vice-Admiral Sir F. Mason, aged seventy-four.

28.—Died, Lieut.-Colonel F. Fuller, aged sixty-two.—Sale by auction of the pictures of the late King Louis Philippe (including the Spanish Gallery collection and the Standish Gallery) concluded, realising £60,000.

31.—Completion of the submarine electric telegraph between England and Holland, although a long gale during the laying down, only 4¾ miles length extra of cable was expended, in deviations from the straight course, in a distance of 115 miles.

JUNE.

1.—Second match of the season of the Royal Thames Yacht Club, resulting in the *Sverige* first rounding the flag, closely followed by the *Rosalind*; the course, 166 miles, having been considerably added to last year's course. In consequence, however, of the *Sverige* having fouled the *Rosalind*, the latter was awarded the prize.

2.—Explosion of one of the boilers of the *Times* steamer in Dublin Bay, with 303 deck passengers, upon whom the contents of the steam and boiling water, bursting up from the midship hatch, descended, shockingly scalding a large number, and killing eleven: Mr. Haigh, Government engineer surveyor, committed to prison on a charge of "Manslaughter," for not making a proper inspection of the boiler.—Death of Earl Ducie, aged fifty-one, a liberal patron of agriculture, and inventor of many family implements of extensive use.—Death of General Lord Dacre, in his seventy-sixth year.

3.—Judgment given in the long-pending case of Lumley *v.* Gye, in favour of the plaintiff.—Ministerial plan regarding the future government of India brought before the House of Commons by Sir C. Wood: directors to be reduced to eighteen—six to be nominated by the Crown for periods of five years, and ten years in India; the directors to have each £500 yearly, and the chairman £800; all patronage and right of nomination to be abolished; and the Board of Control, retaining its share in the administration of Indian affairs, to submit an annual statement thereof to Parliament.

4.—Mountjoy completed his task of walking 68 miles a day for six consecutive days, with ease.

7.—Death of Mr. Joseph Cottle (aged 84), known for his literary labours.—Lord Derby installed as Chancellor of Oxford University.—Honorary degree of Doctor of Civil Law conferred upon thirteen persons on the occasion.

8.—A conversazione given at the Mansion-house, by the Lord Mayor, to more than 1000 lacies and gentlemen; including the chief magistrates from about 80 of our principal towns, and the representatives of mechanics' and literary and scientific institutions.—Died, Major-General H. Vyse, in his sixty-ninth year.

9.—Riot by Roman Catholics in Montreal, on the occasion of a lecture by Father Gavazzi: seventeen of the rioters killed, and many seriously wounded. (A disturbance, from the same cause, had occurred at Quebec on the 4th—unattended, however, with loss of life—in which the latter was roughly handled.)

13.—Entertainment given to Commodore Vanderbilt (U.S.), at Southampton, the Mayor presiding.

14.—Second levee-drawingroom of the season held by her Majesty.—Session of the States General of Holland opened by the King in a speech, emphatically inculcating religious forbearance.—Chobham Common taken possession of by the troops appointed to bivouac there (8,000 of all arms) with great military pomp.

15.—State ball given by the Queen, for which 1900 invitations were issued.—Tercentenary Commemoration of Christ's Hospital by the Benevolent Society of Blues with great eclat at the Hall of the Merchant Taylors' Company.

16. Foundation-stone of an Asylum for Idiots laid by Prince Albert at Earlswood.—Several ladies laid upon the foundation-stone purses containing sums varying from five to sixty guineas; thirty gentlemen subscribed £100 each; and altogether £2,000 was realised.—The ultimatum of Russia finally rejected by the Porte.

18.—First field-day of the troops bivouacked on Chobham Common.—Died, Mr. Pierce Connell, eldest son of the celebrated Mr. Daniel O'Connell.—Died, Marquis of Huntly, in his ninety-second year.

21.—First visit of the Queen to Chobham Camp; when the troops were marshalled before her Majesty and 100,000 spectators.

22.—Presentation of a silver vase (value £400) to the Hon. C. T. D'Eyncourt by some of the electors of Lambeth; which borough he had represented twenty years.

23.—The Queen held her third Drawingroom for the season.

THE ILLUSTRATED LONDON NEWS.

No. 601.—VOL. XXII.] SATURDAY, JANUARY 1, 1853. [SIXPENCE { WITH SUPPLEMENT. GRATIS.

THE NEW MINISTRY.

THE new Ministry, of which the composition was officially announced by the Earl of Aberdeen on Monday evening last, is one that appears destined to a long and vigorous existence. Its policy was tersely and truly expressed by the new Premier. "No Government," said the noble Earl, "is now possible in this country except a Conservative Government—and, what is equally true, no Government is now possible except a Liberal Government." The old terms of Conservative and Liberal have lost their former significancy. They may be convenient to a few, but they are vague or distasteful to the many; who look upon them as idle distinctions, which have no real meaning; or as mischievous shibboleths 'which prevent men from acting together who are able to perform good service to the Crown and to the country." Public opinion has long pointed to the result which we now behold—a union of moderate and experienced statesmen; a coalition (we have no better word) of men of honour, of character, of judgment, and of sagacity. The time requires the services of men wedded to no theories; entangled with no foregone conclusions of exploded policy, stronger over their minds than reason and public necessity; of practical men, living in a practical age, and bringing to the conduct of public affairs the sound intellect and the conscientious discharge of duty which they apply to the private concerns of life. Such a Ministry the country has at length obtained. It boasts for its leaders men long accustomed to serve under the guidance of Lord John Russell, and men equally eminent who rendered invaluable service to their country during the period that the late Sir Robert Peel was Prime Minister. It would be unjust to record the formation of a Ministry comprising so many eminent men, formerly more or less opposed to each other, without paying a respectful tribute to the utter unselfishness which they have exhibited in accepting office. Lord John Russell—once Prime Minister—has consented, on public grounds, to fill a minor position. Lord Palmerston, whose name is identified throughout Europe with a vigorous and far-seeing Continental policy, has consented, for the same high reasons, to waive his claim to the seals of the Foreign-office, and to serve his country in another department. The same patriotic abnegation of self has been displayed by Sir James Graham and other Ministers. We may reasonably hope, for these and other reasons, that the era of useful statesmanship has commenced. It was time that the long reign of party obstructiveness should close, and that representative Government—misunderstood, discredited, or maligned throughout Europe—should receive in its birthplace and home a satisfactory proof that no other form of Government is fitted to be permanently conducive to the social and moral progress of a great and intelligent people. The parliamentary history of England, since the overthrow of the Peel Administration in 1846, is indeed full of lessons to all civilised States. The evolutions and revolutions of party—ending, as they have done, in the tardy conversion of Lord Derby and Mr. Disraeli and their followers to sound economic principles—the patient and respectful acquiescence of the country in such a Government as the last, until Parliament constitutionally and regularly disapproved of it—and the installation of the present Ministry amid the respect and hopefulness of the people—the perfect working, if we may so phrase it, of the State machine—may well make the nation thankful and proud of its position as the oldest and freest of constitutional States—the teacher and the exemplar of the world.

The only fear expressed with reference to the new Ministry is one that, of itself, is a high tribute to the genius and the ability of the men who compose it. "Where," cry the critics, "are the common soldiers of the Ministerial regiment? Aberdeen, Russell, Gladstone, Palmerston, Graham, Newcastle, Herbert—these are generals and field-marshals. The rank and file is nowhere to be found. Such men are accustomed to command, and will not be willing to obey. They are each too clever and too ambitious to serve, and will inevitably quarrel for power and for predominancy: they will fall to pieces from excess of strength." Such criticism does injustice to the high public spirit and fine sense of honour and duty, which have led the foremost statesmen of our age and country to forego some inessential differences of opinion at the call of their Sovereign; and to unite in the formation of a strong and wisely Liberal, yet strictly Conservative, Government. The critics do not remember that one great and inexorable question—which has vexed the hearts and distracted the minds of English politicians, from the peace of Waterloo to the installation of the Derby Ministry—has been brought to a solution. that Protection—as a tax upon bread for the supposed benefit of a few, and to the real misery of the many, and the discontent of all—is dead, and buried at a cross-road in the place of ignominy; and that no other question equally clamorous is reserved for consideration in the present day. Those questions that remain for discussion are, doubtless, difficult enough, and will excite that amount of party warfare which is conducive to the wholesomeness of the political atmosphere in a free country like this; but they are not of a kind to dissever the links which bind together conscientious and intelligent men in the discharge of public duty. The late illustrious Sir Robert Peel, amid the many eminent services which he rendered to this nation, cleared away much obsolete rubbish from the minds, not only of the men who formed the party with which he began life, but of the parties which opposed, or, but coldly supported him in later times. He left the ground clear for new and better combinations than he found, or conducted; and, at the sacrifice of himself, inaugurated a new *régime* and a new system. That system was the system of the practical and the safe;—the system of living fact, as opposed to that of dead theory. All our present statesmen feel, or will feel, the advantage of that great revolution, or renovation, which he accomplished; and the most eminent of them are already devoting themselves with praiseworthy zeal, to the task reserved for them, irrespective of party cries and party obstructions. The Earl of Aberdeen, in his address to the House of Peers; Lord John Russell, in his electoral manifesto to the citizens of London; and several of the other Ministers, in their addresses to their constituency, have sketched the line of duty which the new Government feels itself bound to follow, and enumerated the various questions that will demand its advocacy. The Ministers have succeeded to power at a time when the public mind is ripe to aid them in the wise and practicable reforms which they announce. The cause of religious liberty needs but little at their hands—but that little it will receive The cause of civil liberty needs something more. "The progress of the working-classes in knowledge and intelligence ought," says Lord John Russell, "to be accompanied by an increased share of political power;" and that power, based upon property and intelligence, will be accorded to them. It is evident, however, that this question, linked as it is with that of Parliamentary Reform in general, will not be rashly or prematurely brought before the public. Before a new Reform Bill, however slightly in advance of that passed in the year 1832, can be made acceptable to Conservatism on the one hand, and to the unenfranchised people on the other, much truth remains to be promulgated, and much error to be combated and disproved. But the question will grow, and will be debated, it is to be hoped, not with anger and passion, as the last Reform Bill was, but with the sober and thoughtful anxiety which its importance demands. Social progress and financial reform are subjects of more immediate interest. They include the education of the people—the amendment of the judicial system, whether of common or ecclesiastical law, or of equity—the extension of sanitary legislation—and a revision and readjustment of our fiscal code, in such a manner as shall free industry and commerce from undue pressure, give scope to enterprise, and allow the national energies the wholesome expansion

THE NEW PREMIER.—THE RIGHT HON. THE EARL OF ABERDEEN, K.T.

which they need. All these questions, numerous and important as they are, will receive attention. Many of them—in particular the education of the people, and the remission of Excise and other taxes, which prevent the employment of labour—are questions of urgency that admit of no delay. In addition to these are the questions of colonial and foreign policy, and the national security, which must no longer be emperilled amid the armaments of Europe. In these respects also we may, without being over sanguine, confidently trust that our affairs are in good keeping. The Ministry is strong in administrative talent. Every member of the Cabinet is a master of his business, and brings character, experience, and ability to the performance of great duties, at a time when England more than ever needs all these qualities in her statesmen.

THE NEW PREMIER.—THE RIGHT HON. THE EARL OF ABERDEEN.

In the course of a long life, spent more or less in the public service, the Earl of Aberdeen has played an important, though not a prominent or ostentatious part in state affairs. The weight he had acquired, from his experience and probity, is best attested by the readiness with which the chief men of different parties consented to take office under him.

George Hamilton Gordon, Earl of Aberdeen in the Peerage of Scotland, and Viscount Gordon in that of the United Kingdom, is the son of the late Lord Haddo, and grandson of the third Earl of Aberdeen, by the youngest daughter of W. Baird, Esq., of Newbyth. He was born at Edinburgh, in the year 1784; so that, as he observed a few days back in addressing the House of Lords, he is not far short of seventy years old—an advanced age at which to undertake the cares of the Prime Ministership of a great empire.

His Lordship's early education was completed at Harrow, whence he removed to St. John's College, Cambridge. Here he graduated as M.A. in 1804. Having succeeded to the Scotch titles in 1801, he proceeded upon an extensive foreign tour, during which his faculties, previously improved by his university and home education, became ripened by actual contact with the world. He visited France, Italy, and Germany—the conventional lands to which the nobility and the wealthy of his early days confined their peregrinations; but the young Lord broke through the trammels of custom, and, burning with a desire to visit those classic countries with which in imagination he had become so well acquainted during the progress of his studies, he passed to Greece, returning to England, in 1804, with his mind richly stored with information, and more particularly with all that knowledge which relates to art. The good use which the young Lord had made of his opportunities did not long remain unrecognised; for, in 1806, he was chosen one of the Representative Peers of Scotland—an honour which was repeated in 1807, and again in 1812, his return on the last occasion being carried by the largest number of votes.

An evidence of his advancing reputation had been afforded in the previous year. He was chosen to move the Address in the House of Lords, in answer to the Prince Regent's Speech. This was on the 12th of February, 1811; and his speech on the occasion was characterised by more than the ordinary ability which generally attaches to these first parliamentary effusions. We will take one passage, in which he strongly urges the prosecution of the Peninsular War. "If he were asked (he said) what we had done by our campaign in that country, he would answer, that we had withdrawn a numerous and formidable army from the country of Spain, commanded by one of the most eminent and most fortunate of the Generals in the service of France; that we had baffled the first attack of that powerful army so commanded, and gained a glorious triumph; that we had preserved from the invaders the capital and a large portion of the country of Portugal; that we still presented to them the formidable front of defiance, and held them in a state of disgraceful inactivity. If their Lordships recollected the various gloomy predictions of ill-success which had been delivered in the course of the last session, it must be admitted that the results of the operations in Portugal had surpassed even the general hopes. What we had still to do depended on future occurrences. They might expect, on this subject, a repetition of all those melancholy prognostics and forebodings which they had already heard; but he was ready to say that, instead of giving in to such prognostics, he should much rather adhere to the hopes derived from the accounts of our brave commander Lord Wellington himself, and the expectations and high spirits of his whole army. However he might be induced to pay every respect to the wisdom, the talents, and foresight of others who entertained gloomy opinions on this point, he must be permitted to indulge strong doubts of the correctness of such opinions after the failure of former predictions, and upon a fair review of what had already passed. To continue, therefore, to afford every assistance to the nations of the Peninsula was, he contended, not only sound policy, but the most effectual mode of promoting the best interests of this country." In this speech, also, the Earl of Aberdeen uttered the sentiment that the claims of the Roman Catholics, when considered, ought to be dealt with in a spirit of "conciliation, moderation, and liberality;" but, in the "then position of affairs," he objected to the subject being entertained. In the following year his Lordship spoke upon this and other subjects affecting Ireland.

In 1813 the Earl of Aberdeen was appointed Ambassador at the Court of Vienna. Joining the allied army on the frontiers of Bohemia, he subsequently accompanied the Emperor of Austria throughout the campaign, and ultimately he signed the treaty of Paris on behalf of this country. His diplomatic services were conducted so greatly to the satisfaction of his Government and Sovereign, that, on the conclusion of the war, he was created a British Peer, his patent, as Viscount Gordon of Aberdeen, bearing date the 1st of June, 1814. From this period, until 1828, when he joined the Administration of the Duke of Wellington, in the coveted office of Chancellor of the Duchy of Lancaster, his Lordship did not take a very prominent part in the exciting Parliamentary discussions. He was soon transferred from the agreeable office of Chancellor of the Duchy of Lancaster to the more responsible post of Secretary of State for Foreign Affairs, his appointment dating from the month of May, 1828. He held the seals of this office until November 1830.

The foreign policy of the Earl of Aberdeen has been subjected to severe criticism and animadversion. As he had been our Minister at Vienna at the time of the great European settlement, when we were ranged on the side of the Continental Sovereigns, and as he now appeared as the Foreign Secretary under a Tory Prime Minister, he was naturally supposed by the earnest advocates of popular freedom on the Continent to be a devoted adherent of the policy of the anti-Constitutional party. On the other hand it was assumed, that the statesmen of the school of Canning were devoted to the cause of the Constitutionalists. In regard to both there was misapprehension. Lord Aberdeen was not so decidedly a supporter of "despotic" principles, nor were the pupils of Canning so disinterestedly the friends of freedom. Lord Aberdeen's support of the autocratic Sovereigns extended no farther than the maintenance of the principle of non-intervention; the frank and unreserved recognition of the *de facto* Sovereign of each country, without reference to internal agitation for changes of Government. We speak, of course, of the noble Earl's public acts, not of his private sentiments. The pupils of Canning, on the other hand—of whom Lord Palmerston was the most distinguished—did extend their sympathy to those who were struggling for Constitutional Government; but they did so not merely from their love of freedom, but also because they thought that the material interests of the empire might be served by extended influence over the sympathies of foreign Governments and peoples.

In the course of his first administration of the foreign affairs of this country, the Earl of Aberdeen exemplified in his own proceedings the position we have just laid down. The legitimate Sovereigns were in the ascendant, and with them he was on terms of cordiality in his public capacity. But events occurred, a few months before his resignation, which tested the principle of non-interference. The revolution of 1830 in France having led the way to the throne for the Orleans dynasty, Lord Aberdeen, as the organ of the Ministry of the Duke of Wellington, at once recognised the new Sovereign. Intermediately, had occurred that "untoward event" the Battle of Navarino; and the general foreign policy of the country required no ordinary firmness and skill for its adequate management.

It is almost needless to say that the Earl of Aberdeen, who had always been friendly to religious freedom, cordially supported the Emancipation Act and the Tests and Corporations Acts repeal.

The downfal of the Wellington Administration, at the close of 1830, of course led to the resignation of Lord Aberdeen. During the two previous years, his policy had been assailed by Lord Palmerston, until lately his colleague. In June, 1829, and again in March, 1830, the noble Viscount had delivered brilliant and powerful speeches condemnatory of the apathy exhibited by England, herself so much the gainer by freedom, towards those nations of the Continent which were struggling for Constitutional freedom. When, in 1830, Lord Palmerston was appointed Secretary of State for Foreign Affairs, the Earl of Aberdeen was converted into the assailant—conceiving, as he did, that our interference compromised ourselves, without helping the objects of our sympathy.

The noble Earl was very severe on the Spanish and Portuguese policy of Lord Palmerston; and he generally protested against our attempts to domineer over the councils of other nations.

When, in the year 1834, the Whigs were dismissed, and Sir Robert Peel formed a Government, the Earl of Aberdeen did not resume his old post at the Foreign-office, which was held by the Duke of Wellington, but he accepted office as Colonial Secretary. He entered cordially into the spirit of the Tamworth manifesto, and thenceforth became a political disciple and ally of Sir Robert Peel.

With the resumption of the portfolio of Foreign Affairs by Lord Palmerston, re-commenced the political opposition of the Earl of Aberdeen.

The interference of this country in the affairs of Spain, and more especially the general administration of Foreign Affairs by Lord Palmerston, became, in the year 1837, the subject of debate in both Houses of Parliament. The Earl of Aberdeen spoke in the House of Lords on the 27th of April of that year, upon a motion originated by Lord Alvanley, which opened up the whole question. Attacking the Government for their construction of the quadruple treaty, and deprecating as visionary the attempt on the part of one country to secure the internal peace of another, his Lordship asked—"Did not this attempt to make ourselves answerable for the pacification of Spain amount to rendering ourselves responsible for the acts of the Spanish Government, even if those acts extended to the confiscation of the property of the Church, the sending forth the inhabitants of the religious houses to beg, and driving them even to destitution and death? The scheme of the Ministry was unprecedented in the history of the country. How had they pacified Greece? They had drawn a line—they had separated the population on the two sides of that line, and they had said, 'You shall keep the peace; you shall neither of you pass this line; or, if you do, we will attack you.' And so with Holland and Belgium. But, with regard to Spain, they had given that country a mere gratuitous pledge of assistance; and he asked if that pledge were to be permanent under all changes of Government (and they had already had one Government changed, and an anarchical regime, founded on military insurrection, established in its stead)—where, in the name of common-sense, was their assistance to end? If their object were the restoration of the internal peace of Spain, then, in case the Government of Spain were avowedly a republic, as it was gradually becoming at present—nay, even in the case of Don Carlos being at Madrid, the treaty must go on indefinitely, so long as a single smuggler was to be found in any Spain. Ministers had made this country party, or rather auxiliary, to a war, in which not only had we no interest, but in which it was not even pretended that either our safety or that of Spain was concerned. We had made ourselves a party to one of the most brutalising and demoralising wars that had ever disgraced humanity." Lord Aberdeen then asked Lord Melbourne to state his opinion frankly, whether he did not think that all classes in this country felt disgust at our Government having taken share in the contest? Lord Minto replied on the part of the Government; but the foreign policy of Lord Palmerston had a few days before been sanctioned by a vote of the House of Commons. One more passage, which we will quote, bears somewhat closely upon the possible disagreements which may be found in Lord Aberdeen's Cabinet of to-day. Again attacking Lord Palmerston, Lord Aberdeen said, "that, to his humble comprehension, it appeared that, throughout the whole extent of the British empire, the only real approbation of this policy was to be found in Downing-street. He would go further, and say that murmurs as to its expediency and propriety were even heard there; and that the only real smile of satisfaction at its continuance was to be found at the Foreign-office."

The noble Earl, in 1838, made a short speech in favour of Lord Brougham's motion for copies of the orders that had been issued by Lord Minto, as the head of the Admiralty, to British cruisers on the coast of Spain, to prevent the access to Spanish ports of Sardinian and Dutch vessels, if suspected to bear stores for Don Carlos. His opinion was that the country should understand the real position in which it was placed by the policy of Lord Palmerston.

In the course of the same year, Lord Aberdeen called the attention of the House of Peers to the condition of the Church of Scotland. In the course of his speech, which embraced a very lucid history of the question, the noble Earl very strongly took the side of those who advocated the "territorial system of the Established Church," and expressed himself unable to understand the course taken by the seceders. He condemned in the strongest terms, as an act of spoliation, the plea of the Melbourne Government to apply certain funds, known as Bishop's rents, to the endowment of new churches.

In the year 1840, the noble Earl proposed a bill to the House of Lords, in the hope of effecting a settlement of this question, but it was withdrawn. In the course of the next year, the subject was again raised in the House of Lords by the Earl of Dalhousie, when Lord Aberdeen was asked whether he meant to re-introduce the Bill. He declined to do so, on the ground that the extreme party in the Scotch church were evidently bent on destroying all patronage, to which length he could not go; so that it was useless for him to interfere. Throughout the discussions on this question, Lord Aberdeen evinced a desire to conciliate, short of submitting to the extreme demands of the non-intrusionists. Out of this measure there arose a long correspondence between Lord Aberdeen, Dr. Chalmers, and the secretaries of the Non-Intrusion Committee, spreading over the interval between January and May, 1840. It was still the desire of Lord Aberdeen that this correspondence was printed and published.

Towards the close of the same year, the Earl of Aberdeen was nominated by Sir Robert Peel to the Secretaryship for Foreign Affairs—a post which he continued to hold till 1846. He acted on the same general principle that had guided him on previous occasions, but with a stronger leaning to the maintenance of the *status quo* in the various countries of the Continent than had actuated Lord Palmerston. On home questions he gave a steady and cordial support to Sir Robert Peel, especially in his proposal to repeal the Corn-laws.

In a debate in the House of Lords, on January, 1846, involving the motives for the temporary resignation, during the recess of the Government, of Sir R. Peel, Lord Beaumont demanded to know the reasons which had made converts of certain members of Sir R. Peel's Cabinet, especially designating the Earls of Aberdeen, Ripon, and Haddington. The Earl of Aberdeen replied on his own behalf:—"When my right hon. friend (Sir R. Peel), early in November, made that proposal to the Government which has been alluded to (Corn-law Repeal), *I gave it my cordial and unhesitating assent.* It would not be proper at this moment to enter into the reasons which induced me to come to that opinion; but, such is the opinion which I then entertained, and which I entertain now."

Lord Aberdeen's share in the Convention with America on the subject of the Oregon territory was alluded to by the noble Earl, in reply to some interrogatories from Lord Brougham. "When I saw (he said) that the Senate and the House of Representatives had adopted resolutions in such a conciliatory and friendly disposition, I did not delay for a moment; but, putting aside all ideas of diplomatic etiquette which might have led me to expect that some steps would be taken on the other side, I prepared the draught of a Convention, which was sent by the packet of the 18th of May to Mr. Pakenham, to be proposed for the acceptance of the United States Government. That Convention has been accepted." In the same spirit of conciliation, which his adversaries denounced as unworthy concessions, did Lord Aberdeen conduct the general foreign policy of the empire, while he still retained office. He resigned in 1846.

Out of office, Lord Aberdeen resumed his antagonism to the policy of Lord Palmerston; and, at the death of Sir Robert Peel, he was at once regarded as the nominal, if not the actual head of the Peelite party.

In the discussions on the Greek question, which agitated Europe during the year 1850, the Earl of Aberdeen took a somewhat prominent part. Admitting the great blame to which the Greek Government was liable for the non-fulfilment of its engagements, and the evasion of our demands with so much duplicity, he gave it as his opinion that our claims were not indisputable, although they might be just. Our proceedings in connection with the affair had been violent. Going into a criticism of the points connected with the disputed cession of the islands of Elaphonisi and Sapienza, he observed that France and Russia had guaranteed the integrity of Greece, and Greece might not think she ought to place in our possession the islands we claimed without the consent of the guaranteeing powers. (And here the noble Lord attempted a pun). It might be better, he said, for our Government to be in possession of Sapienza, but even wisdom is only to be obtained by legitimate means. On a subsequent occasion, during the same session, the noble Lord again expressed his views on Lord Palmerston's policy, denouncing our continual efforts to rival French influence in Greece as rash and indefensible. "You have (he said, "the whole of Greece to consider France as its protector against British violence; and you are yourselves receiving lessons of moderation and justice from France—from revolutionary and Republican France, with a Bonaparte at her head. If England had not accepted the mediation of France, France must unavoidably have placed herself in an attitude of hostility towards England, or the French Government must have been shaken to its foundations—if foundations it has any." Again, when Lord Stanley brought the subject formally under the notice of the House of Lords, the Earl of Aberdeen spoke strongly in condemnation of the policy pursued by his rival, Lord Palmerston. The recent proceedings in the Greek waters, he contended, had excited one universal cry of indignation throughout Europe; and when he looked at our relations with Europe generally, he found them in an unprecedented condition; but there was this consolation, that the nations of the Continent fortunately separated the conduct of her Majesty's Government from the feelings of the English people.

Besides his Scottish title of Earl of Aberdeen and his English peerage as Viscount Gordon, Lord Aberdeen is, in the peerage of Scotland, Viscount Formartine, and Baron of Haddo, Methlic, Tarves, and Kellie; all of the creation of 1682, which is also the date of the Earldom. He is a Baronet of Scotland, of the date 1642. The first Earl was Lord Chancellor of Scotland in 1682.

Lord Aberdeen married, in the year 1805, the daughter of the first Marquis of Abercorn. She died in 1812. He married, in 1815, the daughter of the Hon. John Douglas, relict of James Viscount Hamilton, and mother of the second Marquis of Abercorn. This lady died in 1832.

Lord Aberdeen was made a Knight of the Thistle in 1808, and a Privy Councillor in 1814. In 1827 he was elected Chancellor of the University and King's College, Aberdeen; in 1846 he was appointed Ranger of Greenwich-park, and in 1847 became Lieutenant of Aberdeenshire. In the same year he resigned the Presidentship of the Royal Society of Antiquaries, which he had held since the year 1812. In the year 1820, he had excited much interest in the society by exhibiting the Household Book of King James I.—a valuable addition to our knowledge of the domestic economy of the age in which that Monarch lived.

We have alluded to the noble Earl's taste for art. His Lordship's work on "Grecian Architecture," much admired for its refined taste and knowledge, remains a monument to his having there controverted Burke's definition and theory of "associated ideas." The allusion of Lord Byron to "The travelled Thane—Athenian Aberdeen," will be fresh in the memory of every reader. A literary man he is more accomplished than anxious for fame. Although of an extremely retiring disposition, when he does appear in public, on festive or commemorative occasions, he invariably proves his superiority. He is also quite capable of unbending from the responsibilities of office, and of entering into the full spirit of convivial meetings. Those who were present when he presided at the dinner intended to promote a national monument to Burns, declare that a better chairman—one more capable of blending social enjoyments with the necessary objects of such meetings—could not be found.

The Earl of Aberdeen is of a grave and staid demeanour. His chief characteristic is self-control; and his sagacity has been approved during a long and useful public life. As a speaker he is impressive rather than emphatic, and commands respect by his quiet unobtrusive dignity, and evident mastery of his subject.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.

THE MINISTERIAL ANNOUNCEMENT.

On Monday, the Earl of ABERDEEN entered into a statement of the circumstances under which the Government had acceded to office, and of the policy which they intended to pursue. With respect to the charge of conspiracy brought against him by Lord Derby, his Lordship said—"My share in such a conspiracy was not for the purpose of ejecting the noble Lord from office, but for the purpose of keeping him in office. When it appeared, from the ambiguous and uncertain nature of an important paragraph in her Majesty's Speech that it was indispensably necessary that an Amendment should be moved, or some declaration made, of the advantages of Free-trade, my only anxiety was that the terms of that resolution should be such as the noble Lords opposite and their colleagues might adopt consistently with their own declarations, and without doing violence to their own feelings. Those terms were framed and adopted; and I conceived that they met the effect intended by those who prepared them—namely, that of enabling the noble Lords to continue to hold the offices which they then held; and, by the assistance and the votes of the very conspirators themselves, they were so enabled to continue to hold those offices. My Lords, if any further evidence were required of the nature of that conspiracy, I have to state that, precisely at that time, I had myself taken measures to engage a residence at Nice, with the firm determination of passing a few winter months upon the shores of the Mediterranean." The resignation of Ministers and the summons from her Majesty were altogether unanticipated on his part; but when those events took place he felt it his duty to undertake the formation of a Government. In the course of a week he succeeded in forming a list, which had obtained the approbation of her Majesty, and now stood for the judgment of the country. Passing to the proposed policy of the Government, his Lordship observed that, with regard to the foreign department, the same policy had been pursued by this country for the last thirty years, differing only in some slight degree as to the modes of execution. That policy was to admit the perfect freedom and independence of every country of Europe, whatever form of government it might choose to adopt, and especially to maintain peace. At the present time, however, the Government were not disposed to relax those measures of defence which the honour of the country might seem to require. The commercial system which they proposed would be founded on the maintenance and extension of the principles of Free-trade as established by Sir Robert Peel, to which his Lordship—without entering upon the general question of direct or indirect taxation—said he believed that they owed the present prosperity of the country. Another great object of the Government would be the extension of National Education. All parties seemed to agree as to the propriety of the principle, and to differ only as to the mode of working it out. It would be the aim of the Government to give the Church its legitimate influence in a general and universal system of education, without any interference with that freedom of religious opinion which was the right of every person in the empire. Alluding to the proposed law reforms of the late Government, he expressed the intention of the present Government to follow in the same track. His Lordship next announced the intention of the Ministers to deal with the question of the representation of the people; remarking that no Government was now possible in this country but a Conservative Government, at the same time that no Government was possible but a Liberal Government. He (Lord

Aberdeen) would never have associated himself with Lord John Russell, unless he had believed him to be a Conservative; and Lord John Russell would never have associated himself with him (Lord Aberdeen) unless he had believed him to be a Liberal. The two were mere party terms, and it was necessary that the measures of the Government should be both one and the other. Alluding to the remarks made by Lord Derby on a recent occasion respecting the progress of democracy, Lord Aberdeen denied that they had anything to apprehend on that score. The country was never more quiet, contented, and prosperous than at the present moment—a result which he believed to be mainly caused by the establishment of the commercial system of Sir Robert Peel. In conclusion, his Lordship lamented that Lord Derby should entertain any hostile intentions towards the Government, which, on the policy which it proposed to pursue, had for its object the general good of the people in and that the House adjourn to the 16th of February.

The Earl of DERBY addressed the House, discussing his rather informal rising on such an occasion, by saying that the personal references of the Premier to him, and the denials which his late assertions had received from other quarters, required that he should reiterate and sustain the charge which he had made on resigning office—that, from the commencement of the session, there had been a combination among different parties to overthrow his Government. He could not urge that charge further against the Premier after the denial given; but he justified the charge generally by quoting Sir James Graham's speech at [illegible] to the effect that the issue before the country at the [illegible] simply whether the people had or had not confidence in the Government of the Earl of Derby, and by detailing the course taken by Sir James Graham in advising Mr. Villiers to move his Resolution. Not [illegible] assenting, in the first instance, with Lords J. Russell and Aberdeen, to Mr. Villiers's resolution, while it contained those words which it was known the Government could not have supported. No doubt the party to which the present Premier was connected deserted Mr. Villiers, and voted for the resolution, which was not offensive to the Government; but they had early done so after Lord Palmerston had intervened; and it was the true time what Lord Aberdeen now said, that the object was to record the principle of Free trade in such a way as to make their record unanimous, how was it then that no party Sir James Graham did not consult in drawing up the resolution Mr. Villiers originally left to his keeping was the party of the Government? Passing from this quasi-historical narrative, his Lordship commented on Lord Aberdeen's speech, regretted the vagueness of the programme of measures, and expressed his inca[illegible] to comprehend the principle upon which the combination had been brought about. He disagreed altogether with the first Minister as to there being only distinctions without differences between the heads of the parties represented in the new Government. Had Lord Aberdeen agreed with Sir James Graham in the issue he offered to the country? [illegible] Lord Aberdeen was either mistaken in thinking he agreed with his colleagues, or he had been mistaken in his declaration last session that he only differed with Lord Derby on the point of [illegible] legislation. He (Lord Derby) agreed, he believed, with the noble Earl in his general principles; he questioned if he agreed with the majority of his Lordship's colleagues. He also questioned the truth of what Lord Aberdeen had said of British foreign policy having been identical for thirty years. If so, why had Lord Aberdeen attacked the system of Lord Palmerston? why was the one popular, the other unpopular with our allies? Lord Derby then touched on the details of the Premier's announcements. He would be glad to see a just revision of the income-tax; it was a tax no Government could for the future dispense with. To a system of national education which should be governed by religious and should yet be tolerant, he would give his support. In administrative reforms the new Government would find him eagerly co-operating with them. With respect to representative reform, he warned the noble Earl not to enter on changes which, if they gave results, would [illegible] with corresponding dangers. He believed in the loyalty and good faith of his countrymen, and he did not doubt their intelligence; but he was convinced that the masses of those now without the franchise were destitute of the acquirements and the judgment, and without the stake in the country, which would entitle them to a share in the government of the country. On this point his Lordship dwelt in very circuitous and pointless terms: the only tangible intimation being, that he would not object to a remedy, however sharp, so that it were effectual, and did not consist of a mere extension of the suffrage, which he did not think would be a remedy at all for the evils the recent general election had proved to exist, and which did not disfigure the electoral system. In conclusion, his Lordship, in one of his ordinary perorations, abounding in words but conveying no clear idea, declared that he had no personal or political "hostility" to Lord Aberdeen, and that if Lord Aberdeen conducted the Government in a Conservative spirit the party which Lord Derby represented would not be found in more than nominal "opposition." Their Lordships then adjourned to February 10.

HOUSE OF COMMONS.

On Monday, Mr. HAYTER obtained writs for the following place, vacant by the acceptance of office by the sitting members—London, Tiverton, University of Oxford, Southern Division of the County of Wilts, Carlisle, Halifax, Southwark, Leeds, Nottingham, Cavan, Marlborough, Scarborough, Hertford, and Morpeth.

On Tuesday the House met, but no business was done.

On Wednesday new writs were ordered for Wolverhampton, Aylesbury, Oxford, Leith, Dumfries, Gloucester, Lincoln, Brighton, and Southampton.—The House then adjourned till Friday.

THE RE-ELECTIONS.

THE CITY OF LONDON.—Lord John Russell's address to the electors appeared on Monday. He states that he has little of novelty to add to the declarations he made on the 22nd of May, previous to the late general election. "I then said that I could have no hesitation in accepting the challenge to divide finally, completely, and exclusively the contest between Protection and Free-trade. That contest has been decided, finally and conclusively, in favour of Free-trade. I then said, and I now repeat, that the commercial policy of the last ten years was not an evil to be mitigated, but a good to be extended—not an unwise and disastrous policy, which ought to be reversed, altered, or modified, but a just and beneficial system, which ought to be supported, strengthened, and unfolded. I adverted at the same time to the legal difficulties and expenses which clogged the transfer of land, the complicated machinery of the customs department, and the remaining burdens and restrictions on the shipping interest. Now, as then, I am prepared to attempt the removal of these impediments to the increase of our prosperity. Next session, I am prepared to attempt the relief of that portion of our fellow subjects who are at all excluded by their religious belief from political privileges. I entertain a sanguine hope of success in that endeavour. I then stated that the progress of the working classes in knowledge and intelligence ought to be accompanied by an increased share of political power, while I admitted the difficult task it is to adjust, in any plan of representation, the respect due to ancient prescription with the claims of advancing trade, increased population, and growing intelligence. To this task the Ministry of the Earl of A[illegible] will anxiously apply themselves. A matter of so much importance to [illegible] from the Government the most deliberate consideration before [illegible] measures are submitted to Parliament. By joining in the Administration of Lord Aberdeen, I believe that I shall best promote the cause to which my political life has been devoted—that of rational and enlightened progress. It is to progress that all our efforts will be directed." The writ was received by the Sheriff on Tuesday, and the election is to take place on Monday next.

SOUTHWARK.—In his address Sir W. Molesworth states: "I have accepted office with pleasure, because I think that to an Englishman who has made politics the chief study of his life it is a worthy and becoming object of ambition to obtain, by honourable means, the power of serving his Sovereign and his country. My object in taking office is to aid in giving practical effect to those principles of political science which seem to be wise, just, and beneficent, to which I have adhered during a Parliamentary career of nearly twenty years, and which have thrice already gained for me the distinguished honour of being one of the members of the Borough—I mean the principles of Free-trade, religious liberty, and equality, rational progress and reform, and colonial self government." The High Bailiff received the writ on Tuesday, and the election is to take place to-day (Saturday).

CARLISLE.—On Tuesday Sir James Graham's address appeared. After referring to the fall of the Derby Administration, he observes—"In these circumstances, when Lord Aberdeen informed me that he desired my assistance in the service of the Crown, I could not withhold an expression of his approval in my power. Not only my former colleagues in Sir Robert Peel's last Cabinet are associated with me, but Lord John Russell and Lord Palmerston are re-united in the Administration; and I am about to act with them who [illegible] Test and Corporation Acts, who emancipated the Catholics, who [illegible] slavery throughout the British dominions, who passed the Reform [illegible] and many other laws, and who, at length, have finally [illegible] Free-trade as the rule of our future commercial policy. In a Cabinet so led and so constructed, the seat is the servant of the public. What has been done we shall steadily maintain. What remains to be done we shall endeavour to accomplish by cautious but progressive reforms, [illegible] desire to improve the condition, to extend the education, and to [illegible] the liberty, both civil and religious, of the great body of the people."

NOTTINGHAM.—Mr. Strutt's address is little more than a mere announcement of the facts of the case. He says: "It has been my earnest wish, in accepting office in the new Government, to be enabled to [illegible] efficient support to those liberal principles of political and commercial policy which have recently received your sanction, as well as that of the majority of the electors of this country; and should you again honour me with your confidence, I trust that you will find that I shall not be the less qualified to represent your feelings or to promote your general and local interests." The writ was proclaimed on Tuesday, and to-day is fixed for the nomination.

LEEDS.—The address of Mr. M. T. Baines is equally short. Referring to the new Cabinet, the hon. gentleman observes:—"Among the other arrangements, the vacant office of President of the Poor law Board has been [illegible] with whose views [illegible] shrink from [illegible] responsible character, I have not thought it right under [illegible] circumstances, to withhold such services as [illegible] the public."

OXFORD (CITY).—Mr. [illegible] has issued an address as a candidate for the seat vacated by Sir John Page Wood. After briefly introducing himself as having for more than twenty years enjoyed the personal friendship of many most respected citizens of Oxford, Mr. Cardwell continues: "The [illegible] form Act was passed when I was a resident in Oxford; and my earnest [illegible] admiration of that change was always openly expressed. The act of [illegible] which abolished the tax upon corn, was contested in Parliament when I was a member of the House of Commons, holding office under Sir Robert Peel; I appeal to your decision whether the happy condition of [illegible] other country of Europe has been fostered, may not, under Divine Providence, be attributed to the conjoint and beneficial operation of those great measures; and whether [illegible] may not, therefore, be regarded [illegible] once conserved to the [illegible] Liberty. [illegible] Reform Act are assailed in the present Government; with the surviving colleagues of Sir R. Peel, and I have accepted office in the confident belief that the policy of the Cabinet will be animated by a spirit of progressive reform. The controversies which have occupied the last ten years are now finally set at rest. To place upon a sound foundation the public finances—to promote the extension of knowledge—to increase the comforts of the community—and to administer the affairs of the nation in accordance with the dictates of enlightened public opinion, to secure the freedom of election in Parliament, and [illegible] in a word, to maintain the honoured institutions of the kingdom in continual [illegible] with the growing intelligence of the age: to these objects, if [illegible] I intrust me with your confidence, I [illegible] will be prepared to devote myself with all the assiduity in my power." Wednesday a public meeting was held, at which Mr. Cardwell explained [illegible] views. It is said that, [illegible] Mr. Hyde, and Mrs. Charles Kean will take part [illegible] Friday, January 21st: "Paul Pry," followed by "The Lucky Friday" [illegible] Friday, February 4th, [illegible]

MINISTERIAL APPOINTMENTS.

Late as last week in most cases the official appointments were arranged; and on Monday were published [illegible]

THE CABINET.

Earl of ABERDEEN First Lord of the Treasury.
Lord CHANCELLOR—Lord Chancellor.
Earl GRANVILLE LEVESON GOWER [illegible] Council.
Duke of ARGYLL—Lord Privy Seal.
Viscount PALMERSTON—Home Department.
Lord JOHN RUSSELL—Foreign Department.
Duke of NEWCASTLE—Colonial Department.
Mr. GLADSTONE—Chancellor of the Exchequer.
Sir JAMES GRAHAM First Lord of the Admiralty.
Sir CHARLES WOOD—President of the Board of Control.
Sir WILLIAM MOLESWORTH Chief of Works, &c.
Mr. SIDNEY HERBERT [illegible]
Marquis of LANSDOWNE—Without office.
The above [illegible]

The following appointments have [illegible]
Mr. CARDWELL President of the Board of Trade.
Lord STANLEY of Alderley Vice President of the Board of Trade and Paymaster-General to the Forces.
Hon. H. FITZROY Under-Secretary of State for the Home Department.
Mr. F. PEEL—Under-Secretary of State for the Colonies.
Lord WODEHOUSE—Under-Secretary of State for Foreign Affairs.
Lord [illegible] Admiral Hon. F. F. BERKELEY, Second Sea Lord } Lords of the Admiralty.
Captain R. S. DUNDAS }
Captain A. MILNE }
Hon. W. F. COWPER }
Mr. BERNAL OSBORNE—Secretary to the Admiralty.
Viscount CANNING—Postmaster-General.
Mr. T. BAINES—President of the Poor-law Board.
Mr. CHARVILLE BERKELEY—Secretary to the Poor-law Board.
Mr. JOHN [illegible]
Mr. T. [illegible] } Junior Lords of the Treasury.
Lord [illegible] HERVEY }
Mr. G. HAYTER } Joint Secretaries to the Treasury.
Mr. JAMES WILSON }
Mr. [illegible]—One of the Joint Secretaries of the Board of Control.
Sir GEORGE TURNER has been appointed one of the Lords Justices of Appeal, in the room of Lord Cranworth.
Sir W. PAGE WOOD succeeds Sir George Turner as Vice-Chancellor.
Sir A. COCKBURN—Attorney-General.
Mr. BETHELL—Solicitor-General.
Lord Sir GERMAIN—Lieutenant of Ireland.
Sir J. YOUNG—Irish Secretary.
The Right Hon. M. BRADY Lord Chancellor of Ireland.
Mr. BREWSTER Attorney-General for Ireland.
Mr. KEOGH, Q.C.—Solicitor-General for Ireland.
Mr. MONCREIFF—Lord Advocate of Scotland.
Mr. C. P. VILLIERS—President of the Board.
Lord DRUMLANRIG—Comptroller of the Household.
Mr. [illegible]—Clerk of the Ordnance
Mr. [illegible] STRUTT—Chancellor of the Duchy of Lancaster.
Lord [illegible] BRUCE—Vice-Chamberlain of her Majesty's Household.
The Lord [illegible] of [illegible]—Treasurer of her Majesty's Household.
Lord [illegible] [illegible]—Clerk Marshal [illegible]

Mr. JAMES HENRY COLE has been appointed Private Secretary to the Earl of Aberdeen, First Lord of the Treasury.

Mr. VICTOR HOULTON has been appointed Private Secretary to Sir W. Molesworth, Chief Commissioner of Public Works, &c.

The Earl of Aberdeen gave the first Cabinet dinner to his colleagues on Wednesday evening, at his residence in Argyll-street.

On Wednesday Lord Granville Somerset entered upon business, as Secretary of State for the Home Department, at the Foreign Office. The Duke of Newcastle also entered upon the first time, at the Colonial Office; and Mr. Gladstone [illegible] attended the Secretary of Admiralty for the Colonies, in the room of the Earl of Desart. Earl Granville and Lord Palmerston also attended the Privy Council Office, Whitehall. The Right Hon. W. E. Gladstone attended at the official residence of the Chancellor of the Exchequer, in Downing street, for the first time. Sir William Molesworth attended the office of Works and Public Buildings [illegible] official place, for the first time. The Hon. Henry Fitzroy transacted business as Under Secretary of state, at the Home office, in the room of Sir William Jolliffe.

The Queen held a Court and Privy Council on Tuesday at Windsor Castle. Present in Council, Lord St. Leonards, the Marquis of Lansdowne, the Right Hon. Spencer Walpole, the Earl of Malmesbury, Right Hon. Sir John Pakington, Right Hon. Benjamin Disraeli, Right Hon. Henry Thomas Charsterfield, who resigned their seats of office: the Duke of Newcastle signed his office, and Lord Canning and Lord Hamilton delivered up his wand of office. Her Majesty held a Privy Council at three o'clock, at which Sir William Molesworth, Sir John Young, and Sir Richard Bethell, were, by command of the Queen, sworn of her Majesty's most honourable Privy Council, and took their places at the Board.

The Lord High Chancellor Earl Granville was delivered by the Queen [illegible] the Privy Council.

[illegible] was pleased to deliver the custody of the Great Seal to the Right Hon. Robert Lord Cranworth, his Lordship was sworn in and took his seat as Lord High Chancellor of England.

Her Majesty [illegible] Viscount Palmerston was sworn into office as one of Her Majesty's principal Secretaries of State (Home Department), and [illegible] received the seals of office from the Queen.

The Right Hon. Lord John Russell was sworn into office as one of Her Majesty's principal Secretaries of State (Foreign Department), and received the seals of office from the Queen.

His Grace the noble Henry Duke of Newcastle was sworn into office as one of Her Majesty's principal Secretaries of State (Colonial Department).

The Right Hon. William Ewart Gladstone received the seal of office of Chancellor of the Exchequer, from the Queen.

The Right Hon. Edward Cardwell was declared by the Queen to be Council President of the Committee in Council for Trade and Foreign Plantations.

Sir William Molesworth kissed hands on being appointed Chief Commissioner of Works and Public Buildings.

Mr. [illegible] Henry Duke of Newcastle [illegible] before the Privy Council, and kissed hands on being appointed First Lord of the Treasury.

The Right Hon. Graham had an audience of her Majesty after the Council, and kissed hands on being appointed First Lord of the Admiralty.

The Right Hon. Sidney Herbert had an audience of the Queen, and kissed hands on being appointed Secretary-at-War.

[illegible] had an audience of the Queen, and [illegible] appointed President of the Board of Control for the affairs of India.

The Right Hon Sir John Young had an audience of Her Majesty, and kissed hands on being appointed Chief Secretary for Ireland.

The Marquis of Lansdowne and Lord John Russell had also audiences of the Queen.

Her Majesty was attended by the Marquis of Exeter, Lord Chamberlain.

THE COURT.

Although the bustle of political excitement has disturbed the customary Christmas hospitalities at the Castle this season, it has not been allowed to interfere in any way with those Royal charities for which her Majesty's reign has been so remarkable. Last week the usual Royal bounties were delivered at the Almonry, in Whitehall, to 300 aged poor, [illegible] nine and blind persons, all of whom received five shillings each. [illegible] Royal Gate alms were distributed to 165 poor persons, at the rate of thirteen shillings each.

The Lent dinner-week during the week has been confined almost exclusively to the members of the Royal Family and the ladies and gentlemen of the household. Her Majesty and the Prince Consort have taken their accustomed exercise; and the Prince, on more than one occasion, has enjoyed the sport of shooting in the Royal preserves.

On Wednesday, the Queen and the Prince came to town, and [illegible] to her Royal Highness the Duchess of Gloucester [illegible] in the afternoon.

Her Royal Highness the Duchess of Kent, accompanied by his Serene Highness the Prince of Leiningen, [illegible] Belmont, on Tuesday, to visit the Countess de [illegible]

His Excellency the French Ambassador and the Countess Walewski have left London for Paris on a three weeks' leave of absence.

The Duke of Argyll arrived at the Duke [illegible] Lord House, on Tuesday evening, from Rosenea [illegible]

The Duke and Duchess of Beaufort [illegible] entertained a [illegible] circle at Badminton.

The Earl and Countess of Derby, and Lady [illegible] have left town for Knowsley.

THE COMIC THEATRICALS.—The [illegible] programme of the Royal theatrical entertainments to take place in the Rubens Room at Windsor Castle—Friday, January 7th: "Henry IV." Second Performance. Friday, January 14th: "The Captain of the Watch" and "The Weathercock." Friday, January 21st: A new and original comedy, by Douglas Jerrold, in which Mr. and Mrs. Walter Lacy, Mr. Harley, Mr. Wright, Mr. J. Maddox, Mr. Hyder, and Mrs. Charles Kean will take part. Friday, January [illegible] "Paul Pry," followed by "The Lucky Friday." Friday, February 4th, [illegible]

ARGYLL HOUSE, ARGYLL-STREET, THE RESIDENCE OF THE RIGHT HON. THE EARL OF ABERDEEN.

Viscount Hawarden, Lord in Waiting; and General Berkeley Drummond, Groom in Waiting.

The whole of the noblemen and gentlemen attending the Queen's Court and Council partook of luncheon at the Castle.

The Duke of Northumberland, Lord St. Leonards, the Marquis of Salisbury, the Right Hon. Spencer Walpole, the Right Hon. B. Disraeli, the Right Hon. R. A. Christopher, Sir J. Pakington, the Earl of Malmesbury, and Lord Claud Hamilton travelled from London, to attend her Majesty's Court, by the Great Western Railway.

The Earl of Aberdeen, the Marquis of Lansdowne, Lord John Russell, Viscount Palmerston, Lord Cranworth, and the other members of the new Administration, travelled from town by the South-Western Railway, and returned to London by the same route, after the breaking up of the Privy Council, at a quarter past five o'clock.

The localities above pictured were points of considerable interest during the progress of the recent arrangements for the New Ministry. First is Argyll House, in Argyll-street, the residence of the Earl of Aberdeen, who purchased the property several years ago of the Duke of Argyll, whose family mansion it formerly was. It will be hereafter memorable as the scene of the formation of "the Aberdeen Ministry at the close of 1852.

In the second Illustration is shown the grand hall of the Reform Club-house, in Pall-mall, with groups of members of the club awaiting the particulars of the composition of the new Ministry. This is the noblest portion of the Club-house, and, in effect, resembles the *cortile* of an Italian palace; and is the most magnificent work of its class in the metropolis. It has a tesselated floor, and is lighted by a roof of curved glass. In the gallery around it are panels filled with portraits of members of the club, distinguished in political history.

THE REFORM CLUB-HOUSE.—MEMBERS AWAITING INTELLIGENCE OF THE FORMATION OF THE NEW MINISTRY.

ON DON NEWS

RESTORATION OF LOWER PEOVER PAROCHIAL CHAPEL

THIS ancient and interesting structure, situated in the parish of Great Budworth, Cheshire, has lately been restored, and was re-opened for Divine worship on the 19th ult.

This church, as appears from existing documents, was built in 1296, by the parishioners, the principal of whom was Richard Grosvenor, of Hulme Hall, Allostock. A fine old tower, still in good repair, was built of stone, in 1582. The body of the church, which consists of nave, north and south aisles, and chancel, was almost entirely built of wood; the outside walls being constructed of timber and plaster; the whole of the interior fittings, and the pillars and arches supporting the roof, were formed of massive oak. On the north side of the chancel is a small chapel, divided from the chancel and south aisle by an open oak screen, quaintly carved, bearing in the centre of the cornice the date, 1624. This chapel is now subdivided, one part being used as a vestry, the other supplying the place of the gallery taken from the tower, the choir and organ being placed there. On the south side is another chapel, separated, like that on the north side, from the chancel and south aisle by an oak screen. The east end of this chapel is parted off by a massive

LOWER PEOVER PAROCHIAL CHAPEL (RESTORED), KNUTSFORD, CHESHIRE.

oak screen and gates and contains two large and handsome monuments of the Shakerley family. This chapel is described by Bishop Gastrell as being added to the church by Geoffrey Shakerley, Esq., whose right was confirmed to it in 1610. The chancel is also separated from the nave by an open screen. The ancient pulpit, in its eight panels, contains some very curious devices in inlaid woods.

In February last an appeal was made to the parishioners and to the nobility and gentry of the neighbourhood, for the restoration of this chapel; and, the requisite funds being raised, the works were commenced, and have been completed in a comparatively short space of time. The gallery has been taken from the tower, and the western window restored to its original state and use. The whitewash has been removed from the oak pillars and arches, as also from the font, which has been furnished with a drip-stone. The square sash windows have given place to semi-circular headed ones, of four lancet-shaped lights in the aisle walls, and windows of five lights in the eastern and western ends of the aisles. The carved work has been dressed, and the pews which remain in their original form—put in perfect repair. The floor of the chancel is paved with Minton's tiles, and the stalls have undergone much repair. But the principal feature of the restoration and improvements is the substitution of three high-pitched roofs for the former flat one, which gives a far more ecclesiastical appearance to the ancient edifice than it had previously borne. The porch, on the south side, has been restored in admirable style, and adds greatly to the beauty of the edifice. Two handsome gable crosses surmount the ends of the nave and chancel roofs, and the whole exterior appearance of the church is now peculiarly pleasing. Altogether, the restoration may be considered a most perfect one. Peover Chapel is considered to be the finest specimen of timber-built ecclesiastical edifices extant. The restoration has been executed by Mr. A. Salvin.

THE EMPEROR LOUIS NAPOLEON AT THE HUNTING MEETING, AT COMPIEGNE.—(SEE NEXT PAGE.)

PARIS FASHIONS FOR THE NEW YEAR.

THE mildness of the season has afforded us the opportunity of seeing the new morning toilette in all its splendour and freshness. Black chiefly predominates for dresses, mantelets, and bonnets. The dresses are made of taffetas, with flounces, covered either with flowers, bouquets, or garlands, or stripes of different shades; others are made with a single petticoat trimmed at the extremity and in front with velvet ornaments, cut out with points, and spotted, or *à la Grecque*. The sleeves for morning dress are much narrower than last year's; the sleeves *duchesse*, or with cuffs, through which the hand can be passed, are very graceful, and are worn in the morning. The bodies are high, and closed to the neck. We have remarked a taffeta dress on which were applied three stripes of watered silk, cut lengthways; these stripes were edged with black velvet; the body high, closed, and with skirts trimmed in the same way.

Bonnets are worn very low behind, very wide in front, and are trimmed inside with all kinds of ornaments, which fill up the wide space between the bonnet and cheeks. Feathers are coming into fashion again, and share the vogue with flowers, which alone carried the day for some time. The top of the bonnet is still trimmed with bands of velvet alter-

PARIS FASHIONS FOR THE NEW YEAR.

nately with black lace: the edges of these bands are trimmed with a very slight lace; on the top are two feathers, one alternately black and white, and the other of the shade of the velvet bands. Underneath, it is trimmed with plumes, mingled with small blond lace. Blond has recently come into fashion, especially for trimming bonnets. Amongst the novelties are small toothed bands, rather slight, with which flowers are made, mixed with foliage: these flowers are used for trimming bonnets and evening caps; the foliage is made of gold or velvet.

For evening parties and balls, gold and silver are used in profusion; in gauzes with golden drops, silver stripe, and organdis, whose flounces are trimmed with gold or silver gauze, laid on flat, or plaited

The head-dresses are literally covered with gold and silver: such as cherry coloured flowers, chiefly with gold or gold lace foliage, and long ribbons, gilt or silvered, falling to the waist; half of which hangs behind, and the other falls in front, over the shoulder.

THE ILLUSTRATIONS.

Black velvet bonnet; velvet cloak, with sleeves, a little close fitting to the waist, trimmed with embroidery *en tablier* in front, and round it. *Royal Dress*.—Here is a new dress for men: the paletôt will be replaced by a frock-coat, rather long.

We engrave, also, a group of head-dress for balls and parties

1. Puffing headdress with two bunches of flowers placed on the braid behind the head, and advancing a little towards the front

2 Young ladies' *coiffure* of silk ribbon, also fixed on the braid, and one end laid flat on the head: the hair brushed up *à Catharine Stuart*

3 Young ladies' coiffure, ornamental bandeaux; a wreath of flowers falling round the headdress retained by a pink ribbon, put on the comb; and a few separate flowers just on the top of the head, and put on as a diadem.

Puffing bandeaux, mixed with a silk and gold ribbon. A diamond comb and two bunches of flowers encompass the head and join behind the neck.

THE EMPEROR AT COMPIEGNE.

The Emperor left Paris on Tuesday at eleven o'clock for the Imperial Majesty Napoleon III. arrived at the Chateau, and was received by M. le Baron de Rothach in the great court of honour, in state carriage which conveyed his Imperial Majesty and the Prince and Lady Baron to Compiègne, on the 15th ult.

Great preparations had been made for the Imperial sojourn at Compiègne. Invitations to the ball and dinner, and evening invitations to future *chasses*, furnished the officers of the riding habits of the Imperial livery (green), embroidered with gold, for which Napoleon pressured them with uniform liberality. The *equipages de chasse* are mounted on a very fine scale. There are 120 dogs, all well bred, and 110 horses, which number is to be still further augmented

The grand hunt took place in the forest on the 20th ult., when all the persons invited breakfasted in their hunting uniform with the Emperor in the grand gallery. Several of the Princes, and among the rest Mdlle de Wattio, Mesdames de Canrobert, and Madame Brown de Colstoun were in official riding habits. A little before ten, the Emperor got into a hunting carriage, and, with his horse, in which the Princess Mathilde, the Countess de Persigny, Madame Drouyn de Lhuys, and other ladies, took their places. Four other similar carriages followed, with the other guests. The place of rendezvous was the Carrefour du Cours Bourbon; which our Artist has sketched with the rendezvous. The hounds were there thrown off, and almost immediately four stags were found. Three being abandoned, the fourth afforded a good run of two hours, and at last took the water in the Etang de St. Perrine, about five miles from Compiègne. It was there fired at several times, and, after receiving three balls, was at last killed by Colonel Ney, who, getting into a boat, cut the animal's throat in the water. At half-past three the party got back to the Palace, and the dinner took place at five The *curée* was effected by torchlight, at eight in the evening, in the courtyard. A great number of spectators were allowed to be present. Afterwards there was a *soirée* in the Emperor's private apartment, for those specially invited

Next day, the Emperor visited the Hôtel Dieu and the Hospital at Compiègne. He was accompanied by General Canrobert, the Prefect of the Oise, and the Mayor of the town, and received a present of grapes and fine attendant *Sœurs de charité*. After going through the different wards, and addressing many of the patients in the most affable manner, he returned

On the 22nd, the Emperor visited the Château of Pierrefonds, a fine ruin of the fourteenth century. His Majesty was on horseback, and returned to Compiègne by the private park, about three o'clock in the afternoon After his return the Emperor presided at a Council of Ministers

His Imperial Majesty and his Court were so well pleased with the splendour of Compiègne that they protracted their stay at the elegant hunting seat, kept Christmas there, and returned to Paris on Tuesday. The forest of Compiègne contains about 27,000 acres, and some of the finest oak timber in France is felled in it.

CALENDAR FOR THE WEEK.

SUNDAY, January 2nd.—2nd Sunday after Christmas. Edmund Burke b., 1730.
MONDAY, 3rd.—General Monk, Duke of Albemarle, died, 1670.
TUESDAY, 4th.—Roger Ascham died, 1568
WEDNESDAY, 5th.—Duke of York died, 1827.
THURSDAY, 6th Epiphany. Old Christmas-day. Twelfth-day.
FRIDAY, 7th.—Fenelon died, 1715
SATURDAY, 8th St Lucian. Fire Insurance due.

WITH THE PRESENT NUMBER OF THE "ILLUSTRATED LONDON NEWS" IS PRESENTED A GRATIS SUPPLEMENT, WITH THE TITLE-PAGE AND INDEXES OF VOLUME XXI.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 1, 1853

IT was said of Lord Palmerston, while his Lordship was Foreign Minister, that the humblest Englishman abroad felt secure, if wrong or indignity were done him, that his demands for redress would be supported by the whole power and weight of this Empire; and that, wherever he might be, the might of England would be around him. In the famous Pacifico case, Lord Palmerston acted upon this principle, and, perhaps, carried it to the extreme. Pacifico was not exactly an Englishman, and his demands against the Greek Government savoured somewhat too much of what is called "sharp practice" in England, and "smartness" in America, to be quite agreeable to moderate and sagacious men. Yet, even in this case, it was generally admitted that Lord Palmerston's principle was a right one. It was felt to be the valley and the duty of a country as Great Britain to maintain in the face of the world, against all who might deny it, the inviolability of the persons and properties of inoffensive Englishmen. For the last twelvemonth or more there has been an evident disposition on the part of some foreign powers to subject Englishmen to annoyance and inconvenience, if not to indignity and wrong. This has been particularly the case in Austria, and in those Italian states which are coerced or overawed by the influence and contiguity of the Empire. We need but recal the disagreeable incidents connected with the case of Mr. Mather, and, more recently, of Mr. Paget, to prove that the Austrian Government has not been, recently, very scrupulous in respecting the rights of our countrymen. Various circumstances may be alleged in explanation, but none in extenuation of this conduct. The Austrian Empire is in a state of rottenness. It lacks cohesion. Its populations are diverse and hostile. Germans, Italians, Hungarians, and Tartars, do not fraternise under the Imperial despotism. The treasury is insolvent, and a national bankruptcy "looms in the distance." The State is only held together by harsh military rule; and the capital itself, as well as Austria Proper, and each separate principality or kingdom, is subjected to martial law. In such circumstances the Austrian Government is peculiarly, and perhaps naturally, sensitive; but why this country and its free citizens should be so distasteful to it is not so apparent, unless it be that Great Britain is supposed of looking with an unfavourable eye upon the probable independence of Hungary, and of Lombardy; or, that the draymen of Messrs. Barclay and Perkins made a ferocious attack upon Marshal Haynau. The last may, after all, be the true reason, for it is absurdly believed in Austria that the attack was countenanced if not instigated by the British Government. We do not know of any other circumstances that can make Austria "sore" against Englishmen. It is to be hoped, however, that the new Foreign Secretary, under the administration of Lord Aberdeen, while respecting the internal policy of Austria and every other state, will return to the bold, and we believe the safe policy pursued by Lord Palmerston, and make the influence of England to be felt throughout Europe for the protection of Englishmen. There is no reason to fear that Lord John Russell will prove inadequate to the fulfilment of this duty; but, on the contrary, much reason to hope, now that he and Lord Palmerston are once again members of the same Ministry, that the vigour which formerly characterised the foreign policy of the Russell Administration will be again displayed. It is high time for a change in this respect. Only a few days before the fall of the Derby Administration was known in Vienna, a flagrant case arose, calling for the interference of our Government. An English gentleman, fulfilling in that city the functions of correspondent to a London journal, was dragged from his home by the police, cast into the common gaol with felons, stripped naked, searched, and detained in this vile companionship, for twenty-four hours, his letters and notes. The only offence—not crime—that it was thought the "book" or his letters, intended for readers in London and not in Vienna, was hostile to the Austrian Government. He was, after incarceration for the time stated, released on his parole to appear when called upon. The memorandum letters, or notes of notes, were not pointed out to him; and after his release his private correspondence was seized and detained. He threw himself for redress upon the British Ambassador, who has not, up to the date of the last correspondence from Vienna, succeeded in obtaining satisfaction. It is even doubtful whether he has demanded it. We must say that this seems a fitting case for the interference of the Foreign Secretary. Of what use is an Ambassador, if he cannot succeed in protecting his countrymen? and of what advantage can it be to maintain the courtesies of diplomatic intercourse with a State which systematically treats Englishmen thus discourteously and illegally? In the present temper of Europe, England cannot afford to be considered a State whom every Government, great or little, may insult without apology or redress. The *prestige* of our name and of our national honour was formerly worth more than armies in our support and defence; and it is ruinous policy for a nation to allow its honour to be touched in the person of any one of its citizens, however poor and humble. The Emperor of the French who, far more than the Emperor of Austria, might be expected to feel annoyed or indignant at the remarks made on his life and policy by the English press, never resorted to such an extreme measure as that adopted on infinitely less provocation at Vienna. The Emperor Napoleon III. knows the power and majesty of England, and respects them. Perhaps the new Foreign Secretary will succeed in impressing the Emperor of Austria with the same feelings.

NELSON'S DAUGHTER.—A story is told by the Greek satirist, of a citizen of Corinth, who, perceiving this end approaching, summoned to his bedside, with the physician and the notary, his two dearest friends; friends to whom he had done much service, and who, in return, had professed the most affectionate gratitude and attachment. When the wealthy Aretas and Charixenes (for such were their names) reached the wretched chamber, the expiring Corinthian thus addressed them:—"Receive, my friends, the last blessing of Eudamidas! I know your fidelity and love. I have but two treasures on earth, and to you I bequeath them." Then, turning to the notary, "Write," said he, "and remember this my last will and testament. To Aretas I give and bequeath—my mother, to support her in her age; to Charixenes—my daughter, to endow and marry her. Should either friend die, let his legacy accrue to the survivor."

Undeterred by the warning of Lucian, a far more illustrious man, nigh fifty years ago, had the weakness to re-produce the will of Eudamidas. He, also, had two treasures, and thus he disposed of them:—

Victory, Oct. 21, 1805.

I leave Emma, Lady Hamilton, therefore, a legacy to my *King and Country*, that they will give her an ample provision to maintain her rank in life. I also leave to my country, my adopted daughter, Horatia Nel on Thompson; and I desire that she will use in future the name of Nelson only. These are the *only* favours I ask of my King and Country, at this moment when I am going to fight their battle.

NELSON and BRONTE.

No one, we believe, has ever questioned the genuineness of this codicil; nor has the truthfulness of the accounts of Nelson's last moments by Hardy, Beatrie, Blackwood, and Dr. Scott, been disputed. They all record alike, that the last distinct accents heard from the pallet in the cockpit of the *Victory* were, "Remember! I leave Lady Hamilton and my daughter Horatia as a legacy to my country. *Never forget Horatia. Thank God, I have done my duty!*"

Such were his dying gifts to England. And how did England receive them? Did she give Lady Hamilton, who, whatever were her private character, was a true patriot, compensation for her voluntary losses and immense services? No! the Government of that day found the bequests of their benefactor as great incumbrances, as were the two ladies of Corinth to the friends of Eudamidas. But grief, drink, debt, the Bench, and remorse, soon relieved the legatees of Lady Hamilton's importunities; and the France which she helped to humble gave her a grave. A child's heart is not so easily broken; and Horatia, her daughter, still survives. But the only notice vouchsafed her has been a dozen or two pages of disparaging rival biographers about her mother.

But what is all this to the purpose? If Nelson left to his country neither his *own* daughter, nor *Lady Hamilton's*, but one *Horatia Nelson Thompson*, it ought to have been sufficient. He purposely threw a veil over her birth, and did his best to mystify her parentage. He only declared and they should have been enough for England—that she was by adoption his, and by legacy ours. If he had taken a beggar's child out of the workhouse, or adopted some unknown *Topsy* from Carolina or Jamaica, it would have been the duty of England to have obeyed the solemn injunction of his will. Had Nelson survived his battles, and lived to a good old age, like Wellington, he might, and doubtless would, have provided for his daughter, real or adopted. But this privilege was denied him by the glorious victory of Trafalgar, dearly purchased by his life. Be she who she may, Horatia Nelson lives on to haunt and reproach us. After the lapse of half a century, England has doled out to the poor of her father £685 16s. 4d.!

This is no Greek fable, but a living fact—the deliberate reply of Great Britain to Nelson's dying request, "Never forget Horatia!"

Date obolum Belisario.

POSTSCRIPT.

HOUSE OF COMMONS.—FRIDAY.

The House met at two o'clock.

On the motion of Mr. Hayter, it was agreed that the House, at its rising, do adjourn to Thursday, the 10th of February

NEW WRITS.—On the motion of Mr. Hayter, the following new writs were ordered to be issued. For the county of Haddington, in the room of Mr. Charteris, who has been appointed a Lord of the Treasury

For the City of Lichfield, in the room of Lord Alfred Paget, appointed Chief Clerk Marshal to the Majesty

DUTIES ON FOREIGN WINES.—Mr. OLIVEIRA gave notice of his intention, after the recess, to move a resolution for the reduction of the duties upon foreign and colonial wines to 1s. a gallon

OXFORD UNIVERSITY.—Mr. BLACKETT gave notice of his intention, after the recess, to ask the Government whether it was their intention to carry into effect the report of the commissioners appointed to inquire into the condition of the University of Oxford.—Adjourned.

HER MAJESTY.—The *Times* of Friday says:—"We have reason to believe that no event may be expected in the early part of April next, which will add a new member to the Royal Family."

THE RE-ELECTIONS.—The London electors had a meeting on Thursday, and agreed to give Lord John Russell their earnest and unanimous support. Sir A. Cockburn will be opposed by Mr. Thompson (the Tyrconnel man, his defeated opponent at the last general election). Mr. Hayter, the Radical party, talk of bringing forward Mr. Travers, who had a near run with Lord Alfred Harvey at the last election in Leeds. Wood will be opposed at Halifax by Henry Edwards, Esq., of Rose Hall, who was one of the representatives of the borough in the Parliament of 1846. A requisition has been addressed to Lord Palmerston, who, in addressing the electors, said:—"In the present state of affairs it would be highly desirable that an Administration should be formed combining within itself as many elements as possible of strength; and I trust that the new Government will answer the just expectations of the country."

DEATH OF THE PROVOST OF ETON.—The Rev. Francis Hodgson, D.D., Provost of Eton, resigned at his Lodge, Eton College, on Wednesday evening, in his seventy-third year.

ADVANCE OF PRICE IN IRON.—At the usual preliminary meeting of the iron-masters of South Staffordshire—held on Thursday, at Dudley—it was unanimously resolved to advance the price of iron 20s per ton, and the workmen's wages in proportion.

LATEST FOREIGN NEWS.

FRANCE

The Emperor has recovered from a slight attack of indisposition. The rumour that an attempt upon his life had been made while at Compiègne, has led the Minister of the Interior formally to declare the rumour false.

The King of Greece has acknowledged the Empire.

It is said that the Emperor of Russia, the Emperor of Austria, and the King of Prussia will recognise and acknowledge the Emperor of France on the 4th inst

MUSIC.

MUSICAL EVENTS.

Spectacle and Pantomime reign so triumphantly at Christmas that musical performances by the various Societies are suspended, and concert speculators only are heard of in the provinces. After the annual meeting of the united Harmonic Societies, it is expected Mozart's "Requiem" will be performed, with Mendelssohn's "Lobgesang," a programme of unusual attraction. The "Requiem" will be conducted by Costa, for the first time, and a great treat may therefore be expected.—The Harmonic Union will give their first secular concert at Exeter-hall on the 30th inst., under Benedict's direction, the scheme will include Beethoven's "Ruins of Athens," and Mendelssohn's "Walpurgis Night;" a new overture, by Mr. Henry Leslie; and one of Sterndale Bennett's beautiful pianoforte concertos, to be executed by Miss Arabella Goddard The principal parts have been fortunately secured—the services of Madame Florentini; as also those of Lockey and Weiss, and Miss Huddart, a contralto of great promise, a pupil of Signor Negri, will make her appearance on this interesting occasion. Mr. Alberti, who has opened the Strand Theatre with an operatic company, including the names of Miss Rebecca Isaacs, Miss Rose Prahan, Mr. G. Tedder, Mr. Manley, Mr. Corri, &c.—will give his annual monster concert at Exeter-hall, on the 24th inst.—Mr. Benedict has engaged Madame Pleyel, the celebrated *pianiste*, and Madame Florentini, of Her Majesty's Theatre, for a tour in the provinces, which, we hear, will commence on Monday next.—The Duke of Northumberland has followed the example of the Speaker of the House of Commons, by engaging the English Glee and Madrigal Union at parties: Miss Eliza Birch, Messrs. Francis, Land, and F. Bodda were the singers. Mr. Francis created a marked sensation in the ballad "Black-eyed Susan."—Mr. Genge, the tenor, gave his annual concert and ball at the London Tavern, on Thursday.—Mr. Sims Reeves sang at a concert at the Beaumont Institution, Mile-end, on Tuesday night. Madame Florentini is engaged to sing at the same place on the 24th inst.—Mr. Hall's Musical Winter Evenings will commence next month.—The third of the Whittington Club Concerts took place on Thursday: the vocalists were Mrs. A. Newton, Miss Kate Hickmott, Mr. E. Jacobs, Mark, A. Caveno, Messrs. Mattocks, G. A. Cooper; and the instrumentalists, Herr Kreutzer (violin), and Herr Lutgen (violoncello).

FOREIGN MUSICAL NEWS.

The indefatigable Auber, and the eternal Scribe, have just produced another three-act opera, entitled *Marco Spada*, at the Théâtre Impérial de l'Opéra Comique, in Paris. The libretto strongly resembles the plot of the popular melodrama, "The Brigand," rendered famous by the powerful acting of James Wallack. *Marco Spada* is the chief of a band of robbers in the Papal States, who visits in disguise the palaces of the nobles, and, when mortally wounded by the soldiers of the Pope, abandons his claim to the paternity of his daughter, in order that she may not be prevented from marrying the nephew of the Governor of Rome. *Marco Spada*, in expiring, gives out that *Angela* is the daughter of a Duke, whose family he had slain. This story has been worked up in Scribe's most clever and ingenious style, and Auber, on his part, has happily reproduced the charming images of his former operas in a very piquant manner. The opera has been, in fact, a great success, but, perhaps, its run will be in no small degree influenced by the recent début *élève* in French comic opera of Mdlle. Caroline Duprez, the daughter of the famed tenor of that name. Mdlle Duprez, who sang first in Paris at the Théâtre Italien, and afterwards in London, at Her Majesty's Theatre, has quite taken the Parisian amateurs by storm. In a brilliant air, in which *Angela* avows her love in four languages—Russian, French, Italian, and English—Mdlle Duprez electrifies her hearers by a series of the most intricate passages of vocalisation. But Stoltz, the basso, plays and sings *Marco Spada* with much skill; and MM. Couderc, Baulo, Bussine, and Carvallo being included in the cast, the opera is altogether well executed.—A new ballet, called "Orfa," the music by Adolphe Adam, has been produced at the Grand Opera in Paris. Amongst the musical celebrities in the French capital are now are Sivori and Ernst, violinists, the violoncellist Servais, and Mdlle. Krinitz, the *pianiste*: Herr Oberthür and Miss Kennedy, the harpists; M. Vivier, the horn-player, &c

DISCOVERY OF MARBLE STATUES IN WINDSOR FOREST.

SEVERAL marble statues of considerable interest and value have recently been discovered in a secluded spot in Windsor Forest, under the following circumstances:—It appears that some little time back, a woodman or game-keeper, employed about the park, made application in the proper quarter for permission to dig up and remove a statue, which he had discovered partly buried in the earth in one of the covers, for the purpose of placing it in his garden as an ornament. The request was granted, and, by means of horses and chains, a colossal group of three figures, representing Venus protecting a nymph from a Satyr, was dragged forth. Further researches led to the discovery of seven other pieces of sculpture, all of marble, buried in the same spot. When the facts of the case came to the knowledge of her Majesty and Prince Albert, they manifested the greatest interest in the matter, and immediately sent for Mr. Phillips, of Cockspur-street, to examine and inspect the newly-brought to light, and to report in regard to their restoration; and four of the principal subjects have since been removed to the studio of that gentleman. What is a most remarkable feature of the case is, that, with the exception of one object—which is the torso of a Greek statue, in Parian marble—all these works are from the hand of one master, namely, Pietro Francavella, and are of different periods between the years 1570 and 1600. How or when they were brought into this country, and when (if ever) they formed part of the Royal collection, or when they were consigned to the obscure tomb from which they have just been rescued, are all matters of conjecture, upon which at present we have no evidence to guide us. We intend next week to give Engravings of some of these objects, when we shall also enter upon a more detailed account of them, and their probable history.

SOIRÉE OF PHOTOGRAPHERS, IN THE GREAT ROOM OF THE SOCIETY OF ARTS.

termined all the improvements connected with lenses, and all the diagrammatical phenomena of the photographic camera.

In England there has not hitherto existed any medium of constant communication between the experimentalist and the public. We hope to render the pages of the ILLUSTRATED LONDON NEWS the source to which all who are interested in photography will look for information, and find it.

It is our intention, in an early Number, to give a careful resumé of the advances which have been made in photography during 1851, and then to proceed regularly with our record of each improvement. We shall be pleased to receive suggestions from photographic artists; and to the queries of photographic amateurs we will endeavour to furnish prompt and intelligible replies by which they may be guided in their progress. Thus, it is our purpose to render the Journal (which has not unfrequently been aided in its illustrative details by the art of photography) the popular exponential medium of all that relates to actinochemistry in its widest applications—whether employed to paint the portrait of the living or to copy the statues of the dead—to impress the landscape with its variations of light and shade, the solemn temple, or the gorgeous palace—to record the pathway of a star—depict the surface of the moon—indicate the deviations of a magnet—mark the changes in terrestrial temperature or register our atmospheric pressure—or, by microscopic aid, to preserve all the details of minute creation, and thus—like researches which promise the realisation of the hope that the colours of external objects may be impressed in the camera-obscura of the photographic artist.

EXAMINATION OF THE STUDENTS OF THE CHELTENHAM TRAINING COLLEGE, IN THE MUSIC-HALL OF THE ROYAL OLD WELLS.—(SEE PRECEDING PAGE.)

BURNING OF "THE CITY OF PITTSBURG," AMERICAN MERCHANT STEAMER.

DESTRUCTION BY FIRE OF THE STEAMSHIP "CITY OF PITTSBURG."

WE have been favoured by a Correspondent at Valparaiso, with the accompanying Sketch of the burning of the magnificent steamer *City of Pittsburg*, of the New York and San Francisco steamship line, on her voyage from the Atlantic States to California. Our Correspondent writes thus:—

H M S *Portland*, Oct 24, 1852. Valparaiso Bay

AT 3 A.M., the officer of the watch heard a bell on board the American merchant steamer *City of Pittsburg*, which vessel arrived here on the night of the 22nd, from Talcahuano, a port in the Bay of Conception, where she had called to fill up with coals; but, knowing her steam had been up all the preceding day, he supposed she was going to sea. About ten minutes afterwards, flames and dense columns of smoke burst out from the fore-hatchway. Turned the hands up, and sent all boats, with Head's portable pump, to her assistance, but found it was no use attempting to save the ship, the fire being occasioned by spontaneous combustion in the coals, of which she had 1240 tons on board. Got all the crew and passengers out of the ship (several of the latter, women and children), with what little property they could save, by 5.30 A.M. The Captain left her in a ropes-end from the stern, at which time she was burning fore and aft. The vessel was scuttled A.M., with a gun to fire at her water line, to hurry the sinking of the unfortunate vessel. During the morning, we collected all the crew and passengers on board, ten of former and six of the latter many of whom were completely destitute. The *City of Pittsburg* was a fine steamer of 1276 tons, commanded by Capt Forster. This was her second voyage from Philadelphia to San Francisco, she went round Cape Horn, having left Panama on the 1st P.M. when she went down stern foremost, having her bows only to steam 1 foot 12 feet of the keel in 24 fathom water. The Commander in Chief has received a letter of thanks from the American Consul and consignees on shore, for the assistance rendered by English squadrons' boats (*Virago* and *Portland*).—I am, &c.,

HENRY HAND

The *Valparaiso Reporter* states the vessel and cargo to have been insured for 279,000 dollars; her value being considered at 300,000. Speaking of the sad catastrophe, the *Reporter* states the subscription raised for the passengers on board the ill-fated *City of Pittsburg* to amount to nearly 4000 dollars, raised among foreigners and Chilenos; adding, "and we have no doubt that in our Venice of the Pacific, so well known for its benevolence, further steps will be taken by the inhabitants, aided by the American Consul, Mr. Duer, to procure a free passage for them."

WRECK OF THE "SUCCESSOR" IN THE MADRAS ROADS.

THIS year, says the *Madras Spectator*, the monsoon set in as hitherto, with rough and unsettled weather, and a great deal of rain, but a week earlier than usual. On the morning of October 8th, there was little wind; but it freshened up rapidly in the forenoon, and at two P.M. it was blowing very hard, with a tremendous surf on. At noon, two Dhonies swamped, their crews having previously jumped overboard, and aided by the Catamaran men, got safe on shore; two other Dhonies were soon afterwards driven on shore; and three smaller ones drove and were dashed to pieces. Crews all saved. At two P.M. the weather more threatening, blowing in severe gusts with heavy rain and sea increasing, when the master-attendant made signal "weather is suspicious, prepare to slip and stand to sea." From ten A.M. until ten P.M. it was blowing hard in occasional severe gusts, with frequent rain, the wind veering from north to north-east, a heavy ground swell and a very high surf; current from the northward at the rate of three miles. Some time after, the signal for the ships to put to sea was made, several of them parted from their anchors, but they quickly got sail made and got clear out. The H. C. steamer *Hugh Lindsay* also parted her cable, and stood out to sea, but returned to

WRECK OF THE BARQUE "SUCCESSOR," IN THE MADRAS ROADS.

her anchorage next day. Among the ships which put to sea, two were lost; viz. the schooner *Struggle*, which went ashore through the night at Covelong, about twelve miles to the southward; and the clipper *Poppy*, which was wrecked off the Ice-house: crew all saved but the gunner. This vessel was laden with stores, bullocks, and sheep, for the army in Burmah.

The Correspondent who has obligingly forwarded the accompanying Sketch, thus describes the sad scene:—"*The Successor* had on board the horses of the officers of the Madras army now in Burmah, one only of which was saved, by swimming ashore through the surf: all the others were drowned in the hold of the vessel. The *Successor*, like the others, had prepared to put to sea; but one of her cables gave way, and she dragged on the holding anchor, every swell bringing her some fifteen or twenty yards nearer to the outer surf. A strong gust of wind with heavy rain now came on; and when the rain had so moderated as to enable the spectators to view the scene, the vessel was seen rolling in the surf; she had then on board a crew of 13 Europeans, 185 Malsties and Drivers, and 46 hired Syrangs and Lascars; making a total of 244 persons. She struck violently on her stern: her cable now parted; the ensuing swell brought her bow round in towards the shore, which she neared within two hundred yards, and then struck in the sand, the sea making a regular breach over her. This happened immediately under the Lighthouse of Madras (which appears in our Sketch) The whole line of road was covered with carriages. The officers of her Majesty's 20th Regiment, with a number of their men, were on the spot Captain Little, with a strong party of the Artillery, and the Master-Attendant, and with a numerous body of volunteers, were directing every effort to save the lives of those on board. Our Sketch is taken at the moment that Captain Little fired a rocket, and threw a rope over the vessel: he actually succeeded in throwing four life-lines across her, but the people on board appeared not to know their use. They were all grouped together under the poop, their screams distinctly heard from the shore; a boat, accompanied by catamarans, is seen approaching the vessel, which it failed in reaching; four Europeans and thirty natives jumped overboard, and by the daring assistance from the shore were saved. Night came on in all its darkness; three large fires were made on the beach, and periodical blue lights were burnt through the night, which had the effect of cheering the sufferers on the wreck, who testified their feeling by hearty cheers. As day dawned, boats and catamarans succeeded in reaching the wreck; and in the whole eight Europeans, including the master, Captain Henderson, and 180 natives, were saved.

METROPOLITAN NEWS.

OPENING OF THE MUSEUM OF ORNAMENTAL ART.—The very beautiful and costly Museum of Ancient and Modern Art-Manufactures and Vernon Gallery, at Marlborough House, Pall-Mall, will be open (free) daily, from ten to four, to January 6. The splendid collection of ornamental and decorative art, and 45 pieces of rare and magnificent porcelain and portraits in enamel, lent by the Queen and Prince Albert, also a specimen of Paisley ware, are in the upstairs rooms.

SOCIETY OF THE FRIENDS OF ITALY.—The second evening meeting for the season of the members of this society was held on Wednesday, at the Music-hall, Store-street. Dr. A. Brady presided, and there were present M. Mazzini, and several other members of the council. Mr. Douglas Jerrold was prevented by indisposition from attending. M. Mazzini did not address the meeting, being obliged by illness to remain in the middle of the proceedings. Prior to leaving the room, however, he wrote a note to the chairman, which was afterwards read, in which he stated that since the last meeting of the society five Italian patriots had been shot at Mantua, and a large number had been imprisoned for having had Bibles found in their houses.

CITY RAILWAY TERMINUS.—A meeting of the promoters of this scheme was held on Wednesday. From the report read, it appears that during the stipulated period for receiving applications for shares, only 10,000 out of 20,000 had been taken and paid up. Under these circumstances it was proposed to apply to some capitalist who would sign the deed and pay the sum required to meet Parliament, but any dissentient shareholder could receive back, without any deduction, the amount of his deposit. Baron Rothschild and Sir J. Duke expressed their willingness to abide by the decision of the meeting, which, after some discussion, passed a resolution to the effect that they would leave the arrangements in the hands of the directors to carry out the suggestions contained in the report

MERCHANT SEAMEN'S ORPHAN ASYLUM.—The annual examination of the children of this institution took place on Tuesday, and passed off with credit to the children and teachers.

COMMERCIAL TRAVELLERS' ORPHAN SCHOOL.—At the anniversary dinner of this institution, which took place on Monday the Lord Mayor in the chair—Mr. Moon, the treasurer, stated, the society had then a sum of £10,600 invested in Government securities towards the erection of the new schools in the neighbourhood of Harrow; and the committee entertained the hope of being able by the next anniversary dinner, in the ensuing spring. The receipts of the society for the past year had amounted to £4600, and the expenditure to £3500. Seventy-three boys and fifty girls were at present maintained and educated by the society.

CHRISTMAS FESTIVITIES.—The charities of the rich were successful in providing good dinners for the destitute last Saturday. Mr. Cochrane's Soup Kitchen and Hospice, in Leicester-square, was the means of providing some 10,000 unfortunates with a plentiful dinner, 2000 of whom dined in a marquee erected in the yard. In aid of this appropriate act Lord Ward sent a cheque for £100, the Duke of Cambridge an ox, Sir J. Cathcart a sheep, the Earl of Dartrey a sheep, and Sir J. Shelley, M.P. for Westminster, a sheep. The City Hospice and Soup Kitchen accommodated 1200 persons with plum-pudding and roast beef and porter: 4800, in addition, were provided with dinners at home. In Bethlehem Lunatic Hospital, containing 318 patients, in Hanwell, having 803; and in Colney-hatch, having 1122, the inmates were regaled with roast beef, plum-pudding, mince-pies, and beer. As regards the prisons, no alteration took place in the dietary at the House of Correction, Coldbath-fields, or at the House of Detention, Clerkenwell; but, according to ancient custom, the Lord Mayor, through Mr. Cope, the Governor of Newgate, gave to each poor prisoner confined in Newgate, Whitecross street, and Holloway New Prison, one pound of roast beef, one pound of potatoes, and one pint of porter. In the Queen's Bench considerable charities were distributed in food and money, exclusive of 2s. or 4s. to each prisoner and 72 3d. dinners given by the Drapers' Company. Miss Burdett Coutts also provided a Christmas dinner for 230 of the Westminster poor.

BOXING-DAY IN LONDON.—The various free exhibitions were all well attended on Monday. At the British Museum, from the hour of opening the doors (nine o'clock), a continuous stream of visitors poured into the building; and at half-past three, when the gates were shut, 73,259 persons had entered the building. At the National Gallery the total number of visitors was 20,710, and the greatest order and decorum was observed. The Vernon Gallery, at Marlborough House, Pall Mall; and the Museum of Ornamental and Practical Art, had upwards of 7000 visitors.

PHOTOGRAPHIC SOCIETY.—We understand that measures have been taken for the immediate formation of a society, to be called the Photographic Society of London; the first general meeting of which is to be held the third Thursday in January, at the Rooms of the Society of Arts

CANADA COMPANY.—On Thursday, the annual meeting of this company was held at the offices, St. Helen's-place, Bishopsgate. Charles Franks, Esq., in the chair, when a report was presented, showing a balance in the year in favour of the company of about £10,000, out of which a dividend was declared at the rate of 6 per cent, per annum.

THE CUSTOM-HOUSE.—The long-room of the Custom-house has recently been entirely renovated. This fine apartment, with its lofty roof and noble proportions, now shows to the greatest advantage.

FIRES IN LONDON.—The report of the London Brigade shows, that from the 1st of January, 1852, to last Thursday, upwards of 1000 fires had occurred in and near the metropolis; the loss of property is roughly estimated at above £2,000,000, and the less of lives is stated to be very great.

BIRTHS AND DEATHS.—Births registered in the week, ending Saturday, December 25—males, 708; females, 643: total, 1351, ending during the same period—males, 445; females, 426: total, 871. The above return includes the whole of the metropolitan districts.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean height of the barometer in the week was 29.746 in. The mean temperature of the week was 46·6 deg, which is 7·8 deg. above the average of the same week in ten years. The mean daily temperature was above the average on every day of the week. It was highest on Monday, when it rose to 51·4 deg., which is 11·8 deg. above the average, and lowest on Thursday, when it fell to 39·8 deg., which is 1·1 deg. above the average. It rose on Friday and Saturday to about 49 deg., or 11 deg. above the average. On Thursday the wind was E.S.E.; in the rest of the week generally in the south-west. The mean difference between the dew point temperature and air temperature was 6·1 deg.

There are at present under police inspection in London upwards of 2300 persons keeping common lodging-houses, accommodating nearly 80,000 nightly lodgers.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently been made:—*Rectories*: The Rev. R. D. Duffield, to Calthorpe, Lincolnshire; the Rev. P. P. Gilbert, to High Haldea, Kent; the Rev. J. Miner, to Elton, Stockton-on-Tees; the Rev. A. Pritchard, to Ashley, Wilts; the Rev. H. J. A. De Saulx, to Fringford, Oxfordshire; the Rev. T. P. Sproule, to Seaidwell, Northamptonshire; the Rev. R. H. Taylor, to Halwell, Devon; the Rev. F. H. Barber, to Sedgefield, near Evesham, Worcester. *Vicarages*: The Rev. S. Gernon, to Gussage All Saints's, Dorset; the Rev. T. E. B. W. B. Legh, to Newbold-on-Avon, Warwickshire; the Rev. W. Marshall, M.A., to Elton, Somersetshire; the Ven. C. J. Smith, M.A., to Erith, Kent; the Rev. G. E. Adams, to East Budleigh, Devon.

A parliamentary paper which has just been issued contains several abstracts from the latest returns made by the Archbishops and Bishops, in pursuance of 1 and 2 Vict. c. 106, sec. 29. From these it appears that the total number of benefices in England and Wales was 11,723 in 1830, and upon 8214 of these there was a glebe-house. It also appears that 6129 clergymen were resident in the respective parsonage-houses, 564 in the houses appointed by the Bishop in his license, and 1281 within the limits of the benefice, there being no parsonage-house; making the total number resident 8077. The total number ascertained from residence was 1291; but of these 439 p rformed the duties of their parishes. The principal grounds of exemption are residence in other benefices, official chaplainces, and offices and masterships in the universities and public schools. The number exempted by license, on the ground of infirmity and other causes, was 674, of whom 176 were doing duty in their parishes. Number non-resident without license or exemption, 917; of whom 622 were doing the duties in their parishes. The number of sequestrations was 51: and from 327 benefices no returns have been made.

A petition from the University of Glasgow, signed by the Lord Rector and the Principal, has been prepared for presentation to her Majesty, praying for the removal of the col ege building from the present to a more favourable site.

DAGUERREOTYPE PORTRAIT OF THE DUKE OF WELLINGTON

(To the Editor of the ILLUSTRATED LONDON NEWS*)*

Sir,—My attention has recently been called to your critique on the portraits of the late Duke of Wellington, in your Journal, some weeks back, when your remarks on the Engravings from Claudet's Daguerreotype Portraits not being correct, I took you will, as an honourable man, to write in your Journal the true version relative to that portrait of the illustrious Duke. It was on the 1st of May, 1844, and not 1848, when his Grace sat for *two* Daguerreotype Portraits, one of which is only engraved at present, and has the hand introduced. I a so deem it necessary to state that it was the late Colonel Gurwood who introduced me to the Hon. Colonel Arbuthnot, at Apsley-house, when I had the honour to submit the engraved portrait for the late Duke's inspection, when his Grace remarked, "Well Watson it is beautifully engraved." I may also state his Grace has placed his autograph on several impressions.

I am, sir, your obedient servant, J. WATSON

[We have at the above note at the request of the writer, but, at the same time we must observe, that we had the facts stated in the article referred to upon the very best authority. It is not, however, a matter of any importance one way or the other.]

THE LATE FATAL ACCIDENT AT HARROW.—The adjourned inquest on the body of John Bartholomew, the guard, killed on the 9th of the 22nd, when an engine and both land rate will be decided, was held into by a goods-train, concluded on Wednesday. The jury returned a verdict of "Accidental death, caused by a fracture in the tire of the leading wheel of engine 289 causing the fracture to be thrown off by the iron of the tire not being properly welded; and the jury recommend that in future greater care should be used in testing the tires of railway wheels; and that the Messrs. Sharp—of Birmingham, the makers of the engine—do provide for the family of the deceased John Bartholomew."

MELANCHOLY ACCIDENT.—The following is an extract of a letter dated Lisbon, Dec. 20, received via France:—" Mr. Heald (Lord Montes' husband) one of the members of the Lisbon Yacht Club, having in his company a beautiful young lady. The yacht foundered in sight of her Majesty's steamer *Impérieuse*, which instantly manned a boat with fourteen men to rescue them; but only were they unsuccessful, but the fourteen hands were also drowned.—*Times*

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that a fair average money-business has been transacted in the national securities during the week, the market exhibits many signs of weakness, and prices have not been supported. The actual fall, however, in them, has not exceeded one quarter per cent. The market value of Consols is by many parties considered high for investment; but, if reference be made to former years, it will be found that we have had a higher range in the quotations than at present. There has been more doing in the Unfunded Stock and Debentures on which has recently advanced.

The intelligence just at hand from Australia has tended to keep alive the excitement in reference to the future, and to support the prices of the shares of the numerous banking and other companies lately started. In the shares of the Australian Agricultural Company, large speculative investments have been effected; nevertheless, the quotations have rapidly fluctuated. Whether the security in question is safe at the present high figures must entirely depend upon the actual amount of gold on the company's lands, and whether it can be profitably worked. The company has wisely determined to form a new concern of their gold lands, and make a gift of ten five-pound shares for every present share, or will pay a bonus of £20 per share to those who do not wish to be interested in the new undertaking, entitled the "Peel River Land and Mineral Company." In addition to the free shares, there will be 20,000, for which £5 each must be paid, so as to give a working capital of £100,000

The arrivals of bullion have been principally confined to £210,000 in gold from Australia, and 200,000 dollars from New York. From the United States our advices are of a most favourable character, and, judging from the extensive and, we may add, increasing demand for British manufactured goods, it is tolerably clear, especially as there is a small profit upon the export of both gold and silver, that large supplies of the precious metals will continue to flow towards England. At Hamburg, as well as in Paris, gold is about 8s. per cent. dearer than in London; consequently, we must not anticipate any large imports from the continent. We may observe, that Russia is drawing largely upon our supplies of gold almost every steamer to Hamburg taking out from £20,000 to £100,000, to be forwarded to St. Petersburgh.

On Monday the Three per Cent Consols, ex. div for the opening, were done at 101 to 101¼; the Three per Cent Reduced, 101¾; the New Three-and-a-Quarter per Cents, 101¾; and the Bank Stock 224½. Long Annuities, 6⅝; and Exchequer Bills 60s to 62s. prem. The quotations were a shade lower on the following days, with very little inclination on the part of the jobber to operate extensively. On Thursday the Three per Cents Reduced were officially marked 101¾; the New Three-and-a-Quarter per Cents, 101¾; Bank Stock, 224½; Long Annuities, 6⅝; Bank Stock, 224½ to 223½. India Bonds, under £1000, 63s. and Exchequer Bills, 62s. to 72s. prem.

In the manufacturing districts, large orders are in course of execution both for home and foreign buyers The artisans are, therefore, fully employed. In the metropolis, trade is in a healthy state, and the rates for money continue very low.

The Foreign Market has been less active than for some weeks past. News having come to hand from Lisbon, to the effect that, after the 1st of January, 1853, the interest upon the whole of the foreign debt will be reduced to three per cent Portuguese Stock has declined to some extent It must be understood, however, that for some time a diminution of 3 per cent has been made in the interest due to Government upon all sums paid to the bondholders; consequently, should no further deductions be attempted, the actual rate of interest will be the same as it is at present Nothing having as yet been done by the Ottoman Government in reference to paying off the holders of Scrip, either here or in Paris, the premium on that security has fallen to ⅝. Spanish Bonds have ruled heavy. All other foreign securities have remained very little attention. On Tuesday, Equador Bonds were 2¾. Grenada Deferred, 12½ to 13; Peruvian Six per Cents, 104; Ditto, Three, Deferred, 64; Ditto, for the Account, 65½; Portuguese, Small, 38; Ditto, for the Account, 40; Spanish Three per Cents, 51; Ditto, New, Deferred, 24; Venezuela Three-and-a-Half per Cents, 18; Ditto, Deferred, 9. Bargains have taken place in Austrian Five per Cent Bonds, at 89; Belgian Four-and-a-Half per Cents, 98¾; Mexican Three per Cents, 22¾; Russian Five per Cents, 104¾; Ditto, Four-and-a-Half per Cents, 104; Sardinian Five per Cents, 95.

Shares of the Australian Agricultural Company have been done at from 77 to 78½. Australian Banks, 40 to 42½. Peel River Land and Mineral Company, 2 to 2½. General Screw Steam Shipping Company, 2 to 2½. Australian and Oriental Steam, 8½; ditto (£20 paid), 8½. Royal Mail Steam, 15½. South American Stock, 1 to 1½. Van Diemen's Land Bank, 2 to 2½. Bank of Australia, 72 to 74; Bank of New South Wales, 31 to 32. Chartered Bank, 2¾ to 3 prem.; English, Scottish, and Australian, 1¾ to 2 prem.; Bank of India, China, and Australia, 1¾ to 2 prem.; Port Phillip, 2¼ prem.; Peel River Land and Mineral, 1½ to 1¾ prem.; Oriental Steam Navigation, 1½ to 1¾ prem.

A tolerably large business has been doing in Railway Shares. In the general quotations we have no material change to notice. The traffic receipts upon all the leading lines is considered good. The total "calls" for January are £1,024,260. The proportion called by foreign companies is £979,260. The following are the official closing money prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Bristol and Exeter, 107; Caledonian, 67; Chester and Holyhead, 23½; Cork, Blackrock and Passage, 18; Dublin and Belfast Junction, 4⅛; Eastern Counties, 13⅝; Eastern Union, 10¾; Edinburgh, Perth, and Dundee, 53½; Great Northern, 82; Great Western, 93¾; Lancashire and Yorkshire, 82½; Leeds Northern, 17⅝; London and Blackwall 9½; London and Brighton, 107½; London and North-Western, 126; South-Western, 91½; Manchester, Sheffield, and Lincolnshire, 31; Midland, 89½; Midland, Great Western (Ireland), 51; Norfolk, 84½; North British, 40⅝; North Staffordshire, 13⅛; Scottish Central, 96; South-Eastern, 84½; Waterford and Kilkenny, 4⅜; York, Newcastle, and Berwick, 72½; York and North Midland, 69½.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 147½; Hull and Selby, 113; Manchester, Buxton, and Matlock, —.

PREFERENCE SHARES.—Eastern Counties, 10¾; Lancashire and Yorkshire six per cent, 135; Manchester, Sheffield, and Lincolnshire, New (£10), 11, ditto (£5), 5½; Consolidated Bristol and Birmingham, 120½; North British, 5½; Oxford, Worcester, and Wolverham ton, 11½; York, Newcastle and Berwick, 103

FOREIGN.—Antwerp and Rotterdam, 2⅝; Great Indian Peninsula, 7½; Luxembourg, 5½; Northern of France, 9; Paris and Orleans, 39½; Sambre and Meuse, 10½; Upper India Sections, 2½ prem ex new

MINING SHARES have met a steady market. On Thursday, Aztec Fifty were 2½; Anglo-Californian, 1¼; Australian, 1⅝; Lancashire and Yorkshire Freehold, 1½; British Iron, 1½; Cobre Copper, 40½; Nouveau Monde, 2½; Port Phillip, 2½; Oxford, Worcester, and Wolverham ton, 11½; York, Newcastle and Berwick, 103

FRIDAY EVENING.—The Market for Consols has been very flat to-day, and prices are a shade lower. The Three per Cents Reduced left off to-day at 101¾ per Cents Reduced, 101¾; New Three-and-a-Quarter per Cents, 101¾; Bank Stock, 223½; India Bonds, 63s.; and Exchequer Bills, 63s. to 72s premium. Foreign Bonds have been tame and heavy, and Spanish has fallen to par. In Railway Shares only a moderate business has been doing. French Shares are to a fair extent

THE MARKETS.

CORN EXCHANGE (Friday).—The quantity of English wheat received up to our market this week coastwise has been very moderate, viz., 1400 quarters, mostly from Essex and Kent The general quality of the supply was inferior By the l carriage a few rams came fresh to hand, but the greater part of samples of both red and white were out of condition. The amount of business doing was far from extensive, but we have no change to notice in the quotations There was rather more inquiry for foreign delivery parcels from abroad 7760 quarters of wheat have come to hand, and we were somewhat better supplied with grinding samples of barley, but prices may be considered about the same as on Monday. Floating cargoes of wheat were held at very full prices. Fine malting barley was scarce, and quite as dear as last week Grinding and distilling sorts commanded very little attention. We had a moderate delivery for malt, at late figures The oat trade was steady, and late rates were well supported. Beans, peas, and flour were held at full prices.

English Wheat—Essex and Kent, 1 ... 2 ... 40s to 44s; Scotch and Irish, 38s to 40s; foreign, 36s to 38s.

Barley—Grinding, 22s to 24s; distilling, 26s to 28s; Norfolk and Suffolk malting, 30s to 32s; Chevalier, 36s to 38s; grinding barley, 22s to 24s; Lincoln and Norfolk malt, 52s to 54s; Ware, 56s to 58s.

Oats—Potato, 20s to 22s; Scotch and Irish, 19s to 21s; feed, new, 18s to 20s; Dutch, 18s to 20s; Essex, 19s to 21s; Yorkshire, 19s to 21s; Lincoln and Norfolk, 19s to 21s; Kingston and Ware, 21s to 23s; Poland, 19s to 21s; Brandenburgh, 19s to 21s.

Bread—The prices of wheaten bread in the metropolis are from 7d. to 7½d. per 4lb loaf.

Flour—Town-made, 40s to 42s per sack; Essex and Suffolk, 38s to 40s; Hertfordshire, 38s to 40s; Norfolk and Suffolk, 36s to 38s; Yorkshire, 36s to 38s; Devonshire and Somersetshire, 36s to 38s; Irish, 36s to 38s; Stockton and Yarm, 36s to 38s; Dantzic, 36s to 38s; American, 36s to 38s per barrel.

Seed Market—Linseed has been in good request at full prices. Clover steady, and quite as dear. In other articles very little doing.

Liverpool Market—Wheat, 4s. 3d.; barley, 2s. 8d.; oats, 1s. 8d.; beans, 3s.; peas, 3s. 2d.; flour, 20s. 6d.; Indian corn, 2s. 6d.

Bristol Average—Wheat, 42s. 3d.; barley, 28s. 1d.; oats, 18s. 6d.; rye, 28s. 11d.; beans, 32s. 8d.; peas, 32s. 8d.; flour, 20s. 6d.

Cork Average—Wheat, 40s. 3d.; barley, 26s. 3d.; beans, 1s.; peas, 1s.

Potatoes—Supplies are large, and prices have an upward tendency. Regents, 60s to 70s per ton; Cork Reds, 80s to 90s. per cwt.

Provisions—Irish butter is in good request, and for most money Bacon is in fair demand, at full prices. Hams are dull at late rates. Lard firm, and in moderate request.

Coals—Hetton, 18s 6d; Lambton, 18s 6d; Stewart, 18s 6d; Wylam, 18s 6d; Hetton, 18s 6d; Haswell, 18s 6d; Kelloe, 18s 6d; Coxlodge, 18s 6d; Kelloe

AMUSEMENTS, &c.

Daily, at 3 and 8 o'clock. Admission, 1s., 2s., 3s. 6d., and 5s. Stalls, 7s. 6d. Children half-price to the Morning Performance.

THE GOLD FIELDS of AUSTRALIA, NOW OPEN, at the Polytechnic. Among the principal scenes are exhibited Diggings and Machinery—Gold Escort—Bush Life—Native Corroborees—Geelong—The Road to the Diggings—Mount Alexander—Melbourne—Sailing Boat Navigation—Sydney—Hill Creek Quay—Encampment of Gold Diggers by Moonlight. The descriptive Lecture is given by Mr. Pepper, in the Theatre every hour in the evening. Admission, 1s.; Reserved Seats, 2s.; Gallery, 6d. At Twelve, Three, and Seven o'clock, during the holidays.

HINDOSTAN.—The Grand Moving Panorama of HINDOSTAN, Painted by Messrs. Grieve, Roberts, and Stanfield, is NOW OPEN, at the EGYPTIAN HALL, Piccadilly, with the Additional Scenes of Delhi, Agra, Cawnpore, Lucknow, Allahabad, Benares, Dinapore, Patna, Monghyr, Rajmahal, Moorshedabad, Plassey, Calcutta, &c., &c., forming a complete Panorama of the Overland Route to the Dioramas of Hindostan." British Army Despatch.

CALDWELL'S SOIREES DANSANTES, at 8 o'clock, at 209, Regent-street, and at 99, Jermyn-street, St. James's. Open at noon, At Home, At 4 o'clock. Dean-street, Soho.

CHRISTMAS HOLIDAYS.—THE GARDENS of the ZOOLOGICAL SOCIETY, in the Regent's Park, OPEN DAILY (Sundays excepted) from 10 o'clock until Sunset. Admission, on payment of SIXPENCE each, EVERY DAY (except Sundays), and THURSDAY, January 6th, when admission is free.

THE GREAT METROPOLITAN EXHIBITION of POULTRY, PIGEONS, and RABBITS, will take place at the ROYAL GALLERY of PRACTICAL SCIENCE, BAKER-STREET, on the 11th, 12th, 13th, and 14th of JANUARY, 1853.

REEVES' WATER-COLOURS, in Cakes, or Moist in Pans. 113, Newgate, London.

GREAT SALE of FRENCH MERINOS, Cashmeres, and Barèges, and various FANCY DRESSES, All New Goods, and at least one-third their value. NB. For the convenience of ladies in the country, patterns will be forwarded. Address, DEECH and BERRALL, the BEE-HIVE, 62 and 64, EDGWARE-road, W.

EXTRAORDINARY RICH SILKS, COMPTON HOUSE, Soho. SEWELL and Co. have the honour of submitting to Ladies an immense stock of Bayadere Silk Velvet Robes, rich Striped Silks, All these goods have been 2l. to 3l. Silks and Evening Dresses (patterns free), Rich Brocatelle Silks, Velvets, and French Merinos, Lastan true as last year received from Paris several cases of extremely fancy Irish Silks, suitable for Dinner, Wedding, and Walking Dresses, at greatly Reduced Prices, viz.—

Full Fashionable Brocaded Robes, at 5 guineas, usual price 8 guineas.
15 ditto, Embroidered (Coloured Bouquets), 8l. 8s., usual price, worth 10 guineas.
250 Rich Brocaded Satins and Checks, from 45s. to 70s. the dress.
120 the Richest Moiré Antiques, from 5l. to 8 guineas.
100 Parcels of French Glacé and Embroidered Silks, 3s. 9d. per yard.
10 ditto Rich Lyons Velvet (Black and Coloured), 3s. 9d. per yard, worth 5s.
30 ditto Very Fine French Merinos, at 9s. 11d. to yard, usual price 4s.
60 ditto Superfine ditto ... ... 6d. per yard, usual 4s.
Patterns sent to any part (post-free).
Address, W. W. SEWELL, 34, Ludgate-hill, London.

THE GREAT SHAWL EMPORIUM, 171, 172, 173, Regent-street (late J. Holmes and Co). Messrs. FARMER and EDGERS beg ... fully to invite the nobility, gentry, and ... their ... and magnificent STOCK of INDIA, CHINA, FRENCH, and PAISLEY SHAWLS from one to 150 guineas. The Chief Department, under the superintendence of an artiste of first-rate taste and talent, is ... exclusively for the production of ... Shawls, Scarfs, Dresses, &c., ... Shawls, Scarfs, Dresses, &c., ... Shawls, Scarfs, Dresses, &c.,

A WATER SKETCH,
BY PHIZ,
OF CHRISTMAS AND ITS FESTIVITIES.

THE rain has fallen, and so has the Derby Ministry, and it would seem as if the deluge was to be the joint consequence of both. This is sad, for it is not agreeable to begin the new year under a wet blanket. Such a garment is at no time particularly agreeable to wear; but, at this festive period, when every one is expected to dance, we are afraid it will strike a chill, and perhaps the rheumatism, into the movements of the fashionable world. The only parties of the season will be water-parties; the only figure danced, and that with the water up to our knees, will be *La Poot*. We shall require swimming-belts to enable us to go down to supper, and boats to carry us home. We shall have to sleep on cork-mattresses, so that, if the deluge does commit an aquatic burglary into our bed-rooms, we may rise with the inundation, and float for our lives up the chimney. But, however, there is one drop of comfort, which we can fish up, like a pearl, from the bottom of these deep waters, and that is, that the country will be perfectly safe from a French invasion—for, supposing Louis Napoleon did sail with the finest army that ever conquered on *terra-firma*, still, he would never be able to effect a landing as long as the whole of England was under water; for, though we have been in the patriotic habit for ages of calling Frenchmen "French Frogs," still it is well known they are not born with the same talent for swimming, nor with an equal facility of rising again to the surface after they have been some time down at the bottom. In this way no invading foot will be placed upon English soil; though it becomes an anxious question with many Englishmen when they are to see that same soil themselves. Time, finding not a single field where his agricultural scythe is likely to be called into requisition, has apparently thrown it aside, and is now figuring away, with a vigour worthy of Vauxhall, as a Turncock, in which character he has been turning the water on at a pretty rate—such as our water companies, who generally know how to "lay it on," would doubtlessly like to have the charging for. The country, in consequence, is nothing but a large hydropathic establishment; and we, the unwilling patients of this compulsory Cold-water Cure, are indulging in endless shower-baths and *douches* from every burning water-spout, or else taking involuntary *sits-baths*, on the top of lamp-posts, on floating haystacks. We believe it is the custom with many people to talk, at the beginning of a new year, of "turning over a new leaf;" but how will it be possible for them this year to carry this wise resolution into effect, when there is scarcely a tree visible, and every leaf has been carefully washed away long ago? We hope that Fortune will very quickly give a new turn to her Wheel, for really, as far as England is concerned, it has been lately very little better than a water-wheel, every stroke of which has been a stroke of luck to the surrounding country, by flooding it. We long to behold the face of Nature again, which has too long been hidden under a sheet of water—and to see how it looks after having been so repeatedly washed! We are afraid it will not shine any the brighter for its repeated ablutions. Some change, however, is rapidly necessary, or else England, from having been the highest nation, will be reduced to the lowest level of any in Europe, and we shall sink into an amphibious race; or, worse still, be driven to go to Holland, to witness the novelty of a bit of dry land.

As it is, we cannot help pitying those poor creatures who passed Christmas-day by their firesides in company with the rain; that is to say, if there could be any fireside or fire in a room into which the water was pouring by every possible aperture. Then again, if the fire was extinguished, how did they cook their dinner? and, another mystery, how was it served up? Did they all sit round the table with life-preservers about their waists? Did the waiters keep moving about on pattens or stilts? Were the cruets, and the lamps, and the different things fastened to the mahogany, as in the cabin of a ship, to prevent their being shaken from their proper places by the violence of the storm? Did the guests sit under umbrellas? Were the company all arrayed in suits of the strongest Macintosh to prevent their getting a greater soaking than is allowable even on Christmas-day. These are mysteries as deep as the Atlantic itself, and which we have as little inclination to fathom. Festivities, under these aqueous circumstances, must have been, we are afraid, as lively as passing Christmas-day with Undine, and the fishes, on the ground-floor of her marine abode; or as cheering as spending the joyful holiday at the bottom of the tank of the Polytechnic, with the bold diver in his diving-bell. It would have been useless setting the plum-pudding on fire with brandy or rum, for the pitiless flood would have extinguished the blue flames in a minute; and, as for flaming bowls of punch, or a round game of snap-dragon, they would have been as much put out as the persons making the attempt to light them. Dancing must have been equally out of the question, for it would have been as absurd as a party of bathing-women at Brighton or Ramsgate, dancing a quadrille amongst themselves at high water. Such aquatic entertainments may be admirably adapted for Tritons and Nereides, or for young ladies who sport in muslin dresses under the waves, in a Neptunian ballet, at the Opera-house; but for Englishmen, who prefer dry sofas and easy chairs to the best seat you could offer them in an oyster-bed, the change from dry to wet is not of such a nature as to endear the barometer to their Christmas recollections.

CHRISTMAS AND THE FLOODS.—DRAWN BY PHIZ.

The country has been under a sheet of water for some time; and we trust this sheet will now be rapidly withdrawn, for to be standing in a wet sheet at a period when every one is supposed to be enjoying himself, is a matter of penance which we hope England will never be subjected to at Christmas-time again.

THE STAUNTON CHESSMEN.

THE success of these popular Chessmen has been commensurate with their novelty and excellence, and it is scarcely too much to affirm that they have superseded all the patterns hitherto in use. That this would inevitably happen might have been inferred when they were first published to the Chess-playing world; for, while fashioned upon a new and artistic model, in which classicality and grace are combined, they are constructed, also, with a view to utility—which quality is evinced in the characteristic difference of the pieces, the breadth of the bases, and those diversities of proportion whereby the combinations of the game may be perused without doubt or obstruction. These advantages, which belong so exclusively to the Staunton pattern, were apparent at the first, and experience has but tested and corroborated them. The *carton-pierre* box to contain the set—of which the annexed Engraving is a representation—with its turreted corners and Saxon arches, happily intermingled with the insignia of the game, has been devised in a similar spirit of appropriateness, and gives a further interest and speciality to the "Staunton Chessmen," which, we may likewise add, as an example of ivory work, reflect considerable credit upon the manufacturers, Messrs. Jaques, of Hatton-garden, from whom they emanated.

CARTON PIERRE BOX FOR THE STAUNTON CHESSMEN.

MASONIC TESTIMONIAL.

THE presentation of an elegant Testimonial to Jonathan Gooding, Esq., by the Ancient, Free, and Accepted Masons of Suffolk, took place at a Provincial Grand Lodge, holden by special appointment, in the Assembly-room, at Ipswich, on Thursday, the 14th of October last. The gift, a very elegant Silver Inkstand, was presented by the R. W. Provincial Grand Master Sir E. S. Gooch, who addressed the brethren, and spoke in high terms of Brother Gooding's devoted zeal to revive the gentle influences of the Craft, during the period of his secretaryship, from which he had lately retired. Brother Gooding replied in an eloquent address; and, at the close of the proceedings of the Lodge, the brethren partook of a sumptuous banquet.

The Inkstand bears the following inscription:—

Presented to Brother Jonathan Gooding, Esq., on his retiring from the office of Provincial Grand Secretary for Suffolk, by his Masonic Brethren, in grateful testimony of his sterling worth and energetic zeal which he so satisfactorily exerted in his responsible office.—1852.

The Inkstand is most appropriately decorated with the various masonic emblems; and the centre is surmounted with a figure of Charity.

SILVER INKSTAND, PRESENTED TO BROTHER JONATHAN GOODING, ESQ., BY HIS MASONIC BRETHREN.

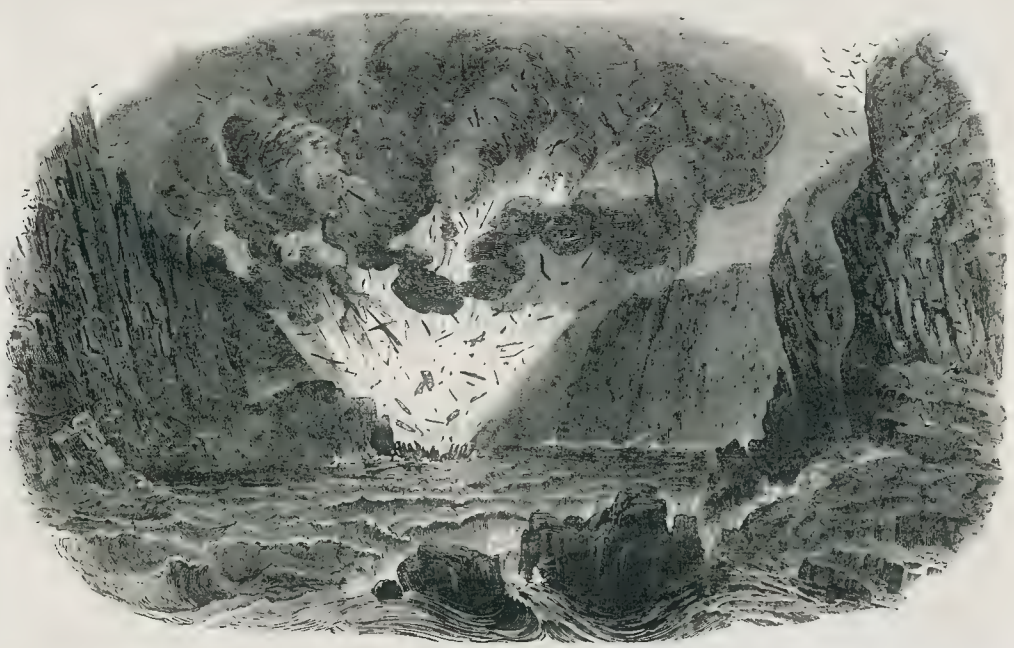
London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes in the County of Middlesex by WILLIAM LITTLE 198 Strand, aforesaid.—SATURDAY, JANUARY 1, 1853.

THE ILLUSTRATED LONDON NEWS

No. 602.— VOL. XXII.] FOR THE WEEK ENDING SATURDAY, JANUARY 8, 1853. [SIXPENCE.

"CITY ARABS" AND "HOME HEATHENS."

We have amongst us a peculiar race or class of people. They have a code of morals of their own—the very reverse of the code prevalent among Christians. They have their own organisation, their own ideas and habits, their own temptations and tribulations, their own joys and sorrows. They are the scandal of our civilisation, and the grief and shame of the wise and benevolent. Society is never allowed to forget them, for they make known their existence by the constant anxiety which they cause, the ceaseless depredations which they commit, and the daily enigma which they call upon us to solve—which enigma is, in one sentence, "What shall we do with them?" We cannot hang them; we cannot transport them; we cannot maintain them in prison; we cannot catch them. In our great cities they more especially abound. London is full of them; Manchester swarms with them; Liverpool is overrun with them. Preston, Bristol, Hull, Birmingham, Newcastle, Glasgow, Edinburgh, Dublin, Cork—every town and city in the empire that has a thriving trade or manufacture, or a large population—is encumbered by their multitude, and vexed by their wickedness and their degradation. They are mostly young—so young, sometimes, as scarcely to be deemed responsible for their actions. Their ages vary from six to seventeen; and, though society wages a constant war against them—though famine and disease—though neglect and despair—though expatriation and the hulks are continually thinning their ranks, their numbers never diminish; for there is a fresh and superabundant crop of them continually springing up. A witness recently examined before a parliamentary committee appointed to inquire into their numbers, and the mode of dealing with them, has given them the name of "City Arabs." Another witness has given them the almost equally appropriate designation of "Home Heathens." "The 'City Arab,'" says Mr. M. D. Hill, the philanthropic Recorder of Birmingham, "has, in truth, all the vices, and some of the virtues, of the savage: he is indolent, averse from any settled or steady employment; averse from restraint of any kind. On the other hand, he is patient of hunger and thirst, and cold; and as to dirt, he rather delights in it than otherwise—it is by no means an evil in his estimation; and he would be much rather permitted to roam about at large, even suffering at times great privations, than he would be at school, or at work, under the restraints which belong to civilised society." Their code is, in general, that he is the best boy or lad who can obtain subsistence, or satisfy the wants of life with the least labour;—by begging or by stealing;—or who shows the greatest dexterity in accomplishing his object, and the greatest wariness in escaping the penalties of justice; and, lastly, the greatest power of endurance and defiance when he comes under the lash of the law. If detected in a crime, and punished, these "Arabs" consider that their punishment is an acquittance as regards society, and that, as soon as they have undergone it, they have fulfilled the terms of a bargain, and are justified in re-commencing the same courses. When, in prison they often behave with the utmost propriety, as if in accordance with their own rude principle of the balance between them and the world's law. The abodes of such of these "City Arabs" as have any abodes at all, except dry arches, door-steps, or the hedges—are as miserable as can be imagined. They sleep in dirty, unwholesome, ill-drained tenements—in rooms too small for the separation of the sexes, and for the purposes of decency. As many as forty and fifty "Arabs" sometimes sleep in one room, boys and girls promiscuously. At fifteen or sixteen years of age the male "Arab" is mated—but not with a wife. They indulge in intoxicating liquors—are afflicted with unmentionable and degrading diseases—and are far more vicious in their conduct, and filthy in their persons and their language, than full-grown men and women of their own class. They seem to have a well-defined organisation among them, or something nearly akin to it. A certain class of "City Arabs" do nothing but steal provisions from shop doors, and sell them for a tenth of their value, or less, to the infamous keepers of the abominable lodging-houses which they frequent; a second class pick men's pockets, and never touch a woman's; a third devote themselves exclusively to picking the pockets of women, and refrain from meddling with those of men; while a fifth, again, do nothing but "draw the damper," *i.e.*, steal from shop tills. In London there are regular gangs, each of which is commanded by a leader or "captain." They are not over anxious to make recruits, unless they hear of a destitute boy more than usually clever and daring. In that case, they try to enlist him. There is often a rivalry betwixt one gang and another as to which has made the most money by its depredations, and which has the cleverest leader, or the expertest thieves. No proper or reliable census of their numbers can be taken; but, in the year 1850, it appears that no less than 7070 of them were committed for trial. Some suppose that the number of convictions does not amount to more than one in thirty of the number of criminals; others believe that one in sixty would be nearer the average. In the first case we should have an "Arab" population of 212,000; in the second, of 424,000. The expense to the public of watching, apprehending, convicting, and punishing the few that fall annually into the custody of the police is not to be easily estimated; though, if put down at the small sum of £10 per annum each, it would amount to a very considerable expenditure. But this expense, great or little as it may be, is a trifle compared with the amount of their depredations upon the public, as may be judged by the notoriety of the fact to all the trading classes, who know by painful and individual experience its extent in their own cases. Among the good qualities of these young "Arabs," in addition to their



PACIFIC EXPLOSION AT THE CAPE OF MAN.—(SEE NEXT PAGE.)

patient endurance, often amounting to heroism, some of the Parliamentary witnesses mentioned a sort of spirit of honour which prevents them from "splitting," or of giving information against the receivers of the goods they steal—receivers who most commonly give them but a miserable per centage of the value. They are not easily managed, either by kindness or by severity. "They are naturally suspicious," said Mr. M. D. Hill, "and have, generally, been so unused to kindness that they suspect interested motives in those who offer it." Their ignorance is extreme. Of 9774 male prisoners between the ages of seven and seventeen, confined in the prisons of England in the year 1850, only 225 could read and write. Of these 225, it is supposed that the larger proportion were utterly ignorant of all useful secular knowledge, available for their guidance in this world, and knew the Bible only as a class or spelling-book, holding it in distaste, and deriving no advantage from its teachings. On this point Captain W. J. Williams, the Government Inspector of Prisons for the Home District, gave valuable and interesting evidence. The manner in which they live, the plunder which they make, their deplorable ignorance, and the use they make of the little and desultory religious instruction which they may have received, under the name of education, either at Sunday-schools in infancy, or in prison in after life, will appear, from the following evidence given by one boy aged sixteen, who was examined in September, 1851, in the Middlesex House of Correction:—

I lived in Cate-street, Whitechapel. Always a heap of boys there. Should think a hundred. About forty slept in the same room with me; all thieves. I was there about a month, and paid 3d. a night. I have been thieving above eighteen months, and have only been caught twice. I have done about sixty robberies in the eighteen months. The most I ever got was 2l. 15s. 6d., from a woman's pocket, in Whitechapel. I have never been in want the whole time. I did lead a merry life; but, I used to say often to myself, when I was going to pick a pocket, "I may be caught this time and transported, but, I pray to God I may be lucky, and shall not.

It is quite evident that the country cannot go upon the same system with regard to these "City Arabs," as that which has hitherto been pursued. It is of no use to catch such "young savages," as one witness called them, and put them into prison for the purposes either of instruction or amendment. A prison education is of little or no value, and all experience shows that prison reformation is but skin deep. Besides, to give, or pretend to give education, to criminals, however young and interesting, however hapless and to be pitied, and to refuse it to equally destitute children, who have not qualified for the privilege by the commission of crime, is, to say the least of it, unjust and unwise. Many of the estimable individuals examined by the Parliamentary Committee, appeared to think that the evil could be met in some degree by the establishment of such reformatory institutions as the Rauehaus in Hamburg, the college of La Mettray in France, and the Red-hill Farm in England. We would not discourage the idea, or damp the benevolence of any one interested in so great a work; but we must express our firm conviction that the deeply-rooted evil requires not so much a present remedy as a future prevention. To grow criminals, and then to reform them, is but a clumsy and unsatisfactory process. Ignorance and bad example are the fruitful parents of the evil. Knowledge or education will not eradicate all crime and evil; but secular and religious instruction, wisely combined, and made free to the poorest of the poor, will do something towards their diminution. When the present noble Secretary for Foreign Affairs was Prime Minister of England, and introduced a bill for the enlargement of the franchise, he expressed a hope that "the Government of this country, in whose hands power is might be placed, would consider most seriously and earnestly the great question of the education of the people. . . . . He was convinced that if, after a measure of this kind, in another session of Parliament the Legislature should consider the means of establishing a really national system of education, it would confer one of the greatest blessings which could be conferred on this country, and one for which the beloved the people were almost prepared." Now that his Lordship is again in office, the country will expect that this great question will once more occupy his attention. It is one of those practical measures which have been too long delayed and impeded by the rivalry of factions, and by the bitter animosities created by another question now happily set at rest. Let us hope that the new Ministry will not lose sight of it, and that the children of England will speedily be as well cared for in this respect as the happier children of America. In that country education is a RIGHT. In this it is a favour conferred upon criminals; but withheld from the innocent destitute, unless private charity step in to do, partially and imperfectly, the duty which the State should do completely for all its children. Lord John Russell believes the country to be almost prepared for so great a work. A zealous effort on the part of the Ministry would do much to ripen public opinion, and make it quite prepared. Even to fail in such a cause would be an honour.

SHIPWRECK, TERRIFIC EXPLOSION, AND LOSS OF THIRTY-FIVE LIVES, AT THE CALF OF MAN.

WE have received from a Correspondent at Castletown, Isle of Man, the following details of this lamentable scene, dated Dec. 29:—

A fearful calamity has just occurred in the south of the Isle of Man, causing deep distress to very many families, and spreading gloom over the whole neighbourhood.

The violent gales, rising occasionally into hurricanes, blowing from the southward and westward from Friday night to Monday afternoon, have done great damage by sea and land. Many vessels have been seen, dismasted, and in distress, drifting down the Channel; and the Fishguards cast upon our shores indicate great losses at sea. A life boat bearing the name of the *British Queen* came on shore in Castletown Bay, on Monday morning.

At nine o'clock on the same day, the *Lily*, a vessel of [illegible] register, bound from Liverpool to Amlwch, on the coast of Anglesea, with a general cargo, consisting chiefly of bales of cloth, cottons, yarn, cotton, iron, and upwards of forty tons of gunpowder, having been driven from York in a crippled condition, was carried by the tide from the westward into the Sound of the Calf of Man, the breadth of which is about 500 yards; and, in endeavouring to pass between the Kitterland islet and the southern extremity of the Isle of Man, was swept round in the current, which here runs, at some periods of the tide, at the rate of nine knots per hour, and struck on the northern point of the Kitterland. With difficulty, nine of the crew got upon the islet: the master, his son, and three of the crew being carried away by the surf, and drowned in the attempt; two of the nine also being severely injured.

In the course of the afternoon the vessel was landed over to the care of Lloyd's agent at Port St. Mary, distant about two miles, and he subsequently took possession of her. He was assisted in the charge by the chief constable of Castletown and one of his subordinates. And by the constable of Port St. Mary and several others, who were stationed on the vessel, as well as on the Kitterland and the Main Island, to guard the wreck, and land the stores when the weather and tide should permit. It appears that during the night of Monday several shots were fired to deter people from venturing near, some parties having made attempts at plunder.

At 25 minutes to eight on Tuesday morning the inhabitants of the whole of the south of the Isle of Man were alarmed at a fearful explosion, and on looking towards the Calf of Man beheld a vast column of fire and smoke ascending to a great height in the air. The Main house was shaken as if by an earthquake, even beyond Douglas, a distance of eighteen miles. The spot where the catastrophe took place is wild in the extreme. The southern extremity of the Isle of Man terminates in the Mull Hills, rising nearly 600 feet above the sea, bold cliffs of clay schist occupy the coasts from the Chasms and Spanish Head, round to Brada Head and Port Erin.

FRIDAY.—A second letter from our correspondent, received this morning, gives further information on this frightful accident.

An inquest has been held at Port St. Mary, on the mutilated remains of four of the men who perished by the explosion. Very little was elicited at the inquest tending to throw light upon the manner and origin of the fearful occurrence. In the examination of James Kelly, the only survivor of the thirty men on board the vessel, on the Kitterland Islet, and who is still lingering in a most precarious condition, it was made out, that on the men going aboard the vessel at six o'clock in the morning, there was a smell of smoke, proceeding apparently from about midships, and many of the men became alarmed, and desirous to leave the wreck. As it was known, however, that the powder was placed fore and aft, they were prevailed on to stay. A hole was cut in the deck for the purpose of discovering the exact position of the fire; and it is presumed that, upon the admission of fresh air, the flames burst out, and the explosion immediately took place.

Originally, as stated by the mate, there were sixty tons of gunpowder on board, but at about 200 quarter casks have been found at Port Erin, which had either been washed out of the vessel, or thrown overboard by parties visiting the wreck in the night, it is thought that about forty tons were on board at the time of the explosion. It is not true, as at first stated, that shots were heard from the vessel in the night, but lights were observed there; and, as the morning of Tuesday was calm and moonlight, it is not unlikely that some parties may have made attempts at plundering, and being disturbed, have left a light carelessly in the wreck. Two or three casks of gunpowder were found secreted in the neighbourhood.

The destruction was most complete and appalling. Not only the wooden portion, the vessel being a [illegible], but the copper sheeting and iron-work of the vessel and her cargo, cabooses, &c., were torn into very minute fragments. No wonder, then, that [illegible] remains of the men on board should be found. An car has been found at Scarlet, distant five miles from the scene of the disaster; the shattered cranny of a watch, belonging to one of the men who perished, was discovered at a distance of three miles; at which place one of the miners working in the mine at Ballacorkish was thrown down, and the candles were extinguished by the violence of the shock.

Port St. Mary is a sad scene of mourning. Twenty-two widows and seventy-two children are left, many of them in an entirely destitute condition. We have no hesitation in saying that the sum subscribed by voluntary contributions made at the Offertory in the churches every Sunday. A wide field has just been opened for the exercise of Christian liberality. One gentleman in this neighbourhood, well known for his charitable acts, has contributed £100 to the fund being raised for the benefit of the fatherless and widow; and it is expected that the residents of Douglas and the neighbouring villages will [illegible] with nearly equal liberality. [illegible] Captain Hughes, the Rev. W. Corrin, the Vicar, and the Rev. E. Kewley, are actively engaged in the [illegible].

The Illustration upon the preceding page is from a sketch forwarded by our Castletown Correspondent—the sketcher looking westward up the Sound of the Calf of Man

NAVAL AND MILITARY INTELLIGENCE.

THE ROYAL NAVY.—The present naval force of Great Britain consists of 565 ships-of-war (either in commission or in ordinary), carrying from 2 to 120 guns each. Of this number 180 are armed steamers, from 100 to 800-horse power engines, for active service (besides revenue smaller vessels) This immense fleet employs in time of peace 40,000 able bodied seamen, 9000 boys, 13,000 Royal Marines, and ten companies of Royal Marine Artillery. Besides, there are seven brigades at Dockyard Volunteers, well-trained to gunnery; viz. Deptford, Woolwich, Chatham, Sheerness Portsmouth, Devonport, and Pembroke, and three other battalions, Coast Guard, &c.

MANNING THE NAVY.—The report of the committee on manning the navy is most anxiously looked for. We have been assured by naval officers that there are many men at Woolwich and other ports, but they will not enter, as they do not credit what is told them as to their being sure to be well treated, and have the restoration of their gall and bester pay, as they had plenty of promises before which were never realised. A naval lieutenant, after capturing one of the advantages which seamen will in future enjoy, according to the general opinion of the officers, was answered by a seaman in the following words: "If I know what you say, sir, to be law, I'd enter this moment." It is evident to all engaged in raising men, that while the future pay and prospects of seamen remain unknown to them, there will be great difficulty in obtaining men worth having. *Times*

SHIPS FOR TRANSPORT SERVICE.—The Admiralty (in pursuance of a resolution to promote the employment and consequent growth of seamen for naval service, and for nations use in time of need) have given notice to the merchants and shipowners on Change, that on future occasions of hiring ships for the conveyance of troops, four men would be required for every 100 tons which vessels taken up would be the transport of convicts, nine men for every 200 tons, in addition to two boys for each ship; one half the crew to be composed of able seamen before the mast, the remainder to consist of officers and ordinary seamen, who have been at sea before.

ROYAL WILLIAM VICTUALLING YARD.—A contract for 1,000 qrs of wheat, for the use of the navy, was taken at this establishment on Thursday, by Messrs. Lyon and Dove, at 50s. 6d. per qr.

THE SCREW THREE-DECKER "MARLBOROUGH."—The "ways" are preparing at Portsmouth for the launching of the after-body of this new line of battle ship. The same interesting operation will be performed on the screw line-of-battle ship *Duke of Wellington*—namely, the cutting the ship in halves, launching the afterpart some 30 feet, and then building in and filling up the middle—thereby increasing her tonnage to nearly 6000 tons. A screw propeller will be added, and she will be in all respects a sister ship to the *Duke*.

FRENCH SCREW LINE-OF-BATTLE SHIPS.—The following is from the *Phare de la Loire*: "For some time past the establishment of Indret has been manufacturing engines destined for different ports. One has been sent to Lorient, for the *Jean Bart*, and one to Cherbourg for the *Marceau*. At this moment, also, experiments are making on the *Bordelaise*, at Toulon, with an engine of 160-horse power from Indret. Indret is also constructing, for first-class sailing ships, to carry 500 millimetres, and one of 450-horse power is about to leave Indret for [illegible], at Cherbourg. In construction there is one of 400-horse power for the *Lune*, which is building at Rochefort; one of 600 horse-power for the *Ulm*, which is building at the same port, and one of 400-horse power for the *Phlegethon*, which is building at Cherbourg. To these we must add a machine of 1,350-horse power, which the Minister of Marine has just ordered for the *Bretagne*, which is to be built at Brest.

NEW ARCTIC EXPEDITIONS.—It is the impression in naval circles as letters have been received by officers who formerly served in Arctic expeditions, requesting them to state to the Admiralty if they were willing to serve again, that one if not two expeditions will be sent to the Arctic regions early in the present year, and both well appointed with steam and sailing vessels. One of the expeditions will be sent to Smith's and Jones's Sounds, to follow up the discoveries made by Commander Inglefield last year. The other expedition will proceed to Behring's Strait, with the object of aiding Captain Collinson's expedition, as all eyes are now turned in that direction in the expectation that some intelligence will be learned of Sir John Franklin from Captain Collinson's [illegible].

THE ARMY.—The following moves of infantry will take place immediately:—1st Foot 1st Battalion, from Portsmouth to Newport (S.W.), to relieve the 48th Regiment, to embark for Corfu. The 10th, from Winchester, will proceed to the Isle of Wight, to relieve the 89th. Connaught Rangers from Parkhurst will move to Portsmouth, in place of the 50th Light Infantry, to embark for the Mauritius. The depôts of the 41th and 50th will move to the Isle of Wight.

ROYAL SAPPERS AND MINERS.—An immediate augmentation of the Royal Sappers and Miners will be of great national importance. The corps might be made of the utmost consequence if augmented to five times its present strength, as their services would be advantageously employed. What is required to make the sappers as effective as any Rifle regiment in the service is, to supply them with a good long-range rifle, and to drill having for years past been precisely the same in every respect as that of Rifle corps. Add, in addition, their qualifications as sappers and Pontooners will render them almost invaluable in defending a country.

THE MILITIA.—Tuesday's *Gazette* contains an Order in Council, commanding that all Deputy-Lieutenants, Colonels, and commanding officers of corps of militia shall immediately proceed to raise and enrol in their respective counties and districts the number of five years according to the provisions of the act passed last session for consolidating and amending the law relating to the militia in England.

ROYAL MILITARY ACADEMY.—An examination of gentlemen cadets has taken place at the Royal Military Academy, Woolwich, to ascertain the most eligible gentlemen cadets of the theoretical class for promotion to the practical class, on the appointment of the gentlemen cadets of that class, vacant in the Royal Artillery, on commissions as second lieutenants in the Royal Artillery and Royal Engineers, when nineteen gentlemen cadets were appointed to join the practical class for study at the Royal Arsenal on the re-assembling on the 2nd of February.

CALORIC SHIP "ERICSSON."—The engines of the caloric ship *Ericsson* have been worked for ten hours consecutively, and made nearly six and a half revolutions per minute. This work was performed upon 420 pounds of coal, carefully measured, and supplied to the furnaces each hour. During the whole time the machinery was in operation, the furnaces being worked upon a checked draft, the fires continually augmented. Such a result exhibits in a remarkable degree the economy of this wonderful machinery.—*New York Paper.*

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

For those of our readers who have not seen Paris at this period, it is difficult to imagine anything so gay as the aspect it presents; and this year the *commerce du luxe* has decidedly displayed an advance over many preceding ones. Although the *Jour de l'An*, the greatest *fête* in the French calendar, has passed, the movement and excitement it has created, the feasting and visiting, and presenting of gifts, seem to have but little abated; and the improvement in the weather, which last week was most dreary, goes far to keep up these rejoicings. The Parisian, male or female, is essentially *flâneur* by nature and habit; consequently, the weather has much to do with his enjoyment; if he cannot stroll along the Boulevards and up the Champs Elysées, because rain and fog deprive even those delights of their highest charms, he has little else to interest him. True, there are the arcades—to him a veritable Arcadia—as the Palais Royal; but that is only one of his many cherished resorts; and he will probably get wet before he arrives there. Fine weather is, therefore, indispensable to his full enjoyment of this season of festivity; and, as the mountain would not come to Mahomet, and Mahomet had to go to the mountain, so the sun declining to shine on the gaiettes of the *Jour de l'An*, our Parisian makes the gaieties of the *Jour de l'An* extend till the sun shines. Few English people can have an idea of the sums spent in Paris at this season in *bonbons*. In the first place, the quantity purchased is something perfectly amazing; in the second, the prices demanded, and unhesitatingly given, is a thing yet more astounding. We know one family in which there are three ladies; a friend this year sent to each a basket containing *bonbons* decorated with flowers, at a costing the modest sum of 600 francs apiece—in all, £72—and this is by no means a unique instance. Everybody gives to everybody, for the *Jour de l'An*. From a diamond tiara to a keg of anise, nothing comes amiss: the amount of silk and braid and Berlin wool, of gold cord and silver cord and chenille, of pasteboard and wire and muslin and canvas, employed in fancy works—of netting and knitting and knotting, of crochet and embroidery, of tent-stitch and chain-stitch and satin-stitch and feather-stitch, performed in the same cause of stitches in the side and aches in the head consequent on sitting up of nights to complete the said works in time, would pass the calculation of Cocker.

The Porte St. Martin brought out, last week, a new piece, entitled "La Faridondaine," which bids fair to have a large share of success. At once moving, interesting, and gay, it presents a continual change of action and emotion; and the singing, of which there is a great deal most happily interspersed, no less than the acting of Madame Hebert Massy, lends it an additional attraction.

The Théâtre Lyrique continues to draw full houses for the representation of "Taharin," written by M. Alboize, and composed by M. Georges Bousquet. Notwithstanding a certain family likeness with "Palissa," so inimitably played by Frederic Lemaitre, this piece is not wanting in originality; and the music has the charms of gaiety, facility, and melody; qualities more likely to conduce to general popularity than more classical and scientific ones. *Tabarin*, a sort of strolling charlatan, has a young and beautiful wife, *Francesquine*, who attracts the notice of a *jeune seigneur*. This gentleman, whose name, by an extra degree of discretion on the part of M. Alboize, is not confided to the audience, forms the plan of carrying off *Francesquine*, and, to all appearance, succeeds, to the despair of our mountebank poet. By one of those ingenious contrivances, however, which never fail to turn the tables in opera comique and vaudeville, it turns out that the latter is but—that he has *subivo*, by mistake. *Mlle. Primerose*, the sister of *Passerel*, a *cabaretier*, and *Tabarin* finds his *Francesquine*, as ever, a model of purity and conjugal virtue.

The great attraction of the moment, however, is the new ballet at the Opera, "Orfa," composed by M. Adolphe Adam, for Cerito. Nothing can be more effective than the whole of this ballet. The *mise en scène* is brilliant to the highest degree; the fun full of nobility and movement, and Cerito, who dances with all the exquisite grace and originality which distinguish her, is well supported throughout.

The installation of Jerome Bonaparte in the Palais Royal is deferred, by his own desire, for the convenience of the annual exhibition of pictures, which there takes place; a consideration for which the artists have reason to be grateful, as much delay and trouble would have been caused by a change of the usual arrangements at this season. The new locality for the Exhibition will not yet be fixed upon, though two or three different sites are named as likely to be chosen.

The *Bourse* has become within the last few weeks the object of those ancronyms and *jeux de mot* which the *esprit Français* is ever so prompt to coin, and which it is wholly impossible for it to refrain from venting on whatever object it can, without too much burning its fingers, venture to attack. The last of these sallies is the following definition:—"La Bourse est un lieu ou l'esprit abandonne souvent la raison."

The reception at the Tuileries on New Year's-day was remarkably brilliant. Some idea of the splendour of the furniture and decorations may be formed from the fact that the price of the carpets alone of the three great *salons de réception* amounts to a million of francs (£40,000). The black coat, in which Napoleon Jerome persists in appearing at all these *solennités*, is a subject of constant remark. On this occasion it was decorated by the *grande croix de la Legion d'Honneur*, presented to him by the sovereign by the Emperor, but no other attempt was made to enliven the sobriety of his costume.

A prospectus has been issued by a Spanish company, for a serious, bonâ fide company, of known names—proposing to the French Government to found in Paris a *cirque* for the celebration of bull-fights, which they assert are by no means dangerous, inasmuch as that men are very rarely killed in them!

A better proposal still is one which requests the Emperor's authority to open the Palais de Cristal, in 1854, with a grand Exhibition of the human race. From the North Pole to the tropics, the earth is to be searched to produce specimens of her inhabitants, who are to be presented, like wild beasts, for the benefit and instruction of two or three nations of their civilised fellow men

The simultaneous recognition of the French Empire by the three Great Northern Powers is made without reserve and conditions, and is accompanied by a most significant circumstance. Nearly the same form of recognition has been accorded to the Imperial Court of Napoleon III. is said to be addressed as *mon frère*. In the letters of credence addressed to Louis Philippe by the three great Northern Courts, he was merely addressed as Sire. In reply to these explanations with reference to the nomination of Prince Jerome were found satisfactory. The Russian Ambassador has presented his credentials to the Emperor of the French; and the Ministers of the Imperial Courts of Austria, Bavaria, Saxony, Hanover, Baden, and Saxony, have received their credentials; and, probably, by the time this meets the eyes of our readers, these Ministers, as well as the Austrian and Prussian Ambassadors, will have presented their new letters of credence

The elevation of Prince Jerome Napoleon Bonaparte to be the heir to the Empire has rendered it necessary to make a change in the government of the Hôtel des Invalides. A decree, dated the 29th December, 1852, has accordingly appeared, which states—"Considering that the high position created for by the decree of the 12th December, 1852, to our well-beloved uncle, Jerome Napoleon Bonaparte, cannot be reconciled with the exigencies of a service which carry with them responsibility and subordination; and considering that the noble sentiments which inspire Napoleon have been confided to the protection of his brother, who cannot abdicate in these conditions—We decree that Jerome Napoleon Bonaparte shall be honorary Governor of the Imperial Hôtel des Invalides." Another decree appoints General Arrighi de Casanova, Duc de Padoue, to the Governorship of that Hôtel. Other decrees appoint, as President of the Senate, M. Troplong First President of the Court of Cassation. The Vice-President of the Council of State, M. Baroche, is appointed President of that body. The corps of Ponts et Chaussées, the Corps des Mines, the Ecole des Ponts et Chaussées, and the Ecole des Mines are to take the name of Imperial

Several of the members of the Senate have been appointed, and some of the nominations have caused considerable surprise. Of the Legitimists the Government have gained the Marquis de Pastoret, the Marquis de Lauriston, the Count de Tallenay, the Duc de Chemerenux, General de Grouchy, General de Rostolan, Admiral Cecille (whose nomination has excited some wonder), and the Duke de Mouchy. The Orleanists seem to be the party who have the least share in the nominations. The Count de Flahault, though occupying a high position under the Government of Louis Philippe, has always had Imperialist tendencies. The Count de Las Cases owes the celebrity of his name to the island of St. Helena. Some of the new senators—Prince Lucien Bonaparte, the Count de Barral, M. Tascher de la Pagerie, and M. Clary—are relatives of the Chief of the State; and others—the Count de Persigny, the Duke de Bassano, &c.—are connected by ties of friendship with Louis Napoleon. Two opposite lines of policy are said to divide the Imperial councils—the one anxious for peace, as the means of acquiring unbounded wealth; the other, jealous of honour and covetous of territory, even at the risk

of war. As yet the former prevails, but the latter is not subdued The new creations amount to thirty-eight. According to the new constitution, the number of the Senate may be increased to 150, besides the cardinals, marshals, and admirals, who are senators of right. The present number is 116. There remain, therefore, thirty four seats in the Senate yet to be disposed of

The continued fall in the Paris Funds is to be accounted for by the re netion which has now taken after a rise brought about by speculation and decision. Several difficult questions are announced.

The accounts of the Paris Savings-bank are kept upon a system which permits the balance to be struck to the end of the year on the 31st Dec. We have heard so much of late years of "cooking the accounts," and "making things pleasant," that figures are not received with the same confidence which formerly attached to them. With this possible reserve, the statement of the deposits of the Paris Savings-bank is of some importance as a test of the restoration of public confidence. In 1851, the deposits were 25,305,854 fr.; and in 1852, 25,703,576 fr., being 397,722 fr more. The number of depositors and of accounts opened also presented an increase.

The empire has been proclaimed by General Pelissier in Algeria.

ITALY.

The Government of Count Cavour in Piedmont still hold their ground with credit, and it is hoped will be able to withstand the attacks of their clerical and their revolutionary antagonists. The Ministry have prepared a new Civil Marriage Bill, having been authorised to withdraw the bill adopted by the Chamber of Deputies, in consequence of the effect produced by the publication of the Pope's letter to King Victor Emmanuel. M. Cavour said the other day, that the Cabinet thought it prudent to imitate the example of England, on the occasion of the recent act of Papal aggression, and not to institute legal proceedings against the bishops for their interference in the question of civil marriage. This view of the case was adopted by the Chamber by a large majority.

SPAIN.

The Treasury receipts for December show a diminution of no less than 9,057,367 reals in the public revenue for 1852, as compared with 1851.

TURKEY.

A Turkish expedition has been fitted out against Montenegro, the Ottoman Porte having resolved to compel this little mountainous district to acknowledge its sovereignty.

AMERICA

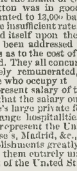
By the steamer *Arctic*, we have advices from New York to the 22th ult. Much excitement has been occasioned in Havannah by the arrival of her Majesty's steam-frigate *Vesta*, with the notorious slave schooner *Venus*, and two other slavers as prizes.

In the Senate a resolution had been submitted by the chairman of the Committee of Foreign Relations, calling for copies of the official notes from the Governments of England and France, inviting the United states to join with them in a conjoint convention, that neither Power would permit the island of Cuba to be taken from Spain.

Cotton was in good demand in New York. The sales in four days amounted to 13,000 bales at an advance of ¼ c. per lb

The insufficient rate of payment to American diplomatists abroad having forced itself upon the notice of the United States Government, inquiries have been addressed to the representatives of the Republic in foreign capitals as to the cost of living. The replies of a large number have been published. They all concur in stating that the post of Foreign Minister is inadequately remunerated, and exacts considerable personal sacrifices from those who occupy it Mr Abbott Lawrence is decidedly of opinion that the present salary of the United States Minister in London is inadequate, and that the salary ought not to be less than 20,000 dollars. Mr. Lawrence's large private fortune enabled him to entertain his countrymen, and exchange hospitalities with the British aristocracy; but the gentleman who represent the United states in Paris, Vienna, Berlin, Constantinople, Dresden, Madrid, &c., all complain that the unavoidable expenses of their establishments greatly exceed their official emoluments. The response restricted upon them entirely unbecoming the character and dignity of the Government of the United States.

OBITUARY OF EMINENT PERSONS.



SIR CHARLES WAGER WATSON, BART

THE death of this respected Baronet occurred very suddenly, on the 30th ult. While seated at breakfast with the Suffolk foxhounds on that morning, he fell from his horse in a fit, and immediately expired. Sir Charles had nearly completed his fifty third year. He was the only son and heir of the late Sir Charles Watson, on whom, when in his ninth year, the dormitary was conferred, in regard for the eminent services of his deceased father, Rear-Admiral Watson, who signalised himself on several occasions, and died, in 1757, in the chief command of the naval forces in the East Indies. The Admiral's mother was half-sister to another distinguished seaman, Sir Charles Wager. The gentleman whose sudden death we record, descended, through his mother Juliana, daughter of Sir Joseph Copley, Bart., from the old Yorkshire family of Copley, and through his grandmother from the equally ancient house of Buller. He was born 4th January, 1800; and married, 19th June, 1827, Jemima Charlotte, eldest daughter of Charles Garth Colleton, Esq., of Haines Hill, Berkshire, by whom he leaves several children, the eldest son being now Sir Charles Watson, third Baronet, born in 1828.

The deceased Baronet resided at West Wratting Park, Cambridgeshire, and served the office of High Sheriff of that county a short time since

SIR JONATHAN WATHEN WALLER, BART.

SIR WATHEN WALLER was only son of Joshua Phipps, Esq., and was originally brought up to the medical profession. Becoming, however, heir to his grandmother, Anne Waller, who dwelt on the family estate of Groombridge, Waller, he adopted, by sign manual, in 1816, the surname and arms of Waller, and was, not long after, created a Baronet. Subsequently he held the appointment of Groom of the Bedchamber to his late Majesty King William IV., and was made a Knight Grand Cross of the Guelphic Order The Wallers, from whom Sir Wathen descended, were a branch of the ancient family seated at Groombridge, county Kent, from which also derived the famous Parliamentary commander, Sir Hardress Waller, and the celebrated poet, Edmund Waller. One of the ancestors. Richard Waller, was at Agincourt, and, in honour of having captured the Duke of Orleans in the battle, obtained from Henry V. the addition to his crest of a shield of the arms of the Duke, pendent from the sinister side of a walnut tree. The French Prince, having been brought to England, resided with his captor at Groombridge.

Sir Wathen Waller was born 6th October, 1799. He married, first, 23rd February, 1793, Elizabeth, second daughter of Thomas Slack, Esq., of Braywick Lodge, Berks; and, secondly, 1st October, 1812, Charlotte-Sophia, Baroness Howe in her own right, widow of the Hon Penn-Asheton Curzon, and eldest daughter of the renowned Admiral Richard, Earl Howe. By the latter (who was mother, by her first husband, of the present Earl Howe, and who died 3rd December, 1835) he had no child. But by the former he leaves two sons and one daughter, all of whom are married. The elder son, now Sir Thomas Wathen Waller, second Baronet, is Secretary of Legation at Brussels

Sir Wathen died on the 1st inst., at his house, New Cavendish-street, Portland-place. For many years he resided at Pope's Villa, Twickenham.

THE REV. FRANCIS HODGSON, PROVOST OF ETON COLLEGE.

FRANCIS HODGSON, a distinguished scholar, poet, and divine, was son of the Rev. James Hodgson, rector of Barwick, county of York, and was born the 11th November, 1781. He received his early education at Eton College, over which he was afterwards to preside as Provost. From Eton, where he was for a short time assistant-master, Mr. Hodgson proceeded to King's College, Cambridge, and became classical tutor there. Entering holy orders, he was eventually made Archdeacon of Derby, and held a share of the living of Bakewell, to which he was presented by the Duke of Devonshire.

On the death of Dr. Goodall, in 1840, Mr. Hodgson was appointed to the post of Provost of Eton College, which has attached to it the rectory of Eton. Mr. Hodgson's nomination gave general satisfaction, as he was already stood high in learning and literature. While at the University he formed an intimacy with the poet Byron, which ended but with the death of the latter. Lord Byron not only retained Mr. Hodgson's great affection, but entertained a very elevated opinion of his intellectual endowments. This estimation was justified by several poetic works subsequently published by Mr. Hodgson: in particular, "Adonais, a Monody," "Juvenal; a poem, entitled "Lady Jane Grey," and some other pieces of smaller pretension. In his later days Mr. Hodgson made considerable contributions to "Lendon Bell"—a collection of poetical pieces in Latin and Greek, which was the successful and popular forerunner of two other beautiful works of similar character, the "Anthologia Oxoniensis," and "Sabrinæ Corolla." Mr. Hodgson was a scholar of sound and accurate judgment, and of delicate and refined taste. As a man, he was remarkable for benevolence and singular kindness of heart. As a friend, he was no less worthy of admiration for warmth and sincerity of affection. Mr. Hodgson twice married; his first wife was a Miss Tayler, sister of Mr. Frederick Tayler, the admirable painter in water-colours; she died, leaving no child. His second wife was the Hon. Elizabeth Denman, Lord Denman's second daughter, whom he wedded 3rd May, 1838. The Rev. Provost died on the 20th ult., at the Lodge, Eton College. He leaves, by his second wife, who survives him, five children

The mortal remains of the lamented divine were interred on the 4th inst., in the vault of the College chapel at Eton.

PROVINCIAL INTELLIGENCE.

FRIGHTFUL CATASTROPHE ON THE NORTH-WESTERN RAILWAY

One of the most frightful collisions that ever occurred on the line of the London and North Western Railway, or any of its tributaries, took place on Monday evening, at a place termed the High-bridge, about a mile on the London side of the Oxford station

It appears that, on Monday evening, the 5.30 passenger-train to Bletchley was preparing for its departure from Oxford when a coal-train was telegraphed to have left Rugby at five o'clock, and was consequently due at the Oxford station-master, on receipt of the message, told the guard of the passenger train that he must not start until the coal-train had arrived. But it seems that a ballast-train had left Oxford at a quarter past five, and was met by the coal-train; and the passenger train at., and soon darted on at a fearful rate of about thirty miles an hour, till it met the coal-train proceeding towards Oxford, and a dreadful collision took place, the ballast-train containing certain pens upon it, from the resistance that it was drawn by two heavy engines, and having between fifty and sixty coal trucks attached The shock is described as frightful, and the crash was heard in all parts of the city of Oxford. The engines reared up, the fire blew about in all directions, and in a few seconds after the crash the line and the vicinity was strewed with the shattered fragments of the engine and tenders, the carriages and human bodies all mixed together in an almost undistinguishable mass As fast as the bodies of the dead and the maimed could be extricated from amongst the debris, or from the water in which they were some of them found immersed, they were conveyed either to the infirmary, or to other places for medical aid.

The passenger-train consisted of four carriages, besides the engine and tender. Twenty-one passengers were paid for at the Oxford booking-office by this train, chiefly third-class, and the remainder second-class. The third and second-class carriages were smashed to atoms. The entire of the three engines and their tenders are a perfect wreck. The sensation created by the sad calamity in Oxford and its vicinity is truly frightful, and throughout the day the "High Bridge," the scene of the occurrence, was crowded by hundreds of people, making the most painful inquiries after relatives and friends.

Captain Bruyeres, and other officials, were on the spot instituting a minute investigation into the sad affair.

An inquest was held on Wednesday; when the fact was brought out still stronger, that the driver seeing the ballast engine enter the station, mistook it for the expected coal train, put on his steam, and moved off without waiting for any signal to start. It appears that the melancholy list of victims amounts to eight killed, two mortally wounded, and about twenty others more or less seriously injured. Of the six men in charge of the engines which came into collision, only one has escaped with life. The inquest has been adjourned from day to day.

THE AMERICAN MINISTER.—A grand banquet was given on Tuesday, to the Hon. J. R. Ingersoll, the American Minister, at Liverpool. There were about sixty guests, comprising the chief American merchants, and others connected with the trade. The other guests being the Earl of Derby, Col. De Rinzy, the Earl of Sefton, Wm. Brown, Esq., the Worshipful the Mayor of Liverpool, John Cheetham, Esq., M.P., Captain Forbes, U.S., Mr. Mansfield, &c. Last evening, a similar banquet was given to the same Minister, at the Town-hall, Manchester. The Manchester Commercial Association presented an address, in the morning of the same day, to Mr. Ingersoll. We shall next week give an illustration of the banquet scene.

CHRISTMAS AT GREAT CHESTERFORD.—On Tuesday (last week) the children of the public schools at Great Chesterford were entertained with a large Christmas-tree, judiciously illuminated, and decked with appropriate gifts, by the kindness of the Hon and Rev. Lord Charles Hervey, rector of the parish. A number of the children gathered round the tree, and sang a carol; whilst the Lady Harriet Hervey distributed the presents. The school, which is under Government inspection, was built for the parish and surrounding districts, by Lord Charles Hervey, and contains about 150 children of both sexes

NEW YEAR'S EVE AT THE ROYAL EDINBURGH ASYLUM.—On New Year's Eve the inmates of this asylum were entertained with Highland dances, songs, a scene from Sheridan's play of "The Rivals," and other amusements. The Highland dancers wore full national costume, the room was tastefully decorated, and the festivities were characterised by joyousness and general decorum. This asylum is the largest establishment of the kind in Scotland, and contains at present 550 patients—there being distinct buildings for pauper inmates and patients of high rank Employment and recreation are the principles of management; the males mostly work in a farm, and the pleasure grounds; and others work at shoe-making, tailoring, carpentry, painting, plumbing, blacksmiths' and upholsterers'; while the female work at needlework, knitting, and domestic occupations generally. A ball and concert are given weekly, in which the patients of both sexes join; and in summer excursions are made in the adjoining country, with cricket-matches, bowls, quoits, &c., and the asylum publishes its own journal the *Morning-side Mirror*—the contributors and printers being like inmates of the institution.

PRINCE ALBERT'S FARMS.—Her Majesty and Prince Albert possess several farms in the Isle of Wight, two of which, containing about 600 acres, the Prince farms himself. Every recent improvement has been introduced on these farms, and steam-engines are now performing on them various agricultural operations. He has proved himself a thrifty and successful farmer, and the results of his skill and superintendence are highly remunerative. The cattle are principally Devons. The Prince is partial to the rearing and fattening of the Scotch black cattle.

BIRMINGHAM.—The main feature in the state of trade last week has been another advance of 20s. per ton for bar and sheet iron and for other descriptions in proportion. Plates are now quoted £7 10s. to £8 for ship plates, and bars and rods at £11. A reduction in the price of South Staffordshire pig iron was at first created some little excitement in the district, but the makers soon got possession of the market, but this temporary depression was soon overcome. One eminent iron-master refused an order for several tons of pigs at £3 10s., and is now selling hot blast mine pigs at £3 10s. per ton. Notwithstanding the great quantities of coal and coke brought from Derbyshire and North Staffordshire into this district, the coal trade maintains its position.

DEVONPORT SAILORS' HOME. This home has been opened for the use of sailors. It is situated in the middle of St. Aubyn-street, in an excellent part of the town, and has accommodation for fifty beds at present. The sailors will be provided with board, lodging, washing, &c., for 12s. a week, and may have a bed for 6d. a night. The house is well adapted for the home; and it is stated that when each room is partitioned off into cabins, there will be accommodation for 200 occupants

SUBMARINE TELEGRAPH BETWEEN LONDON AND LIVERPOOL.—The contractors have just commenced operations for laying down the underground telegraph from Cornhill to Liverpool, Manchester, and Birmingham, along the railway road, and the line, when completed, will place those towns in immediate communication with the Continent, besides furnishing a duplicate line of telegraph communication with the metropolis

ESCAPE FROM A TIGER. On the evening of Christmas-day, a young woman was carelessly gazing at a leopard in Batty's menagerie, in Huddersfield, she sauntered within reach of the tiger's den, when the ferocious animal thrust its paw through the wires, and seized her by the coil of plaited hair behind the crown of her head. A female standing by saw the tiger seize its prey, and with extraord nary presence of mind seized the girl by the waist, and unshrinked her hold. The tiger still retained his grasp, and roared and plunged terrifically. At this moment the struggle was a fearful one. At length the comb fell from her hair, the coil unfurled, and the young woman was rescued, leaving the savage's paw full of her hair. The unfortunate girl fainted, but soon recovered again, and without any injury beyond the fright, and the loss of a hand ful of hair.

BLOWING UP A MONSTER CHIMNEY.—Passengers who have had to pass Warrington junction, about twenty miles from Liverpool, have frequently been surprised at the altitude of the chimney connected with Messrs. Hesgarth's chemical works. It was 406 feet high, 40 feet diameter at the base; 17 feet in diameter at the summit; contained 1,500,000 bricks, 3500 tons in weight; and cost £7000 erecting. There was only one chimney higher in the United Kingdom. As it had become of no use for the chimney, it has been blown up, under the superintendence of Mr. Stephen Cousins. A number of holes were delved round the base; and fourteen charges of gunpowder were fired. At half-past two o'clock the train was fired. Nine charges exploded without any apparent damage being done to the stability of the mass; but the report of the tenth had no sooner been heard than the chimney was rent from top to bottom, and the huge fabric fell, crumbling away gradually from the base upwards. A dense cloud of lime dust hid the ruins for a few seconds; but when it cleared away, the 3,500,000 bricks were perceived in the shape of a huge mound. No accident of any kind occurred.

NETHEDALE IRONWORKS.—We understand that these works, which have been standing for about a twelvemonth, have just been bought by parties already engaged in the iron trade. It is their intention to put them into immediate operation. This, coupled with the blowing-in of Lugar and Portland Ironworks, will again afford employment to many hundreds of workmen in those districts of Ayrshire.

IRELAND.—The late Lord-Lieutenant and the Countess of Eglinton held an undress and farewell levee in Dublin Castle, on Tuesday, which was numerously attended by all parties. The officers of the garrison took the occasion of presenting the Countess of Eglinton with a magnificent bracelet, set with brilliants and emeralds, and bearing the inscription —"To Teresa, Countess of Eglinton and Winton, by the officers of the staff and household, in memory of 1852." Lord and Lady Eglinton and their family took their departure for England on Wednesday.

EPITOME OF NEWS, FOREIGN AND DOMESTIC.

On the 15th February, Mr. Butt, M.P., who was counsel for Burwan, is to bring a bill forward in the House of Commons "to make better provision for the granting of new trials in criminal cases

A corrected alphabetical list has been printed, by order of the House of Commons, of election petitions for the present session. The number of members petitioned against is 152, of which number eight cases are invalid or withdrawn, leaving 144

His Royal Highness Prince Albert, attended by Lieut.-Colonel Seymour, honoured Mr. Ward with a visit at his studio at Upton park villas on Tuesday, to inspect his historical picture of the "Execution of Montrose

The Hon. Miss Stapleton, sister of Lord Beaumont, has seceded from the Roman Catholic Church. She received the sacrament at Carlton Church, on Christmas-day.

The consumption of tea in the Royal navy has so increased that another contract for the supply of 50,000 lbs. has been taken by Messrs. Strickler and Co., of Fenchurch-street.

Considerable anxiety is felt at the progress which the sea is making on the beach in Dover Bay. On Tuesday last, a full of 200 tons of rock and chalk took place in the rear of Ethel Terrace

In consequence of an application from an eminent importer and salesman of Leadenhall market, the Lords of the Treasury have issued a general order to the several ports directing the delivery of foreign rabbits, alive or dead, in future free of duty.

The magistrates of Tirrragh, Sligo, have agreed, at a meeting held for the purpose, to call on the Government for a reduction of the police force, on the ground of the restored tranquility of their district

A harness-maker, named Nicl, residing at Crest, France, murdered his wife, by discharging a loaded gun at her head. When he had committed the deed, he placed the gun on the body, and called for assistance, telling the first comers that his wife had laid hold of the gun to shoot him, and that in the struggle it had gone off, and lodged the contents in her head. The circumstances soon began to answer towards this statement, but Nicl had no credit, and he was arrested He has since confessed his guilt

Yesterday week a robbery was committed in the sleeping apartment of the Hon. Mr and Mrs. T. Liddell, at Ravensworth Castle, and close in gold, two gold watches, and a number of brooches and rings, were taken, the burglar's booty amounting in value to about £200.

Mr. Heald's death by drowning is contradicted. A telegraphic message has arrived stating that he was safe

Mr. R. Coulthard, of Thistlewood, Cumberland, has two swans that lately reared each two lambs; the same two have had eight lambs within the year

The late gale served a good purpose at Troon. A clipper was on the blocks ready for launching. The tide rose a great height, from the influence of the storm, and floated the clipper off the blocks. She was floated into the harbour, and there moored in perfect safety

At Basle, in Switzerland, an unsuccessful attempt has been made to light the town with gas obtained from the carbonisation of wood.

The sentence of death on Kirwan, convicted of the murder of his wife, has been commuted into one of transportation for life.

The amount of damage inflicted by the recent gales in Dublin and its immediate vicinity has been ascertained to be about £10,000

Among the passengers who went out in the *Haddington* was Lieut. Whipple, R.N., as Admiralty agent to take charge of the first mail between Marseilles and Malta, under the new Indian mail contract.

Instructions have been issued to the Customs authorities at Southampton to cause all persons ill from fever that arrive home in the West India packets to be taken to the lazarette at the Motherbank, that immediate precaution may be given to the packets

The recent storm, it appears, has done great injury to the telegraph, some hundreds of the supporting posts in different parts of the country having been blown down, and the communications temporarily stopped.

The notorious bandit Francisco Manuel Cordon, who murdered the commandant of the Civic Guard of Ronda, had been surprised by a detachment of troops and shot at Cordova, in Spain.

The remainder of the cliff at the Halcombe Tunnel, between the towns of Teignmouth and Dawlish, has fallen down.

Loughcoster Castle, Galway, late the mansion of Lord Gort, and part of the Encumbered Estates Court, Mr. Jos. Ball, has been again disposed of, by private sale, for a sum of £20,000, thus realising a profit of £3000.

The Royal mail steam-ship *Arabia*, Captain Judkins, left Liverpool last Saturday for New York. She took out about 100 passengers, the usual mails, and a full cargo of goods.

Lord Auckland has met with an accident, while returning to Bishop's Court, from Ramsay, by the kick of a horse; but which is not of a serious kind

The Grand Duke of Tuscany has prohibited the use of masks during the present Carnival

For the first time since 1848 the King of Prussia has conferred titles of nobility

Alderman Kinahan, the well-known distiller, was duly inaugurated Lord Mayor of Dublin, on saturday last.

The amount of bullion now in the Bank is £20,749,149.

Last month, twenty-eight ships left Liverpool for Australia, with 8200 passengers.

A new invention has recently been made, in Bohemia, for producing beer in a stone-like mass, which, on infusion in warm water, dissolves into a palatable beverage.

Dr. Wiste, of Hanover, has invented a contrivance for arresting a railway train at full speed, without injury to the carriages or passengers

The deposits in the Paris Savings Bank last year were 26,258f. 16c. from 205,265 depositors

The Queen and Prince Albert visited the Museum of Ornithology at Mr. Gould's house, during last month were 13,811 on the public days, and 511 on the students days, admitted on the payment of 1s. each

On Christmas-day twenty-nine couples were married at the parish church of Bradford.

Lord St. Germans will make his public entry into Dublin on the 12th of this month

The New Crystal Palace Company have leased for a term of ninety-nine years, thirty-five acres of land belonging to the authorities of Dulwich College, for a carriage drive.

Measures are being taken for the restoration of the Wellington monument, Wellington, Somerset, which was begun in 1817, but never completed

Three children at Reading Muir, Falkirk, obtained a bottle of whisky, and drank the whole of the contents; all three were taken very ill, and the oldest, a girl, has since died. The others recovered.

Mr. J. S. Dalton, the originator of the *Illustrated London Magazine*, has commenced a new publication, entitled *The Book of Days*.

A German physician has found that the skin of the human body is the principal source of animal heat. He asserts that they who wash in cold water are less liable to colds and rheumatisms, and recommends a return to the long and close sleeves of a former period

The mail train of the Great Western on Monday night dashed through a flock of sheep in a deep cutting between Ebley and Stonehouse, and ten of them were killed on the spot.

The *Phœnician* has arrived in the Downs, with 35,000 oz. of gold dust on board. She sailed from Sydney at the end of September.

The cholera was, in November last, raging violently in Persia. The number of deaths per day at Tauris was not less than 1000.

Joseph Appleby, Esq., of Alnwick, held his rent-day for Thropton a few days ago, and made his tenants the return of ten per cent.

The Earl of Aberdeen, the new Premier, is in his 69th year. The Duke of Argyll the youngest member of the Ministry, is in his 30th year.

M. Pantwewitz, an inspector of forests in Silesia, has presented to the King of Prussia a book printed on paper made entirely from pinewood, with a binding of the same material

Lord Denman has dedicated to Mrs. Stowe (author of "Uncle Tom's Cabin") a collection of occasional papers, bearing upon the question of slavery, which he contributed to the *Standard*.

Mr. Hind, the astronomer, has been assigned an annuity of £200 a-year by Government.

Dr. Max Müller has been appointed to a lectureship of modern literature at the University of Oxford.

The *Quarterly Review*, in answer to the question "What is man?" says, "Chemically speaking, a man is 45lb. of carbon and nitrogen, diffused through five-and-a-half pailfuls of water."

During the late flood at Cockermouth, an immense salmon was seen scudding about the *main street*.

The restoration of the beautiful structure of Ross Church is now completed, and the removal of the scaffolding showed the spire on Christmas-day in all its fair proportions.

The Right Rev. Dr. O'Higgins, Roman Catholic Bishop of Ardagh, died on Monday morning last, at his residence in Ballymahon, Longford.

THE VIADUCT OF THE PENZANCE RAILWAY, IN PART DESTROYED BY THE LATE GALE.

DESTRUCTIVE STORM AT PENZANCE.

THE terrific gale of last week reached Penzance and Mount's Bay, from S.S.W., or S.W., about ten o'clock on Sunday night, and continued till about three next morning

Unfortunately it was the period of spring tides: hence the destruction of property was very great. During the gale the whole of the scaffolding and wood-word erected for the works for extending the southern arm of Penzance pier, were wholly swept away; and the scaffolding was drifted by the heavy sea with tremendous force against the wooden viaduct of the West Cornwall Railway, on the Eastern Green, just at the entrance of the town, and a considerable portion was destroyed (*See the Illustration*). On that part of the line still nearer to the town, a considerable portion of the sea wall which there protected the railway was thrown down, and about 180 feet of the viaduct was swept away, or so far mutilated as to require replacing. Such was the force of the waves that large blocks of granite of some thirty-two cubic feet, and weighing perhaps two tons, were lifted across the line, a distance of about a dozen feet.

After the accident, the trains arrived only as far as the Marazion station, and the usual omnibuses conveyed passengers to and from that station instead of Penzance.

Fortunately, there were not at the time of the gale a dozen vessels in the harbour, or the loss of property must have been very great. About half-past two o'clock, when the gale was at its height, the *Sophia* (Hosmstow, master) parted all her fastenings and drove out of the pier; she lay for an hour and a half between the old and new pier-head; and afterwards drifted out towards the Eastern Green, and went ashore between eight and nine o'clock. She had on board a cargo of guano, with which she arrived at Penzance about a fortnight ago from Patagonia. Other vessels lying in the old pier sustained damage. Such was the force with which the sea beat over into the pier, that massive pieces of granite lying there (not portions of the wall), weighing from two to four cwt., were washed off into the basin of the pier.

On the Western Green, also, the sea swept over upon the road, flooding a few houses on the right. Further on, portions of the wall which protected the road were destroyed.

WRECKS IN THE MERSEY.

On the morning of Christmas-day, Liverpool was visited with a terrific hurricane, fully equal to that on the 9th of January, 1839; and although Sunday was tolerably calm, the storm was renewed on Monday morning with equal intensity. The gale commenced in Ireland, passed over the Channel, reached England soon after midnight on Saturday morning; and, gathering strength as it proceeded, accumulated into a hurricane by two o'clock A.M. At five it was most terrible, but it abated soon after six. This storm visited every part of the United Kingdom; but its more dreadful effects were felt along the coasts.

The damage done at the docks at Liverpool, on the river, and in the bay, has been considerable. The shipping in the docks, more especially in those at the extreme north and south ends of the town, felt severely the force of the storm. In the morning, two vessels, the *Centurion* and the *Manilla*, came into collision in the river off the north docks. The *Manilla* was much damaged amidships, being cut down to the water's edge; she also lost her mainmast, and had her deck house, &c., damaged. The bowsprit and cutwater of the *Centurion* were carried away, and she was otherwise disabled by the accident. Another serious collision took place on Sunday night in the river, between the brig *Margaret*, from Drogheda, and the *Constantine*, outward bound for New York. The *Margaret* had her maintopmast, bulwarks, and stanchions carried away: she was, subsequently to the accident, towed into the George's Dock Basin, and with some difficulty secured until the gale moderated. The *Constantine* escaped with comparatively trifling damage. The schooner *Mary Ann*, of Runcorn, lying in the river, parted from her anchors on Monday morning, and was abandoned. She was subsequently brought into the Coburg Dock by the crew of the steam-tug *Jackall*. The barque *Elizabeth*, from Liverpool, for Savannah, and the *Conway*, for New Orleans, were both wrecked; but the crews were saved. The *St. Catherine*, from Havannah to Liverpool, was driven on shore at Southport on Saturday morning: the crew were saved.

The accompanying illustration is a view on the Mersey at one P.M. on Monday, looking to the north-east, and showing two of the above wrecks: the *Conway* is seen against the northern extremity of the new dock works; and the *Elizabeth* on the beach in Bootle Bay, with Bootle landmark, and the life-boat which took part of the crew from the *Conway*.

WRECKS IN THE MERSEY, AFTER THE LATE GALE.

"THE NEPTUNE" STEAMER HOVE TO, N.W. OFF FLEKKE FIORD, NORWAY.

THE STEAMER "NEPTUNE" OFF THE COAST OF NORWAY.

WE lately recorded the courage of a woman in volunteering her services, and urging some seamen to put off in a boat, at great risk, from the coast of Norway, to the assistance of a steam-ship in great peril. We are now in possession of the full details of this heroic act, and a Sketch of the locality, which we have engraved.

It appears that the steamer *Neptune*, Captain Brownless, on her outward voyage from London to St. Petersburg, encountered, when two-thirds across the North Sea, the terrific storms of the 26th, 27th, and 28th of November, which caused such fearful disasters on our east coast. At the height of the hurricane, about midnight of the 27th, the Naze of Norway was sighted. Finding the water becoming considerably smoother under the coast of Norway, Captain Brownless hauled closer in shore. The weather, however, continuing bad, he resolved upon going into Flekke Fiord for shelter; and, requiring a pilot for that purpose, the union-jack was shown at the fore. Some time elapsed, and it was feared no boat durst venture out, when attention was directed to a small object under the land, which soon after was observed to be a boat pulling down upon the vessel; and upon the boat nearing the ship, the astonishment of the Captain and people on board was greatly increased on observing that one of her crew was a *woman!* The first exclamation was 'Grace Darling!" The deep sea lead line, being the handiest was thrown into the boat; our heroine passed the line twice round her body, hitched, or rather tied it, and then passing her right arm through the noose at the end of the line, ascended the ship like a sailor. The boat, which was of the commonest description, was half filled with water when she reached the steamer, and, of course, her little crew of three were thoroughly drenched. By the Captain's orders the woman was provided with a change of clothing by the stewardess, until her own was dried. The romance of the thing was much increased by the beauty of the woman: not more than twenty-five or twenty-six years of age, a little above the middle stature, fair skin, good colour; beautiful, expressive, dark blue eyes; fine white teeth, and hair like flax, a feature peculiar to the women and children of Norway.

The visit to Flekke Fiord of so fine a steamer as the *Neptune* was quite an event for the little port, and great hospitality was shown to the passengers and crew. A little before the adventurous young woman left the ship, the seamen and firemen made a collection of about £3 among themselves for her; on learning which, the Captain solicited the passengers to contribute, and when the captain beckoned her to come and take the money, she stared with astonishment, probably having never before seen so much money; but, when assured that it was all for her, she dropped on one knee, clasped the Captain's hand in both of hers, and shedding tears of gratitude, kissed it repeatedly! After this she went round to the passengers and kissed their hands also, and subsequently she took her leave of the tars and firemen, who evinced a contempt for a mere cold shake of the hand, and aspired to an embrace with the lips: two or three of the better-looking of the sailors were successful, but not one of their more soiled brethren. As she descended the side, all hands, of their own accord, mustered at the gangway, and one, obtaining a more elevated position than the rest, thrust out from the vessel's side, and over the girl's head, a boat-hook, to which was attached a union-jack; and, as the boat shoved off, the crew and passengers simultaneously gave three deafening cheers, and continued waving handkerchiefs, &c., as long as the boat was in sight. We much regret that our Correspondent has not furnished us with the name of this successor of Grace Darling.

In the Illustration, the *Neptune* is shown hove to, five miles north-west of Flekke Fiord, at the moment of the vessel being boarded, in the height of a N.E. gale. The coast of Norway here is extremely grand; the rocks rise perpendicularly 2000 feet out of the water, under which they have an equal depth. On the morning of the incident represented, the cliffs were capped with snow.

LARGE ELM TORN UP BY THE LATE HURRICANE, AT MAGDALEN COLLEGE, OXFORD.—(SEE NEXT PAGE.)

CONSECRATION OF THE NEW CHURCH OF ST. MATTHEW, MARYLEBONE.

ON Saturday, the handsome new church of St. Matthew, which has recently been erected in Great Carlisle-street, near Portman market, St. Marylebone, was consecrated by the Right Rev. the Lord Bishop of London, assisted by a number of the metropolitan clergy, in the presence

NEW CHURCH OF ST. MATTHEW, MARYLEBONE.

of a numerous congregation. The church has been built by private subscription, for the purpose of relieving the spiritual destitution of a very populous and miserably poor district of London, where the necessity for increased church accommodation has long been felt.

The church is an elegant and commodious structure; the carcase was originally intended for a theatre, but was purchased by the Church Building Commissioners, who conveyed it to a body of trustees; and a committee of gentlemen was formed to raise the necessary funds to complete the design. The execution of the work reflects great credit on the architects, the Messrs. Francis. The elevation, which fronts Portman-market, has been entirely remodelled in the classic style, two cupolas being added, one on each side of the pediment. The front is lighted by five large windows, and the building has three entrances. Above the altar-screen is a handsome stained glass window. The difficulty experienced in obtaining light, from the church being closely surrounded with buildings, rendered it necessary to perforate the ceiling with sky-lights. The edifice is calculated to accommodate 1600 worshippers, and of the total number of sittings, 1200 will be free and exclusively appropriated to the poor; while the remaining 400 are proposed to be let at a moderate rental. The cost of construction has been £3000, the ground £1100 more, the endowment and repair fund £1800; making altogether, with other minor expenses, a total cost of nearly £6000. The sum already subscribed is also £6000; but as the amount collected towards the endowment fund is only £1000, or merely the minimum sum required by law to be raised previous to the ceremony of consecration, it is highly desirable that this fund should be increased. The Rev. Dr. Spencer, formerly curate at Whitechapel, has been appointed to the incumbency

Among the clergy present at the consecration were the Rev. Mr.

Wharton, Rev. Dr. Butler, Rev E. Spock, Rev. Mr. Beccles, Rev. Charles Barnes, Rev. George Fisk, Rev. J. Hillmer, Rev. Hugh Allen, Rev. H. Dowse, &c. Sir Charles Goring and Mr. C. J. Bevan (one of the trustees) were also in attendance.

The Bishop, with his chaplains, was received at the door of the church by the Chancellor, the registrar, the minister, and trustees, and conducted by them to the vestry room. Having proceeded in his robes to the front of the communion table (on which the vessels for the Holy Communion were placed), the minister presented to his Lordship the petition praying him to consecrate the church, together with the deed of endowment, which the Bishop delivered to the registrar, to be by him read aloud. The Bishop, with his chaplains and the clergy, then walked in procession from the east to the west end of the church, repeating alternately the 24th Psalm. The ceremony then proceeded according to the usual form. The Chancellor read aloud the sentence of consecration, which the Bishop signed, and commanded, together with the petition and the deeds, to be recorded in the registry. The service of the day was then read by the Rev. Dr. Spencer. The Lord Bishop afterwards preached an appropriate and impressive sermon, taking for his text the 5th verse of the 11th chapter of Matthew—"The poor have the Gospel preached to them."

The impressive and interesting services of the day were closed with the apostolical benediction, after which a liberal collection was made.

HURRICANE AT OXFORD.

THE great storm of last week, whose devastations by sea are pictured upon page 20, reached the fine old city of Oxford on the night of Sunday, and reached its greatest height at seven o'clock on Monday morning, when the wind blew a violent hurricane. In the northern portion of the city its effects were most seriously felt. At the workhouse a large stack of chimneys was blown down, and, falling through the roof and ceiling of the old women's ward, killed a poor woman who was sitting by the fire. In the Observatory a noble cedar was blown down; much damage was done to the roof of the Infirmary, and the University Press. Several of the other public buildings were injured. At All Souls' College, one of the pinnacles was blown from the top of the dining-hall, and broke through the roof; and from that of Merton College, much of the lead was ripped off. In Christ Church, Broad-walk, four of the large elm trees were blown down, as well as several others in the meadows; but a more remarkable devastation occurred at Magdalen College, where a large elm tree, near the new gateway, was torn up by the roots, and in its fall destroyed a portion of the ornamental work, and considerably injured the arched entrance which leads to the back of the President's lodgings. The accompanying Illustration shows the fallen tree.

A chimney-stack at the President's lodgings was also blown down, and from thence to the roof in the College-walks, and especially in Addison's walk, limbs of trees were torn off by the violence of the wind; and in St. Thomas's parish, three large poplars were blown down.

CALENDAR FOR THE WEEK.

SUNDAY, Jan. 9.—First Sunday after Epiphany. Laud beheaded, 1646.
MONDAY, 10.—Plough Monday. Royal Exchange burnt, 1838.
TUESDAY, 11. Hilary Term begins.
WEDNESDAY, 12. Short Odd rods, 1840.
THURSDAY, 13.—Old New Year's Day. Cambridge term begins.
FRIDAY, 14.—Oxford Term begins.
SATURDAY, 15. Queen Elizabeth crowned at Westminster, 1559.

THE WELLINGTON VOLUME of the ILLUSTRATED LONDON NEWS is now ready. Price One Guinea. From July 3rd to December 25th, 1852. Containing all the PRINCIPAL SITUATIONS of the CARRIAGE and FUNERAL of the late DUKE OF WELLINGTON.

CASES for BINDING the VOLUME, 2s. 6d. each.

LONDON: PUBLISHED AT THE OFFICE, 198, STRAND.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 8, 1853.

THE new year has opened auspiciously for the country and for the Ministry. The policy of Free-trade still vindicates, by its results, the great expectations formed of it by those "foremost men" of our time, who imposed it upon a willing nation, though upon reluctant statesmen. The quarterly and annual returns of the national revenue, published on the 5th of January, show a great and most satisfactory increase. The revenue of the quarter, ending upon the 5th of January, 1853, exceeds the revenue for the quarter ending upon the 5th of January, 1852, by £557,739; while the revenue for the financial year, ending on Wednesday last, exceeds the revenue for the year previous by no less a sum than £702,776. All this, it must be remembered, is contemporaneous with a reduction of taxation in several important items, more especially the Window and Soap-duties. We need not enter into the further details of this official document, a full abstract of which will be found in another column. It is sufficient to notify the broad fact which it represents—a fact large enough to satisfy all reasonable men, that the recent financial and commercial policy of this country is sound; and to encourage the confident hope that a still further development of that policy will be attended with results equally beneficial. The removal of commercial restrictions has already so greatly increased the national wealth and the public contentment; and tended so obviously to strengthen our alliances with the principal nations of the world; and the matured convictions of the people of Great Britain have been, and are daily, so emphatically expressed in favour of Free-trade as a system, that, so far from expecting any retrogression on the part of our own statesmen, it is highly probable that our example will convert that portion of the civilised world, which still clings to the doctrine of Protection. France and America are both gradually moving in the same direction, and when they are thoroughly convinced of the truth of the principles of Free-trade, it is likely that the peace and prosperity of the world will stand on a firmer basis than ever they stood before in any recorded period of modern or ancient history.

CONSIDERABLE discussion has lately taken place on the subject of Life Assurance. Its importance justifies the interest it has excited. When the citizens of ancient Rome, eager to acquire wealth without labour, expended large sums in building temples to Fortune, Juvenal advised them to follow the dictates of Prudence, and abandon the worship of the fickle deity. In our days, Prudence is the parent of Life Assurance; and yet it appears that only 240,000 persons out of our immense population have taken advantage of the principle. No single circumstance has operated more injuriously to the extended success of these institutions than the disputable character of policies. It is, indeed, a fearful battle for parties with moderate means to fight in a court of law against a public company. The vital principle of a policy of insurance is, that all its conditions shall be carried into effect for the benefit of the insured. Upon this principle, both the insurer and the insured are presumed to contract, and the sacredness of the contract ought to be positively guarded against violation by any strained interpretation of technical terms.

During the last few years a new and dangerous doctrine has been established. Formerly, it was deemed essential to society that an office should not start with a large subscribed capital; now it is contended, the preliminary expenses of establishment being defrayed, there is no necessity for any capital, as the premiums of the living are sufficient to pay the policies of those dying in the course of the year; and this opinion is entertained by several eminent mathematicians.

If an office commences business with young lives who, on fair calculations, may survive as a body for twenty-five or thirty years, of course the receipts will for ever exceed the payments, and the premiums will form a capital sufficient to meet the demands which must arise when the insured die off simultaneously; but, for the continuous stability of such an office, new lives must be constantly added, and this may perhaps be expected if the institutions maintain a respectable character. But a contingency may arise which has been overlooked. The capital of these companies is generally invested in the Funds, and much depends on the rate at which they are invested. For instance, during the war the Equitable was enabled to purchase Consols between 50 and 60, so that the rise to 100 nearly doubled its capital; but the companies formed during recent years have paid on an average from 85 to 95 for Consols, and if another war were again to throw down Consols to 60 or 50, the loss on their capitals would be immense. Safety, therefore, in the future is exposed to great contingencies, nor can we close our eyes to the fall in the rates of interest, owing to the influx of gold and the very probable conversion at some future period of Consols into a Two-and-Three-Quarter per Cent Stock.

The stability of those companies which do not possess a large subscribed capital is liable to be suspected, from the very loose and unsatisfactory manner in which their balance-sheets are prepared. They place on one side their outgoings, and on the other side the premiums received, and the excess of the latter above the former is accounted a nett balance of profit; but this is very fallacious, since no provision is made for policy risks. These liabilities are entirely kept out of view; but they are real, and though, on the doctrine of chances, they may be remote, yet it is possible they may be immediate. A visitation of cholera, for example, might suddenly arise and sweep away the insured in a new office within a year or two after its establishment, when the reputed balance of nett profit would vanish, and insolvency would follow. Certainly this is an extreme case, but prudence guards against all contingencies. At any rate, all balance-sheets should be free from sophistry: in them nothing should be suppressed, and especially no credits should be displayed as absolute when exposed to enfeeblement, or reduction even, by remote liabilities.

In all great mercantile institutions, which demand a general support from the public, publicity is the chief conservator of confidence. On this principle the Bank of England is required to publish in the *Gazette* a weekly return of its assets and debts. We are convinced that those life insurance companies who should imitate this rule, not perhaps weekly, but annually, would promote their own interests. The sums for which they are responsible in the aggregate are said to amount to one hundred and fifty millions, equal to one-fifth of the National Debt. This is a gigantic trust to be reposed in any body of men, free from Parliamentary control. We have great faith in the honour and judgment of the directors and actuaries of these institutions, but we are convinced that if all policies were declared indisputable, and periodical statements were published of assets and liabilities, showing in what those assets consisted, it would be better for the companies, and better for the public.

THE REVENUE.

The returns of the quarter's revenue, made up to the 5th inst., will, we are sure, be universally regarded as the most gratifying for many years past. On both the year and the quarter there is a great increase, as compared with the corresponding periods of 1852. On the year the increase is £978,938; and on the quarter, £7 7,7?? Under two heads only is there any falling off on the quarter, and in both cases the deficit is so inconsiderable as to be scarcely worthy of mention. The two heads are the Customs and the Excise. The decrease under the former is £16,138, and the latter, £13,524; but on the year we find an increase in the Excise of £269,811. The Stamps are more productive, by £167,544, than during the corresponding quarter of last year; whilst the Taxes show an augmentation of no less than £253,861. Even the Property-tax brings in an additional £100,282 to the quarter's revenue, as compared with the amount received in the quarter ending January 5th, 1852; on the year the increase is £294,714

The increase and decrease will be best seen by the following details:—

INCREASE			
Stamps	..	..	£167,544
Taxes	..	..	253,861
Property-tax	..	..	100,282
Post-office	..	..	7,000
Crown Lands	..	..	4,500
Miscellaneous	..	..	1,114
Total, ordinary Revenue	..	..	£580,211
Imprest and other Moneys	..	£15,329	145,017
Repayments of Advances	..	129,624	
Total Revenue	..	..	£725,228
DECREASE.			
Customs	..	£16,138	31,472
Excise	..	15,334	
Increase of the Quarter	..	..	£7 7,7?6

On comparing the returns for the *year* ended Wednesday with those for 1851, we shall find a still more favourable result. There is a small apparent decrease of £56,887 in the Customs; but it is more than sufficiently explained by several reductions of duty which have taken place. In the Excise there is a large augmentation, of £261,811 a fact which shows the augmented means of consumption possessed by the working classes. The Stamps display an increase of £355,712; and the whole of this accession may be ascribed to the extension of trading transactions. In the Property-tax there is an increase, on the year's returns, of £294,714; in the Crown Lands, of £110,000; in the Miscellaneous, of £121,488; and in the Repayments of Advances, of £228,354. On the other hand, we find a decrease of £150,100 on the taxes for the year, which may be accounted for by the delays in collecting the new House tax; and the Post-office exhibits a decrease of £12,000, which is doubtless attributable to the unusual excess in the year of the Exhibition. The general result of a comparison of the Revenue for the year ended 5th January, 1853, with that for ended 5th January, 1852, is that the latter exceeds the former by £702,776.

Whether, therefore, we examine the returns for the quarter or for the year, we find abundant evidence of a high state of financial prosperity, of the comfort and well-being of the industrious classes, and of the continued and advancing success of the system of commercial policy commenced in 1846.

CHURCH, UNIVERSITIES, &c.

CAMBRIDGE, JAN. 4.—The decree of LL.D., by Royal mandate has been conferred in Convocation on Mr. Geldart, Master of Trinity Hall. The Rev. M. B. Cowie, of St. John's College, has been elected Hulsean Lecturer for 1853. The Hulsean prize for the best English dissertation has been adjudged to Mr. W. Jay Bolton, of Caius College—subject "The Evidences of Christianity as exhibited in the writings of its apologists down to Augustine, inclusively."

The Bishop of Meath has appointed Archdeacon Stopford and the Rev. Ralph B Baker his Lordship's examining chaplains.

TESTIMONIALS.—The following have received testimonials of respect and esteem:—The Rev. J. G. Childs, from the parishioners of St. Dennis, Enfield; the Rev. C. Wyatt, M.A., from the best English children of Christ Church schools, Macclesfield, upon his leaving that neighbourhood.

PREFERMENTS AND APPOINTMENTS.—The following have recently taken place:—*Rectories:* The Rev. S. T. Preston, M.A., to Little Brandon, Wymondham; the Rev. E. C. Adams, B.A., to Hawkchurch, Dorsetshire; the Rev. E. Sparke, to Puddeshaue, St. Mary; the Rev. W. Menzies, M.A., to Winnal, Hampshire; the Rev. T. Bacon, to Kingsworthy, Hants. *Vicarage:* The Rev. W. C. Mosom, M.A., to Elmsham, Glanford-brigge. *Incumbencies:* The Rev. H. H. Price, M.A., to Ash, Sandwich; the Rev. M Richardson, B.A., to Mun.resdale, Penrith, the Rev. E. D. Webster, B.A., to Bassenthwaite, Keswick, the Rev. T. Biddy, to Norton, Gloucestershire.

THE COURT.

WINDSOR CASTLE.

The opening of the New Year was celebrated by her Majesty on Saturday last, by a grand musical entertainment, given for the first time in St. George's-hall. On that day there dined at the Royal table her Royal Highness the Duchess of Kent, his Serene Highness the Prince of Leiningen, her Serene Highness the Princess Adelaide of Hohenlohe, the Lady in Waiting to the Duchess of Kent, the Baroness de Speth; and Captain and the Hon. Mrs. Tottenham. In the evening the party was increased to about fifty, chiefly residents of the neighbourhood of Windsor, invited to be present at the concert. A rising orchestra, handsomely and appropriately decorated, was constructed at the east end of St. George's hall, which was covered by the new and powerful organ recently erected there by Mr. Hill. The orchestra, consisting of upwards of 160 performers, was conducted by Mr Anderson, the director of her Majesty's private band. Mr. Cusins, organist of her Majesty's private chapel, presided at the organ. The first part of the concert consisted of the "Lobgesang" (Hymn of Praise). The second part comprised the published portions of the unfinished oratorio "Christus," and a scene from "Israel."

On Sunday the Queen and Prince Albert attended an early service, in the private chapel of the Castle, and partook of the Sacrament of the Holy Communion, administered by the Hon. and Rev. G. Wellesley.

On Monday the Duke of Wellington had an audience of the Queen to deliver up the Garter worn by the late Duke. The Earl of Beauborough, the Earl of Malgrave, and the Right Hon. Edward Strutt kissed hands, on their appointment to the offices of Master of the Buckhounds, Comptroller of the Household, and Chancellor of the Duchy of Lancaster. On the same day, Sir George Hayter had the honour of submitting his picture of the late Duke of Wellington visiting the effigy and relics of Napoleon, to the Queen and his Royal Highness Prince Albert.

A Privy Council was held at the Castle on Tuesday. The Most Noble George Duke of Argyll, and the Right Hon. John Viscount Sydney, were, by command of the Queen, sworn of her Majesty's most honourable Privy Council, and took their seats at the board. Her Majesty, in Council, was pleased to declare the Right Hon. Edward Cardwell, of St. Germains in Ireland. The most noble George Duke of Argyll was sworn in Lord Privy Seal. The Duke of Norfolk had an audience of the Queen, and kissed hands on resigning the seals of office as Lord Steward of her Majesty's Household. In the evening her Majesty, his Royal Highness Prince Albert, with the Prince of Leiningen, drank tea with her Royal Highness the Duchess of Kent at Frogmore.

Her Royal Highness the Duchess of Cambridge and the Princess Mary arrived at the Castle, on a visit to her Majesty and the Prince Consort, on Wednesday evening.

The Belgian Minister and Madame Van de Weyer, and Viscount and Viscountess Hardinge have been also among her Majesty's guests during the week.

The Countess of Charlemont has succeeded the Marchioness of Ely as Lady in Waiting to the Queen; and Lieut.-General Sir Frederick Stovin has relieved Major-General B. Drummond as Groom in Waiting. Lord Charles Fitzroy has succeeded Colonel the Hon. Charles Grey as Equerry in Waiting to the Queen. Colonel Bowyer has been relieved by Lieut.-Colonel F. H. Seymour in the duties of Equerry in Waiting to his Royal Highness Prince Albert.

The Duke and Duchess of Hamilton and their youthful family have left St. James's-place, for Paris.

The Marquis of Lansdowne has left town, for his seat, Bowood Park, Wilts.

RAILWAY INTELLIGENCE.

A movement, likely to be attended with success, is now making among the shareholders of the Amhergate Railway to amalgamate with the London and North-Western Railway. The shareholders already sending their assents are so numerous, that a large majority is expected to declare in favour of the movement

LONDON AND NORTH-WESTERN RAILWAY.—AMERSHAM RECEIVER.—A very crowded meeting of landowners, lessees, occupiers, and other persons interested in supporting a proposed railway from the Watford station of the London and North Western Railway, through Rickmansworth, Chorley-wood, Chenies, and Chalfont St. Giles, to Amersham, in the county of Buckingham, was held on Wednesday at the Swan Inn, Rickmansworth. The chair was taken by the Hon. C. C. Cavendish, M.P., who was supported by the Hon. and Rev. Lord Wriothesley Russell, the Rev. Edward Hodgson, the Rev. William Moore Brabazon; Messrs. H. W. Woolrych, William Simpson, Francis Blake, H. Ingram, William Weller, M. Curr, J. Ayres, and other landowners and occupiers. The chairman briefly opened the business, and stated he was happy to see so numerous and respectable an assembly before him; but he regretted they were deprived of the presence of one or two friends, whose assistance he felt would be of the greatest value to them though that absence was not caused by any want of approval of the undertaking. He had received a letter from Lord Robert Grosvenor (who was represented at the meeting by his steward, Mr. Elliott), regretting that a previous engagement in his world prevent his being present on that occasion, and Sir John Kirkland had also written, apologising for being unable to attend. He had also to apologise for the non attendance of their friend Mr. Lovejoy, who was confined here to his room, had he not been unfortunately compelled to attend the sessions at Aylesbury; as well as for that of Mr. Fuller, who was also unavoidably prevented being present. He felt that the proposed railway must prove of the greatest advantage to the district, which only required the aid of railway accommodation to rise rapidly into importance, and he would be very happy to do all in his power to promote its being carried out. On the motion of the Hon. and Rev. Lord Wriothesley Russell, seconded by the Rev. E Hodgson, it was resolved

That, considering the expensive and inconvenient nature of the great traffic in and about the district through which the proposed railway from the Watford station to Amersham is to run, as also to such places beyond as the necessity of a more ready and expeditious communication with the metropolis, and that it would be extremely beneficial and advantageous that the proposal of the London and North-Western Railway Company, to make a line from the station at Watford, through Rickmansworth, Chorley-wood, Chenies, and Chalfont St. Giles, to Amersham be approved and accepted

The following gentlemen were appointed as a committee to wait on the various landowners and occupiers, to obtain their concurrence and assistance in procuring the construction of the line:—The Hon. C. C. Cavendish, the Rev. Edward Hodgson, Mr. H. W. Woolrych, Mr. Francis Blake, Mr. William Weller, Mr. Herbert Ingram, Mr. Worrell, Mr. John Taylor, and Mr. Thomas Wild. A vote of thanks having been given to the London and North-Western Company for the liberal manner in which they had offered to construct the proposed railway, Mr. Taylor wished to know whether the chairman could inform him whether Lord Essex still entertained the idea of opposing the railway? The chairman could not speak authoritatively on the subject, but he believed that the noble Lord was not now so strongly opposed to the line as he was when it was first projected, and would remain neutral. A cordial vote of thanks was then given to the chairman, who briefly acknowledged the compliment, and, expressing his thanks for the unanimity which had prevailed throughout the proceedings, again assured them that no exertion should be wanting on his part to ensure the carrying out of the proposed line

GREAT WESTERN RAILWAY.—The award of the arbitrator as to the rateable value of this company's line, so long the subject of contest has just been made. The assessment by the parishes was at an assumed rateable value of £1,000 per mile of railway. The arbitrator has now declared that the rateable value in the parishes of Coates, Bisley, and Sapperton ought to have been at £25 per mile only; in Minchinhampton, at £55 per mile; in Rodborough and Stroud, at £135 per mile; and in Painswick and Stonehouse, at £175, instead of £900 per mile.

BOSTON AND MIDLAND COUNTIES.—It appears that the directors of this company are in a position to proceed with the bill for this line, and that the requisite capital has been subscribed. The line is intended to complete a railway communication between Nottingham and the port of Boston, by forming a junction with the Ambergate Railway at Grantham, and thence proceeding to Boston. The capital required is estimated at £250,000, and the length of line 32 miles, making the average cost per mile about £7812. Arrangements have been made with Messrs Peto and Betts for the construction of the line on favourable terms

RAILWAY TRAFFIC IN 1852.—It appears that the gross traffic receipts of railways in the United Kingdom for the year 1852 have been £27,742,820, being at the rate of £2218 per mile per annum. With regard to the traffic returns published weekly, they show a progressive increase during the past five years. In the year 1847 they amounted to £1,41,781; in 1848, to £4,342,650; in 1844, to £5,610,980; in 1845, to £6,—,—; in 1846, to £7,689,870; in 1847, to £8,975,671; in 1848, to £9,—,—; in 1849, to £11,038,990; in 1850, to £12,747,986; in 1851, to £14,767,910; and in 1852, to £15,648,610. The capital expended on the railways on which the traffic is published weekly, amounted in 1844, 1845, to £—,—,—; in 1846, to £—,—,—; in 1847, to £—,—,—; in 1848, to £—,—,—; in 1849, to £181,400,000; in 1850, to £—,—,—; in 1851, to £220,170,201; and in 1852, to £238,907,453. The expenditure on those old and new lines, the traffic returns of which are not published weekly, amounts to about £8,626,100; making, with the £238,907,453, a total of £248,533,552 expended on 7238 miles of railway, being at the rate of £33,878 per mile. Deducting 45 per cent for working expenses from the gross receipts of 1852, will leave for interest and dividends £8,536,951; which on the capital expended, would be at the rate of 3.14 per cent per annum. It is probable that the amount to be divided among the holders of railway shares, bonds, and debentures, after the usual half-yearly meetings in February, will not be less than £4,000,000.

LATEST INTELLIGENCE.

FRIDAY NIGHT.

The Countess de Neuilly, the Duke and Duchess de Nemours, the Prince and Princess de Joinville, the Duke and Duchess d'Aumale, and the Prince and Princess of Coburg paid visits to her Majesty, at Windsor, on Wednesday afternoon.

LORD CRANWORTH.—The new Lord Chancellor will receive the Judges, Counsel, &c., on Wednesday next, the first day of Hilary Term, at two o'clock, at his Lordship's residence in Upper Brook-street.

The Earl and Countess of Eglinton have arrived in London, from the Viceregal Lodge, Dublin, *en route* to Eglinton Castle, Ayrshire.

PROVOST OF ETON.—Among those named as likely to receive the office of Provost, are the Hon. and Rev. Gerald Wellesley, her Majesty's private chaplain, the Hon and Rev. Lord Wrottesley, Bart., Canon of Windsor, and the Rev. Dr. Hawtrey, the present head master. The gift of the Provostship is vested in the Crown.

DUBLIN, Thursday.—Earl St Germans was this day sworn in as Lord-Lieutenant of Ireland; but will, to-morrow, leave for a short visit to London.

FOREIGN.

FRANCE.—The accounts from Paris state that the health of the Emperor is far from satisfactory, notwithstanding that he rides out every day; his cough, however, is apprehended. An order has been issued to the effect that no more Polish refugees will be allowed to reside in France. The Germanic Diet is shortly expected to recognise the Empire. The preliminary steps have already been taken.

TUSCANY.—Our able and fortunate countryman, Baron Ward, First Minister of the Duke of Parma, was dangerously ill. M. Madini and his wife were in daily expectation of their pardon The Grand Duke had ordered them to be kindly treated in their prison until their liberation.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,
TAKEN DURING THE WEEK ENDING THURSDAY, JANUARY 6.

Month and Day	Corrected Reading of Barometer at 0 A.M.	Thermometer: Highest reading	Thermometer: Lowest reading	Mean Temperature of the Day.	Departure Temperature from Mean Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches							Inches.
Jan 1	29.640	54.0	42.1	48.0	+ 11.0	82	S.W.	0.00
„ 2	29.824	52.1	47.2	49.5	+ 12.2	96	S.W.	0.00
„ 3	29.827	43.1	30.8	44.3	+ 8.3	85	S.W.	0.20
„ 4	29.647	46.2	34.0	45.3	+ 9.6	86	S.W.	0.01
„ 5	29.634	52.0	41.0	46.3	+ 8.8	84	S.S.W.	0.05
„ 6	29.635	50.5	39.8	42.1	+ 4.9	90	S.W.	0.40

Note.—The sign + denotes above the average, and the numbers in the seventh column are calculated on the supposition that saturation of the air is represented by 100.

The mean temperature of the week ending January 6, was 46·2°, which is 1·2° above the average of the same week for thirty-eight years. An inspection of the table will show that the mean daily temperature was above the average on every day. It was highest on the 2nd, which was 49·5°.

The weather has been equally and variable. Rain fell in the week to the depth of one-tenth of an inch.

Lewisham, Jan. 7. JAMES GLAISHER.

HEALTH OF LONDON.—The temperature during the month of December was remarkably high; the number of deaths in the five weeks ending last Saturday, were 1042, 1013, 1041, 871, and 1008 respectively; the last number, however, is influenced by many coroner's cases, which occurred in the quarter, and not previously reported. The present state of the public health is satisfactory. In the week ending Saturday, January 1st, 1911 children were born within the metropolitan districts, of which 987 were boys, and 924 were girls. In the corresponding weeks of the previous eight years the average number was 1822.

THE GUILDHALL LIBRARY.—It is with pleasure we announce a considerate and proper act now on the eve of assembling to the citizens of London. Many of our readers are doubtless aware that this great city possesses a most valuable recording to London matters; that it is annually adding to its stores and that it is in the possession of a fund fully adequate to the acquisition of the most rare specimens. It has lately attracted the attention of the present chairman of the committee (Mr. William Williams); and the result has been, that cards of admission have been—or on the eve of being—issued to every one desirous of any kind of distinction whose habits of research are at all likely to render the collection of use to him. A new printed catalogue of the library will, as soon as corrected, accompany each ticket; and it is intended to print every added catalogue in his own room, and wait on the librarian with his ticket, and see at once what is wanted.

TAXES ON KNOWLEDGE. A deputation of the electors of the city of London has waited on Lord John Russell, at the Foreign office, to present to him a memorial on the subject of the "Taxes on Knowledge," agreed to at a meeting held at the Guildhall Coffee-house. The deputation consisted of Mr. Bennoch, Mr. Alderman Stewart, Mr. J. Pennethorn, and Mr. A. Novello. Mr. Bennoch said that the deputation had was ted on his Lordship to present to him an address on the subject of the taxes on knowledge. He would not trespass upon the time of Lord John, as he was about to call his attention the names of many leading men in the city of London, who were interested in the education of the people. Mr. Bennoch then read the memorial. Some documents were then handed in to Lord John Russell's secretary, who was in attendance. Lord John Russell said: "I will bear the subject in mind. I cannot say more now. You are aware that the President of the Board of Trade will have to consider various taxes." The deputation then retired.

THE AUSTRALIAN MAIL.—Notice was posted on Monday, at the General Post-office, that the *Adelaide*, Royal Mail Steam-packet, which had been detained at Plymouth since the 3rd ult. (with the mails of the 2nd), in consequence of some accident to her machinery, finally took her departure on Sunday last, the 2nd inst., with the London mails for the Cape of Good Hope, Southern and Western Australia, Victoria, Sydney, New South Wales, and Van Diemen's Land, of Saturday, the 1st inst.

EASTERN STEAM NAVIGATION COMPANY.—An extraordinary general meeting of shareholders of the Eastern Steam Navigation Company was held on Monday, at the London Tavern, the business having reference to the election of a director, instead of Henry Davidson, Esq. Charles Geach, Esq., M.P., was unanimously elected.

STEAM TO AUSTRALIA.—The *Harbinger*, next month, will commence the General Screw Company's line to the antipodes, to be followed up by other vessels of heavy tonnage and good power. Those already named are the *Crocus*, *Jason*, and *Golden Fleece*.

BALLAST-HEAVERS' OFFICE.—This office, which has been established to enable the ballast-heavers and their employers to make their contracts direct with one another, and thus to remedy the notorious evil the ballast-heavers are suffering from the middle-man and truck-drinking system, was opened on Wednesday.

ROYAL THAMES YACHT CLUB.—The usual monthly meeting took place on Wednesday, at the Bridge House Coffee-House, Westminster-bridge, when the Rear-Commodore, Mr. Wyld, presided. The Secretary announced that several new members had been added to the list of members, at the Hanover-square Rooms.

SCOTTISH HOSPITAL.—The usual general quarterly meeting of this corporation was held on Wednesday, in the board-room, Crane-court, Fleet-street. The secretary reported that the total number of persons relieved during the past year had been 4158, at an expense of £2100; and that subscriptions had amounted to £2200; and, when all expenses had been defrayed, they had a balance in hand of £167.

LAMB AND FLAG RAGGED SCHOOL, CLERKENWELL.—About 420 children were entertained on Wednesday, at the school rooms with 230lb of beef, 400lb of potatoes, and 200lb of plum-pudding. In the evening, they were amused with a series of dissolving views; and a suitable address having been delivered by the Rev. Mr. Wild, the children were dismissed, having spent a most delightful and happy day.

THE MORNING MAILS FOR 1853.—On Wednesday, an official corrected list of post towns to which letters and newspapers can be forwarded in the morning or by evening mails was issued at the General Post-office, by order of the new Postmaster-General This list comprises upwards of 340 post towns, which now have the benefit of two deliveries daily; of letters and newspapers, indeed, it may be said that every place of any note, throughout the kingdom, enjoys the advantage of two deliveries, in consequence of the great facilities now afforded by the railways. The mails for Ireland are made up thrice daily—morning, afternoon, and evening (except Sundays). Glasgow, Edinburgh, &c., the same. For France and Belgium, Prussia, Switzerland, Holland, Spain, Portugal, Brazil, Egypt, Italy, Austria, Russia, Turkey, &c &c., the mails are likewise made up, morning and evening, daily (except Sundays), viâ Dover and Calais. In addition to the mails, expresses can be sent off at all times, by the Electric Telegraphic Company.

ADMISSION OF THE PUBLIC TO APSLEY-HOUSE.

After an interval of mourning consecrated to the memory of the Illustrious dead, the present Duke of Wellington has thrown open Apsley-house, under suitable regulations, for the inspection of the public. We may recognise in this noble act of liberality the generous and grateful emotions inspired in the hearts of the late Duke's family by the recent national manifestation, of which their venerated parent was the object. The public will highly appreciate the spontaneous kindness which permits them to view so many priceless gems of art, and to enter walls hallowed by so many tender and elevating associations. At no time could the historical treasures of Apsley-house be regarded without feelings of the deepest interest and delight. The memorials of his exploits, the splendid rewards which were so lavishly showered upon him, and the evidences of his exquisite tastes and simple habits, which meet the eye in every apartment, will always render the Duke's town mansion one of the most interesting spots of English ground; but they would have wanted their chief and most touching charm but for the final piety and reverential feeling at the noble successor to the titles and honours of the House of Wellington. The Duke's private room and the Duke's bed-room remain precisely as they were when last used by the Great Captain. No rash hand has made the slightest alteration in the arrangement of his books, his papers, or his pictures. Thus every step is full of memories of the Great Duke. The walls are vocal with his name, and his spirit still fills the place. His son is content to be the trustee of his father's fame; and every one will see in this self-denial a pious and graceful act of filial duty.

A private view of the apartments in Apsley house, about to be thrown open to the public, took place on Tuesday. Great curiosity existed to see the works of art and trophies which were known to decorate the mansion, for the collection was always kept strictly private by the late Duke, and permission to view the interior was an especial favour rarely granted to any except his Grace's personal friends.

Entering the court yard, the visitor is conducted into the entrance-hall, to the right of which is the waiting-room, containing busts of the late Duke, by Steele of Edinburgh; William Pitt, Lord Liverpool, Mr. Perceval, Colonel Gurwood, &c.; then, passing to the foot of the principal staircase, he finds himself in front of Canova's colossal marble statue of Napoleon. The face is full of a dark, stern god, and breathes an awful beauty. The figure is undraped, and holds a winged Victory upon a globe in the right hand. The globe has been thought too small for the figure, a piece of which was which we should not repeat here but for a fabulous remark of the sculptor. The Marquis of Bristol, who admired the statue exceedingly when he first saw it in Canova's studio, having, nevertheless, urged this objection, the sculptor said:—"Vous pensez bien, my Lord, que la Grande Bretagne n'est pas comprise." After the battle of Waterloo, and the entrance of the allied armies into Paris, this statue was regarded as a trophy of war, and was presented by the sovereigns of Europe to the illustrious hero, in whose mansion it will, we trust, remain an heir-loom to the remotest posterity.

The staircase conducts the visitor to the Piccadilly Drawing-room, in which there are several admirable paintings, deserving of a closer inspection than can be obtained from the narrow gangway which leads to the next apartment. In this Drawing room is Wilkie's "Chelsea Pensioners reading the *Gazette* of the Battle of Waterloo," a well-known production, full of life, animation, and character. The Duke took the liveliest interest in the composition, arrangement, and painting of this picture, for which he paid Wilkie two guineas per square inch. On the other side of the door is Ruben's "Judgment of Paris," and Rembrandt's Peregrines celebrating the Battle of Trafalgar," a work, like most of great merit. Another picture which the late Duke greatly admired, "A mimic fight in the Lists with the Wild Beasts," by Sir Edwin Landseer, has also a prominent place here, and evinces the wonderful skill of this painter in delineating the peculiar characteristic expression of the Lion of Britain and his noble companions A Portrait of John Duke of Marlborough, at the other end of the room, is too far distant from the visitor to properly see it, and the same may be said of a Madonna by Murillo. In the door of the Piccadilly drawing-room, which graced the walls of the British Institution three or four years ago; and of many other cabinet specimens of the Dutch school.

The drawing-room is the next apartment, near the door of which is a life-like portrait of the Duke's great adversary in arms, Marshal Soult, and a fine portrait of Pope Pius VII. This room also contains the original painting of the "Mouse Hunt," by Francis Grant, R.A.; and the copies, by M. Bonnemaison, of the four celebrated pictures by Raphael belonging to the Spanish Government. The subjects are known to fame as "The Holy Family," "The Visitation," "La Madonna del Pesce," and "The Spasimo." These admirable copies were obtained by his Grace after the battle of Waterloo. Some artists have a rare facility for painting and reproducing the characteristics of great masters; and many of our readers, as they look upon these repetitions of the works of the Prince of Painters, will ask themselves why the new National Gallery should not have a wing destined to contain the best copies that money can procure of all the *chefs d'œuvre* of the greatest ancient and modern artists, for the instruction and delight of those who are unable to make a distant and long pilgrimage to see the originals. In this room stand a pair of Sèvres porcelain vases, presented to the Duke by Louis XVIII.

We now enter a magnificent saloon—the Grand Picture Gallery which occupies the entire western side of the mansion. This gorgeous apartment is memorable as the scene of the annual Waterloo Banquets, at which his Grace entertained the surviving General Officers of the actions of the 16th, 17th, and 18th of June, 1815. The invitations to these festivals were issued by Prince Albert since his marriage. The walls are covered with pictures bought with rare and costly pictures, by the first masters. The late Duke's collection has always been considered more choice than extensive, but there are certainly paintings in the saloon which would grace the gallery of equal size. For want of sufficient space, cabinet pictures, by the Flemish and Dutch masters, are hung up so far above the line, that it is impossible to see their beauties, or, indeed, to offer any opinion upon their merits.

The first glance around this noble saloon is bewildering, from the number and richness of the collection. Several of them have a twofold interest connected with them, and bear testimony not only to the genius of the artist, but to the valour of the departed hero. Some of the gems of the collection, for example, were presented to the late Duke by the King of Spain, after their recovery from the baggage of Joseph Bonaparte, captured at Vittoria. The most valuable picture in the gallery collection is Correggio's "Agony in the Garden," by Correggio it is a small painting on panel, of wonderful beauty, but it is unfavourably hung, and the spectator is prevented by an envious barricade from approaching it. This picture was for a long time in the Royal Palace, Madrid; and has always been considered a *chef d'œuvre* of the artist. Another remarkable picture is the "Water-seller," by Velasquez, also from the Royal collection at Madrid; besides the painter's own portrait, and a portrait of Pope Innocent X. These works of an artist little known in this country will be regarded with peculiar interest by our connoisseurs. The Grand Gallery is also rich in the works of the Dutch school, in the selection of which the late Duke displayed infinite taste. Teniers, Jan Steen, Van Ostade, Van der Heyden, Vanderhelst, De Hooge, &c., are fine specimens of their best pictures. At one end of the room (where you enter) is a small "Annunciation," a compositon of Michael Angelo; just above it, on the right, is a copy of Raphael's celebrated "Madonna della Seggiola," by his greatest pupil, Giulio Romano On each side of the "Annunciation" hangs a small Claude. In the centre of the room, over the fireplace, is the well known picture by Vandyke, of "Charles I. on Horseback." The air of resigned melancholy in the features, amounting to a presentiment, speaks of a gentle and loving nature rendered fierce by maxims of kingcraft. This picture cost [illegible] guineas.

Those three Murillos are among the most [illegible] pictures in the collection. The "Conception" is a [illegible] Spagnoletto, and Salvator Rosa are represented by pictures in characteristic styles, but of high, and sometimes supreme, merit.

Two huge candelabra of Russian porphyry, in the middle of the saloon, were presented to the late Duke by the Emperor Nicholas. At the side of this specimen are two vases of Swedish porphyry. The gift of the King of Sweden.

Having with difficulty torn himself from the Picture Gallery, with its richly-gilded cornices and ornamentation in the style of Louis Quatorze, and taking one last look at the Duke's place at the Waterloo Banquet (exactly opposite the fire-place), the visitor finds himself in a small Drawing room, containing a full-length portrait of King William IV., by Wilkie; a full-length of the late Marquis of Wellesley; a [illegible] Female Study," by Willis; and two or three other pictures.

Visitors now descend the back staircase, and proceed into the China-room, where portions of the exquisite services of china, and the magnificent gold and silver plate used at the Waterloo Banquets, are exhibited. In this room is the far-famed silver-gilt Wellington Shield, presented by the merchants and bankers of London at a cost of £7000. It was designed by Stothard, and is three feet eight inches in diameter. The designs illustrate the most picturesque incidents in the Duke's military career, commencing with Assaye. After depicting his brilliant victories in the Peninsula, they conclude with the receiving the ducal coronet from the hands of the Prince Regent. These subjects are ranged in compartments within a wreath of oak, turned round the shield. In the centre is the Duke, seated on horseback. Victory is placing a laurel crown on the victor's brow, while anarchy, discord, and tyranny, lie beneath the conqueror's feet. "The wonder of the central group consists in the management of the horses within the circle, without the slightest confusion or interference with each other; all the evolutions of the chargers emanate from the centre, in itself a most original conception."

On each side of the Wellington Shield is the splendid silver plateau presented by the Regent of Portugal, for the Duke's services rendered to the Crown of Portugal during the Peninsular War from 1808 to 1811. This silver plateau is 30 feet long and 2½ feet broad. It is lighted by 100 wax tapers, and is of beautiful design and workmanship.

Here also are the three splendid candelabra presented by the Corporation of London, and the Waterloo Vase from the City merchants and bankers. The gold and silver plate displayed at the Waterloo Banquets was valued at £500,000.

The exquisite service of Dresden porcelain, representing the Duke's victories, is only partly exhibited, the greater portion being displayed in splendour in the secretary's room. Before leaving this room, the visitor should not fail to notice the remarkably-spirited busts, in bronze, upon the case opposite the Wellington Shield. The centre bust is that of Louis Quatorze, who has Turenne upon one side, and the Prince de Condé on the other.

We now approach the rooms (upon the ground-floor) where the late Duke passed most of his hours when in town. We first arrive at his secretary's room, where Mr. Algernon F. Greville, who for many years filled the post of his private secretary, was accustomed to discharge his duties, and await the Duke's instructions. The Duke's *sanctum*, which we next reach, is a library, the walls of which are covered with books in glass cases. Files of boxes, carefully docketed, and made upon a principle invented by the Duke, and heaps of letters and documents, occupy the space near the G. place, directly opposite which stands the Duke's arm-chair. The library-table, in the centre of the room, is crowded with books and magazines. On the left of the Duke's arm-chair is a large table, of a curious rounded shape, which is folded up in the middle. It is provided with drawers and a sliding cover, on drawing down which over his papers his Grace was enabled, by means of a spring lock, to render all secure in a moment. Everything in this room, and the secretary's room, adjacent, is just as the Duke left it. The half-drawn curtains of the fireplace; the cosy red morocco arm-chair; the book cases, whose glazed doors, left open, bear witness to the Duke's recent visits to consult some favourite volume; the little portfolio-table, with a small book, or two upon it, fastened to the left side of the arm-chair, and capable of being brought in front of the person sitting in it—all remain just as they presented themselves to the Duke's eyes when he looked round this favourite apartment and left it for the last time. This room looks out upon the lawn, where his Grace was accustomed at times to take snatches of exercise. Over the mantel-piece are three female portraits the centre one a small full-length of the late Duchess; and the others, portraits of the present Duchess and Jenny Lind

Next to the Duke's library is a small Bed room, which causes an exclamation of astonishment from every one, from its more than Spartan simplicity. A small iron French bedstead with green curtains, two plain chairs, and a small table, may be said to constitute the whole of the furniture of the apartment which *le vainqueur du vainqueur du monde* thought good enough for himself. We assure our readers that thousands of persons in the middle classes would look with horror at the bare idea of complaint against "the Fares and Sisters There" if they were shown into such an apartment in a provincial or continental inn. The vast contrast between the luxury which the Duke always slept in here. The quilt is a common German affair; the blankets are still commoner English blankets; the carpet is almost mean, and the only signs of the Duke's former splendour here and there rather than adorn, the walls. The contrast between the gilded saloons up stairs, and the simple and unadorned apartment at which we have arrived, is most remarkable. But none now is able to appreciate the self-denying and abstemious life which enabled the illustrious departed to win his way with firm nerve and unclouded brain to honours and titles too brilliant, and to wear them during a tenure of such unexampled duration.

The Duke's Bed-room is with great good taste, the last apartment shown. Saddened by his reflections the visitor steps out into the lawn (by an outlet habitually used by the late Duke), and breathes more freely upon the air and sight of heaven as he thinks of the illustrious warrior now sleeping in the vault which has left to him so many vivid and enduring memorials of his labours and exploits. Apsley-house is, indeed, full of the symbolised legends of history, and every relic speaks trumpet-tongued of WELLINGTON.

We are happy to announce, that, by the permission of the Duke of Wellington, Apsley-house will be opened to the public during the present month of January, on Tuesdays, Thursdays, and Saturdays, from ten till three o'clock. Tickets are issued by Mr Mitchell 24, Old Bond-street, in answer to written applications, with name and address.

NEW YEAR'S-EVE IN THE TOWER OF LONDON.—The annual festival of the non-commissioned officers of the 1st battalion of Coldstream guards, stationed in the Tower, which was celebrated on New Year's-eve, deserves to be noticed as an admirable type of a class of entertainments which are now happily common in the British army without rivalry in discipline. The dinner on previous occasions for the non-commissioned officers was the only festivity in which they took part; but this year Colonel Paget, and the officers of the regiment, very handsomely provided a ball also, in order that the wives, daughters, and female friends of those present at the dinner might also participate in the festivities appropriate to the season. About eighty sat down to dinner. About a no o'clock the *convives* adjourned to the ball room (the sergeants' mess-room, in the Tower), which was also appropriately decorated. Dancing then commenced, and the ball-room, in which about 200 persons were assembled, began to exhibit a brilliant and animated spectacle. The va ied military uniforms, the picturesque attire of the Yeomen of the Guard, and the graceful dress of the fair sex flitted about in pleasing contrast in the mazes of the dance; nor was the presence of the officers of the regiment wanting to give a fresh grace and sanction to the scene.

GRAND CHAPTER OF THE ORDER OF CHARLES III., AT MADRID.

EVERY year, on the 7th of December, the day before the Roman Catholic festival of the Immaculate Conception, the solemn ceremony of the investiture of the Order of Charles III. is held in the Chapel of the Royal Palace at Madrid. This year, the ceremony excited additional interest from the presence of the Queen and the King Consort, who presided in person at the meeting, in the preceding page, from a Sketch by our Artist at Madrid. Her Majesty and the King Consort are seated upon a throne to the left of the high altar, surrounded by the Knights Grand Cross, and other Knights of the Order. Her Majesty wears the robes and insignia of the Order, consisting of a white under tunic, with a mantle of light blue silk, richly embroidered with silver stars and round her neck she wears the collar of the Order. The Queen [illegible] the Order, but the King Consort is invested as are all the Knights, with the [illegible] round the waist. The [illegible] a red velvet cushion, upon which are placed the insignia of the Order. The steps are covered with silk.

The form of installation is briefly as follows:—The Secretary of the Order having read the oaths and statutes, the new Knights are sworn faithfully to observe, and are then presented to the Queen by "the Grand Master of the Indies." There were present upon this occasion, besides the Patriarch, two other Grand Dignitaries of the Order, the Archbishops of Toledo and Saragossa.

The portion of the ceremony represented is the presentation of the new Knights. The Royal Chapel is on a level with the state rooms of the Palace, and is superbly decorated. Its entrance is a Corinthian marble arch, and there is a profusion of gilding. The ceiling was painted by Giaquinto: here figure Santa Isidro, the tutelar of Madrid; and Santiago, the patron of Spain.

THE ORDER OF CHARLES III. (firstly Duke of Parma, then King of the Two Sicilies, and lastly King of Spain) was instituted by that Monarch on the 19th September, 1771, in commemoration of the birth of his son Charles Clement. He named it after himself, and devoted it to "the pure conception of the Virgin Mary" The reasons which induced Charles IV. to revive it are not known, but this revival took place on the 12th June, 1804. It was abolished with the other Spanish Orders, in 1808, by Joseph Bonaparte, then King of Spain, and was only re-instituted in its original form in 1814 It is a universal order of merit for the nobility, both native and foreign. Its members constitute two classes, Grand Crosses, who, besides the King and the Royal family, are limited to sixty; Knights, 300, who enjoy a pension of 30 golden each. George IV., the late Duke of York, and Admiral Lord [illegible] were Grand Crosses of the deceased order of Maria Luisa. The present Vicomte Combermere, and Sir Thomas Lawrence, were Knights. The Senior English Knight of the Order is Colonel Charles Menzies, K.H., the gallant and distinguished Colonel Commandant of the Portsmouth division of Royal Marines.

ANNUAL CHAPTER OF THE ORDER OF DON CARLOS III., AT MADRID, IN THE PRESENCE OF THE KING AND QUEEN OF SPAIN.—(SEE PRECEDING PAGE.)

THE NEW MINISTRY—THE CABINET.

Lord John Russell, Foreign Secretary.
The Duke of Newcastle, Colonial Secretary
Sir William Molesworth, Bart., First Commissioner of Public Works.
Mr. Gladstone, Chancellor of the Exchequer.

Earl Granville, President of the Council.
Earl of Aberdeen, First Lord of the Treasury.
Lord Cranworth, Lord High Chancellor.
(See next page.)

Viscount Palmerston, Home Secretary.
Sir James Graham, Bart., First Lord of the Admiralty.
Sir Charles Wood, Bart., President of the Board of Control.
Mr. Sidney Herbert, Secretary-at War.

THE NEW CABINET MINISTERS.—BIOGRAPHICAL OUTLINES.

THE EARL OF ABERDEEN.

We have so recently given an elaborate memoir of the new Premier, that it is unnecessary here to do more than refer our readers to our last week's publication.

THE MARQUIS OF LANSDOWNE.

Of the Marquis of Lansdowne, also, we recently gave a long memoir. Early last year his Lordship, who for some years had acted as leader of the Whigs in the Upper House, intimated his intention to withdraw from active political life. From this comparative seclusion he was drawn on the resignation of Lord Derby, by a command from her Majesty. Having determined to co-operating with Lord Aberdeen in the formation of a strong Administration, he yet declined to take office, but accepted a seat in the Cabinet, as the Duke of Wellington had done before him, whom he resembles in the influence which his age and experience give him in the councils of his party, and in the House of Lords Lord Lansdowne has ever been the advocate of Liberal principles, and never more earnestly than when that advocacy involved an exclusion from power. He is also a warm and steady patron of literature. A portrait of his Lordship appeared in No. 552 of the ILLUSTRATED LONDON NEWS (April 3rd, 1852).

LORD JOHN RUSSELL.

Lord John Russell entered public life in 1814, in July of which year he delivered his maiden speech. At a very early period in his political career he was looked on with especial favour by the Whigs, not more on account of his being a scion of one of the "great families," than on the score of his nascent Parliamentary talent. He devoted himself, almost from the commencement of his public life, to the great question of Parliamentary Reform, which, however, he approached cautiously, as prudence dictated in an age when to be a Reformer almost placed a man under a social ban. Year after year he brought forward motions, sometimes a bill, either for the disfranchisement of notoriously corrupt boroughs, and the transference of the privilege to large towns, or for a more general application of the same principle to the whole representative system. In 1823, we find him spoken of by the author of "Public Characters," as "a young man of as great promise as any that had appeared among the nobility for some years." Passing over many details, for which there is no place in a mere biographical outline, we come to the era of 1830—1, when Lord John Russell received the first reward of his long struggle for Reform, in being selected to aid in framing, and ultimately to introduce, the great Reform Bill. This was a period of immense popular excitement; and, of all the Whig Ministers, none quaffed more copiously of the cup of popularity than Lord John Russell. He was cheered on by the public sympathy in his long struggle against the Tory Opposition; and when his labours were over, he received ovations of all kinds, among the most conspicuous of which were some banquets got up in his honour. He took a fair share in introducing and supporting the various measures carried by the Grey and Melbourne Governments; among which were Municipal Reform, Poor-law Reform, the East India Charter and China Trade Bill, Irish Church Reform, the Irish Poor-law, the Dissenters' Marriages Act, &c. The dismissal of the Melbourne Government carried with it the resignation of Lord John Russell; but he again returned to office in 1835. From 1830 to 1834 he had been Paymaster of the Forces: in April, 1835, he assumed the higher post of Secretary for the Home Department, and with it the leadership of the House of Commons. In 1839 he exchanged that office for the Colonial Secretaryship, which he resigned in September, 1841. The history of the Whig Administration during that period is, in fact, the biography of Lord J. Russell; for he was identified with their measures, and, from his position, possessed a powerful control in their councils. The accession of Sir Robert Peel threw him once more into Opposition; but, the defection of the "Country party," in 1846, having deprived Sir R. Peel of his chief party support, Lord John Russell was called on by the Queen to form a Cabinet, which he did out of the old Whig materials. His task was to carry out what Sir Robert Peel had begun. He did so cautiously, and with a due regard to the interests that might be affected by sudden change. In dealing with the Sugar-duties he acted on this principle; and he postponed the repeal of the Navigation-laws so long, that the more eager Reformers began to doubt his sincerity. The events of 1848 gave the Government of Lord John Russell full employment, both abroad and at home; and the time not thus occupied was devoted to useful practical reforms. The death of Lord George Bentinck having placed Mr. Disraeli at the head of the Tory, or Country party, that gentleman commenced a series of skilful tactics against Lord John Russell's acknowledged him as the leader of the Opposition. The minority now gradually increased, until, in 1850, Lord J. Russell was only able to defeat one of Mr. Disraeli's propositions by a majority of fourteen. Another defeat, sustained at the hands of Mr. Locke King, showed that the Radical portion of the Ministerial party were becoming resolute to have some further parliamentary and electoral reform. This Lord John Russell soon afterwards offered, in the shape of a new Reform Bill, which proved, however, insufficient to meet the wishes of the Reformers. In the autumn of 1850 appeared Lord John Russell's letter to the Bishop of Durham, characterising in strong language the recent Bull of the Pope, and reflecting on the religious ceremonies it was supposed to exercise on Catholics. The publication of this document was the signal for a fierce religious dispute; and, early in 1851, Lord John Russell introduced his bill forbidding the Roman Catholic prelates to use territorial titles. This measure was opposed, *ab initio*, by the successors of Sir Robert Peel, who also disapproved of the letter to the Bishop of Durham, as having imported religious feeling into a question essentially political. Lord John Russell at one time resigned office, but was forced to resume it because Sir James Graham and his friends would not join him, and Lord Derby was not ready. Ultimately, after suffering serious changes, to suit both Tories and Peelites, the bill passed, and the session came to a close; the events of the year having left on the minds of political observers a conviction that the Russell Administration could not last long. Scarcely was the session over, when Lord John Russell dismissed Lord Palmerston from the post of Foreign Secretary, thus precipitating the catastrophe; and, almost immediately after the commencement of the next session, the ejected Minister having carried a vote on the Militia Bill against the Government, Lord John Russell resigned, and made way for the Derby Government. In Opposition he preferred a more conciliatory and moderate line of tactics than that desired by the followers of Sir Robert Peel and the representatives of the Manchester school. It was even supposed that his leadership of the Whig party was on an end. Events proved, however, that a long life of public service in the cause of Liberalism and progress could not be so easily ignored; and, on the defeat of the Derbyites, although Lord John Russell had somewhat ostentatiously abstained from an active share in the struggle, he was called on to take a most important part in the present Government. Without him, the arrangement could not have been made satisfactorily; and he showed a spirit of honourable concession and self-sacrifice in waiving the pretensions warranted by his past official rank, accepting the seals of the Foreign-office, but retaining the leadership of the House of Commons—a post for which he is peculiarly fitted, by his experience, tact, and temper. Lord John Russell's name will be associated in history with the repeal of the Test Acts and the Reform Act. He has throughout his life been a consistent Liberal, but acting on the rule that it is better to advance steadily, if slowly, than to create reaction by precipitancy. He is the younger brother of the present Duke of Bedford; was born in 1792; and has been twice married. After representing successively Huntingdonshire, Tavistock, South Devon, Bandon Bridge, and Stroud, he was elected in 1841 for the city of London, which he has since continued to represent.

VISCOUNT PALMERSTON.

Lord Palmerston has been in the service of the State, with the exception of two brief intervals, since the year 1807: and he has held office under every Prime Minister of this country, save one, during the last five-and-forty years. Born in 1784, in he made his first public essay in public life by contesting (unsuccessfully) Cambridge University with Lord Henry Petty (Marquis of Lansdowne); those two opponents now, at the expiration of six-and-forty years, finding themselves together in the same Cabinet. In 1807 Lord Palmerston was made a Lord of the Admiralty under the Duke of Portland; and, in 1809, he was elevated to the post of Secretary at War. This was under Mr. Perceval; and he continued to fill the same office in the successive Administrations of Lord Liverpool, Mr. Canning, Lord Goderich, and the Duke of Wellington. In 1828 he resigned, at the time Mr. Huskisson quitted the Ministry; but, on the accession of the Whigs, in 1830, Lord Palmerston accepted the important post of Foreign Secretary. He was a disciple of Canning, and had upheld the principles in foreign policy of that statesman in some brilliant speeches, after seceding from the Duke's Administration. In office, he upheld the same general principles; but was accused by his opponents of too much intermeddling in the internal affairs of foreign states, in his desire to advance constitutional principles among them. His most doughty and persevering antagonist on this head was the Earl of Aberdeen, under whom he has now again accepted office. Taking an active part in the domestic policy of the Whig Ministry, he still more especially devoted himself to foreign affairs. To him is attributable the settlement of Belgium, the quadruple treaty by which England, France, Spain, and Portugal bound themselves to mutual amity, and the former to aid the latter; and that prolonged interference in the political affairs of the kingdoms of the Peninsula which has resulted in the consolidation of the thrones of Donna Maria and Isabella. He went out with the Whigs, in November 1834, having added two more to the list of premiers under whom he had served. Lords Grey and Melbourne—and resumed his old post when they returned, in 1835. He continued his old policy till 1841, continually opposed by Lord Aberdeen, and by the present Lord Stratford, so long as he was a member of the House of Commons. With his party he went into Opposition in 1841, supporting generally the financial schemes of Sir Robert Peel, and finally voting for Corn-law repeal; although with a reservation of his opinion in favour of a fixed duty for revenue. We do not here enter into all the details of his life. It is enough to say that under his guidance England's foreign relations were honourable to the national pride, but provocative of enmity on the part of foreign Sovereigns, who regarded Lord Palmerston as a propagandist patron of their dissatisfied subjects. These feelings found an echo in a portion of the English press, until the antagonists of Lord Palmerston conceived that they might attack him successfully in Parliament. In the Lords a condemnatory vote was carried, on the motion of Lord Derby, supported by Lord Aberdeen; but in the House of Commons that decision was counteracted by a vote in favour of the noble Viscount, whose speech in defence of his whole policy during many years stands on record as one of the most wonderful efforts of argumentative eloquence. The year 1850 was in the middle of the year 1850. By December, 1851, Lord John Russell, who had till then stoutly defended his colleague, had so changed his opinion, that he dismissed him from office. Lord Palmerston, on the meeting of Parliament, remained, by turning out Lord John Russell and his colleagues; and, in exactly one year from his dismissal, he consented to perform the part of "Home Secretary" to the "Foreign Secretary" of Lord John Russell: and with, for his official superior, the statesman for many years his rival, but in the House of Commons his unopposing opponent of his policy. Lord Palmerston unites to an extraordinary capacity for business, and an experience which in the present day is unrivalled, debating powers of the highest order. He is an extraordinary instance of mental and physical vigour, and of the stamina so remarkable in British statesmen. In his sixty-ninth year, he is as capable, and as formidable, whether in his capacity of Minister or of debater, as he was in his fortieth. Age even seems to give his mind more and more riper, while physical powers seem to suffer no diminution. Lord Palmerston married the sister of Lord Melbourne, in 1839. He sat for Bletchingley in 1806. He subsequently sat for Cambridge University, which he represented till 1831, when he returned to Bletchingley. In 1832 he was elected for South Hants, but lost his seat in 1834. In June, 1835, he was elected for Tiverton, and in that snug haven he has ever since remained

MR. GLADSTONE.

Third son of Sir John Gladstone, an eminent Liverpool merchant, the Right Hon. W. E. Gladstone, commenced his career in a manner the least to be expected from his origin. Having distinguished himself at Oxford, he launched into the world a work on "The State in its Relations with the Church," which left the public under the impression that he was a man devoted to abstract questions of religious doctrine, discipline, and Church government; and, moreover, a strenuous advocate of the principles commonly known as "Puseyite." When he entered Parliament, in 1832, it was soon discovered that he had all the natural capacity for eminence as a debater; and Sir Robert Peel, a keen judge of talent, made him a Lord of the Treasury, and subsequently, Under Secretary for the Colonies, in 1834. On the return of that Minister to power, in 1841, Mr Gladstone was made Vice-President of the Board of Trade; and, in 1843, President of the Board. In this capacity he was the "right hand man" of Sir Robert Peel, in carrying his commercial and fiscal reforms; developing a talent for such duties, and a knowledge of the necessary details, that astonished those who had only regarded him as a speculative writer. He resigned office in February, 1845; but came in again as Colonial Secretary, on the formation of that year's Ministry till the downfall of the Peel Government. From that date he has continued a distinguished member of the Peelite party, though leaning more than Sir James Graham to the principle of compensation to agriculture. When, however, the Derby Ministry was principally into shape in his Budget, Mr. Gladstone would not adopt it, but became its most determined opponent. His prominency in the final onslaught on Mr. Disraeli pointed him out as the successor in the office of Chancellor of the Exchequer, for which his past experience at the Board of Trade eminently fits him. Mr. Gladstone was first returned for Oxford University, in 1847.

SIR JAMES GRAHAM.

The career of Sir James Graham has been one of unusual political vicissitudes. During his early political life he was accounted a Radical: in 1830 he accepted the post of First Lord of the Admiralty, under Earl Grey; but resigned in 1834 on the Irish Church question, thinking that the Whigs were going too far. After remaining for a short time, together with the present Earl of Derby, in a neutral position, he joined the Opposition under Sir Robert Peel; and when that statesman came into power, in 1841, he took office as Home Secretary, ably supporting his financial and commercial reforms, his Maynooth Bill, and, finally, his proposal to repeal the Corn-laws. An able Home Secretary he was, also an arbitrary one, and he was exposed to much odium for having authorised the opening of the letters of political refugees. He went out with Sir Robert Peel in 1846, and, although sitting on the Opposition benches, he abstained from active opposition to Lord John Russell till the question of Papal Aggression arose, when he took a decided part against the Ecclesiastical Titles Bill. Several attempts by Lord John Russell to induce him and his friends to coalesce with the Whigs failed, nor would he step in to avert the downfall of the Whig Cabinet, in 1852. To the Derby Administration he was a determined opponent, manifesting very decided Liberal tendencies; indeed, he was at one time regarded as the proximate Premier of an ultra-Liberal Administration. He was the prime mover of the tactics that led to the defeat of Lord Derby; and the reason has surprised no one that, at last, in the new Ministry of Lord Aberdeen, he had returned to his earliest office at post at the Admiralty. He manifested the same spirit of self-denial that had actuated Lord John Russell. Sir James Graham was one of those supporters of Sir Robert Peel's Reform Bill; and he has taken an active share in either framing or modifying almost every great measure passed within the last twenty years. To great vigour of mind and application, he unites shrewdness, sagacity, and readiness, combining all the personal qualities by which a man would conceive—the man going east, as well as the man going west—all would concur in stopping the omnibus, and taking the conductor in charge. Not so Sir James Graham. But how much more surprised would all those passengers, and the policeman at their head, be, if the conductor were to say, 'Why, this is factious combination (fellow-citizen); you, gentlemen, were some of you going one way, and some going another, and yet you have all combined to prevent me from driving my omnibus into the shops on either side of the street!' (General laughter.) Such, however, was the charge made against me a change as which I think, as you will see, we need not be very much concerned."

SIR JAMES GRAHAM ON PARLIAMENTARY REFORM.

"It is said that no Reform-bill can be expected from the Duke of Newcastle. I tell you this, that unless the present Government do bring forward a Reform-bill I will not remain in office. Something has been said with reference to the time and the precise nature of details. The new Cabinet has not yet assembled for the despatch of business, and, consequently, can have had no opportunity of considering their measures: but I tell you that you must leave the Government, constituted as it is with balanced opinions and representing not only the aristocratic but also the democratic principle—you must leave to those trusted with the management of affairs the time and mode of producing their measures. Lord Grey, in the exercise of his discretion, by selecting his time and opportunity, carried one of the greatest changes ever effected in this country without bloodshed. It was a revolution; but, because well-timed, it was a blood-less revolution to submit an illustration of popular rights. The Government is pledged to introduce such a measure, but the precise time and manner must, within moderate limits, be left to their discretion.

THE SAME—ON LAW REFORM.

"Talking of law reform, the other day Lord Derby strutted about in borrowed plumes. Who, I ask you, were the persons who prepared the measures of law reform, which were passed by the late Government? They were recommended by a commission, and there sat at the head of it Sir John Romilly, the Master of the Rolls—a son of that man whose memory ought to be revered in every company in this country—Sir Samuel Romilly. He contended that the severe and harsh character of our criminal code should be mitigated. He contended for the reform of the Court of Chancery—he contended for modifications of its extraordinary expenses, and sought to have justice brought nearer home to Englishmen. He contended that county courts should be established, and that the chicanery and needless expense of common law should be put an end to. And he was called a destructive in his day. But I have lived to see all the measures for which he contended, and for advocating which he

1835, Sir Charles Wood was promoted from the Secretaryship to the Admiralty, which he held till 1839. In 1846, when Lord John Russell came in, he was made Chancellor of the Exchequer, an office he continued to hold till the resignation of the Whigs in 1846. Like his late chief, he was in his earlier life opposed to the repeal of the Corn-laws, preferring a fixed duty, but he followed him in 1846 in voting for their total repeal. Sir Charles came in for Great Grimsby in 1826. In 1831, he exchanged the seat for Wareham; and in 1832 he sat for Halifax, which he still represents. Sir Charles Wood is a good man of business, and a tolerable speaker. He will probably be more useful as President of the Board of Controul, than in his former office of Chancellor of the Exchequer.

THE DUKE OF NEWCASTLE.

The official career of this nobleman commenced at about the date of Mr. John Herbert's, he having been one of the young statesmen selected by Sir Robert Peel from the Tory ranks to carry out his Liberal-Conservative policy. As the Earl of Lincoln, he was made, first a Lord of the Treasury, Commissioner of Woods and Forests, and Chief Secretary for Ireland. His change of policy with regard to the Corn-laws, in 1846, led to a separation between him and his chief, the late Duke of Newcastle. The influence of the father was used to eject the son from the representation of South Notts, which he had enjoyed since 1832. The former prevailed, and the present Duke was obliged to take refuge in the Falkirk Burghs. He was born in 1811. During the interval between 1846 and the present time, he has rendered good service to his party; which they now have rewarded by appointing him Secretary for the Colonies.

EARL GRANVILLE.

This nobleman first attracted public notice by his admirable arrangements in respect of the Great Exhibition of 1851. Under Lord John Russell, Lord Granville was successively Under-Secretary for Foreign Affair, Master of the Buckhounds, Paymaster of the Forces, and Treasurer of the Navy. Finally, he was made Secretary for Foreign Affairs, in December, 1851, on the retirement of Lord Lansdowne. He resigned in the February following. Lord Granville is a good man of business, and a speaker of more than average excellence. His father received the title in 1833. Lord Granville was born in 1815, and sat for some years in the House of Commons before he succeeded to the title.

SIR WILLIAM MOLESWORTH.

The career of the hon. Baronet the member for Southwark has hitherto been remarkable for consistency. He has been from his first entrance into Parliament a Radical Reformer, advocating the Ballot, Short Parliaments, Free Trade, and the removal of the Bishops from the House of Lords. Upon these principles he sat for Cornwall from 1832 to 1837, and subsequently has represented Southwark. His specialty, however, is Colonial Reform, on which subject he has annually made a powerful and luminous speech in the House of Commons. His being offered a seat in the new Cabinet is considered an evidence of the Liberal tendencies of the Government, and his re-election for Southwark, without opposition, shows that his constituents do not consider his acceptance of office has barred his claim on their confidence. Sir William was born in 1810. He has also distinguished himself in literature; avowedly as the editor of the works of Hobbes, and, by repute, as a periodical writer of great power. From his antecedents, we should argue that he will prove an efficient Minister. His extensive colonial knowledge will, of course, be useful to his colleagues in deliberation.

LORD CRANWORTH.

The new Lord Chancellor has passed through a quiet, unobtrusive, but most useful career. As Mr. Rolfe, he was highly respected at the Chancery bar; and he assumed office, under the Melbourne Administration, as Solicitor-General. Subsequently he was appointed a Baron of the Exchequer, a Vice-Chancellor, and one of the Lords-Justices in Chancery. Finally, he has been made Lord Chancellor; and the universal approval of the legal profession attests to the wisdom of the choice.

THE DUKE OF ARGYLL.

Unless it be that the Duke of Argyll is the youngest member of the Cabinet, we do not know why he should be placed last in the list, for in point of ability he does not yield to any of his senior colleagues, although of course wanting their official experience. The Duke of Argyll was born in 1823. He had scarcely made his appearance in the House of Lords when he was marked as a man of promise, one who unites with a certain originality of character, the more useful and practical advantages of sound sense and information. As yet he has done little, but that little has been of a character to justify favourable heralds a brilliant future. The noble Duke has published a work on the Scottish Church question. He holds, by hereditary right, the office of Master of the Household in Scotland, and of Sheriff of Argyleshire. In 1851, he was elected Chancellor of the University of St. Andrew's. We shall publish a portrait of his Grace in the ILLUSTRATED LONDON NEWS of Saturday next, the 15th instant.

THE POLITICAL CAREER OF MR. SIDNEY HERBERT.

The political career of this gentleman, who is half-brother to the Earl of Pembroke, did not commence until a period recent when compared with that when most of his colleagues started in life. He had already distinguished himself by some good speeches, when Sir R. Peel selected him, in the year 1841, to fill the office of Secretary to the Admiralty; promoting him, in February, 1845, to the more important one of Secretary at War. Mr. Herbert resigned office with Sir Robert Peel, in 1846, and has since identified himself with the fortunes of his colleagues in the Peel Government. He is one of those to whom the term "Liberal Conservative" well applies; for he commenced his Parliamentary life a confirmed Tory, with opinions favourable to agricultural protection. These he abandoned under the influence of Sir Robert Peel's examples; and, in 1846, he voted for Corn-law Repeal. Mr. Herbert was born in 1810; and married, in 1846, the daughter of Lord Hertesbury. He has distinguished himself, together with his amiable lady, as the founder and supporter of the Female Emigration Society. He has represented South Wilts since 1832

SIR CHARLES WOOD.

Sir Charles Wood was born in 1800, and married a daughter of the late Earl Grey. After having been private secretary to his father-in-law, he was appointed, in 1832, Secretary to the Treasury, in the room of Mr. Edward Ellice. When the Whigs returned to office in April,

MINISTERIAL OPINIONS FROM THE HUSTINGS.

LORD JOHN RUSSELL ON THE INCOME-TAX AND FINANCIAL POLICY.

"There has of late been much discussion on a subject connected with the Income-tax, namely, the rate at which different kinds of incomes should be assessed. Now, that is a question upon which no Ministry undertook to settle, but evidently without having fully examined it. When they were asked respecting it, whether in curing one injustice they did not create many other instances of injustice, the answer of the Chancellor of the Exchequer was, that he had not had time to examine it sufficiently. Now, our Chancellor of the Exchequer my colleague, means to take time for the purpose of examining the schedules. He will devote all his time and attention, in conjunction with others, before he brings forward the Income-tax measure, in order to see in what manner that measure can be amended, and in what manner the measure thus amended can be defended. Now, I have always said that I thought injustice was inherent in an Income-tax. At the same time do not let us forget that the Income-tax, fairly as I think it originally was, fairly as I believe it must be, has been the means of relieving the country from upwards of £12,000,000 of taxes bearing chiefly upon the industry and commerce of the country. My opinion is, that if it be borne for some years more, still greater alleviation can be obtained from the national burdens, and that in gradual revision, and not in sudden reformation of our taxation, is to be found the true policy of this country."

THE SAME—ON THE "COALITION."

"We have been accused by the late Prime Minister of factious combination. Why, how could we—all having objections of a similar nature to the measure proposed—how could we do otherwise than concur? Let me ask your leave to submit an illustration of this case. If an omnibus, with some ten or twelve passengers inside, is seen going down Ludgate-hill at a furious pace, break up into the shop-windows, and endanger all the persons passing by; why every man would concur—the man going east, as well as the man going west—all would concur in stopping the omnibus, and taking the conductor in charge. Not so Sir James Graham. But how much more surprised would all those passengers, and the policeman at their head, be, if the conductor were to say, 'Why, this is factious combination (fellow-citizen); you, gentlemen, were some of you going one way, and some going another, and yet you have all combined to prevent me from driving my omnibus into the shops on either side of the street!' (General laughter.) Such, however, was the charge made against me a change as which I think, as you will see, we need not be very much concerned."

SIR JAMES GRAHAM ON PARLIAMENTARY REFORM.

"It is said that no Reform-bill can be expected from the Duke of Newcastle. I tell you this, that unless the present Government do bring forward a Reform-bill I will not remain in office. Something has been said with reference to the time and the precise nature of details. The new Cabinet has not yet assembled for the despatch of business, and, consequently, can have had no opportunity of considering their measures: but I tell you that you must leave the Government, constituted as it is with balanced opinions and representing not only the aristocratic but also the democratic principle—you must leave to those trusted with the management of affairs the time and mode of producing their measures. Lord Grey, in the exercise of his discretion, by selecting his time and opportunity, carried one of the greatest changes ever effected in this country without bloodshed. It was a revolution; but, because well-timed, it was a blood-less revolution to submit an illustration of popular rights. The Government is pledged to introduce such a measure, but the precise time and manner must, within moderate limits, be left to their discretion.

THE SAME—ON LAW REFORM.

"Talking of law reform, the other day Lord Derby strutted about in borrowed plumes. Who, I ask you, were the persons who prepared the measures of law reform, which were passed by the late Government? They were recommended by a commission, and there sat at the head of it Sir John Romilly, the Master of the Rolls—a son of that man whose memory ought to be revered in every company in this country—Sir Samuel Romilly. He contended that the severe and harsh character of our criminal code should be mitigated. He contended for the reform of the Court of Chancery—he contended for modifications of its extraordinary expenses, and sought to have justice brought nearer home to Englishmen. He contended that county courts should be established, and that the chicanery and needless expense of common law should be put an end to. And he was called a destructive in his day. But I have lived to see all the measures for which he contended, and for advocating which he

was denounced as a destructive. I have lived to see all them adopted with benefit and satisfaction to the British people (Loud cheers). Who was another member of that commission? Sir George Turner, who has on y this last week been elevated by the present Government to the highest official pos ion in this country. Who was another member? Sir William Page Wood, the Solicitor-General under Lord John Russel.'s Government. Who else has served on that commission? I also, who have now the honour of address ng you. We shall not stand still. The Court of Chancery has been reformed. Common-law proceedings have been simplified. We must now go to the ecclesiastical courts. Su-h proceed ngs as that of Mr. Moore, the son of an Archbishop, with £700 a year and a reversion in favour of his grandson must be put an end to."

SIR WILLIAM MOLESWORTH ON REFORM.

"Now, the late elections, and the election petitions on the table of the House of Commons, disclose a hideous scene of bribery, corruption, and intimidation, and there is too much reason to fear that many of those disgraceful, discreditable, and i legal acts were committed with the connivance if not with the positive approval, of persons who were in high authority. Now, an effort must be made to put a stop to such disgraceful proceedings, and, therefore, the question of a Reform Bill is one which must and will engage the early attention of her Majesty's Ministers.

LORD PALMERSTON ON THE BUDGET.

"Taking the Budget pe.se, by itself, upon principle, it was not a bad Budget. In the first plac , it relieved the shipping interest fro n some vexatious restrictions to wh ch it had still been exposed; and in the next p ace it proposed to diminish to the consumer the cost of beer and the price of tea. Now, some persons thought that the diminution of the Malt-tax was to be to the benefit of the landed interest to the farmer and the landowner that was a pure delusion—an entire delusion. It could have been of no benefit to them, except by raising the price of barley; but how was it to ra se the price of barley? Why, as beer would have been cheaper, more would have been drunk—more malt made—more barley bought—and the demand increasing, the price would have increased—but foreign barley and malt would have come in, and the farmer would not be one farthing the better, and the public would have no interest in the matter. Well, then, another part of the Budget was to increase taxation

doubling the House-tax and extending it to £10 houses. Well, gentlemen, if the people's credit required an increase of taxation if the public revenue required an augmentation of the revenue—and if no other mode less objectionable could be found—I am persuaded that the patriotism and good sense of the householders of England would lead them cheerfully to acquiesce in the augmentation of their burdens. There was no such necessity in the present instance."

MR. BAINES ON OUR FOREIGN POLICY.

"With regard to the other members of the Cabinet, he would only say that they possessed as great an amount of administrative ability as was ever possessed by any Cabinet in this country. He might also say, with the most perfect truth, that these members were men of the most spotless character. They were engaged in the task of governing the country in t mes which he had strong confidence in believing they would discharge efficiently. In the House of Lords, the head of the Government (Lord Aberdeen) had given an outline of the policy which would be adopted. Government would respect in foreign nations the right of choosing their own rulers. No unnecessary interference with foreign countries would take place, nor would anything be resorted to to break that peace which it was so important to preserve; but, on the contrary, all the arts of peace would be cultivated by every means in the power of the Government."

HON. C. P. VILLIERS ON REPRESENTATION AND EDUCATION.

"He thought a change was necessary in their representative system. Common sense showed that it was most desirable, and could not be allowed to exist much longer. They had small insignificant places, with populations of 10,000, returning two members to Parliament, and important towns with 200,000, returning only the same number. The mode of election, too, was objectionable. The system of intimidation was more than ever the less favoured portion of the community; and abuses existed which should be swept away. Corruption and immorality were consequent upon the present mode of election, and he thought some means should be devised to remedy the evil. It had been suggested that the ballot should be adopted; but certain parties objected to it; though he (Mr. Villiers) would say they were wrong in supposing they could show a better. In the interview he had with the first Minister of the Crown, he stated his opinion in favour of the ballot. Upon the question of education he would observe that though he had always opposed Government interference in social and domestic life, he was of opinion the state should provide education for the children of the poor, who were unable to provide it for them."

THE RE-ELECTIONS.

AYLESBURY. Mr. Bethell, the Solicitor-General
BRIDPORT.—Lord Alfred Hervey, one of the Lords of the Treasury
CARLISLE Sir James Graham, Bart., First Lord of the Admiralty
DUMFRIESSHIRE.—Sir William Jardine will oppose Lord Drumlanrig, the Comptroller of the Household. The election is on the 12th
GLOUCESTER Admiral Berkeley, Lord of the Admralty, has been returned by a majority of 93 over Mr. Hope. Close of the poll:—Berkeley, 702; Hope, 609
HADDINGTON The 11th is the day fixed for the election; but no opposition is anticipated to Sir John Hope, Chancellor of the Exchequer
HALIFAX. Sir Charles Wood, Bart., Chief Commissioner of Indian Affairs, was returned for this borough, in opposition to Mr. H. Edwards, by a majority of 66, the close of the poll being:—Sir C. Wood, 697; Mr. H. Edwards, 326.
HERTFORD. The Hon. W. F. Cowper, one of the Lords of the Admiralty.
LEEDS. M. T. Baines, Esq., President of the Poor Law Board.
LEITH BURGH.—Mr. Monerieff, Lord Advocate.
LICHFIELD. Lord Alfred Paget, Chief Equerry
LONDON. Lord John Russell, Secretary for Foreign Affairs.
MARLBOROUGH. Lord Ernest Bruce, Vice-Chamberlain.
NOTTINGHAM.—Edward Strutt, Esq., Chancellor of the Duchy of Lancaster.
OXFORD (University).—Mr Gladstone is opposed by Mr. D. Perceval. The polling commenced on Tuesday, and, at the close of that day the numbers stood:—Gladstone, 85; Perceval, 80. On Wednesday: Gladstone, 171; Perceval, 170. On Thursday: Gladstone, 204; Perceval, 204. Friday (at four o'clock): Gladstone, 457; Perceval, 410. The poll closes on the 14th
SCARBOROUGH Earl Mulgrave, Treasurer of the Household
SOUTHAMPTON.—Sir Alexander Cockburn, the Attorney-General, has defeated Mr. B. Cochrane by a majority of 52
SOUTH WILTS Mr. Sidney Herbert, the Secretary of War, will be opposed by the Hon. Grantley F. Berkeley. The nomination is on Tuesday, the 11th
SOUTHWARK.—Sir William Molesworth, Bart., First Commissioner of Works
WOLVERHAMPTON The Hon. C. P. Villiers, Judge Advocate General.

MONPETH Sir George Grey, Bart., has been returned in place of the Hon. E. Howard, resigned
OXFORD (CITY). Edward Cardwell, Esq., President of the Board of Trade, has been returned for this city, in place of Sir W. P. Wood, who has accepted the Vice-Chancellorship.

NATIONAL SPORTS.

An interregnum in the steeple chase season confines the public field sports for the week, to coursing, of which we find five meetings in the register, most of them, we may add, possessing other than local interest; viz., the Wilts., Hawkstone (Salop), Shipston (Yorkshire), and Penrhyn (Wednesday), Angus and Mearns (Forfarshire); and Thursday, Clifton (Notts)

TATTERSALL'S

MONDAY.—A moderate attendance, but more business than for several weeks past. Our quotations, therefore, touch upon a variety of events, and promise well for the book makers as the season advances:—

METROPOLITAN HANDICAP.

20 to 1 agst Gideon (a)	7 to 1 agst Hatchet (b)	28 to 1 agst Grapeshot (c)
22 to 1 — Ackbrandt (a)	28 to 1 — Ithuriel (b)	30 to 1 — Cantonment
	30 to 1 agst Woolcock filly	

CHAST-R CUP.

20 to 1 agst Lady Evelyn	20 to 1 agst Muscovite	
20 to 1 — Iodine Mystery	20 to 1 — Sear-crow	

1000 to 10 agst Little Jack

16 to 1 agst Miss Mowbray	16 to 1 agst Knight of Gwynne	40 to 1 agst Mars Mischief
16 to 1 — Sir Peter Laurie	25 to 1 — Lord George	100 to 8 — Boort a

DERBY.

14 to 1 agst West Australian	16 to 1 agst Gerunio (f)	50 to 1 agst Orlando (g)
	16 to 1 — Sir Hubert	50 to 1 — Lord Ravensberg
16 to 1 — Chesnut (e)	20 to 1 — Beaumont (g)	
16 to 1 — Pharos (e)	40 to 1 — Hampden (g)	100 to 15 — Honeywood
16 to 1 — Dutchess (e)	50 to 1 — Barbarian (g)	

THURSDAY. A thin room and scarcely anything doing. The following were the quotations:—

METROPOLITAN STAKES.

17 to 1 agst Richmond		25 to 1 agst Grapeshot
20 to 1 — Galvanism		30 to 1 — Lampolo

DERBY.

16 to 1 agst Chesnut	25 to 1 agst Hurtworth	40 to 1 agst Barbarian
17 to 1 — Ludwell (e)	40 to 1 — Hate, Me	

Lord Brougham, at the date of the last letters from his Lordship was quite well, at his chateau, near Cannes, where the noble and learned Baron intends to remain until the re-assembling of Parliament.

CHESS.

TO CORRESPONDENTS.

BRITISH CHESS CLUBS.—We have to acknowledge the receipt of the Rules &c., of the Weymouth Chess Club, the Kidderminster Chess Club, the Chel ceaham Chess Club, the Stourport Chess Club, and of a new Chess Club established at Huddersfield. What are the other chess clubs of the metropolis and the provinces doing? We have a number of communications on this subject, but one of above one hundred claims our appeal for the particulars of their names and hours of meeting has been answered by about a dozen only!

T T A T.—1. Your proposed move will expose the K to check. 2. You may remove Major Jackson's knight's Knight (P) to Q B 3rd, and regain the foreign bandsmen. 3. Be happy to see Mr. Horwitz's "Problem Tourney" in type, in the celebrated match against the Paris Club, when Messrs. Staunton and Horwitz, on one side,

G. S. Stanyforth.—Safe practice, at right nearly three months after date. A reply shall be forwarded, with a brief critique on Mr.

INVALID.—Many thanks to Mr. Horwitz for all "Loose Leaves of Indian Chess," is expected. Please send us the Nos. in question as soon as you receive

A. M. Mills.—Mr. Horwitz is a member of the Chess Club, and of the Cleaver problem Tourney, which is now in progress, and open to all subscribers of the Chess Players' Chronicle.

The next meeting of the Committee will be held at Mr. Lander's, 24, Cavendish-square, on Monday evening, the 10th inst., when the following cases will be adjudicated. If a player cannot attend, he can nominate a friend to act for him. Should neither attend, the case shall be submitted to the Committee present, and if not then settled, shall be referred to the next meeting.

Case 1.—Mr. Parker and Mr. Wilson, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 2.—Mr. Wilson and Mr. Lander, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 3.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 4.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 5.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 6.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 7.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 8.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 9.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 10.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 11.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 12.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 13.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 14.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 15.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 16.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 17.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 18.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 19.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 20.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 21.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 22.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 23.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 24.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 25.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 26.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 27.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 28.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 29.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 30.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 31.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 32.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 33.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 34.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 35.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 36.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 37.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 38.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 39.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 40.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 41.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 42.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 43.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 44.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 45.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 46.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 47.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 48.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 49.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 50.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 51.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 52.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 53.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 54.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 55.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 56.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 57.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 58.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 59.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 60.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 61.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 62.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 63.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 64.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 65.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 66.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 67.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 68.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 69.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 70.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 71.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 72.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 73.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 74.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 75.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 76.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 77.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 78.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 79.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 80.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 81.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 82.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 83.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 84.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 85.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 86.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 87.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 88.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 89.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 90.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 91.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 92.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 93.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 94.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 95.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 96.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 97.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 98.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 99.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 100.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 101.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 102.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 103.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 104.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 105.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 106.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 107.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 108.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 109.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 110.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 111.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 112.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 113.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 114.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 115.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 116.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 117.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 118.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 119.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 120.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 121.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 122.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 123.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 124.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 125.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 126.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 127.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 128.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 129.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 130.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 131.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 132.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 133.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 134.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 135.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 136.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 137.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 138.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 139.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 140.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 141.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 142.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 143.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 144.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 145.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 146.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 147.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 148.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 149.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 150.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 151.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 152.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 153.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 154.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 155.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 156.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 157.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 158.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 159.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 160.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 161.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 162.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 163.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 164.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 165.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 166.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 167.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 168.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 169.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 170.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 171.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 172.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 173.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 174.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 175.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 176.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 177.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 178.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 179.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 180.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 181.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 182.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 183.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 184.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 185.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 186.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 187.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 188.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 189.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 190.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 191.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 192.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 193.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 194.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 195.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 196.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 197.—Mr. Lander and Mr. Parker, the latter having played a move, and then withdrawn it, on the plea that he had touched the piece inadvertently.

Case 198.—Mr. Lander and Mr

DINNER TO MR. THOMAS CUBITT'S WORKMEN, AT THE NEW RESIDENCE OF THE RUSSIAN EMBASSY, CHESHAM-PLACE

THE NEW RESIDENCE OF THE RUSSIAN EMBASSY.

CHRISTMAS is usually the scene of those pleasant festivities which unite the higher and lower classes in one common enjoyment. A remarkable instance of this occurred on Monday the 27th instant, on the completion of the new residence of the Russian Embassy in Chesham-place; when the kindness and hospitality of the Baron Brunnow were displayed in an entertainment given by his Excellency to about 200 of the workmen employed in Mr. Thomas Cubitt's establishment, who have been occupied during the past ten months in the necessary alterations.

To form Chesham-house, as the future residence of the Imperial Embassy is designated, two of the largest mansions in Chesham-place have been thrown into one—a task of no ordinary difficulty, and requiring the most skilful arrangement. The whole of the ordinary fronts of the two houses have been thrown into one handsome facade, the doors removed, and the entrance to the embassy made through two ornamental lodges, opening into a spacious court-yard from Lyall-street.

On the occasion referred to, the walls were decorated with garlands of evergreens, expressive of a hearty Christmas welcome to the guests. The good taste of the *maître d'hôtel* had also introduced from the temporary residence of the Baron Brunnow two portraits of the Queen and Prince Albert, which formed the most conspicuous ornaments of the vast range of apartments. A medallion transparency of her Majesty, with the motto "Vivat Regina" over the staircase, and a colossal representation of the Imperial Russian arms between the entrances to the principal *salons*, completed the interior decorations. The tables were spread along the length of the drawing-rooms, extending between 200 and 300 feet, and a liberal feast crowned the board.

Mr. Pearce, the *maître d'hôtel* of the Baron Brunnow, occupied the chair, supported by the principal *employés* of Mr. Cubitt, whose son, Mr. George Cubitt, was also present.

Shortly after the guests had taken their seats, his Excellency the Baron Brunnow, accompanied by the Baroness and their daughter, and a few private friends, entered the room. His Excellency went round the tables, spoke to the guests and the chairman, and altogether evinced great interest in the scene.

After dinner the chairman proposed "The health of her Most Gracious Majesty the Queen," which was drunk with enthusiasm, and followed by a few bars of the National Anthem.

The next toast was that of his "Royal Highness Prince Albert," with which was coupled the rest of the Royal Family.

Mr. Robert Waller proposed "The health of his Imperial Majesty the Emperor of Russia." He was sure it would require no recommendation from him to secure for the toast a worthy reception. He should not attempt to compliment, by any feeble words of his own, the exalted individual whose name he had been permitted to introduce, but would content himself with the simple expression of an earnest hope that the good feeling and friendship which had so long existed between our gracious Sovereign and the Emperor of Russia might never be interrupted (Loud cheers). When the applause with which this toast was received had subsided, the band played the "Russian National Hymn." After which

The chairman said he was sure the tribute of respect which had been so cordially paid to his Imperial Majesty must be truly gratifying to his Excellency Baron de Brunnow, the Baroness, and the family.

Mr. John Waller, in a neatly eulogistic speech, proposed "The Health of his Excellency Baron de Brunnow," and thanks to him for the kind entertainment they had that day enjoyed.

His Excellency Baron de Brunnow presented himself, and begged permission, in his own name as well as that of his family, to express the pleasure they felt at seeing so large a company assembled on the occasion. It had been considered that the first entertainment to be given in their new residence was due to those who had assisted in completing it; and he returned to those present his sincerest acknowledgment for the kind manner in which his health had been proposed and drunk. He regretted very much the poor accommodation at present afforded for their entertainment, and could only hope that their meeting was as satisfactory to them as their presence was gratifying to himself and family (Cheers).

The chairman felt sure he should be pardoned if he added a few words to what had fallen from the lips of his Excellency, whose last expression, before entering the splendid mansion in which they had assembled, was, that he thanked God, up to the present time, those employed upon the works had been protected from all serious accident (Cheers).

Mr Scarry proposed "The health of the Baroness Brunnow," to whose excellent taste and judgment, as one of the draftsmen employed on the works, he had on many occasions been greatly indebted (Cheers).

This toast was received with marked enthusiasm, and followed by a duet, sung by the Misses Brougham.

His Excellency Baron Brunnow thanked the company for their kind reception of the toast—the health of the Baroness Brunnow. "Of course (added his Excellency), I have often been the witness of the suggestions she has made during the progress of these works, and I am bound to admit that her suggestions have been invariably carried out where it was possible. But there is one important thing she would have desired she would have desired better accommodation for your entertainment this day (Cries of "No, no"). But your forbearance and your good temper have rendered our task easy indeed. I cannot thank you enough for this good temper, which is the peculiar characteristic of Englishmen (Cheers). There is another peculiarity of Englishmen also, and that is, they never fail in gratitude for kindness shown to them. I therefore appeal to your good feeling to join me in drinking to the good health of Mr Thomas Cubitt" (Cheers).

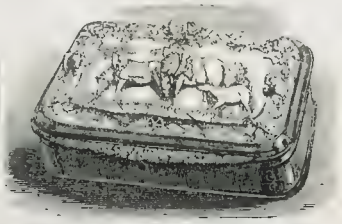
Mr. George Cubitt returned thanks for the honour that had been paid to his father's name.

The Baron and Baroness here left the room, and the remainder of the evening was devoted to the most perfect social enjoyment, the hospitalities of the day being prolonged until a late hour.

GOURA VICTORIA PIGEONS, TO BE EXHIBITED AT THE POULTRY SHOW, BAZAAR, BAKER-STREET.

TESTIMONIAL TO THE REV. S. F. RAMSEY.

THIS very handsome silver-gilt Snuff-box, made by Williams and Clapham, of the Strand, has been forwarded to Canada West, for presentation to the Rev. Septimus F. Ramsey, M.A. (late incumbent of St. Michael's, Burleigh-street), by the members of his respective congregations in the townships of Whitchurch and East Gwillimbury, in token of the high sense they entertain of his public services and private worth. The Bishop of Toronto has been pleased to express his satisfaction at the state of the churches in Mr. Ramsey's mission; and has highly approved of the testimonial which he so well deserved.



SILVER-GILT SNUFF-BOX PRESENTED TO THE REV. S. F. RAMSEY, M.A.

GOURA VICTORIA PIGEONS.

THESE handsome birds—*Goura Stuarti* (M. Temminck)—are found in the large islands of the Indian Archipelago and New Guinea. They live in the dense forests, and feed upon berries, seeds, grains, &c., which they seek for on the ground. The nest is formed upon a tree; and, like most of the species of pigeons, they lay but two eggs. The specimens here figured will be exhibited at the Poultry Show, to be held next week, at the Bazaar, Baker-street, Portman-square—originally announced to take place at the Oval, Kennington; the change being made in consequence of an objection by the Duchy of Cornwall to the Exhibition being held at the Oval, which is their property. The Show will commence on Tuesday, the 11th instant, to be continued the three following days. We intend to illustrate some of the most remarkable Prizes next week.

THE NEW CUNARD STEAM-SHIP "ARABIA."

THE ROYAL MAIL STEAM-SHIP "ARABIA."

On Saturday last, at noon, the magnificent new steam-ship the *Arabia*, Captain Judkins (built for the Cunard Company by Mr. Napier of Glasgow), sailed from the Mersey for New York, with a very large and valuable cargo of merchandise on board, in addition to sixty passengers, amongst whom were the Chevalier Hulseman and Sir Alan M'Nab. The mails were placed in charge of Lieut. Scriven, R.N., Admiralty Agent. As she sailed down the river she was greeted with loud cheers, which were answered by those on board.

The *Arabia* is of the following dimensions:—285 feet keel and forerake; beam, 41 feet; depth of hold, 28 feet; Custom-house measurement, 2393 37-100 tons; the engines of 9 feet stroke; the diameter of the cylinders 103 inches; and the diameter of the paddle-wheels 36 feet. She is provided with tubular boilers, which are fired from amidships. She has two masts, unlike the other vessels of the company, which have three; and there are two chimneys. The *Arabia* may be considered almost a fac-simile of the *La Plata* (a vessel only the *Arabia*, until purchased by the Royal West India Mail Company). The figure-head of the *Arabia* is an Arab chief, in a warlike attitude. The stern, which is elliptical, is beautifully ornamented. The promenade deck extends the entire length of the vessel.

The internal arrangements of the *Arabia* are very similar to those in the other vessels of the Cunard fleet, the comfort and convenience of passengers being the first consideration. Beneath the upper deck are saloons, stewards' pantry, &c. Between this pantry and the saloon two well-furnished libraries have been placed. The saloon itself is capable of dining 160 persons; and here a different style has been adopted from that to be seen in the other ships of the line. As the vessel has no mizenmast, the saloon forms an unbroken apartment; and the absence of the mast has also given an opportunity to introduce a cupola, filled with stained glass. The cabinet work is of bird's-eye maple, panelled with a marqueterie of ebony. The ceiling blends oak beams, with green, and gold, and white alternately. In the upholstery, crimson hangings have been adopted. The sofas are covered with Utrecht crimson velvet, and the floor is laid with a rich tapestry carpet. The stern lights of the saloon are filled with stained glass, representing groups of camels, with their drivers, and other Oriental sketches; and the opposite end of the saloon is decorated with plate-glass mirrors, in highly-wrought gilt frames.

There are no fire-places, the whole of the apartments being heated by steam pipes traversing the floors, and the temperature can be regulated at pleasure. The gentlemen's retiring saloon is panelled with bird's-eye maple, and curtained and carpeted in the same way as the saloon. The ladies' *boudoir*, on the same deck, is of satinwood, exquisitely carved in arabesques, and through the openings of which a crimson silk background is introduced. The sofas are covered with Utrecht velvet. A velvet pile carpet is laid on the floor, and the panels are adorned with paintings on glass, representing scenes in Arabia and other parts of the East; amongst which is a view of Jerusalem, another of Mount Ararat, and an encampment in the desert, which are particularly beautiful. The sleeping apartments are hung with Tournay curtains, and the floors are laid with Brussels carpets.

The *Arabia* is stated to have the largest and most powerful engines ever put into a ship, and the ease and facility with which they work is a marked feature in their performance. The *Arabia* carried about 1200 tons of coal, and a full cargo, besides passengers.

A SCENE AT THE THEATRE ROYAL, JERSEY.

CONSIDERABLE excitement has been caused in the island of Jersey about a song, but that song was the "Marseillaise." So much disturbance had arisen that the authorities ordered the theatre to be closed, and this measure increased the prevailing dissatisfaction. The circumstances appear to be briefly as follows:—A short time ago, Colonel Le Couteur compelled the *chef de musique* of the town band (Mr Hagemann) to wait upon the French Consul, and tender an apology for having played the "Marseillaise" upon an occasion when the Lieutenant-Governor patronised the performances at the Theatre Royal, and when the French Vice-Consul and several officers of a French war steamer in the port were present. This act of Colonel Le Couteur excited much popular displeasure, and the storm burst forth on the night of Monday week, when the performances at the Theatre Royal were under the patronage of Colonel Le Couteur and the officers of the St. Helier's battalion. The performance was honoured by the presence of the Lieutenant-Governor, Major-General Love, at whose entrance into the theatre the audience rose and the band played "God save the Queen." After the first act, the audience *en masse* demanded the "Marseillaise." The orchestra executed instead the air, "Mourir pour la Patrie, which was received with acclamations. But the audience were determined to have the obnoxious air; and when the curtain fell at the end of the second act, the demands for the "Marseillaise" were repeated, and the noise became deafening. Mr Hagemann quitted his seat, and approaching Colonel Couteur, appeared to ask his commands, the nature of which was inferred when it was seen that the musicians was preparing to leave the orchestra. The confusion now became indescribable. Shouts, groans, hisses, and exclamations were directed at Colonel Le Couteur, who, with eight of his officers, left the theatre. The Lieutenant-Governor did the same, and the Vice-Consul of France followed his example. The clamour continuing, M. Alexandre, the manager, came forward, and declared that, holding, as he did, his *brevet* from the French Minister, it was impossible to accede to the request of the audience. The "Marseillaise" was then sung by a large portion of the audience.

On the Wednesday following, the performances were under the patronage of the tradesmen and artisans of the city, when a special band of music had been engaged to execute the "Marseillaise." On Wednesday the walls of the city were covered with placards, announcing that the "Marseillaise" would be played in the theatre at night, and these placards were signed with the name of Col. Le Couteur, turned upside down. We need not say that these placards did not emanate from the gallant Colonel. At the usual hour of performance the theatre was surrounded by an immense mass of persons, who found the portico occupied by the police. The crowd then learned that the Baillie, fearing a riot, had ordered the theatre to be closed. This announcement caused much dissatisfaction. A few score of persons under the portico of the theatre thundered forth the "Marseillaise," the chorus of which was heartily taken up by the crowd. Three groans were then given for Colonel Le Couteur, and the singers repaired to the house of M. Thomas le Breton, where they again sang the interdicted air. The police now interfered and dispersed the crowd, which, however, reappeared in front of the theatre, and sang "God save the Queen."

Such was the end of an affair, to which much importance has been attached in the island. It is expected that the matter will be brought under the notice of the tribunals.

DISTURBANCE IN FRONT OF THE THEATRE ROYAL, JERSEY.

THOMAS WRIGHT, THE MANCHESTER PRISON PHILANTHROPIST.

THE peculiar claims of this venerable man upon the gratitude of the public have already been ably advocated in the public journals, and

THOMAS WRIGHT, THE MANCHESTER PRISON PHILANTHROPIST

primarily by Mr. Dickens, in his "Household Words." Such an instance of self-denial and practical philanthropy has rarely been recorded. For several years Thomas Wright has spent all the spare time he could snatch from his daily labour in the prisoner's cell, sympathising with the lost position of the inmate, and, by kind persuasion and earnest prayer, exhorting future amendment and restoration to society. The chaplain of the Salford Prison testifies:—"In numerous instances

Wright has succeeded in reconciling husbands and wives, parents and children, masters and workmen; and in a variety of cases he has assisted in enabling convicts of superior education to regain their caste in society by means of emigration; and in several instances, condemned criminals have sought to obtain his Christian sympathy and assistance at the foot of the gallows." Wright was then a weekly servant at Messrs. Ormerod and Sons, iron founders, in Manchester, whom he faithfully served forty-seven years. His weekly wages, as foreman in one of the departments, viz. the moulders, was £3 10s. per week, £2 of which he handed over to his wife for housekeeping; the rest he had for years employed in his good work. When unfortunate criminals have been left for execution, he has made it his business as frequently as possible to visit them, exhorting them to make their peace with their offended Maker; and it is truly gratifying to witness the success of his endeavours in the testimonies which this good old man has received from various criminals previous to their execution —each breathing a silent prayer that God would bless and reward their venerable benefactor in his declining years

His private visits have not been confined to Lancashire, but have been extended to various other prisons, to Scotland, London, and the hulks; where he has conferred inestimable benefits on many of their inmates

Soon after Thomas Wright's services became extensively known through the press, there was commenced in Manchester a subscription for a fund to relieve him from his daily toil, and thus enable him exclusively to follow up the work of social reformation so congenial to his feelings, and beneficial to the community at large. Within a comparatively short period, upwards of £2800 were raised, principally in Manchester and Liverpool; and the committee of gentlemen who took upon themselves the raising of the fund, have brought their labours to a close which may be regarded as successful The amount of subscriptions received, including £100 from the Royal Bounty Fund, through the Earl of Derby, is £3246, the larger portion of which has been thus disposed of: £1002 7s. sunk in the purchase of a Government annuity for Mr. Wright's life, producing £102 per annum; and £2000 to be invested immediately in Manchester corporation bonds, producing £80 per annum. After deducting a small sum for expenses, a balance of £186 remained, which has been paid over to Mr. Wright. By this arrangement, the venerable philanthropist is now in the receipt of an amount equal to that sum which up to a recent period he received from his daily labour in the iron-manufactory to which he was then attached: while a permanent provision is made for those whom he may leave behind him. Mr. Wright is in good health; and there is reason to hope that many years yet remain for him, in which he may still exercise the benevolent sympathies which have gained for him this honourable recompense

THE GEOLOGICAL SURVEY OF THE UNITED KINGDOM.

This national and valuable survey is rapidly progressing towards completion, under the direction of Sir H. T. De la Beche, and his coadjutors of the Museum of Geology. The counties of which the surveys are already completed, are Brecknock, Cardigan, Carmarthen, Caernarvon, Cornwall, Devon, Glamorgan, Merioneth, Monmouth, Montgomery, Pembroke, Radnor, and Somerset; and in Ireland, Carlow, Dublin, Wicklow, and Wexford. The counties in part completed comprise Dorset, Gloucester, Hereford, Shropshire, Brecon, Denbigh, Flint, Anglesea, Lancashire, Cheshire, Derbyshire, and the West Riding of Yorkshire. The survey of Scotland has not yet commenced; but will be, as soon as a sufficient area has been topographically surveyed by the Ordnance Department. In addition to the counties enumerated above, we may add the Isle of Wight and South Staffordshire, which wait only for the final colouring previous to publication. The Geological maps are, as our readers are probably aware, founded on the basis of the Ordnance Survey, and consist of the topographical maps, coloured from the observation of the gentlemen engaged in the Geological survey. These are at present six persons—not, of course, including assistants—employed in the field in England, under the superintendence of Mr. Ramsay, the eminent geologist: several local observers, under the directions of Mr. Reete Jukes; three at the Museum of Geology, who have charge of the collection of surveys; and various persons employed in the Natural History department, under the control of Professor E. Forbes. This survey being founded on a basis so accurate and extensive as that of the Ordnance topographical charts, the geologist is enabled to lay down facts which, for accuracy of general outline, as well as minuteness of detail, are most remarkable. The boundaries of each formation and subdivision, and the order of the various stratifications of slate, freestone, limestone, gypsum, the various orders of coals and ironstones, and the metalliferous beds are laid down with the greatest minuteness and accuracy. Of the value of the maps, in a scientific and economic point of view, it is impossible to speak too highly. A striking instance of the value of this survey is afforded in the case of the map of south Staffordshire. The annual value of the coal and mineral raised from this county exceeds £1,500,000. Most of the beds of ironstone are being rapidly exhausted, and in a great part of the district "the thick coal" has been extracted. It is, therefore, most important to ascertain the positions in which new coal-measures may be found. The examination made by Mr. Hill and others came too late with the geological survey, has gone far to solve that most important problem. For many years past the lower coal measures of this district was concealed from view by the overlying red sandstone; the result of the survey has, however, shown that it belongs entirely to a lower set of beds, and a clue has been obtained by which they may be followed under the red sandstone. The results of this discovery are shown upon the map of the district, shortly to be issued, and indicating, as it will, the "faults" which at certain points have raised the "Permian" to the surface, and with its knowledge of coal measures, will point out clearly those places in which coal may be sought with every probability of success, without undergoing the necessity of sinking through several hundred feet of red sandstone, often upwards of one thousand feet—which overlie the strata in other places. Upon the map, which includes a district of about 450 square miles, each coal, or set of coal is marked by black lines, and dislocations in the strata affecting the coal measures by white lines. The lower red sandstone is shown by brown colour, the new by pale red, and the new red marl by a darker red; basalt and igneous rocks are denoted by green, and limestone by blue. Accompanying the map will be vertical sections showing all the details of the line of the strata on a scale of forty feet to the inch. The maps of other parts of the country, where there are no strata of great value, will also be accompanied by vertical sections, showing all the scientific details, in order that the survey, when completed, may be as perfect as it is possible for such a work to be.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Although the revenue returns for the past quarter are unusually favourable, and a fair average money business has been doing in the National Stocks; the market for Consols has been in a very lunatic state during the whole of the week, and prices have tended downwards. The leading causes of the depression are the advance in the rates of discount by the directors of the Bank of England, the comparative tightness of the Money Market, and the continuous shipments of gold to Russia and elsewhere. How far the Directors may think the Money Market has taken remains to be seen; nevertheless, it is evident, looking to the adverse nature of the Continental exchanges, that large additional supplies of bullion will be abstracted from our coffers, unless efforts be made to check the outflow, which, in the present state of things, is somewhat unnatural. That the Continental trade is considerably against England is evident from the unusual scarcity of drawers on the two last exchange nights. Parcels of coined gold have been forwarded to Sydney, the amount being £70,000. This demand must of necessity continue so long as Australia is without a mint.

Subjoined is a statement of the fluctuations in the prices of home stocks during the past year

	Lowest.	Highest.	Difference.
Bank Stock ..	216	234½	18½
Reduced 3 per Cents ..	96⅝	101¼	4⅝
Consols ..	95⅝	101	5⅜
New 3½ per Cents ..	98	103⅝	7⅝
Exchequer Bills ..	53s.	83s.	30s.
India Bonds ..	65s.	94s.	29s.
India Stock ..	257	287	30

Prices, generally, were lowest in January; but Bank Stock and India Stock were dearest in July; and Exchequer Bills in June. In 1851, Consols only fluctuated 3⅝; India Stock, 9; and Bank Stock, 7 per cent. Exchequer Bills varying about 25s. On Monday, Bank Stock marked 224½; Three per Cents Reduced, 101¾ ⅞; Three-and-a-Quarter per Cents, 104¾ ⅞; India Bonds, 83s prem; Exchequer Bills, 72s premium; Consols for account, 100¾. The market on Tuesday and Wednesday was very flat, and the quotations were not maintained. On Thursday, very few purchases of stock were effected, and the quotations suffered a further decline, closing with very inadequate business done. Bank Stock was 224½ to 223⅝; the Three per Cents Reduced were 101¾; Three per Cent Consols, 100⅞ ¾ ex. div.; New Three-and-a-Quarter per Cents, 104¾ ⅞; Long Annuities, 5⅞; Ditto, 30 years 6¾ ex. div.; India Bonds, 83s. prem.; South Sea New Annuities, 99⅝; Consols for Account, 100¾; Exchequer Bills, 70s. to 73s. prem

The imports of bullion have amounted to about £70,000 from Constantinople, £200,000 from Australia, and 25,000 dollars from New York. The next return of the Bank of England is expected to show a decline of £ 90,000 in the stocks of the precious metals

Money has been in improved demand, and first-class bills in Lombard-street are now done at from 1¾ to 2 per cent per annum. The quantity of really good paper afloat is enormous.

In the Foreign House no new feature worthy of particular notice has presented itself. Parcels of Danish, Belgian, and Portuguese Bonds have been cancelled.

On Thursday, Brazilian Bonds, New, Four-and-a-Half per Cents, were 83 to 84¼; Grenada Deferred, 12⅛; Mexican Three per Cents, 23½; Ditto, for the Account, 23⅜; Portuguese Four per Cents, for the Account, 38⅛; Russian Five per Cents, 121½; Sardinian Five per Cents, 94; Spanish Three per Cents, 40⅜ ex div.; Ditto, New Deferred, 20⅛; Ditto, Passive, 5⅝; Spanish Committee's Certificates of Coupon and Arrears, 14 per cent; Turkish Loan, ¼ pm.; Austria Five per Cents, 99 Juice, Five and a Half per Cents, 92 to 93½ ex div.; Dutch Four per Cent Stock, 97 to 98.

Miscellaneous Shares have been steady Australian Agricultural have marked 85 to 95.0; South Australian Land, 67 to 69; Van Diemen's Land, 25 to 24. Bank Shares were in demand. Colonial, £16.000. Bank of Australasia, 44½; London Chartered Bank of Australia, 3 to 3¼ prem: English, Scottish, and Australian, 1¾ to 2 prem.; Bank of India, China, and Australia, 1¾ to 1¾ prem.; Port Phillip and General, 11¼ to 11⅝ prem; Great Nugget Vein, 4¾ to 4¾; General Steam Navigation, 28⅜; General Screw Steam, 51¼ to 52½; North of Europe Steam, 2¾ Peninsular and Oriental Steam, 6 to 6⅛; Scottish Steams, 2 to 2⅛ prem. £16,000.

The position of mining affairs in this country appears to have greatly improved. In 1852, the dividends paid upon English mines were about £360,000; upon Cornish, £240,000; Welsh, £16,000; Scotch, £12,000. Foreign mines paid £132,000.

Comparatively speaking, the demand for English Railway Shares has been in a very inactive state, and prices have not been supported. The total "calls" last year were £8,043,004, including the proportion called on foreign companies. The following were the official closing money prices on Thursday:

ORDINARY SHARES AND STOCKS.—Aberdeen, 23; Ambergate, Not-Ingham, and Boston, 7; Bristol and Exeter, 108; Caledonian, 66; Chester and Holyhead, 25¾; Cork and Bandon, 18; East Anglian, 1; Eastern Counties, 18; Eastern Union, 3; Lond C 7¾; Edinburgh, Perth, and Dundee, 39½; Great Northern Stock, 20½; Great Southern and Western (Ireland), 105¾; Great Western, 80¾; Lancashire and Yorkshire, 83¾; Ditto, Fifths, 11¼; Ditto, West Riding Union, 8; Leeds Northern, 17; London and Blackwall, 8; London, Brighton, and South Coast, 64; London and Brighton, 108⅞; London and North-Western, 124; Do. Fifths, 15⅞; London and South-Western, 90¾; Manchester, Sheffield, and Lincolnshire, 20⅜; Midland, 74; Newcastle and Carlisle, 42; Newport and Pontypool, 5; Norfolk, 44; Northern and Eastern Union, 3; North British, 40; North Devon, 1; North Staffordshire, 18½; Oxford, Worcester, and Wolverhampton, 50; Shrewsbury and Birmingham, 6⅜; Shrewsbury and Chester, 3; South Devon, 2½; South Eastern, 8¾; South Wales, 30½; Vale of Neath, 13; York, Newcastle and Berwick, 7; Ditto, Extensions, 1½; Ditto, G.N.E. Purchase, 9¼; York and North Midland, 19.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 110½; Hull and Selby, 134; Midland Bradford, 108; Wilts and Somerset, 104.

PREFERENCE SHARES.—Birmingham, No. 2, 4; Huddersfield, 107 Eastern Counties Extensions No. 1, 1¼ prem.; ditto New Six per Cent Stock, 15. Great Northern, 7; Ditto, Five per Cent, 112; Great Western Fund at Four and a Half per Cent, beg. Manchester and Sheffield Limited, 2; North Wales Mineral Valley, 2½; North British, 5; South Eastern, 2½; York Newcastle and Berwick, 1½.

FOREIGN LOANS AND RAILWAYS.—East India 5; ex New, Grand Junction of France and Luxembourg; ditto Railway 5½; Northern of France, 9¼; Orleans, 10; Paris and Rouen, 5½; Paris and Orleans, 58; Paris and Rouen 8; Paris and Strasbourg, 21½; Paris, Caen, and Cherbourg, 8; Rouen and Havre, 20; Sambre and Meuse, 10¼; Upper India Scrip, 1 prem.; Western of France, 18; Western of Switzerland, 2; Namur and Liege, 8.

Anglo-Californian Mining Shares were 1½; Australasian, 4½; Ave Maria, 1½ to ½; Golden Fountain, 1; Victorian Mounds, 2½; Port Phillip, 2½; Santiago de Cuba, 8; United Mexican, 9; Yuba, 2 to 1⅝.

FRIDAY EVENING.—The Consol Market has been flat to-day, but we have very little alteration to notice in prices. The three per cents are 100¾; ditto for the Account, 100¾; the Three per Cents Reduced, 101¾ and the New Three-and-a-Quarter per Cents, 104¾ ⅞. Bank Stock, 224. There will be interest due on Consols during the present week, in consequence of the reduction of the Debt. The dividends at the Bank will be payable to-morrow. The minimum rate of interest now charged by the directors is two-and-a-half per cent. In Foreign Bonds and Railway shares, very little doing.

THE MARKETS.

CORN EXCHANGE, Friday.—The general quality of the English wheat on sale here to-day was middling, and nothing shifting to do in the value of that article. In foreign wheat, the business done this week have not reached to 2700 quarters. Fresh up the present day but little more was offered, and the demand was very limited. Barley was in steady request, and was sold at Monday's prices. Beans and middling kinds were a mere drug, and realised no money, what under terms. For forward delivery nearly a thousand quarters of Egyptian beans, and 3000 quarters of wheat have reached us safely from the westward. All disposed of. Oats were very dull sale, but no change took place in the quotations. Flour, from per sack, whose were heavy. The show of English barley was good of foreign limited. Fine malting samples moved off freely, at full prices. Grinding qualities were rather dull. Malt continued very little s Wheat, per quarter. Barley per quarter. Malt per quarter. Oats per quarter. Beans per quarter. Peas per quarter. Flour per sack.

ARRIVALS.—English: Wheat 470 quarters; barley 700 sacks, 3800 oats, 50 flour, 4560 Foreign: wheat 3700; flour, 730 sacks, 2019 barrels

Liverpool, Friday.—Wheat, 4d. to 5s.; ditto, white, 4s. to 6s. Norfolk and Suffolk, new, 3s. to 5s., ditto, white, 4s. to 5s.; rye, 3s. to 3s.; grinding barley, 2s. to 2s.; distilling ditto, 2s. to 2s.; malting ditto, 4s. to 5s.; Lincoln and Norfolk malt, 5s. to 5s.; brown ditto, 5s. to 5s.; Kingston and Ware ditto, 5s. to 5s.; beans, 4s. to 4s.; ditto, new, 4s. to 4s.; harrowings, 3s. to 3s.; potato ditto, 3s. to 3s.; Yorkshire and Norfolk malt, 5s. to 5s.; ditto, white, 5s. to 5s.; peas, 4s. to 4s.; ditto, new, 4s. to 4s.; ditto, 3s. to 3s.; grey peas, 3s. to 3s.; maple, 3s. to 3s.; white beans, 3s. to 3s.; harrowings, 3s. to 3s.; potato ditto, 3s. to 3s.; oats, 2s. to 2s.; Dutch and Friesland ditto, 2s. to 2s.; Poland and Russian ditto, 2s. to 2s.; Yorkshire and Scotch ditto, 2s. to 2s.; Irish ditto, 2s. to 2s.; Scotch ditto, 2s. to 2s.; potato ditto, 2s. to 2s.; flour, per sack, 2s. to 2s.; per barrel, 2s. to 2s.; per bag, 2s. to 2s. *Foreign*: American flour, 2s. to 2s. per barrel, French, 2s. to 2s. per sack.

Seeds.—The general demand is steady, but we have no change to notice in prices

Liverpool, Friday.—Wheat, 4s. to 5s.; ditto, white, 4s. to 5s. Norfolk and Lincolnshire and Yorkshire, 4s. to 5s. Scotch, 4s. to 5s.; rye, 3s. to 3s.; grinding barley, 2s. to 2s.; distilling ditto, 2s. to 2s.; malting ditto, 4s. to 5s.; Lincoln and Norfolk malt, 5s. to 5s.; brown ditto, 5s. to 5s.; Kingston and Ware ditto, 5s. to 5s.; beans, 4s. to 4s.; ditto, new, 4s. to 4s.; harrowings, 3s. to 3s.; potato ditto, 3s. to 3s.; peas, 4s. to 4s.; ditto, new, 4s. to 4

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE, Oxford-street. Lessee and Manager, Mr. CHARLES KEAN. HINDOSTAN.—The Great Moving Dioramas is now OPEN DAILY, at Three and Eight o'clock, at the ASIATIC GALLERY, 209, Regent-street. Admission, 1s., 2s., and 3s. 6d. Painted by Mr. J. [illegible] Mr. Hanson, and Mr. Knell, from Lieutenant-Colonel Sandwith's Drawings. Descriptive Pamphlets, 6d. each, may be had at the door of such exhibition. "Nothing can be more truthful, nothing more picturesque than the views of the principal Mosques or the picture of Calcutta."—Times.

THE GOLD FIELDS of AUSTRALIA.—The NEW MOVING PANORAMA, painted from Sketches made on the spot by [illegible] New Scenery by [illegible] EXHIBITION DAILY at Three and Eight, next the Polytechnic. Among the Subjects are—Port Phillip Heads—Melbourne—Geelong—Sydney—Parramatta Heads—Mudgee—Bathurst—Mount Alexander—The Road to the Diggings—The Mountains—Summerhill Creek—Ophir—Encampment of 10,000 Diggers by Moonlight. The descriptive Lecture is given at Three and Eight, by Mr. Frost, who resided many years in Australia. Admission, 1s., Central Seats, 2s.; Gallery, 6d. At Twelve, Three, and Eight o'clock, during the holidays.

MR. GOMPERTZ'S COLOSSAL PANORAMA of the ARCTIC REGIONS, with the earliest points of contact in connection with the Search for Sir John Franklin, now open daily to crowded audiences at St. George's-hall, Canterbury, well shortly be opened in Maidstone.

CALDWELL'S SOIREES DANSANTES, every Evening, Eight to Twelve, Admission, 6d., per quarter. £1 6s. admitted now Half-year. Open all the arrangements complete. Mr. Caldwell guarantees to teach any lady or gentleman unacquainted with the art of the most-recent Dances, with grace and freedom, and take part in the fashionable amusement, in Six private Lessons, for £1 1s. 0d.—Caldwell's.

THE GREAT METROPOLITAN EXHIBITION OF POULTRY, PIGEONS and RABBITS will take place in the spacious GALLERIES of the BAZAAR, BAKER-STREET and PORTMAN-STREET, on the 16th, 17th, 18th, and 19th of JANUARY.—Admittance, First Day, January 16th, 5s.; Children under twelve 2s. 6d. Wednesday, Thursday, and Friday, 1s. each. Open from day light till 7m in the evening

MATRICULATION EXAMINATION of the UNIVERSITY of LONDON.—During the ensuing holidays the studies of one of the classes in DENMARK-HILL GRAMMAR SCHOOL will be arranged with the view of preparing the pupils for the above Examination.

EDUCATION, TWENTY GUINEAS per Annum.—A respectable village, 40 miles from London, near Epping Forest. Music, Dancing, Drawing, and the Modern Languages, by Masters in attendance. Writing, Arithmetic, and English, including Washing, Bedding, and the best and most wholesome Food. Large Playground. Referees to Parents. No notice previous to the removal of a Pupil. Charles W. W., Mr. May's, Music-seller, 11, Hi-horn-lane; 98, Hishopsgate-street Within; and 2, Sussex-terrace, Hackney.

DENMARK-HILL GRAMMAR SCHOOL, near London. Conducted by Mr. FLETCHER and Mr. C. C. [illegible] B.A. Fellow of University College, London, and formerly Professor of [illegible] Literature in the Lancashire Independent College. Richard Fletcher, Esq. C. F. MASON

The aim of the course of study pursued at the above-named Establishment is to combine with a sound and extensive classical and Mathematical discipline, a competent acquaintance with Modern and Physical Geography, Mechanics, Chemistry, and the elements of Natural History, together with all the essential features of a thorough English Education. The French and German languages are taught by Professors. In special cases the course of study may be modified so as to meet the particular requirements of the pupil.

It may be accepted as some test of the efficiency of the system that the objects aimed at are realised, that not the pupils only, but even those of sufficient age to become candidates, to the satisfaction of the last Matriculation Examination of the University of London.

The educational and domestic arrangements offer unusual facilities for older pupils. There is also a separate preparatory department for junior pupils, with separate school-room and play-ground.—Prospectuses may be obtained at the School; and of Messrs Longman and Mason, 91, Bartholomew-close; Mr. Churchill, Princes-street; and of Messrs. Relfe Brothers, School Booksellers, 126, Aldersgate-street, London.

NEW BOOKS, &c.

SUPERBLY ILLUSTRATED WORK

THE SALAMANDRINE; or, LOVE and IMMORTALITY. By C. MACKAY, LL.D., Author of "Egeria," "Legends of the [illegible]."

This New Edition of "a charming poem on a most poetical subject," is more than twice as large as the First Edition, and has had its text engraved in the finest style of art by Messrs. Dalziel. It is in a truly poetical, or, the finest paper, [illegible] Pica type, royal 8vo, enamelled, gilt edges, One Guinea.

"It is a book of high thoughts in matter of entertainment most rare as and attractive."—Examiner

"This book is a right charmer."—Critic

Now ready, in one volume, 16s. handsomely bound in cloth, price

ORIGIN and PROGRESS of the ART of WRITING. Being a complete history of the art in all the stages of its development from the simple Hieratic, through the early Greek and Phœnician, and the curious Inscriptions of the Assyrians, to the different styles of European MSS. from the 6th to the 16th Century, and the progress of ordinary writing from the Invention of printing to the present time. By JOHN HILCHEES, Esq.

"The Art of Missal Painting and Illumination is the most interesting part of the whole subject. The Author has treated it in a highly scientific style of Art. . . . The numerous specimens of illuminated writings of the Middle Ages, and from long full experience of the [illegible] writers, are executed in fac-simile from the Magna Charta, Domesday Book, &c. . . . Illustrated by a series of fac-similes from private letters written in [illegible] Medieval and Modern [illegible] of Modern [illegible] including fac-similes

MARBLE STATUES FOUND IN WINDSOR FOREST.

(Continued from page 30.)

must have lain in their hiding-place during a considerable time—five-and-twenty or thirty years at least; and the probability is that they have been there much longer. The very absence of any record of their removal would show that they have long been out sight of and forgotten. The *Times*, we think, is a little premature when it states:—"We believe it will be found that these statues formed part of the exterior decorations of the once famous 'Royal Cottage,' and were removed and hastily thrown aside in consequence of some sudden whim of George IV." It is hardly to be supposed that the casting away of these ponderous blocks of marble, weighing in the whole some twenty tons, could have been done within our generation 'so hastily," and, as a matter of whim or chance. It is not likely that George IV., though his taste was not of the highest order, would have consented to "throw away" works of the kind we are now speaking of, and all by the same artist. Since the above suggestion appeared in the *Times*, the columns of the same journal have given a letter from a correspondent, who states that these statues were removed, some years ago, in artillery waggons, from the British Museum, by order of George IV. The statement is one which, if true, is capable of verification. The national institution in question is closed for the present week for the Christmas; but will re-open next week, when here will be an opportunity of investigating all the circumstances.

APOLLO

THE ILLUSTRATED LONDON NEWS

No. 603.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, JANUARY 15, 1853. [SIXPENCE.

THE WINE DUTIES.

NOBODY seems to care greatly for the repeal of the Malt-tax. It is highly productive, and as little burdensome as any tax can well be. Added to this it is a tax which concerns ourselves alone, and does not bring us into collision with the "foreigner." In this respect it is very different from the duty on foreign wines, which brings us into direct commercial hostility with our nearest and most powerful neighbour.

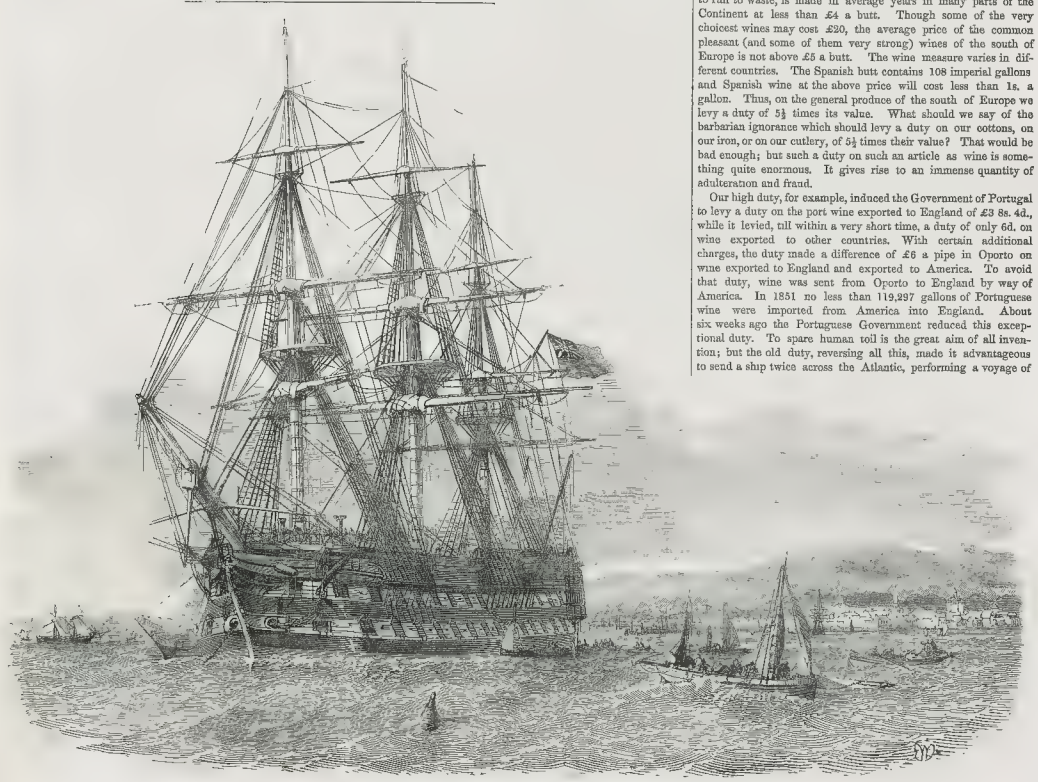
The new Emperor of the French has a decided tendency towards Free-trade, and as he has caused himself to be declared and accepted the sole maker and unmaker of commercial treaties on behalf of the French nation, it becomes the obvious interest of this country to encourage him in the development of a Free-trade policy, by the removal, as far as practicable, of all unnecessary impediments to a freer commercial intercourse between the two nations. Foremost amongst these impediments is the heavy duty levied upon the import of French wine—that great agricultural staple of our neighbours. If it can be proved that not only has the tax been the cause of national jealousy and animosity—perhaps of wars—but that it is actually less productive at the present time than it was in periods when our wealth and our population were less, there will, we conceive, be ample justification for a re-consideration of the whole subject by this country. We entered fully into these two branches of the inquiry in an article published in this Journal on the 31st of July last. There are, however, some other points—less obvious perhaps—but equally important, which have since that period been brought prominently before the public, and which it is expedient to remember, now that a new Government is in office, and that the French Emperor is more than ever disposed to cultivate and extend his commercial relations with the great, and let us hope wise, nation that first set the world the example of Free-trade.

In England wine is an expensive luxury; in France it is the daily drink of the very poorest of the poor. A few years ago it was customary, and, probably, is yet so in the South, to keep in the hall of every respectable house or tavern, a large jug containing the wine of the country, which it was the duty of one of the servants to replenish when empty. From that jug every person about the house was at liberty to drink at all times as much as he pleased. Like a fountain placed by a pious Mussulman at the way-side, it supplied delightful refreshment to weary travellers. A similar custom obtains in other wine-growing countries; and in many of them wine is so cheap in abundant years, that it is of less value than the casks necessary to contain it. Quantities of it are allowed to run to waste, or the ripe and luscious grapes are given to the cattle. A liquid so precious and so difficult to be procured in England, is the produce of the whole of Europe south of 48 degrees latitude, and of a portion to the north of that line. Almost every country has its own peculiar vintage. To enumerate the sorts or calculate the quantity made would be quite impracticable. The English people are only acquainted with a few French, Portuguese, Spanish, and German wines. As to the quantity, the empire of Austria alone, which we never hear of as a wine-growing country, is said to produce the enormous quantity of 600,000,000 gallons; and in France it is pretty well ascertained that, in 1850, upwards of 900,000,000 gallons were made.

Wine has been almost as long known as man himself. Noah, soon after the Deluge, planted a vineyard; and never since has the use of wine been forgotten. From the beginning of history wine and bread have been the chief objects of the husbandman's care: they have been united at all festivities; they have been made holy by religion; and they are still the chief sustenance of many millions of human beings. To all the peasantry of France, Spain, Portugal, Italy, and a great part of Austria, wine is no more a luxury than bread; it is to them a staff of life. For us, who can get but little of it, it is merely a cordial—a restorative and a medicine. There is no reason, except taxation, why, with such a neighbour as France, so ready to trade with us, it should not be an article of daily diet.

The present duty is 5s. 6d. per gallon on all wines—the richest and the poorest—except Cape wine, which is undrinkable and chiefly used to adulterate other wines, and is admitted at a duty of 2s. 9d. Excellent wine, such as is allowed in abundant years to run to waste, is made in average years in many parts of the Continent at less than £4 a butt. Though some of the very choicest wines may cost £20, the average price of the common pleasant (and some of them very strong) wines of the south of Europe is not above £5 a butt. The wine measure varies in different countries. The Spanish butt contains 108 imperial gallons and Spanish wine at the above price will cost less than 1s. a gallon. Thus, on the general produce of the south of Europe we levy a duty of 5½ times its value. What should we say of the barbarian ignorance which should levy a duty on our cottons, on our iron, or on our cutlery, of 5½ times their value? That would be bad enough; but such a duty on such an article as wine is something quite enormous. It gives rise to an immense quantity of adulteration and fraud.

Our high duty, for example, induced the Government of Portugal to levy a duty on the port wine exported to England of £3 8s. 4d., while it levied, till within a very short time, a duty of only 6d. on wine exported to other countries. With certain additional charges, the duty made a difference of £6 a pipe in Oporto on wine exported to England and exported to America. To avoid that duty, wine was sent from Oporto to England by way of America. In 1851 no less than 119,297 gallons of Portuguese wine were imported from America into England. About six weeks ago the Portuguese Government reduced this exceptional duty. To spare human toil is the great aim of all invention; but the old duty, reversing all this, made it advantageous to send a ship twice across the Atlantic, performing a voyage of



EMIGRATION FROM THE ISLE OF SKYE.—"THE HERCULES" IN THE HARBOUR OF CAMPBELTON.—(SEE PAGE 42.)

7000 leagues when one of 400 would suffice. Before port wine is allowed to leave Portugal for an English market, it is, by direction of the Government, and under the monopoly of a company, coloured, strengthened, and fortified, mixed with elderberry juice, brandy, and the unfermented juice of the grape. It is more than wine when it leaves Portugal, and before it reaches the English consumer, it undergoes other manipulations, which often leave it with scarcely a trace of its original qualities.

A pipe of port wine is sometimes compounded in London of 50 gallons of elder, 60 gallons of Cape Pontac, paying a duty of only 2s. 9d., 5 to 10 gallons of British brandy, and cider added to keep the cask full, till all the ingredients are well blended together. Eight pipes of port wine of 115 gallons each, which can be sold for £70 a pipe, are manufactured at an expense of £401, out of the following materials: 2 pipes of Beni Carlos, at £38 a pipe; 230 gallons of Figueras, costing £90; a pipe and a half of Cape Pontac, costing £48; a pipe and a half of good port, £109; a pipe of common port, £63; 20 gallons of mountain, £11 8s. 7d.; washings of brandy-casks, elderberries, salt of tartar, gum-dragon, &c., in proportion; costing in all £401, including the payment of duties for 8 pipes of duty-paid port-wine, which are then worth £560. The revenue and the wine-drinkers are both defrauded by such concoctions.

England has other "vineyards" altogether her own. The above dishonest manufacture is carried on in secret vaults in Thames-street and other parts of the town. But the manufacture of British wines—of British port, of British sherry, and of British champagne—is carried on openly by about twenty licensed manufacturers, and with no fraud either on the public or on the revenue. In Ropemaker-street, in Bishopsgate, and in Pear-tree-street, and other crowded parts of the metropolis, our "vineyards" flourish. How different they are from the sunny slopes of Spain or Portugal, from the umbrageous vales of Italy, and from the vine-covered plains of France, we need not stop to describe. The great principle of division of labour, so essential to well-being in each nation, is in truth common to all society; and its operations are impeded by taxes, which drive a certain class of traders to manufacture wine in vaults and cellars and factories, of nobody knows what ingredients.

The British wine manufacture, exclusive of all the untold abominations practised in darkness by private dealers, produces about 600,000 gallons annually, equal to a tenth part of the wine we import. One gentleman, as we learn from the late Parliamentary investigation, has no less than 2000 customers on his books for the wine made in London. This gentleman, it appears, is by no means the largest manufacturer. Another gentleman has a stock of a million gallons of this kind of wine, worth £250,000, stored somewhere in the metropolis. The British plan has one convenience—it manufactures under one roof imitations of all kinds of wine. They are conveniently made, too, all about an equal strength; and with something like the conjunction of a Dibbler, our manufacturers can draw out of one and the same vat, various kinds of wines, imparting, as they draw it, the peculiar flavour they wish it to bear. Various fruits give it the desired taste. To make champagne, French grapes, however, are employed, which is one mode of encouraging at once the growth of foreign produce and home industry, while the wine duties are evaded. The wine which comes from the Cape of Good Hope, and is so nauseous that nobody will drink it of itself, is a principal ingredient in making British port and British sherry; and, to give British port the genuine flavour, sometimes Portuguese grapes are used, and the bottoms of the elderberry-adulterated wine of the Oporto Company.

The price of British port and sherry to the trade is 5s. a gallon; and it can be retailed at 1s. 2d. or 1s. 3d. a bottle. British champagne is sold to the trade at a guinea a dozen. In consequence of their comparative cheapness, the use of these wines is extending very much; and since 1833, when the duty on home-made sweets was abolished, the quantity annually manufactured has increased from 148,849 to 600,000 gallons. In such a trade there is no fraud; but it furnishes the materials for great frauds. The manufacture is quite legal, and so is the sale. British ports and British sherries—some of the materials of which pay duties, while others pay none, and which are worth 1s. 2d. per bottle—are very often sold, as the produce of Spain or Portugal, at the price of 3s. or 4s. a bottle. Chemistry extracts the most delicious scents from the most offensive substances, and British wine, manufactured by chemical rules, may be as wholesome as the foreign product; but, at least, it would be fair to the foreigner, consistent with the spirit of Free-trade, and honest towards John Bull, were he allowed to choose between the foreign and the home product on equal terms. To encourage native industry is extremely laudable; and the manufacturers of British wine tell us that their peculiar industry could not be practised were the wine duties greatly reduced or abolished. They admit, therefore, that a great quantity of foreign wine would then be imported; and, as all the wine imported would be paid for by the produce of British industry, the question is, whether spinning and weaving in Manchester, smelting and forging in Birmingham and Sheffield, and the general well-being of the country, would not be promoted by the abolition of the wine duties?

There is another question just now of very great importance. Every Christian nation ought to be interested in the prosperity and happiness of every other nation. Every country suffers at all times, in a variety of ways, from the ignorance and political debasement of its neighbours. In England we have lately been led to fear that the prejudices of our nearest ally might be operated on to such an extent as to hurt war on our shores. What right have we to expect from our neighbours co-operation or aid, when we cut off, as far as we can, all the friendly relations of commerce with them, by levying a duty on their chief produce of five-and-a-half times its value? How can we reproach them with political turpitude, when we set them such a bad example? One enormous duty on wine is equally contrary to common sense and political principles. It stops exchange, it stops division of labour, it stops the growth of society, it stops the progress of knowledge, and continues those long-descended enmities of race and nation which it ought to be the mission of Christianity and the aim of civilisation to extinguish.

THOMAS WEIGHT, THE MANCHESTER PRISON PHILANTHROPIST. In the Sketch of Mr Wright, in the ILLUSTRATED LONDON NEWS of last week, it was omitted to be stated that the Portrait is from a Daguerreotype by Mr. G. Stanley Bent, of Newmarket-lane, Manchester.

FIRST WINDMILL ERECTED IN NATAL.—Mr. Anderson, the engineer, has lately completed for Mr Henning this mill, which is beautifully situated at Natal, and commands a fine view of the harbour, and the Indian Ocean; it can be seen for many miles out, and will, doubtless, be looked for by masters of vessels, as a beacon. Upon the first trial of the mill, all parts of the mach nery were fully tested, and worked well; but a little after the breeze suddenly changing, power ful grinding for the remainder of the afternoon, but enabled the engineer to show the sure and ready action of the break while he took in the sail.

CITY OF LONDON LITERARY AND SCIENTIFIC INSTITUTION.—The members of this society, which was finally closed on December 31, are about to present a testimonial to their secretary, Mr. George Stacy, for the zeal and ability with which he has laboured for the interests of the institution during the twenty-seven years of its existence. £200 has been subscribed towards the fund for the above purpose, and another £100 is confidently looked for.

WESTERN HARBOURS. There has been presented to Parliament, within the last few days, the report of the commission appointed to inquire into the merits of the western harbours of Ireland for the purpose of Transatlantic communication. Appended to the report are some very useful explanatory maps of the coast.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday

Everybody knows—and good care has been taken to let them know that Russia has acknowledged France as an Empire, and Louis Napoleon as an Emperor; but everybody does not know what more there has been taken to prevent their knowing—that the recognition was made nearly three weeks ago, but, in terms and with conditions so unsatisfactory to Louis Napoleon, that the matter was kept quiet while the offensive passages were being discussed, and the difficulties resolved; in which, we see, he has proved successful. The other powers who hung back have now come forward, and all goes swimmingly. *Sa Majesté* is gay as a lark, and the gossips entertain us with a thousand anecnotes, *plus ou moins vraies*, of his private proceedings

All combine in wishing for an Empress; for it is a positive fact apart from the tales of the gossips—that an extreme laxity of morals pervades the Court, and that many women decline to appear there, solely for that reason. The *salons* still ring with details of the proceedings at Compiegne; and though, doubtless, there is much of exaggeration in all this, that there were strong grounds for censure there is not the slightest doubt. The difficulty of finding an Empress, however, is not yet resolved

We were promised, for the advent of the year, the most brilliant *fête* pubble, private, and official The promise still awaits fulfilment. *Fêtes* there are, but not in the number that were announced in any of these circles; they are few and far between; and the dancing world seems to find considerable difficulty in getting under way. On Sunday, the pet day here for all galeties, the Princess Mathilde gave a grand ball, the invitations for which were thus couched: "Son Altesse Impériale la Princesse Mathilde M—— de venir passer la soirée," &c. On the same night a brilliant reception, principally attended by the Faubourg St. Germain, took place at the magnificent hotel of Madame de Castellane. The ball at the Tuileries, the Senate, and that announced for Saturday, at the Hôtel de Ville, are the great *fêtes* of the moment.

The theatres present nothing new of any great interest.

At the Français, *Louise de Signorelles*, by Mdlle. Rachel, has a moderate success

At the Italiens, "Ernani" appears, under the title of "Il Proscritto," why, or wherefore, nobody seems to know. It is a subject of remark, that Mdlle. Cruvelli, while constantly displaying all the evidences of the talent she really possesses, frequently shows a carelessness and want of study in the performance of her parts, anything but favourable to herself, or flattering to her audience. We all know the old saying, of the bird that can sing and won't sing. We hope Mdlle Cruvelli will not force the public to remind her of the conclusion. With such resources as she possesses, the least she can be expected to do is to exercise them, and give full scope to her natural abilities.

The Vaudeville has two new pieces—"Le Baromètre des Amours," and a sufficiently amusing one, entitled, "Alexandre chez Apelles," which has nothing to do with Alexander or Apelles, but with a class *de tout ce qu'il y a de plus sucrerie de même temps*. The heroine is played with much spirit by the pretty and *spirituelle* Mdlle. Farquell, who, some years since, had such a success at our St. James's. The ending of the piece is, however, somewhat lame, and spoils the *ensemble* of the thing.

The "Revue," which follows "Les Violettes et les Abeilles," has some of the most irresistibly comic scenes that it is possible to imagine There is one so horribly, grotesquely graphical, between three porteuses, who play in the Pont Neuf, that it equals hardly a creature in Macbeth's witches, mounting from the ridiculous to the sublime, from the force of passion and expression, vile and base as the passion and expression are. The *charge* of the death-struggle of Victor Séjour's "Richard III.," in which the hunchback is made to splatter "Auvergnat!" as one of those scenes, of which the intense absurdity becomes ludicrous beyond description, nothing can give any idea of the effect of this scene; it must be witnessed to conceive the effect

The Gaieté is preparing for the long promised representation of "Uncle Tom's Cabin." with the *élite* of its *troupe*, and has just engaged Mdlle. Dinah, the youngest sister of Mdlle. Rachel, to make her debut in the part of *Eva*—a child-like part, which, in the small talent in the theatrical world, in which the chances of success of the *débutante* are already matters of speculation.

A collection is being made of the works of Napoleon I., for publication, by a commission delegated by the Comité Historique, who are to class and arrange them according to their styles and subjects.

The Prince Napoleon has refused to accept the picker of five-and-twenty men, accorded to each of the immediate members of the Imperial family

The extraordinary mildness of the weather continues to be such that it appears as though autumn were only giving place to spring without the intervention of winter. Even the cabmen declare that the summer fruits are actually ripening; and even here, the lilac and other spring flowering shrubs have large flower-buds. As is generally the case in such seasons, much sickness prevails; typhus fever, smallpox, and influenza are peculiarly active

An interruption in the diplomatic relations of France with Russia which a few days ago seemed inevitable, has been averted by the prudence and forbearance of Louis Napoleon. It appears that one at least of the great Northern Powers refused to give the new Emperor the customary appellation of *Monsieur mon Frere* in the letters to be presented by its Minister. The Russian Envoy in Paris, M. de Kisseleff, having communicated to the French Minister of Foreign Affairs the omission from his credentials of this expression of equality commonly used by one Sovereign to another, the French Cabinet positively determined to refuse to submit to what Louis Napoleon considered a slight, if not an insult. M. de Kisseleff was represented that the expressions "Sire" and "Your Majesty," which were employed, were the same as the Russian Cabinet had uniformly addressed to Louis Philippe, and which were accepted by the Ministers of that Sovereign. Louis Napoleon and his Ministers refused to receive the Russian Envoy, and M. de Kisseleff himself fully expected that his duties in Paris would be brought to an unpleasant term anticipated. The matter was the more serious, as the Austrian and Prussian Ambassadors had purposely deferred presenting their credentials, in pursuance of an understanding between these three great Powers to acknowledge the Emperor confidently, or not at all. They had resolved that, if an objection were taken to the form of the recognition adopted by any one of them, it would suspend the act of recognition by all the rest Some of the minor Powers of Germany were prepared to follow the example of Austria and Prussia

But there were other, and perhaps more powerful reasons why Louis Napoleon should take counsel from his prudence, rather than from his resentment. The excessive speculations of the last few weeks upon the Paris Bourse, the increasing amount of defaulters, and the depressed state of the public mind, rendered it probable that the abrupt departure of the Russian Envoy, and a suspension of diplomatic intercourse with the Great Powers, would be followed by a financial panic, and possibly by a commercial revolution. It is hinted that there is at least one man in the Council of Louis Napoleon's Ministers whom any sudden depreciation of public and industrial securities would have plunged into total ruin. Add to this that the Empire of pence and of the industrial conquests inaugurated by the Emperor's speech at Bordeaux is publicly dependent for its realisation upon the maintenance of public confidence and the price of French Rentes. After an interval of anxious consideration, Louis Napoleon decided to act from policy rather than from feeling, and to receive the Russian credentials against the advice of some of his Ministers. The Court equipages were hastily ordered out, and at the late hour of four in the afternoon, M. de Kisseleff was ushered into the State apartments of the Palace. Louis Napoleon is said to be excessively mortified at the affront to which fiscal and financial necessity has alone compelled him to submit, and there are people who hint that his resentment will be implacable.

The Austrian and Prussian Ministers presented their credentials on Tuesday morning, so that the forms of diplomatic intercourse are now established between the French empire and all the states of Europe. The King of Prussia addresses the Emperor as "Monsieur mon frere," and this was the form observed in the letters of the Austrian Emperor. A curious circumstance, that even the Pope, whose capital is occupied by a French army, suspended his recognition of the Emperor of the French until he had certain points from Louis Napoleon to be pursued

Mr Rives, the American Minister, the Minister of Saxony, and the Turkish Ambassador have received their letters of credence from the Emperor

The Empress is reported to be in the family way. The Duchess of Montpensier is a daughter

A few days ago M. Dupin demanded an audience of the Emperor, to beseech him to accord a delay beyond the period which he had fixed for the sale of the Orleans property, which was graciously accorded. He has obtained the object of his interview. M. Dupin made his new affidavit, finally refusing to accept the place of Procureur-Imperial at the Court of Cassation, which has for some time past been kept vacant, in the hope that this eminent statesman would condescend to accept it.

A hostile meeting took place on Wednesday, between Count Niewerkerque, Director of the Museum, and Count Edgar Ney. The meeting has its principal interest in the fact of both being intimates of the Elysee. The name of a lady is said to be mixed up in the affair

The bandy continue to be depressed, and there is a want of confidence in the Money Market, which unfavourably influences commercial affairs

SPAIN

A new decree upon the liberty of the press has appeared The press is to be allowed to discuss all political subjects, with the exception of two, viz., "the monarchy, and, as its symbol, the unquestionable legitimacy of the throne of Isabella II." and secondly, "the representative principle fundamentally considered—i. e., the right of the nation to interfere in the affairs of government in the manner that the laws may determine." The Government and Royal decree, instead of abolishing the publication of any number of a political journal On the other hand, the qualifications of responsible editors and pecuniary guarantees are lowered. The general tendency of the new regulations is to put the press pretty much as it was before the April decrees were issued. Trial by jury is now done away with, and the former system of sending such cases before a tribunal of judges and First Instance is substituted for it It appears to be the conviction of the Ministers that the jury system is in no shape applicable for Spain. Upon the whole the new decree has given satisfaction to the public, manifesting a willingness to permit a wider range for discussion than that which is now permitted. The principle, however, of enacting laws affecting the rights of a nation by Royal decree, instead of submitting such grave questions to the consideration of the representatives of the people is essentially vicious. When a Ministry can make and abrogate laws at pleasure, the freedom of the press becomes a mere mockery

PORTUGAL

The newly-elected Cortes assembled on the 2nd instant. The tariff has been simplified, but the reductions are slight, and disappoint the expectations of those who looked for the adoption of a system of Free trade. It was generally believed in Portugal that the Government of Lord Derby intended to follow up the malt and hop-duty reductions by reducing the duty on wines; and it is said that the Portuguese Ministers held out a threat to the protected manufactures of the duties upon English manufactured articles until they could secure reciprocity in England, and obtain an assurance that no reduction will be made in French wines without admitting those of Portugal. Wool, cotton, cassimeres, cassenets, &c. plain, figured, or coloured—shall pay 60 reis per lb. with 30 per cent tank-note tax for railways, and three per cent emoluments, the additional twelve per cent being taken off; and that twelve per cent reduction in most articles to be the only reduction made. In cotton goods the alteration is very slight. Hardware, crockery, and glass have in some instances been considerably reduced. Ministers have declined to accept of direct contribution.

The Duke of Saldanha has stated to the Cortes that the dispute about the *Gerard Lee* affair, which was referred to the arbitration of the President of the French Republic, had been decided in favour of Portugal. He also announced that the Queen had recognised the new Emperor, and accredited a Minister to the Imperial Court.

ITALY.

M. Madiai has sunk under his long and cruel imprisonment by the Tuscan Government. A private letter says:—

"The husband Madiai, less strong in body, and less vigorous in mind, than his wife, but not less constant in his faith, expired a few days ago in captivity. It is satisfactory to know that, within a short time of his departure, he received a visit of M. Colomb, a Swiss pastor, who administered to him the consolations of that faith for which he died; and that the unceasing efforts of the Romish priests to obtain his recantation entirely failed. The trials and virtue of martyrdom are not common in this age, for the greater liberty of professing the truth has lessened the danger and the honour of adhering to it."

GERMANY.

The Poor-laws gave rise to an animated debate in the first Prussian Chamber, on the 5th inst. Minister Von Manteuffel declared it as their fixed opinion that alms are the prolific seeds of pauperism, and that Legislative provision for the destitute is practically the greatest cruelty towards the poorer classes, because it encourages selfishness, prudence, and energetic labour, which alone can secure from destitution They overruled not an amendment but an abolition of Poor-laws. The Chamber moved that the Ministry be requested to bring in a Poor-bill this session, which the debate will not fail to excite public interest.

In consequence of the expected meeting of sovereigns in Hanover, parsuant to the September treaty, such large quantities of produce and wares are being imported, that the Custom-house warehouses are overfilled, and the railroads cannot deliver all the bales and barrels accumulating on their premises.

From Vienna we hear that the state of siege was not repealed on New Year's-day, as was expected. It is doubtful whether there is any intention at all of formally abrogating the supremacy of military jurisdiction in the Austrian capital, though, in fact, the military authorities have transferred the power in favour of the civil ones, and given back to the civil officials. While the north of Germany is enjoying quite spring weather, in Austria and Hungary the Waag, Gran, and Save are frozen over, and the Lake Balaton bears of late years increasing Austria is increasing its army. Large bodies of troops are being marched into the Austrian territory bordering upon Montenegro.

DENMARK.

The Duke of Augustenburg has definitively sold his estates in Schleswig and Holstein for half a million sterling. The Grand Duke of Oldenburg has standfastly refused to accede to the treaty for regulating the succession in Denmark and the Duchies With reference to the petition to the ex-Danish Diet in favour of the widow and children of the Schleswig Holstein army, it is assumed that the king of Denmark would not sell to establish a fund of £10,000 a year for the relief of such widows and infants. This is the consequence of a duke. The land estate has been entered into no engagement that the fund shall ever be distributed

PERSIA

The sentence of death passed on the brother of the Shah of Persia, for having been concerned in the assassination of the Ambassador, on the intercession of the Ambassador of England, been commuted into exile

HAVANNAH.

Intelligence has been received at the Admiralty that her Majesty's ship *Pesta*, 26, Captain C. B. Hamilton, was at Havannah on the 10th ult. and had been—all well—for a month at anchor, with other ships, under his orders, were cruising in the neighbourhood. Considerable excitement prevailed in Havannah, owing to a British squadron, Pantaloon, Lawrence—he had received a packet from the island of Nevis, and sent into safety at Havannah having contrived to make her escape, and take refuge on board the *Pesta*. Application had been made by the British Government for the release of the vessel, but in vain. The poor woman, Fanny Lawrence, and her children had been sent into safety the marks of the most savage flogging were evident on her back when she was landed at the ship. The *Pesta* was under the guns of the batteries, and surrounded by the Spanish fleet, but her gallant captain would not listen to any proposal for giving her back to her inhuman masters; and was ready to take under the protection of the British flag

CAPE OF GOOD HOPE

The *Australian* steamer has brought advices from the Cape up to the 30th November, ten days later than the news brought by the *Harbinger*. The Gaika tribes on the eastern frontier had declared war, and committed depredations with parties of Kaffirs concealed in their ranks. Governor Cathcart had arrived at the Orange sovereignty with 600 men, and had issued a proclamation declaring that every Kaffir found in arms, or in any other case, or tribe who should appear in arms, to resist the Queen's lawful authority. The enemy, however, has not prepared in some districts, and has made successful inroads, so that time is evidently what they have to be at an end. The news from Australia had caused a rise in all the export markets. Several vessels were laid on for Melbourne, and many respectable persons there had written home as well supplied with provisions, implements, &c., for a trip to the diggings.

INDIA

The following telegraphic message has been received in anticipation of the Overland Mail, dated

"TRIESTE, January 12.

"The steamer *Ariel* arrived this morning, with the Calcutta mail of the 8th of December

"Pegu was taken on the 21st of November, and will be annexed

"The campaign may be considered at an end, unless the Burmese Government should invade our new territory, which they will probably do. In such a case we should march on Ava

"The North-Western frontier is quiet

"Calcutta exchange firm, at 2s. 6d. to 2s. 1d

"The supply of money for commerce abundant."

"From China we hear that the insurrection gains ground."

THE AUSTRALIAN GOLD-DIGGINGS.

The arrival of the *Australian* mail-steamer at Plymouth, with 600 ounces of gold, valued at £600,000, created great animation throughout the city on Tuesday. In addition to the gold brought on freight, there was said to be £200,000 in the hands of passengers. The *Australian* brought home one of the heaviest mails ever brought by one vessel

The son of Lieut. Bernard, commanding H.M.'s ship Hero, who has also the charge of the Royal Victoria Nugget, presented to her Majesty, by the Government of Melbourne. It is a large piece of solid gold, weighing 28 lb. 4 oz., and was found in the Buninyong diggings

We learn from Sydney that the gold fields in that colony are improving, and are yielding as the winter ceases. Large quantities of gold were conveyed in almost daily from north, south, and west. The Turon is believed at Sydney to be the richest gold field in the world. The northern gold field

at Bengara has not been fully tried, but promises well a party of four obtained 200 ounces in less than six weeks, which gave them about £25 each a very little expense all expenses. At the gold mines, twenty-eight miles from Adelaide about 5,000 people were at work gathering. It is said, from 2 oz. to 3 oz. per day each. The deposit is of a similar quality and rich to the same prize as at Melbourne. Hears at Adelaide have not risen, the run being still for the established gold fields, especially Sandhurst.

The colony of Victoria is indubitably the richest gold field in the world. The amount of gold brought into Melbourne up to August last was estimated at 1,770,000 ounces since it at time there have been brought down by Government and private from Mount Alexander and Clarke, 1,500 ounces. The Argus has estimated the present yield weekly yield of gold, taking the last three months as a criterion, at 80,000 ounces. which, at 78s an ounce gives a gross annual sum of £14,560,000.

The *Morning Herald* of September 27th says:—

> In the first few weeks after the [illegible] upwards of twenty thousand ounces have been conveyed from the [illegible] to the Sydney Mint, [illegible] has an average with of [illegible] weekly would be [illegible] appear, and [illegible] to [illegible] them with energy and perseverance [illegible] the plain and [illegible] upon which Englishwoman can found a safe investment as to the wisdom of [illegible] their fortunes at the diggings.

Great inconvenience is experienced at Melbourne for want of houses accommodation The population is swelled by the arrival of thousands of immigrants from England, while the carpenters, stonemasons, and bricklayers, who would otherwise be employed in buildings for their accommodation, were off to the diggings to earn an ounce of gold a week, and to become their own masters. A suggestion that our builders should be allowed to send out houses in frame

Anything the demand for labour is increasing. Shipwrights are getting 18s. a day; labourers on wharfs are paid 10s. a day, and three hours' grog; painters have 14s. a day and 1s. 6d. an hour over-time. All descriptions of trading mechanics and labourers brickmakers, masons, and rough [illegible] that is, people who will not work at the diggings—they can stand the harsh privation, and handling a pick or shovel is second nature to them.

The once brilliant Ballarat diggings are again resuming their former [illegible]. The escort from Ballarat brought down 503 ounces 16 dwts., half-an-ounce less than it brought down the week before.

The despatch of Sir F. Pakington, directing the gold revenue to be placed under the control of the Legislative Council, gave great satisfaction to the Governor. The proposal to impose a moderate export duty of half-a-crown an ounce on gold, but it remains to be seen whether this proposal will meet the approval of the Council

Provisions were dearer. The price of the 4 lb. loaf was raised to 2s., and a scarcity of flour was anticipated

The following extracts from letters from a young man in Australia, to his mother in London, give a graphic account of the diggings:—

> Melbourne, Jan. 9, 1852
>
> [illegible] gings, with my stores, when, as we had a very little [illegible] thereon, in our way by the diggings, we [illegible] sold off up [illegible] McIver, which I resold again on the 9th of the month. I sold flour, that I had given £3 per bag for, for £4 6 per bag, for which I cleared £81. Sundries, as tea, &c., at 1 to 2 on. My two horses, cart, and harness cost me close on £40; I sold them for £95. The one of gold, which, at £3 17s. per ounce was £110 the price agreed upon [illegible] buyers had brought the gold to Melbourne, and sold it at £3 5s. per ounce, so that they [illegible] £121. I assume this £40 by the transaction. But still I made as much as £70 by [illegible] much of it here now, as gold-diggers Bank nothing frequently or giving £50 or £60 for a cheque of two or three days to drive a wedding party about the town for a day. There [illegible] are one or two of these weddings here nearly every day, the party drive up one street and down another in the dray, shaved themselves off, and [illegible] gradually drink at the [illegible] taverns. You would stare in London to see such a wedding, the whole [illegible] in their paraphernalia, the bride and bridesmaids, smiling, as I generally see, the dirty [illegible] and over the back of the fly. Black cloth is in hand, preparing for [illegible] to have a "mother." One of these weddings frequently costs the "happy bride" £100 or £200.
>
> [illegible] which is from all countries now, and there is not a person residing for a week at [illegible] ye to sleep in sheds, &c., who never knew anything but a feather-bed [illegible] becomes walk the streets of Melbourne for days [illegible] without having an open knife in my hand. It [illegible] with prosperity, while the diggers [illegible] are [illegible] earn 7s. 6d. or 7s. 9d. per day, which no man now will work for under 10s. a day. There are marriages parties driving about every day, and [illegible] the Botanical gardens last Sunday, and there were diggers' wives [illegible] dressed in white satins, velvets, [illegible], and jewellery, who had [illegible]
>
> [illegible] There are about 4,000 people arriving here every week, this number will soon be 6000; it seems we have only two days' provisions in the country, a steam is now [illegible] morning in earnest from England. Everybody now is doing well that the weather will permit to do anything. In nearly every shop, such as a tailor's, there is a bill up with "thirty good hands wanted;" carpenters get 10s. per day wages, shoemakers 12s. per day, and makers are millions in proportion, and more than they can do. Bootmakers are making small [illegible] of 4s. or 4s 6d. per dozen thrown down, a 45s suit, and makes a handful of gingerbread nuts as cheaply [illegible] a pound of flour, or [illegible] of [illegible] their wages [illegible] they will not venture to lay their heads. They stand with open mouths at the wine-vaults and public-houses, admiring the [illegible] above the doors, [illegible] a looking-glass, three or four glow vases filled with gold, large pieces of the same metal being [illegible] the counter. Commanded [illegible] a pound of gold for a pint of [illegible] all this

PRIZES FROM THE GREAT METROPOLITAN POULTRY SHOW.

COCHIN-CHINA FOWLS.—CLASS 13, FIRST PRIZE.—MR. JOHN FORREST, HAVERHILL.

COCHIN-CHINA FOWLS.—CLASS 11, FIRST PRIZE.—MR. JOHN FAIRLIE, NEWMARKET.

BANTAMS.—WHITE.—CLASS 46, FIRST PRIZE.—REV. J. F. HODSON, BRISTOL.

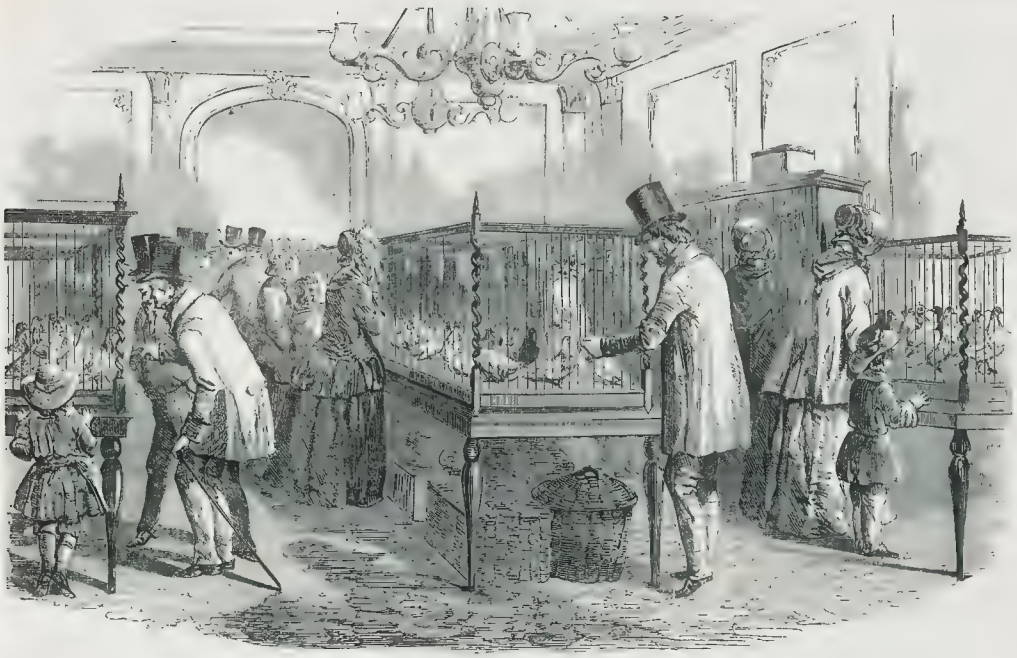
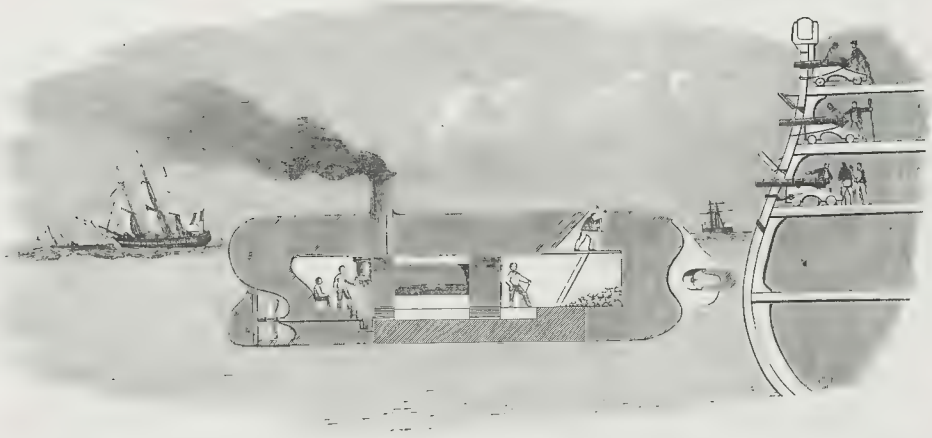
PRIZE RABBITS.—(SEE PRECEDING PAGE.)



ANNUAL PIGEON SHOW OF THE PHILO PERISTERON SOCIETY.—(SEE NEXT PAGE.)



NASMYTH'S ANTI-INVASION FLOATING MORTAR.

A NEW IMPLEMENT OF DESTRUCTION.

We have been favoured by Mr. James Nasmyth with the following description of the means which he has devised "for destroying, by one masterly blow, the largest ship of an invading enemy." Mr. Nasmyth adds, prefatorily—

The means in question consist of no "long range" secret nostrum; but on the contrary, a very short range, resulting from a union of the most effective destructive agencies of well known and established character, combined in so simple, common sense, and effective a manner, as to be certain to yield results such as, I doubt not, would cast into shade all modes hitherto proposed for the destruction of the ships of an invading enemy.

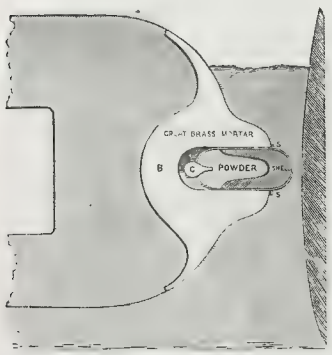
I beg to submit and offer this design for the service of my country, and trust that a fair trial may be granted, so as to test its merits in the fullest degree; and should the result be found to confirm what I anticipate, I shall consider myself most fitly and amply rewarded by the gratification I shall feel in having thus devised so efficient, simple, and economical a means of protecting our harbours and coasts from the attack of an invading enemy.

The principles on which the arrangement and construction of the Floating Mortar is based, consist in the first place of a monster self exploding shell, so arranged as to explode on having its breach end crushed against the breech of the Mortar, the self-exploding cap being situated there, as will be seen on reference to the Illustration.

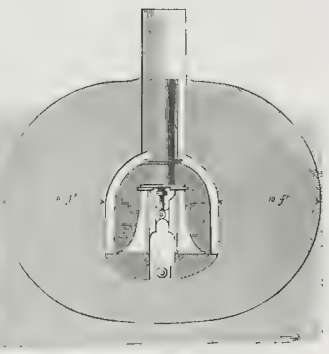
In order to enhance the destructive effect upon the enemy's ship, the shell is so far submerged as to tear its way into the enemy six feet under water-line.

Next, to protect the shell from the effect of water while resting in the chamber of the mortar, it is rendered water-proof, by being inclosed within a perfectly water-tight copper case, which will so effectively secure it from the action of the water, as that it may remain, if need be, for years in the chamber of the mortar, submerged, as before said, six feet under water-line, and ready for service at any time.

The crush consequent on coming in contact with the side of the enemy is the agent whereby the monster shell is made to explode. A very moderate velocity of the Floating Mortar would, when brought up against the side of the enemy, prove sufficient for this purpose; so much so, that, in order to obviate the chance of its explosion by accidental contact with any other object, I have so placed the flange joint of the copper case against the mouth of the Mortar, that the crush against the side of the



BRASS MORTAR AND SHELL.—ENLARGED VIEW.



FLOATING MORTAR.—TRANSVERSE SECTION OF.

enemy, resulting from a speed of two or three miles per hour, shall be sufficient to overcome the resistance of this flange, and crush the self-exploding cap at the breach end of the shell against that of the mortar, and so cause it to explode and tear its fearful way through the side of the enemy. Thus it will be evident that we can never fail to render the shell effective, in as much as that it is the very fact of contact with the side or hull of the enemy that brings the self-exploding agency into action. No ship that has ever been built, whether of wood or iron, could survive the fearful hole which a monster shell, exploded under such circumstances, would produce

The next feature is the intimate union of our mortar with the hull of the screw steam-vessel, which transports it direct to the object which we desire to destroy. The mortar is (as will be seen on referring to the engraving) made part and parcel of the vessel, and so situated as to unite the most effective mechanical arrangement with the strongest position of the vessel—viz., "end on," so that the entire mass of our vessel (mortar and all) is brought into play, as the means whereby the concussion or recoil due to the explosion of the shell is absorbed by the entire mass of the Floating Mortar, so that no sensible recoil or concussion would be experienced.

Next is the manner in which the crew who attend to the navigation of the Floating Mortar, together with the steam-engine, boiler, and screw, are protected from the action of shot, whether hot or cold. This object is attained by giving the vessel, in all directions where assailable, such a thickness of timber as that no shot, of whatsoever description, can penetrate to the *interior*. To insure this, the hull of our Floating Mortar will be made at least ten feet thick, of poplar wood, which material is admirably adapted for the purpose, by reason of its lightness, toughness, and inincombustibility. Red-hot shot might lodge in it, but would fail to set it on fire. A red-hot shot would only clear a few inches of the timber around it, and cool at its leisure; and from the extent to which the hull would be submerged, the portion above water presents no object for a possible hot shot, the effective action of shot; whilst, as there will be most ample accommodation in the interior for a high-pressure engine and boiler, with direct action screw-propeller, there is nothing to prevent our attaining a velocity of eight or nine miles an hour, with ease for the accommodation of the vessel a speed of five or six miles would be ample. The draught of the engine furnace would cause perfect ventilation for the crew, which need not consist of more than three or four handy men.

I would observe, in conclusion, that as this class of vessel is chiefly designed for *offensive coastal service*, and would not have to act against an enemy, probably, at greater distances than one or two miles from our shore, it could speedily return for another shell; the means for lodging which in the chamber of the submerged mortar are most simple, but not needful at present to describe. I conceive, however, that the total destruction of one enemy's ship at each trip would be sufficient service

Three or four such floating mortars, each of which sending to the bottom of the sea the largest ships an invading enemy might dare to bring towards our shore, would make such a demonstration as would strike terror into the largest fleet that molested a peaceful nation; and not fail to confirm the maxim, that the best way to prevent war is to render the results so terrible to that evil-doer that nations will think twice ere they face such wholesale destruction as our floating mortars would not fail to deal out to them.

I trust, therefore, that our Government will not permit this system of effectual defence to remain a mere notion, but afford the public an opportunity to judge of its efficiency by the most full and fair trial. We are about to expend millions of money in improving our means of defence All I ask for is that £5000 or so be expended in testing the merits of my plan of defensive vessel. The only reward I look for is the high gratification I shall feel in having in this form placed any skill in contrivance which I may happen to possess at the service of my country, in reference to an object of the highest national importance

Bridgewater Foundry, Patricroft, Jan. 11th, 1853 JAMES NASMYTH

THE ILLUSTRATIONS

In the large Engraving upon the preceding page, the Floating Mortar, steered by the man at the sight-hole, X, is shown attacking the enemy

2. An enlarged view of one of these Mortar and Shell. The cap C explodes the instant it is brought in contact with the breach B; this it does in consequence of the protruding end of the shell being crushed against the side of the enemy The flange S S is just so strong as to resist any ordinary pressure, and is thereby made safe till crushed back by contact with the side of the enemy.

3. Transverse section of the Mortar.

PIGEON-FANCIERS' SHOW.

THE annual show of the Philo-Peristeron Society was held on Tuesday, at the Freemasons' Tavern, Great Queen-street. It was attended by great numbers of ladies and gentlemen, the friends of the amateurs who form this society. A prettier sight for ladies can hardly be imagined than was presented by the beautiful plumage and graceful carriage of this interesting class of birds, exhibited in their handsome mahogany pens with iron bars, the bottom of the pen being usually covered with green baize. The show on Tuesday was one of the best ever yet held, and sufficiently evinced the improvement in the various breeds effected by the society since its establishment seven years ago.

The Almond Tumbler, of which some pens of rare beauty were shown, is the pigeon which holds the first rank in the estimation of the fancier. The qualities for which he is valued are—a round small head, fineness of beak, and a certain quaint affectation in his carriage. The Almond Tumbler is a neat, well-shaped bird, possessing the well-known habit of throwing a series of summersaults in his flight—a quality, however, which we are assured enters very little into the estimation of the real fancier by comparison with peculiarities of form.

The Carrier Pigeon ranks next in the opinion of the fanciers; and, indeed, these two varieties are the only two which the real fancier highly appreciates. The electric telegraph, however, has converted the carrier pigeon into a relic of a past age, and the representative of a past state of things. He is to the electric wire what the old stage coach or the horse-express is to the railway train. Before the era of electric telegraphs the transit of a message by a carrier pigeon was the quickest mode of communication, and the knowledge of many great and important events has been conveyed to distant communities, by the instinct of these wonderful little messengers. Formerly, Antwerp possessed the breed of birds that were reckoned to fly the fastest and with the greatest certainty from place to place. The Antwerp Carriers were unusually long in the wing; but this quality claims no merit with the modern fancier. A good shape, long, straight head, and unusual length from the eye to the tip of the beak, are the characteristics by which connoisseurs measure the value of this variety.

The Fantail Pigeon, as an ornamental bird, in a poultry-yard, claims some attention from the fancier; and a very pretty, pert, strutting little fellow he is. No lady is more particular about the snowy whiteness of her morning dress than is the Fantail as to the cleanliness of his plumage To be perfect, he should have thirty-six feathers in his tail His shape and carriage should be such as enable him at pleasure to cause the back part of his head to touch the ground behind him.

The Pouter Pigeon was represented by some large and splendid specimens. The enormous size to which some of these birds inflated their crop with wind made them objects of great curiosity.

Space would fail us if we entered into a minute description of the Nuns, Jacobins, Helmets, Owls, Trumpeters, Runts, Swallows, Spots, and Turbits which graced the pens in the large room of the Freemasons' Tavern. We must not omit, however, to notice a few new varieties from Germany, many of which exhibited the rarity of their race, upon the wings, instead of the black cultivated by English fanciers. Some of these German varieties promise to be useful accessions to our English breed; but, after all, the best pigeons are bred in England, and the visitors to the show on Tuesday declared that the pens contained the best birds in the world

Persons unacquainted with the tastes and habits of our working classes may not be aware that many of the mechanics, weavers, &c., of our large towns are great pigeon-fanciers The man who earns as a week will often pay two or three guineas for a pair of Almond Tumblers. Amateurs more blessed with wealth give from five to ten guineas, and the price is not an extraordinary one for a single bird. Twenty guineas have sometimes been given for birds of unusual merit, and very high prices are also given for carrier pigeons which satisfy the requirements of the association.

The Philo Peristeron Society have usually held from twelve to sixteen meetings in the year. At some of these, young pigeons are shown; at others, the adult birds. When members are requested to attend, they are expected to produce at least two eligible birds. Each class of birds is kept separate; and at a meeting of amateurs of the higher order it may be held as certain that the rarest productions, each of its kind, are exhibited

After the show the members of the society sat down to a *recherché* dinner at the Freemasons' Tavern. The chair was filled by Mr. Bowles, president of the society, with Mr. Wicking, vice-president. In the course of the evening the secretary (Mr. Esquilant) stated that upwards of 1000 persons had visited the show in the morning, who all appeared exceedingly gratified with the beauty and rarity of the birds. The society was now free from debt, and had never been in a more prosperous condition.

CALENDAR FOR THE WEEK

SUNDAY, January 16.—Second Sunday after Epiphany Battle of Corunna, 1809

MONDAY, 17 Dr. Franklin born, 1706

TUESDAY, 18.—Old Twelfth-day

WEDNESDAY, 19. Operas first performed in England acknowledged, 1703.

THURSDAY, 20 Archbishop Tillotson born, 1630

FRIDAY, 21 Louis XVI. Guillotined, 1793

SATURDAY, 22 —Lord Byron born, 1788.

HIGH WATER AT LONDON BRIDGE.

TO CORRESPONDENTS.

ONE INTERESTED IN PHOTOGRAPHY, WITH LIMITED MEANS OF PROCURING APPARATUS, is informed that he may, at comparatively a trifling cost, obtain a camera obscura sufficiently perfect for copying buildings and statues with a considerable degree of excellence. The box of the camera may be made cheaply of deal, and, if blackened within and varnished without, it answers equally with any of the highly ornamental instruments. A lens of the periscope form may be obtained for a few shillings; and if all, except about an inch, of such a lens is stopped out, by blackening, or by a diaphragm, pictures may be very quickly produced, and, although less perfect than those produced by achromatic lenses, they will possess great beauties

H. O. S. is referred to the price of Papin's works on application to the booksellers in general

SIGMA AND ANOTHER.—In going into the Savoy church, the first Sunday evening after it opened, we saw a chair at the door covered with a cloth, and a plate with an orange upon the chair. He wishes to know the origin and meaning of this custom.

S. S.—A letter with "London" after the name would be a sufficient address.

G. C. J. H Commoners who have had seats in the Cabinet are not "right honorable" by virtue of that appointment, but because it is the practice first to swear them as members of the Privy Council, which confers that title. The latest instances are those of Mr. Gladstone and Sir W. Molesworth, who took their places at the Board of Privy Council before being presented to the Queen to kiss hands upon their appointment.

*** Correspondents whose letters are not immediately answered may infer that the matters upon which they request information either require further time for inquiry, or do not fairly come within the scope of our researches.

THE WELLINGTON VOLUME of the ILLUSTRATED LONDON NEWS is now ready. Price One Guinea. From July 3rd to December 25th, 1852. Containing all the EXTENDED ILLUSTRATIONS of the CAREER and FUNERAL of the late DUKE of WELLINGTON, &c.

CASES for BINDING the VOLUMES 2s. 6d. each.

Office, 198, Strand

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 15, 1853.

MR. DISRAELI little imagined, when he solicited the suffrages of the electors of Buckinghamshire in July last, that his address, in explanation of the policy to be pursued by the Ministry of which he was the "foremost man," would prove prophetic of the policy—not of his own Ministry, but of that which was so speedily destined to succeed it. "Do not suppose," said the right hon. gentleman, "that, when the new Parliament assembles, you will see marshalled before each other *the old parties* who have hitherto governed the empire. *You will have new principles of action introduced; you will have new policies, founded upon those principles recommended to the notice of the House of Commons;* and you will find that it is possible—notwithstanding all the passion of party hatred which a Ministry that understands the 'spirit of the age' may have to encounter—that it is possible, I repeat, for *such a Ministry to govern a great country like this by considering the interests of the whole community*, and by adopting a policy that will make it more prosperous and powerful than before." In these eloquent words we have a remarkable prediction, and a faithful portraiture, not as the speaker intended them, but as facts have since interpreted and realised them. The lines of demarcation between the old parties has been effaced; and there is every reason to hope that those new principles of action—the good of the whole community considered, irrespective of party exigences—will produce that new and beneficial policy which "the spirit of the age" demands, and which Mr. Disraeli, with an object of his own to serve, so emphatically prefigured. It is singular, however, that Mr. Disraeli, who could so well describe what the country required, and the consummation to which all parties and party movements were tending, could not foresee the means to accomplish the end; nor that his own part in the drama was but that of a precursor and herald. Yet his admission of the speedy dissolution of the old parties of Whig and Tory, and their re-formation under new names, was in itself a proof, among many, that he linked himself to a party without really belonging to it, and that his mind was far in advance of his colleagues in the Ministry. Nor is it unlikely that he will yet give in his own person a still more striking proof of the new combinations into which the old parties shall resolve themselves, by separating entirely from the men with whom his triumphs were achieved, and with whom his reverses were suffered. There will always be two great parties in our Legislature, by whatever names we may please to call them. "Party," says Mr. Macaulay, in his yet unfinished "History of England," "has always existed, and always must exist. For it has its origin in diversities of temper and understanding, and in passions which are found in all societies, and which will be found, until the human mind ceases to be drawn in opposite directions by the charm of habit and the charm of novelty. Not only in politics, but in literature, in art, in science, in surgery and mechanics, in navigation and agriculture, even in mathematics, we find this distinction. Everywhere there is a class of men who cling with fondness to whatever is ancient, and who, even when convinced by overpowering reasons that innovation would be beneficial, consent to it with many misgivings and forebodings. We find, also, everywhere another class of men sanguine in hope, bold in speculation, always pressing forward, quick to discern the imperfections of whatever exists, disposed to think lightly of the risks and inconveniences which attend improvements, and disposed to give every change credit for being an improvement. In the sentiments of both classes there is something to approve. But of both, the best specimens will be found not far from the common frontier. The extreme section of one class consists of bigoted dotards; the extreme section of the other consists of shallow and reckless empirics." The present Ministry, acting in accordance with the common sense which is the spirit of our age and time, is equally removed from either extremity. The triumphant return of its members by the several constituencies which they represent, the all but unanimous approval of the public, aided to the unanimous verdict of such foreign nations as possess a legislature or a press—all augur for the new Ministry a protracted course of existence, and we trust of usefulness, in the sense expressed by Mr. Disraeli.

THE affairs of the East, and the relations of Turkey with the great European Powers, which have of late assumed a prominent importance, have become still further complicated by the Turkish expedition which has sailed against Montenegro. The *London Gazette* of Tuesday announces a Turkish blockade of the Albanian coast, from Dulcigno to the extreme Turkish frontier: and Omar Pasha, the ablest General in the Turkish service, has commenced a campaign, in which the whole power and resources of the Ottoman empire will be employed to subjugate the fierce and hardy mountaineers, who have hitherto succeeded in preserving their independence.

The territory of Montenegro, which has thus suddenly assumed such importance, is about fifty miles in length by thirty in breadth. The country is wild and mountainous. The riders of the hills are covered with pine forests, offering shelter to the mountaineers; while the absence of roads cannot fail to impede the progress of a regular military force provided with artillery and munitions of war. The Montenegrins do not much exceed 20,000 in number, but they are a people of unquestioned bravery, inured to arms, and possessing the love of home characteristic of the inhabitants of mountainous and picturesque countries. They are tall, muscular men, of pure Sclavonic race, and striking Sclavonic physiognomy. They profess the doctrines of the Greek Church, and live under the government of a Vladika, or monarch bishop, whose spiritual functions have recently been separated from his temporal authority. They are said to rely upon the interference of Austria and Russia. The Czar has recently professed great interest in this little community; and although he is not, as Lord Malmesbury erroneously supposed, the head of the whole Greek Church, a community of profession of a common religion may afford to the Cabinet of St. Petersburgh a pretext for interfering to maintain the independence of Montenegro against the Turks. It is stated that Russia has already offered her mediation, which Turkey has firmly declined to accept.

The independence of Montenegro was distinctly recognised by the Earl of Malmesbury; and his speech, which arrived at Constantinople after the Turkish expedition was resolved upon, caused an unmistakable sensation in the Turkish Ministry.

The avowed cause and origin of the war we have yet to learn, but the predatory border habits of the Montenegrins have long been the subject of remonstrance from their Mussulman neighbours. It will, probably, appear that their frequent incursions became at length intolerable, and demanded severe chastisement and retribution. As yet, however, all the successes appear to have been on the side of the mountaineers.

The brave and protracted resistance offered to the vast armies of Russia by the Circassian mountaineers, shows how a small state may defy a large one; and it is probable that the reduction of this little independent kingdom will not be effected without a considerable expenditure of blood and treasure, which Turkey is ill able to afford. Disaffection is said to exist in the adjacent Turkish provinces of Bosnia and Servia, and the supplies of men and arms from these districts may enable the Montenegrins to prolong the contest until French or Russian intrigues at Constantinople succeed in embroiling the Porte with some one or other of its European allies. In the present state of Continental politics, any event which threatens, however remotely, to disturb the peace of Europe, or to alter the balance of power, must be regarded as a calamity. The repudiation of the Paris loan, the fall of the Ministry of Reschid Pasha, and the public proclamation at Jerusalem of the firman granted to the Greeks, rendering null and void the firman granted to the Latins a measure which received the strenuous opposition of the French Ambassador—disclose many sources of weakness, and an unsettled condition of affairs in Turkey. There are writers who declare that the last hour of Turkey has come, and that the decayed fabric of Mussulman rule cannot be much longer shored up by the agreement of the Christian Powers. But the division of the spoil presents such manifold difficulties, that the British Government is prepared to give such powerful and disinterested support to the maintenance of the Ottoman Empire, that we trust its independence will yet be secured.

THE COURT

WINDSOR CASTLE.—The chief feature in court life during the past week has been the entertainment at the Castle of different members of the new Administration. On Friday, the 7th inst., the Royal hospitalities were extended to the Earl of Aberdeen, the Lord Chancellor, Lord and Lady John Russell, and a large party invited to be present at the first of a series of private dramatic representations

The new Chancellor of the Exchequer and Mrs. Gladstone, Sir James and Lady Graham, and the Right Hon. E. Cardwell, arrived on a visit to the Queen at the early part of the present week.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal and Princess Alice, the Duchess of Kent, the Prince of Leiningen and Princess Adelaide of Hohenlohe, with the Ladies and Gentlemen of the Court and the domestic household, attended Divine service in the private chapel of the Castle. The Hon and Rev. G. Wellesley officiated.

On Monday Mr. Thesiger was attended at the Castle, by his Majesty's command, to take the first sitting for a portrait of her Serene Highness the Princess Adelaide of Hohenlohe

On Wednesday his Royal Highness the Duke of Cambridge and their Royal Highnesses the Prince and Princess Augustus of Coburg, the Prussian Minister and Madame Bunsen, and the Master of the Rolls arrived on a visit to her Majesty and the Prince Consort

The second dramatic performance of the present season took place last night (Friday)

The members of the Royal family continue in the enjoyment of excellent health. Her Majesty has taken out-door exercise whenever the weather would allow, and the Prince Consort has enjoyed the sport of shooting in the Royal preserves with the guests at Windsor Castle

Lord Byron has relieved Viscount Hardinge as Lord in Waiting to the Queen

The Hon Arthur Murray and the Hon. Percy M. Kerr have succeeded the Hon Maria Dundas and the Hon Mary Stephenson Marsh, Bedroom in Waiting to the Queen

A CABINET COUNCIL was held on Saturday afternoon, at the Foreign-office, lasting upwards of three hours. The Council sat three hours. A second Cabinet Council was held on Thursday, which also sat three hours

THE DUKE OF WELLINGTON has been appointed Master of the Horse to her Majesty

THE LORD CHANCELLOR'S LEVEE.—Lord Cranworth held his first levee as Lord Chancellor on Tuesday morning, at his house, Upper Brook-street, and entertained the Vice Chancellors, the Master of the Rolls, the Lords Justices of Appeal, the Vice Chancellors, the Judges of the several Courts at Westminster, the Courts of Arches, Admiralty, and Prerogative, together with the Queen's Counsel and Serjeants-at-law, to breakfast. The levee was the most numerously attended one for several years. It being unusual, according to recent practice, to hold a levee previous to Hilary Term. At the conclusion of the Lord Chancellor, with the other Judges, proceeded to Westminster to open the Courts.

THE EARL OF GRANVILLE broke his collar-bone while hunting last week, near Woburn Abbey. His Lordship came to London the same evening, and is progressing satisfactorily

LORD DENMAN is seriously ill, at Nice, from an attack of paralysis; his Lordship is now, however, considered to be almost out of danger.

THE MASTER OF THE ROLLS has appointed Mr. Parker, Q.C., to succeed Mr. T. H. Plumer, deceased, as one of the Examiners in the Court of Chancery. The other examinership, vacant by promotion of the Hon. C. P. Villiers, M.P., to the office of Judge Advocate, will be conferred upon Mr. Otter, barrister-at-law, of Lincoln's-inn

THE RIGHT HON. EDWARD STRUTT, M.P., Chancellor of the Duchy of Lancaster has appointed his brother-in-law, Mr. W. M. James, of the Chancery bar, Vice-Chancellor of the duchy.

PRIVATE SECRETARIES.—Mr. Charles Cardwell, of Lincoln's-inn, is private secretary of the President of the Board of Trade. The Vice-President (and Paymaster), Lord Stanley of Alderley, continues Mr. Edgar Bowring as his secretary at the Board of Trade. Sir Thomas Redington has appointed Mr. Arthur Hobhouse (of the Board or Contro.) to be his official private secretary.

THE LATE DUKE OF WELLINGTON.—It has at last been decided that the car which conveyed the remains of the late illustrious Commander-in-Chief to St. Paul's Cathedral is to be placed in the Repository of the Royal Arsenal at Woolwich, and the pall used upon the occasion of the funeral in Chelsea Hospital.—*United Service Gazette.*

LATEST INTELLIGENCE.

FRIDAY.

CHANCERY (Thursday).—Mr. Vice-Chancellor Kindersley this day refused the injunction sought for by Mr. Murray, of Albemarle-street, to restrain Mr. Begue, of Fleet-street, publishing a work called "Switzerland and Savoy," pirated upon the ground that he could "not say the defendant had made an unfair use of Mr. Murray's work, and that no case had been made out for the interference of the Court, and no injunction could be granted unless the Court were satisfied of the unfair use of the book."

We understand that the Marquis of Breadalbane resigns his post of Lord Chamberlain, in consequence of ill health.

The directors of the London and North-Western Railway are taking measures to supply to their trains the best practical communication between the guard and driver.

SOUTHAMPTON, Thursday.—The "Merchants and Traders of Southampton" gave a grand banquet this evening, to celebrate the connection of the General Screw Steam-shipping Company with that town.

WINDSOR.—A severe accident happened on Thursday, at Windsor station, when Miss Ricardo and her female attendant (recently arrived by train) were about to start in a phaeton, when its ponies took fright at the railway whistle, started off, and both were thrown out. Miss Ricardo escaped unhurt; but the attendant had her leg broken, and afterwards amputated. The chaise was dashed to pieces, but the ponies were uninjured.

Nathaniel Alexander, Esq., M.P. for the county of Antrim, died on the 8th inst., at the residence of Robert Langtry, Esq., Islay.

The Lord Warden and Lord Admiral of the Cinque Ports, and the office of Admiralty within the said Cinque Ports.

FOREIGN.

FRANCE.—The first Imperial State ball was given at the Tuileries on Wednesday night. Louis Napoleon was present, and the ball was of the most brilliant description. The Emperor, who was in excellent spirits, danced with the lady of the English Ambassador. An official notice has been published, which shows that the Emperor has extended clemency, within the present month, to 483 political offenders; making, since the *coup d'état*, a total of 1075. The Prefect of Nièvre on Thursday exhibited a considerable decline upon Wednesday's prices. The long-continued fall of prices is exciting considerable alarm in Paris. Railway Shares, Bank, Sous, and all other investments, partake of the panic. The desire to effect transactions for cash on almost any terms has been the cause of much concern to the Government. Rumours have been in circulation for some days of the intended retirement of the Minister of War had become so involved in pecuniary transactions, that the Minister of Finance, to save the credit of the Government, had advanced him the money necessary to relieve his colleague from his unfortunate embarrassments. These reports having reached the Emperor, his Majesty instantly commanded the strictest inquiries to be made upon the subject, the result of which was, as stated in the *Moniteur*, "that these reports had no foundation, and are the result of an odious calumny." The Four-and-a-Half per cent closed on Thursday at 104f. 75c.; and the Three per Cents at 73f. 50c., being a fall of about three-quarter per cent.

SPAIN.—Several Journals have been seized for violent articles against the decree on the liberty of the press. A paper is about to appear devoted entirely to the Government.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

FOR THE WEEK ENDING THURSDAY, JANUARY 13.

Month and Day.	Corrected Reading of Barometer at 32°	Barometer: Difference from Standard	Reading	Mean Temperature of the Day	Departure of Temperature from Average.	Degree of Humidity	Direction of Wind.	Rain in Inches.
	Inches.							Inches.
Jan. 7	29.[illegible]	[illegible]	[illegible]	42.7	+ 11.6	93	S.W.	0.11
" 8	29.[illegible]	[illegible]	[illegible]	41.6	+ 8.5	84	S.W.	0.01
" 9	29.[illegible]	[illegible]	[illegible]	42.1	+ 7.1	91	S.W.	0.01

" 13	29.[illegible]	[illegible]	[illegible]	44.4	+ 8.0	77	S.W.	0.00

Note.—The sign + denotes above the average, and the numbers in the seventh column are calculated on the supposition that saturation of the air is represented by 100.

The mean temperature of the week ending January 13, was 43·3°, which is 8·2° above the average of the same week in thirty-eight years. The mean daily temperature was much above the average on every day of the week; the excess amounting on the 12th day to 14°. The temperature has also been in excess on every day since December 1, averaging 8½° too much daily.

During the past week the same unsettled weather has continued. Rain fell to the depth of 0·7 inch (seven-tenths of an inch).

JAMES GLAISHER.

Lewisham, Jan. 14.

HEALTH OF LONDON.—In the week ending January 8, 724 boys and 715 girls were born, and 487 males and 478 females died. Of these deaths 432 occurred under fifteen years of age, 319 from fifteen to sixty, and 209 at sixty years and upwards. In the ten corresponding weeks in the previous ten years the average number of deaths was 1145, so that the state of the public health at present is very good. Out of the 965 cases of death, 965 are assigned as those for the most part affecting children: 174 are referred to diseases of the organs of respiration: this number is less than expected, calculating from the return for the same week in the ten preceding years, by no less than 124; plainly showing the beneficial effects of the long continuance of mild weather. Centesimals compared by great range, upon individuals thus affected. The low mortality attributed to the diseases of the lungs is remarkable.

THE RIGHT OF CABS AT RAILWAY STATIONS.—This much-agitated point is at last likely to be definitively settled. After a lengthened investigation on Saturday—on which Mr Bellantine appeared for the Inspector, and Mr. Crowder for the railway company it was announced that the Brighton Company would willingly join the South-Western, or any other company, and carry the dispute to the higher courts, and so have the question settled. The police magistrates' decision is consequently deferred.

THE CONSERVATIVE LAND SOCIETY.—At a ballot on the 8th inst., 100 unsuccessful shareholders in Middlesex, Surrey, Hertfordshire, Kent, Essex, Suffolk, Sussex, Herefordshire, Berkshire, Nottinghamshire, Warwickshire, and Derbyshire, were fortunate in the drawing, and will shortly have to select their allotments. Fifty shareholders had the valuable privilege to seniority of membership, besides 100 completed shareholders.

THE LATE EXHIBITION.—JURORS' REPORTS.—It is announced in the *Journal of the Society of Arts*, that her Majesty's Commissioners for the Great Exhibition of 1851 have liberally granted to that society 250 copies of the jurors's reports for distribution among the institutions in union with it.

SOCIETY FOR THE AMENDMENT OF THE LAW.—The monthly meeting of this society was held on Monday evening, at the society's rooms, Regent-street. The adjourned debate on reform of the ecclesiastical courts, so far as the probate of wills and letters of administration are concerned, in which a higher court of law and equity jurisdiction was warmly urged, was then resumed. After a somewhat lengthened discussion, the further consideration of the subject was adjourned to next Monday the 1st inst., when the question will be argued whether the jurisdiction relative to wills and administration should be transferred to the courts of law or equity, and whether it would be desirable to create a new court for the exclusive transaction of business or not.

THE PHOTOGRAPHIC SOCIETY.—Those of our readers who have visited the photographic exhibition at the house of the Society of Arts, and who take an interest in the progress of this new art, will be glad to learn that a society is formed for the purpose of more systematically utilising the energies which are at present employed in this direction. We hear that a council, composed of gentlemen well known in the photographic world, has already been organised, and that Sir C. Eastlake has consented to become the first president of the future society. Doubtless, by union the body, and the frequent interchange of results upon whose co-operation depends the successful study of photography—artists, chemists, opticians, and men of mechanical invention—it may be made of much service to advancing science and giving facilities to education as it now is in affording pleasure to the lover of nature. The society proposes to date its existence from the 20th January next, when a meeting, open to all who need participate, will be held at the Society of Arts, as stated in our advertising columns. We know too well the engrossing interest of this art to doubt that the gathering of amateurs will be a large one.

CENTRAL RAILWAYS.—It is proposed to concentrate the South-Eastern Railways at Waterloo station; carrying out the long-projected West-end branch from the Bricklayer's Arms station to that of Waterloo. Blackfriars bridge to be rebuilt double, to serve for trains as well as the ordinary traffic. Farringdon-street and Market, and the Fleet Prison to form the grand central depôt.

THE BRITISH MUSEUM.—On Saturday the library of the British Museum was re-opened to the public; and the different galleries were also re-opened on Tuesday.

POLYTECHNIC INSTITUTION.—A special general meeting of proprietors, held on Saturday last, determined upon the new by-laws in connection with a supplemental charter just obtained, by which each £100 share has been converted into ten shares of £10 each, a holder of two shares having the option of admission for himself at all times; the effect of which will no doubt be that the proprietary will be greatly extended, and the institution proportionately benefited thereby.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.—The third ordinary meeting of the session 1852-3 was held on Monday, at the Institute, 18, Grosvenor-street, Grosvenor-square; Mr. D. Mocatta, V.P., in the chair. After the usual formalities, and the announcement of various donations of books and periodicals, Mr. Donaldson, V.P., read an interesting paper on Byzantine architecture in France, in which he pointed out the analogy existing between the churches of the ancient Greek Empire and those which were built in France in the eleventh and twelfth centuries.

ROYAL GEOGRAPHICAL SOCIETY.—On Monday evening a meeting of this society was held at the Royal Institution, Sir R. Murchison in the chair. Captain Allen, R.N., read a paper on the feasibility of forming a canal between the Gulf of Akaba and the Dead Sea. This sea is upwards of 1000 feet below the Mediterranean: a fact which, although known, has not, according to Captain Allen, been satisfactorily accounted for. He made certain observations along its shores, and had come to the conclusion, that the Gulf of Akaba, on the north eastern point of the Red Sea, was at some distant period connected with the Dead Sea, although the channel is now filled up. The level of a country between the Gulf of Akaba and the Dead Sea has not yet been satisfactorily surveyed, but Captain Allen conclusive that the Dead Sea was also originally connected with the Mediterranean, the lake of Tiberias being one of the links of the chain, and that by evaporation the intervening district was dried, and by upheavals or otherwise barriers made, which have now divided what might have been an unbroken sea into a series of lakes. A gather volumious paper was then read by the secretary, "Outlines of a Journey in Palestine in 1852," by the Rev. Dr. E. Robinson and others, communicated by his Grace the Duke of Northumberland; which was followed by "Latest Researches in Syria and Palestine," by the Chevalier Van de Velde, of the Dutch Navy.

LAMBETH.—DANGEROUS HIGH TIDE.—Sunday the tide rose to such a height that it completely flooded the cellars, kitchens, and basement store-rooms along the banks of the Thames, covering a portion of the road at Lambeth. The footways from Hammersmith to Kew, and from Kew to Richmond, on the survey side were under water. At Kew, the gardens abutting upon the river, were so inundated, that flocks of swans swam majestically under the windows of the dwelling houses. It was one of the highest tides that has for some time occurred. Brentford, from its low situation, suffered much; but still no material damage was done by the tide. We regret to say that the high tides which followed, on Monday, Tuesday, and Wednesday, were nearly as disastrous.

THE MODEL DWELLINGS AT ST. PANCRAS.—Nothing can be more encouraging than the success of the first building erected in Old St. Pancras-road, by the Metropolitan Association for Improving the Dwellings of the Industrious Classes. This building is erected on the principle of the Edinburgh and Parisian houses; but the departure from the established customs must, at first, with many objectors, and some difficulty was felt in obtaining tenants. Since the opening of this building the rents have been re ar raised, and, notwithstanding, it is rare now to meet with a set of rooms vacant. There can be no doubt that this first erection is paying a handsome percentage; and it is almost certain that similar buildings would be a satisfactory speculation; and would also gradually pave the way to an alteration for the bettering of the dwellings of the very poor.

BILLINGSGATE IMPROVEMENTS. The street frontage of the new Billingsgate market is nearly completed, and, when the whole is finished, will present a very handsome appearance. The change which will be presented in the aspect of the place will be such as to leave no trace of the former insufficient and ill-adapted premises for carrying on the traffic, and will redound to the credit of all parties concerned in the alteration. The shell fish stalls, which used to make such a conspicuous figure in the old fish-market, are now removed, and will continue at the further extremity of the market towards the river.

PROPOSED RAILWAY ALONG THE THAMES. Surveys are being made for a railway along the river from London bridge to Westminster, so as to accommodate the metropolis in a similar way to that of Paris, by uniting with the termini of the leading railways. The proposed line is to run on a cast-iron viaduct, level with the bridges, with stations at all the roads thoroughfares, the entire journey to be run by atmospheric power in six minutes. A public promenade lit up is also to be formed, with a telegraph between the termini. The viaduct is to be so formed as to carry off the sewerage, and to keep off the periodical overflow of the tides, so destructive to property on the Surrey side.

EXECUTION OF HORLER.—On Monday morning, Horler, the murderer of his wife, was hanged in the Old Bailey. Up to the last he entertained the delusive hope of a reprieve, alleging insanity, and seemed to struggle with his fate even on the scaffold. According to his latest statement, he committed the crime for which he died on a momentary impulse.

CHURCH, UNIVERSITIES, &c.

TESTIMONIAL.—The Rev. W. Calder, by the congregation of Trinity Church, Portsea, on his leaving that place.

MUNIFICENT ENDOWMENT.—Sir Michael Shaw Stewart, Bart. has endowed the church at Greenock with £200 per annum, and £100 for a curate, on condition that daily service shall never cease to be performed.

OPENING OF A FREE CHURCH OF ENGLAND.—On Sunday, a building which has been erected at Stoke Newington was opened upon what are called by the founders "Church of England" principles, but entirely independent of the jurisdiction of the Bishop of London.

ETON COLLEGE.—The Queen has nominated Dr. Hawtrey to the Professorship of Eton College. He was formally elected by the Fellows on Wednesday. The appointment gives universal satisfaction.

The Bishop of London has intimated his intention of holding a general confirmation at St. James's Church, Piccadilly, on Thursday, March 24th.

NEW BISHOPRIC OF NATAL.—The consent of her Majesty's Government has been obtained to the immediate creation of an English Bishopric at Natal. It is stated that the first appointment to the bishopric will be given to the Rev. T. W. Weeks, M.A., incumbent of St. Thomas's Church, Waterloo-road.

PHILLIPS'S FIRE ANNIHILATORS.—In the ILLUSTRATED LONDON NEWS of the 20th of November last appeared the following paragraph, abridged from the *Times*:—"The *Severn*, on her homeward passage from the Brazils narrowly escaped the fate of the *Amazon*, in consequence of the spontaneous ignition of one of Phillips's patent fire annihilators." We were afterwards informed by the secretary of the Fire Annihilator Company that this statement was entirely unfounded, and were called upon to contradict it. This we did in our paper of the 1st of January, in the following terms, which we considered to be sufficiently ample and unquestionable:—"A paragraph having been inserted in our paper of the 20th Nov., to the effect that the *Severn* had narrowly escaped the fate of the *Amazon*, in consequence of the spontaneous ignition of one of Phillips's fire annihilators, we have to state that a report has been published by E. Braithwaite, Esq., M.I.C.E., and Charles Watt, Esq., consulting chemist, proving, after a full investigation, 'That the accident on board the *Severn* did not arise from spontaneous combustion or spontaneous ignition; but that it arose from the act of some person.' Letters from Professor Brande and Lewis Thompson, Esq., M.R.C.S., and consulting chemist, also show that they take a similar view of the case." We have since been informed by the Fire Annihilator Company that they do not consider our contradiction sufficiently distinct. We, therefore, beg to state once for all, in addition to the above, that the *Times* newspaper, upon which the paragraph inserted in ours of the 20th November last was founded, without having any knowledge whatever of the subject on our own parts, has since unequivocally stated that its Southampton correspondent was in error in alleging that the fire on board the *Severn* was caused by the ignition of Phillips's fire annihilators. We can have no hesitation in reiterating the contradiction of the *Times*, and in expressing our belief that the imputation conveyed as to the dangerous character of the annihilators, was utterly devoid of foundation.

ROYAL LETTER ON EDUCATION.—A letter is now in course of being forwarded by the Archbishop of Canterbury (by command of her Majesty) to the clergy of the various dioceses of England and Wales, stating that the funds of the National Society for the Education of the Poor, having been expended, "the president and governors of the society therefore earnestly pray that we will be graciously pleased, by issuing our Royal letters directing collections to be made throughout England and Wales in aid of the funds of the society, to place in their hands the means by which the objects of the society can be maintained and extended, so that at length the poor in every parish throughout the kingdom may have the opportunity afforded them of obtaining for their children the inestimable blessings of a sound Christian education."

EMIGRATION FROM THE ISLE OF SKYE.

THE desolate grandeur of the scenery in some parts of Skye annually attracts to it crowds of tourists. Every phase of our society is duly represented in the course of each season, at the Storr, Quiraig, Corrishk, and the Cuchullin or Coolien Hills. They return delighted, as well they may, with the wildest and most impressive scenery in the kingdom. Gay and joyous, they see in the hovels around them only objects of curiosity, and subjects for their pencils. It interests them to observe a man turning the ground with the "Caschrom," for they have come expressly to see what they have never seen before. The old woman leaning on her staff, with her "creel of peats" on her back, is charmingly picturesque; and forthwith figures in half-a-dozen portfolios. They venture to peep into a hut, and recoil disgusted by its squalor; but the day is bright, the scenery is superb, their own spirits are buoyant with youth or with exercise and the mountain air; and they pass on rejoicing in the success of their excursion, or the materials it has furnished for the sketch-book, the note-book, or the next letter.

Alas! that there should be another side to so pleasant a picture—that there should be another point of view from which the objects that have afforded our lively tourists so much gratification or amusement become subjects of painful anxiety or of sorrow. That hovel, with its broken walls and tattered thatch, is the habitation of a human family, with hearts as warm, as brave, as gentle, as pious as your own. That man whom you saw toiling with a rude implement to turn up the ground which he cannot plough, has laboured in vain for the last six years to raise sufficient food for his family. That aged woman, tottering under her load of peats, has carried them perhaps a mile over the swampy moor, for the fire that is to cook a scanty meal; but, scanty though it be, He for whose bounty it is provided will be solemnly and reverently implored to bless it. Look at that heap of sea-shells at the door—limpets, periwinkles, cockles, of various forms: these will tell you what, for many a day in latter years, has been the food of that family. Yet not a year has lost a sheep from the hill, or a sheaf from his barn. There was a time when that family lived in humble abundance. They had sheep of their own on the common, and cows of their own in the byre, and potatoes in heaps more than they could consume. Year after year the potatoes failed; wet harvests destroyed their little patch of corn; the sheep were first sold to buy food; the cows, too, are now gone. Sons and daughters have yearly travelled long journeys to seek amongst strangers the employment which they could not find at home, and have failed to bring back enough to feed the family and pay the rent. Arrears have accumulated, hope is failing, and every night they are almost ready to relinquish the struggle for existence, which every morning they have renewed with less and less prospect of success. This is no imaginary picture; it is a living reality: too true a representation of the condition of thousands in the Western Highlands and Islands. Noble efforts were made to aid them at home, both by public subscriptions, and by the sacrifices and exertions of individual proprietors; but the evils of over-population could not thus be overcome. Every attempt to extricate them from their difficulties by eleemosynary assistance tended but to aggravate the mischief; and, after careful investigation, it became obvious that the time had arrived when a part must seek in other lands the means of subsistence which the land they inhabit cannot furnish for them all.

The poor people themselves, with an instinct that anticipated the conclusions of science, had long felt that their numbers were increasing beyond what their native localities could maintain; and, if left to the guidance of that instinct, would probably have moved westward, following the course that their race has pursued for ages, and in numbers sufficient to have prevented undue accumulation on the soil they now occupy. But unwise interference with the natural course of events first stopped their egress and pent them up within too narrow limits; and well-meaning friends raised delusive hopes, founded upon speculative and impracticable schemes, to counteract the evil without resorting to the natural remedy for excess of population. Migration is the destiny of the tribes of man. If we seek for the primitive home of any one of the various races inhabiting Europe, we must turn to the East. All have migrated, and the course of migration, so far as it can be traced, has invariably been westward, as if some unseen power had directed the steps of these different tribes towards that undiscovered world in the west which their descendants were in after ages to people. And now that the population of that new world has been provided for, another great vacant continent draws to itself a stream of migration even as air rushes to fill a vacuum.

Before the discoveries that now draw thousands to the gold fields, the overcrowded population of the Western Highlands had begun to feel the influence of that current which even then was beginning to set towards Australia. Its boundless pastoral districts promised them abundant employment of the kind most congenial to their character and habits: a renewal, in short, under brighter skies and in the midst of abundance, of the life and occupations they had been used to lead on the moor and stormy shore of the Atlantic, amidst penury and want.

But years of distress had exhausted their means; and to remove any considerable number to so great a distance was a costly operation. A passage to Australia costs about £15. The demand for labour in the colonies had, however, led to the appropriation of colonial funds to the payment of the passages of efficient labourers; and as the attractions of the gold diggings drew multitudes in the colony from ordinary service, the agricultural and pastoral industry of Australia was in danger of perishing for want of hands. Large sums were remitted from the colony to the United Kingdom, and a way of escape appeared thus to be opened for the suffering Highlanders, if means could be found to supplement the deficiency in their own resources to such an extent as would provide the outfit and deposit, which the Emigration Commissioners require the emigrants themselves to provide as a condition of their receiving aid from the colonial funds. It was for the purpose of aiding the Highlanders to provide for these preliminary expenses, amounting on an average of all ages to £3 or £4 per head, that the Highland and Island Emigration Society was formed. Originating in "small beginnings" in the Island of Skye, the scheme of the society and the detailed arrangements for conducting its operations were matured in Edinburgh under Sir John M'Neille; and at length its management devolved upon a committee in London, composed of several influential noblemen and gentlemen, with his Royal Highness Prince Albert as patron, and Sir Charles Trevelyan for their chairman.

The following are the society's principal objects, which explain the principles on which the plan is founded:

1. The emigration will be conducted, as much as possible, by entire families, and in accordance with the rules of the Colonial Land and Emigration Commissioners.

2. Passages to Australia are provided by the Commissioners, from funds raised in the colonies, for able-bodied men and women of good character, and not exceeding a specified age, with a certain proportion of children, on production of a stated quantity and description of clothing, and on payment of a deposit of from £1 to £2 for adults, and 10s for children. For persons exceeding a specified age, a larger amount of deposit is required. The emigrants asking for aid will be required to apply all their available means, including the expense of their outfit and deposit.

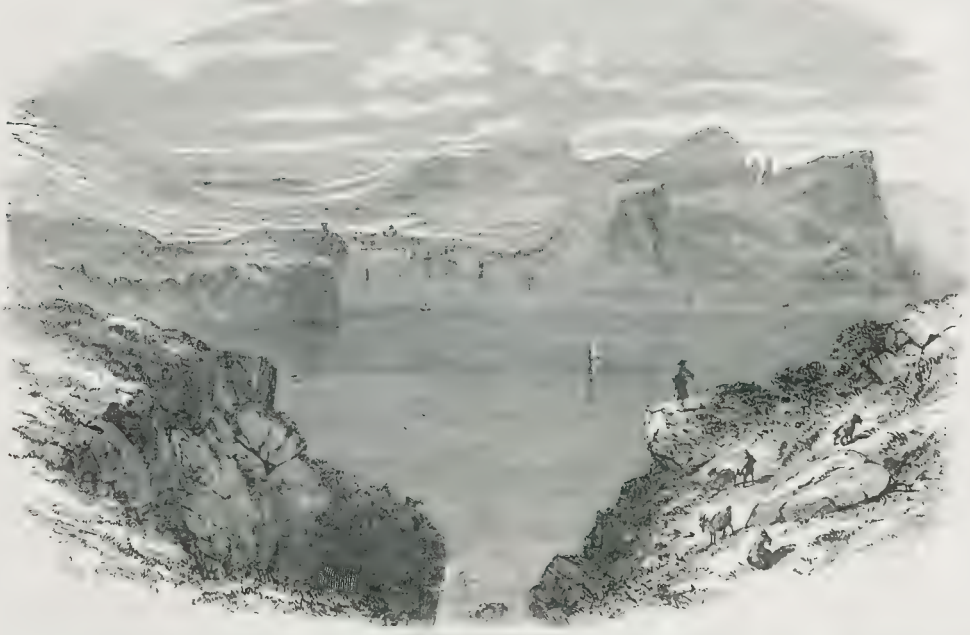
3. The society will advance the sums necessary to make good whatever may be deficient for the purposes, as far as its funds will admit, in the discretion which it may be determined to extend its operations.

4. The owners or trustees of the properties from which the emigrants depart, will be expected to pay one-third of the sums disbursed on account of the emigrants by the society. The emigrants will be required to repay to the society the whole of the sums advanced to them, which will again be applied in the same manner as the original fund.

The committee thus urge the great benefits which must accrue on every side from such a mode of relief:

The desolate portion of the population of the distressed districts will be placed in a position of comfort and independence; the colonies will be benefited by the immigration of a moral and industrious population, whose tastes are peculiarly congenial to the pastoral life of Australia; the general course of emigration will be improved by the prominence given in the plan to colonization by unbroken families, including at least an equal proportion of females; and the industrial schemes contemplated for the improvement of agriculture in the Highlands and Islands at

EMIGRATION FROM THE ISLE OF SKYE.



TOWN AND HARBOUR OF PORTREE.

Scotland, and of the fisheries on their coasts, may be carried out with ar more freedom and better prospects of success when the surplus population has been removed

His Royal Highness Prince Albert has been graciously pleased to express his approbation of the object and plan of the committee, and has given them full authority to announce his willing acquiescence to become Patron of the undertaking.

Subscriptions received at the following banks:—At the West-end—Messrs. [illegible], Murdoch, and James, 21, Haymarket; Messrs Coutts and Co., Strand; Messrs Drummond, Charing-cross Messrs. Herries and Co., 1, St. James's-street; Messrs. Ransom and Co., 1, Pall-Mall East. In the City—Messrs. Prescott, Grote, and Co., Threadneedle-street; Messrs. [illegible], and Co, Lombard-street; Messrs. Williams, Deacon, and Co., Birchin-lane; and at the office of the Committee, 4, St. Martin's-place, Trafalgar square, where every information as to the details of the plan will be afforded.

This appeal has not disregarded. Subscriptions to a considerable amount have been received; and since the end of May, 18[illegible], when the society commenced its operations, it has sent to Australia from the distressed districts in the Highlands about [illegible] persons, of whom about 2000 have gone from Skye.

H.M.S. [illegible] has been ordered to be fitted as a hospital ship at Hong-Kong during the sickly [illegible] Campbelton, at the entrance of the Firth of Clyde, receiving emigrants aided by the society, by an arrangement which they have made with the Admiralty and the [illegible] Company. [illegible] are largely employed

EMIGRATION FROM THE ISLE OF SKYE.

solely with a view to preserve the health of the British soldiers stationed at Hong-Kong, is made conducive to the relief of distress in the islands of Scotland caused by the excess of the population, and, at the same time, to the relief of distress, hardly less urgent, in Australia, caused by a deficient supply of labourers. It is pleasant to see so many beneficent objects effected, as it were, by one operation, and with an economy of means for which Government Commissioners and societies rarely get credit.

The *Hercules* has on board 840 emigrants, of all ages, making, as has been stated, with those who have preceded them, above 3000 sent by the aid of the society in the last half-year. This emigration has been effected in unbroken families, many of them consisting of three generations, and has thus furnished a nearer approach than has yet been made to a correct system of colonization, as distinguished from individual emigration. Each ship contains a group of families, accompanied by a religious instructor and schoolmaster—a small colony which carries with it in full strength and activity the domestic affections and sympathies which, amongst this people, have peculiar force and sanctity. In the letter from Colonel Phipps, which transmitted to the society a munificent donation from the Queen, the immediate advantage to the colonies of conducting emigration on this system is clearly and truly stated. He says—"The only possible chance against a large portion of the emigrants deserting to the diggings lies in the system of family emigration. What are usually considered the prohibitory clogs to emigration—the old and the very young—are now most useful, as forming anchors by which a family would be held to a rural home, with plenty of space and plenty of food." The prospective advantages with reference to its moral condition, of peopling a colony with families, instead of detached individuals who have no domestic ties or sympathies is too obvious to require illustration.

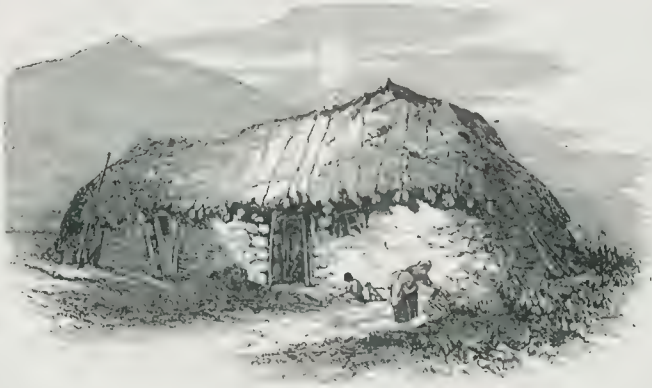
Another advantage attending the course pursued by this society is that it provides, in a more natural and less objectionable mode, for the great object of the Female Emigration Society. Of the unmarried adults sent out by the Highland Emigration Society, a great majority have been females, members of emigrating families, who have gone to the colony under the care of their parents and other near relations. Every one who has seen these Highland emigrants must have been struck with the air of sedate respectability that belongs to even the poorest amongst them. In abject poverty they have nothing of the reckless or disreputable aspect that so often accompanies it. This is no doubt due to the humble and simple piety that is interwoven with their whole existence. They are no sooner collected in a depôt, or on board of ship, than they establish family worship, and conduct it with reverence and composure in the midst of persons who are engaged in other and very different occupations.

Mr. Chant, the benevolent and intelligent officer who has conducted on the part of the Commissioners, the whole of the emigration that has been aided by the society, says, in a letter to a friend:—

The St. Kildeans are a very interesting people. Their kind patron, Mr. Mc Leod, of St. Kilda, has behaved most generously to them. He pays the whole expense of their outfit and deposit, so that they may land at Port Phillip free of any obligation to the Highland Society, and supplies them with money for their immediate wants on landing. You would be much pleased with the simplicity of their manners, their gratitude, and, above all, their piety. They conduct family worship three times a day in the depôt at the table assigned for their use, regardless of the noise and bustle by which they are surrounded. As you may suppose, they are much astonished with the change and the number of people they have seen in Liverpool. One of them said to me on Monday, "Well may the Day of Judgment be called the great day. If there were no more to come to judgment than I have seen in Liverpool, it might well be called the great day." Poor people! Born and brought up on a rock in the Atlantic Ocean, the whole population of which is only 110 souls, it is not to be wondered at that they are astonished at the crowded state of Liverpool, with its fleets and its large docks, warehouses, &c.

They all partake, more or less, of the same character.

The emigrants on board the *Hercules* are from the islands of Skye, North Uist, and Harris. They were brought from those islands in the *Celt* steamboat, hired by the society for their accommodation, the season being too far advanced—too cold and boisterous—to admit of their being exposed without hazard to their health on the decks of the steamboats that ply to those distant islands. On her voyage from North Uist and Harris, the *Celt* had a stormy passage, that would have been perilous in a less efficient vessel. Some of the women were on board



THE CUCHULLIN OR COOLLEN HILLS.

SKYE PEASANT WITH THE CASCHROM.

SKYE WOMAN WITH PEAT CREEL.

* See Selections from the Printed Correspondence of the Society. London: Trelawny Saunders, 6, Charing-cross. Two feeling and eloquent sermons on this subject have lately been published by Rivington, one of which was preached by the Bishop of Argyle and the Isles, and the other by the Rev. H. Mackenzie, Vicar of St. Martin's-in-the-Fields; and those who are interested in the history and prospects of the Celtic race would do well to peruse them.

for five days and nights, with their infants in their arms. Nearly all the females and children suffered greatly from sea-sickness; and when, on the afternoon of Sunday, the 12th ult., they passed from the Cleft to the dock of the *Hercules* riding quietly in the beautiful harbour of Campbelton, many of them were still much exhausted; but the men, access one to be found, seemed to have suffered little. It was curious to observe them, as they stepped over the gangway of the gallant ship. The young women came first—some looking cheerfully round, some sad, and some in tears; but all took pains to adjust their shawls and handkerchiefs, their tresses, or their caps, as they made their appearance before strangers. The married women and their children followed; the latter skipping and dancing on the broad deck, overjoyed at their escape from the confinement of the steamboat; the former, so completely absorbed by the care of their children, and the fear of losing them in the crowd, that they did not seem to be conscious of where they were, or what had brought them there. The men looked dark and stern, like men about to confront danger, and not likely to shrink from the encounter, but relaxed into a smile at the first kind word. Next day they were all cheerful and happy, spoke with gratitude of the pains that had been taken to provide for their comfort; and expressed astonishment at the extent and completeness of the arrangements, which greatly exceeded any thing they had imagined to be possible. On the third day they all looked quite at home, some engaged in reading, some in writing to the friends they had left. Two young women were working with their needles, or knitting, the children playing together, and all loud in their pious creatures are enabled to escape from wretchedness to comfort, from a mendicity to independence. It would have been difficult to collect a more respectable-looking body of their class. Yet many of these families had been reduced to such straits before leaving home, that for some weeks it had been found necessary to supply them with food, for otherwise they must have starved before the steamboat arrived to take them away. It is no doubt an acceptable recompense to those who have taken a part in promoting the success of the Highland and Island Emigration Society, to know that by their aid 3000 human beings, who, for the last five or six years have been hopelessly struggling with misery, have been rescued from the suffering and the moral evils of such a condition, and have been placed, with their descendants for some generations, beyond the reach of want, as surely as any thing in human affairs can be considered sure.

But though there is much satisfaction in having contributed to effect so happy a change in the lot of so many of our fellow-creatures, fellow-countrymen, and fellow Christians, it would be unfortunate if those who have engaged in this undertaking should rest satisfied with what has been done instead of deriving, from the success that has so far attended their exertions, the confidence and encouragement it is calculated to give them. The population of Skye has, it is true, been reduced, by the aid of the society, from 23,000 to 20,000, but there are still thousands there who desire to follow their friends to Australia, because they find themselves unable to obtain employment and subsistence at home. In the outer Hebrides there are thousands more in similar circumstances. On the west coast of the mainland the number is nearly as great. The Society has, in truth, but entered upon the ground it proposed to occupy. It is something to have made a commencement, and to have performed perhaps about one-tenth of the work it has to do in the Highlands. The only difficulty it has to encounter is the want of sufficient funds to maintain a continuous stream of emigration, such as the urgency of the distress in the Highlands and Australia demands.

The perils of that colony are such as to cause the greatest anxiety. It is evident that agricultural and pastoral industry must there cease to be remunerative, unless it can be supplied with labour at a much lower rate than the probable gains of a successful gold-digger. This difficulty will be most effectually met by sending to the colony in large numbers persons who, by their character or circumstances, or both, are not likely to relinquish the certain wages of ordinary labour for the more precarious gains of the diggings; and the want of enterprise which has prevented the Highlanders—unless to a very limited extent—from engaging in the competition that was open to them in the great tenure of industry at home, will probably make them shrink from the more formidable and ruder competition of the diggings. What was considered a reproach to them here is their chief excellence there.

It is to be hoped that a society constituted and conducted as this has been will not be permitted to decline for want of means to carry on its operations. At least a year must elapse before any part of the money it has advanced can be recovered and become available. In the meantime, such wretchedness—remediable, which, with assistance, might at once be permanently relieved. And one who can spare three pounds may have the gratification of placing one suffering fellow-Christian beyond the risk of want for the future. Doubtless, there are many thousands of persons in the kingdom who would gladly contribute such a sum for the accomplishment of that object; and, through the agency of this society, they have every facility for effecting it.

The *Hercules* sailed from Campbeltown on the 26th ult., and, after contending in vain for five days with adverse and boisterous weather, she anchored off Rothesay, in the Isle of Bute, where she is waiting a favourable wind. So far from there having been any loss of life, the emigrants received an addition to their number while they were at sea. A small pamphlet has just been published by Rivington, containing an interesting series of correspondence relating to this gallant ship and her living freight, from the time of her arrival at Campbeltown till her temporary return to Rothesay.

A few days before the sailing of the vessel, the provost and magistrates of Campbeltown entertained at dinner in the Town-hall, Captain Bayntun and the officers of H. M. S. *Hercules*—the provost occupied the chair; and the guests included some of the most influential gentlemen of the district. The toast of "Captain Bayntun and the officers of H. M. S. *Hercules*," was drunk with great cordiality; and was followed by various toasts having reference to the benevolent object of the meeting.

The accompanying illustrations are from sketches by Mr. Sammet Read, taken expressly for this Journal.

NATIONAL SPORTS.

Should the weather continue "open," of which there is little doubt, the steeplechase on paper for 1853 will commence on Wednesday next, at Epsom; we have no other fixtures for January but Newton and Oundle, on the 27th and 28th. The coming appointments for the week ensuing are Hereford and Gateshead on Wednesday, Nithsdale on Thursday, and Alcar on Friday.

TATTERSALL'S.

MONDAY.—The room was tolerably well attended, and business, without showing any decided alteration, took a wider range than usual. The quotations closed as follows:

METROPOLITAN HANDICAP.			
10 to 1 agst Eldorado	25 to 1 agst Galvanism (t)	30 to 1 agst Hirsute	
30 to 1 — Rosebery	30 to 1 — O'Flaherty (t)	30 to 1 — Pudsey	
		30 to 1 — Warwick (t)	
LIVERPOOL STEEPLECHASE.			
1 to 1 agst Mr Peter Laurie	15 to 1 agst Oscar		
CHESTER CUP.			
66 to 1 agst Agnes Wickfield (t)	66 to 1 agst Cardinal Wiseman (t)		
66 to 1 — Augur (t)	66 to 1 — Trivet (t)		
	66 to 1 — Pudsey (t)

Sir Edward Lytton Bulwer, Bart., M.P., returned seven-and-a-half per cent to his tenants at the audit, Knebworth Park, Herts

THE PRESS AND THE THEATRES.

CONSIDERABLE discussion has lately arisen on the subject of the so-called "privilege" accorded to the press by the metropolitan theatres—a privilege (if such it be) entitling each daily and weekly journal to issue nightly an order for the admission of two persons to each theatre. This custom had its origin with the theatres, and not with the press: and was intended to facilitate the admission of free and independent critics, to report upon new performers and new performances. Lately, however, the system has been abused by many journals. Upon this point we do not at present intend to enter; it is sufficient to state that exceptions were lately taken to it firstly, by Mr. Albert Smith, with good taste and good feeling; and, secondly, by Mr. Charles Mathews, in a manner that was insulting to the press, and untenable both in point of fact and in point of principle. In common with our contemporaries, we received a circular last week from the Lyceum Theatre, entreating us to suspend our usual orders during the run of the Christmas entertainments; and although, at the request, that the press orders were so numerous as to monopolise the space of the theatre, and prevent the accommodation of persons who had paid for their places. Of course we immediately taken. Caring nothing for the "privilege" of free admission, and thinking it, in its indiscriminate use, by no means creditable to the press or to the theatres, we sent a circular—not only to Mr. Charles Mathews, but to every theatre and exhibition in London—declaring our intention to issue no more orders. We are happy to learn that the same course was adopted by other independent journals; and that the principal newspapers, without concert or combination one with another, have very soon determined upon, and renounced the privilege, which one theatrical manager had directly proved to be injurious to his pecuniary interests, and, indirectly, to be equally injurious to others. For our own part, we would clear of the theatres and their favours. We desire nothing of them; and would scorn to accept even one solitary free admission for one night from any manager, great or small, who should imagine that his courtesy was a bribe to secure a favourable notice. We stand upon our independence and dignity of criticism. From all the plague and nuisance of the free-order system, we, in common with our most distinguished contemporaries, have relieved ourselves, much to our satisfaction. When the penitence of some injudicious managers shall cease to complicate the question, we have no doubt that critics and managers will devise, between them, some plan by which the conductors of theatres may be moderately civil to the critics, without calling upon the critics for unmerited praise, or thinking themselves aggrieved by well-merited censure.

THE THEATRES.

DRURY-LANE.

The lessee of this establishment is doing his best, according to his lights and opportunities, to solve the problem of the manner in which the nations. theatre is to be worked in order to its being made to *pay*. He has but no time to spare during a month or two, and the public will, we think, be glad of the business of the evening; and has this time resorted to a better-class author (Mr. C. Reade, one of the partners in the play of "Masks and Faces," and the maid of "Peg Woffington") and attempted a drama in the legitimate form of five acts. But the subject is *ad captandum*, and dealt not with the past or the distant, but with the domestic and the humdrum: the scene varying but from Berkshire to Australia, and the prevailing themes being the causes of emigration and the discovery of gold. The "manners" of the drama, therefore (to speak technically), are not raised above the ordinary realities; but, so far as the playwright has skill to make them, literal accentuation, or speaking portraits of *living* individuals, and moving pictures of the modes of life and thought of England and its dependencies. Themes of this kind have generally been confined to the three-act drama; but there is no good reason why they should not occupy the space of five acts, provided the story and the interest. The first act of Mr. Reade's new drama, though somewhat overwritten, promised a good play. There was variety of character, antagonism of purpose, energy of dialogue, striking situations, and some skilfully contrived groups, which told well, and occasionally secured a strong sympathy. *George Somerset*, the landscape painter, is a fine conception, and Mr. Lyne Stirling's delineation of it was full of power and earnestness. *Lord Lovel* is not without a dash of grandeur, befitting the associations of the Hebrew race. To him is opposed the coarser (but not unnatural) villainy of *Silas Jorkins*, the lawyer of his competitor from the village, earns his curse and his hostility, and at last secures a to his superior villiance and skill. "An eye for an eye, and a tooth for a tooth," is *Lovel's* principle; and it is carried fearfully embodied in his practice. *Lovel*, indeed, checkmates at every turn the respectable *Manikins*, much in the same way that the shrewd Red Indian in "Sarah Bisagt" counterpoints the lawyer in all her contrivances. The point, however, is not so exclusively contested; and *Lovel* achieves comparatively an easy victory. We have said that a part of the scene is in Australia. The Land and fourth acts are devoted to the discovery of the gold, and the work is of it. The first, turned reformer, is the chief agent; but is, in the end, outrun by the young former, who discovers a "nugget" worth several thousand pounds—of these the earlier act was the most interesting in its incidents, and most skilfully contrived in its situations; and it was on the latter that the hopes of the stage-manager were built. In this were represented, in an elaborate scene, the diggings and gold-seekers' encampment, on the banks of the river Mc Quarrie. The scenic arrangements were perfect, but the dramatic were defective. The playwright should have started *in medias res*, and then worked his subject backwards and forwards, by way of episode and continuation, so as to have grouped his accessories about a central situation. But, instead of this, Mr. Reade treated the whole matter as a lecture: introducing to us both the chief and the Jew speculating, and describing *in extenso* on the best way to dig for gold, and the best means to collect it; and then following this up with an item or two of fraudulent practices, brain-law, and attempted assassination; and according to a shape law of narration, not of dramatic art, he executed his work. Here, accordingly, the action seemed to stand still, and the audience grew sulky.

A similar defect was perceptible in the fifth act, on *George Somerset* and *Rose* (the former of whom is to claim the bride at the moment she is about being forced into marriage with the odious *Manikins*, who has contrived at an inn to rob the returning emigrants of their wealth. But we rallied and the curtain fell triumphantly upon the culprit by arresting *Manikins's* agent, the despi able *Crawley*, with the notes upon him. This ammon to a great fact of modern civilisation was exceedingly felicitous, and of course secured the approbation of the house. The *Jew* at last others with full evidence of *Manikins's* guilt, and thus aids in the fulfilment of his own benefaction, as pronounced in the last act of the drama. Throughout, this play is well written, and the characters are skilfully contrasted; but, as we have intimated, the former is occasionally wanting in the disposition of the stage business, and it is a highly meritorious effort, and deserves to be encouraged. The house was numerously attended, and the applause properly predominated over the manifestation of dissent. We think the piece is likely to prove sufficiently attractive

STRAND.

Mr. James Anderson, late lessee of Drury-lane, has migrated to this little theatre from the City of London. He has made his appearance in "The Sentinel," from the pen of Mr. Bourcault; on Monday, it is announced that the drama of "Civilisation" will be reproduced.

MUSIC.

NOTES OF THE WEEK.

The week's musical doings are within a narrow compass. The return of John Parry to his Music-stall, which on Monday last was to have, however, pass unrecorded. "When it is announced that at Salmon's Amateur Glee Meeting, Rossini's magnificent opera, "William Tell," was executed, it must be admitted that the progress is not on the decline in the country: at these meetings the most difficult operas are gone through without excision. Next Friday (the 21st), the Sacred Harmonic Society will perform Mendelssohn's "Elijah," under Costa's direction. much interest will be excited by this revival, as the accomplished Madame Fiorentini will sing the principal soprano part for the first time in London; and Miss Huddart, the contralto, will sing the music of the *Queen*. Miss Deakin, Miss Dolby, Mr. Lockey, Mr. J. A. Novello, and Mr. Weiss are allotted the other parts. For the future the rehearsals will be in the large hall every Friday evening; and by this change of night, Costa's presence will be secured during the season.

The society has just published a carefully-prepared catalogue of its well-stored library, which is especially rich in Handelian collections, both in print and manuscript. The cultivated amateur will be much interested in the perusal of this catalogue, especially in the division having reference to musical literature. Some of the illustrated works are ancient, scarce, and valuable. Mozart's "Requiem," which has been some time in preparation, under Costa's supervision, will be anxiously looked for, as the earliest novelty.—The anniversary festival of the Ancient Madrigal Society will be celebrated on the 20th inst., in Freemasons-hall; General Lord Saltoun in the chair.—A lecture on church music, and its due place in public devotion, was delivered before the Islington branch of the Church of England Young Men's Society, on the 5th instant, by Mr. J. T. Cooper, organist of St. Paul's Church, Islington. The illustrations, which included compositions by the first writers, such as "Jubilate in B flat," Purcell; "Wherewithal shall a young man cleanse his way?" Boyce; "Awake, put on thy strength," Wise; "If we believe that Jesus died," Goss; "I will sing of thy power," Greene, &c., were sung by choristers of the Temple church, gentlemen of Westminster Abbey, and others, making a choir of about thirty voices. The specimens above mentioned were introduced by the lecturer as only appropriate for use in cathedral and collegiate churches. For parochial church service purposes were given of a plain single chant to the "Venite, exultemus," the Ambrosian chant, harmonised for the choir, and adapt d to the Prayer Book translation of the "Te Deum," by the lecturer; and a series of plain psalm tunes—the Old Hundredth, Old Hundred-and-Fourth, a chorale by J. S. Bach, "Sanctus" by Talis, &c. The Rev. Daniel Wilson, A.M., Vicar of Islington, presided over the meeting, which was very numerous. All present appeared to be highly interested with the illustrations, and with the remarks of the lecturer, who, at the close of the lecture, suggested a plan for promoting congregational singing in our parish churches.—The Hungarian contralto, Mdlle Marie Doria, whose voice rumour proclaims as resembling that of Alboni, will make her first appearance in London at Albro's concert-room, early in December; and in the 8th inst Alboni, by the way, is mentioned in a letter from New York, was to have appeared at the Broadway Theatre in "Cinderella," on the 27th ult.; and Madame Sontag was to make her debut in Italian opera about a fortnight after that date.—The reunion of the names of Sontag and Alboni brings us to the gossiping hint, that the two Royal Italian Operahouses, or rather the one, as, in all probability, according to present appearances, Covent-garden only will open, some time in March. Mr. Gye is on the Continent, looking after Mdlle Lucca and Mario and Tamberlik, Signor Medori, the new prima donna, and Ronconi cannot return from the Russian capital until April. With this distinguished batch are the ancillaries Tagliafico, Zelger, Belletti, and Mdlle Cruvelli—Madame Castellan, who is the rage at Lisbon, will be here to open the campaign, as also Madame Jullienne, who, at Barcelona, has been creating a perfect furore amongst the Iberian connoisseurs.—Private correspondence from Lisbon gives flattering accounts of the progress of Mr. Swift, the English tenor, who has been singing in Italian opera with Castelina.—There are flying rumours of the advent of another attempt to establish a national opera in London, on some solid basis: may this news be confirmed!—An agreeable piece of news has come to hand from Hanover, namely the appointment of Joachim, the violinist, as Chapel master, in place of the late young and lamented Helmesberger.—Sivori and Vieuxtemps in Paris are fighting the ground inch by inch, and the Italian and French schools of execution are discussed with the utmost vehemence, whilst the gentle Mdlle. Camus calmly intervenes with her delicate manipulation, and earns a wreath for Bohemian masonry, which will long be lovingly cherished and sacred to the young and gifted pianiste.—The Empress of pianistes, the tornado of executants, in the person of Madame Pleyel, will soon astound amateurs in London by a flying exhibition, on her way to an extended provincial tour.—The triumphant reception of Meyerbeer's "Prophète" in Italy is now the great theme for gossip south; it was at Florence the great work was first heard, and its success has been pre-eminent. A correspondent suggests warmly that Berlioz's "Benvenuto Cellini" should be produced in London. The opera is, where? It may be answered, at the Royal Italian Opera, if art considerations are to have their due influence. If it were only to hear Berlioz's overture of the Carnival, which is enchanting, and the "Benvenuto" itself, its production would be justified. The character of *Cellini* is written for a tenor, the *Ascanio* for a contralto, and the *Teresa* for a soprano, *Ascanio* for a mezzo-soprano, and *Fieramosca* for a basso. Four and a comic basso. The opera ends in the interior of the Colosseo, at Rome—a grand opportunity for scenic display. It appears that Formis, the basso, and Mdlle. Fodor, the tenor, and Mdlle. Wagner, are the stars in Berlioz's *Sacred*, the basso, and Wagner in *Valentine*, quite delighted the Prussian *illettanti*.—At the benefit of Signora Medori, who played *Violetta*, at the Royal Italian Opera, Hungarian Opera, in St Petersburgh, Mdlle. Marray Lenz and second Mdlle. Lodge, at the shortest notice, sang the part of *Mr. Smith* with great success.—A new opera, called "Duke Sherry," is in rehearsal at Drury-lane. Some the early part of this month, the *libretto* by the popular poet, Felice Romani, and the music by Vicenzo Bonnetti; Madame Jullienne was to be the *Jane Shore*.

THE MARBLE STATUES FOUND IN WINDSOR FOREST.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

Rye-bank, Newcastle, Staffordshire, January 8th, 1853.

SIR,—In this day's ILLUSTRATED LONDON NEWS, you give us representations of some statuary lately found in a farm-yard, and invite us to tell in their own various opinions, and upon which I may perhaps throw some light. In my youthful days I passed a matter of years at Windsor; though I cannot enumerate for certainty the number, I am aware it was a whole year, but I may consider it as having been my home from 17.7 until the spring of 1812. At the beginning of this time I was very juvenile, of natural habits, and a great lover of nature and romance—tales of ruined abbeys and haunted castles were my delight. There was then, as indeed, there is now, a building at the east end of St. George's Chapel, known as the Cloisters. Walking one day in that part of the town it might almost be considered a ruin, the glass of the windows was nearly all broken, some of the stone-work the same, and the beautifully pointed arching was falling in great lumps to the ground. It was then, as it is now, a long building, and I made my way to it to see its place, it struck me as being the best of all its kind in which my early romantic tales and I determined, if possible, to effect an entrance. The door was in the passage leading to the cloisters, and I found it to be of large size, old, much out of repair, and fastened with an iron bar; but still somewhat loose; it also opened in the centre. I was had the opportunity when no one was near, and, by pushing the door open with the back of one hand, the other, I made a shift to squeeze my little body through the space between, and thus obtained an entrance. When in, I found the interior nearly filled with rubbish, and part of which was a number of tall king-cases, perhaps twenty it might be more, or less: these were from seven to eight feet long, and about three feet square, some were lying at length upon the ground, and some stood upon end. As you may suppose, I had a longing desire to see what was in them, and, after much effort, I succeeded in opening one of the cases, which enabled me to see that it contained a large figure of a man. The secret was now revealed—each case contained a statue. After this I passed many hours in the interior of the romantic ruins there. True it was I should have been better pleased if the statues had been out of their cases, and ranged round me; but, as that could not be, I contented myself with making myself acquainted with the names I could know informed that they had been given to her Majesty Queen Charlotte, for the purpose of being set up in the pleasure-grounds at Frogmore, but, it having been found that they were much too large, they remained at to make that use of them; and, finally, they had been put in the Tomb-house to be out of the way.

That period on, and in its lapse I ceased to squeeze myself between the doors of the Tomb-house, and at length the good old George III. ordered the interior to be excavated, and the Royal vault to be constructed. Upon this occasion, there was no doubt, the statues were made: I had no recollection of the circumstance—perhaps I was absent at the time. The most probable place to which they would be removed seems to me to have been Cumberland Lodge, at the Great Park, a little time it was only inhabited by servants, and there they may have remained until George IV. erected his cottage in the immediate neighbourhood. Cumberland Lodge was then given to me to be made use of by my regiment at some distance from the Lodge. One thing may be remarked, it is much more likely to have been done by George III. than by George IV. After all, the statues now found may be the same which I saw in the Tomb-house, but if it cannot be shown why became of the latter, I think they may be considered identical

It appears very strange to me that not one of the servants in the Royal household should have any knowledge as to the fact; five-and-twenty or thirty years is not a long vista through which to look back, for my part I see clearly through it.

You are at liberty to make any use of the contents of this letter which you may judge proper. Only this, my name must not appear in print.

* * *

COINCIDENCES.—"Bonaparte and Wellington were born in the same year, and Burns and Rogr, the Scotch poets, were both born on January the 25th; but it more remarkable that the two great dramatic poets of modern Europe, Shakespeare and Cervantes, both died on the same day in the same year—April 23, 1616. It is further remarked that Shakespeare, like the case of the great Raphael, and of Schiller, died on the anniversary of his birth."—*Fennell's Shakespeare Repository*, No. 1, a diligently-compiled miscellany, illustrative of the life and Genius of our great Dramatic Poet.

FOREIGN POTATOES.—Potatoes are imported into this country duty free, and large imports have been made. In the month ending the 31st of December last, 105,134 cwts. were imported, against 46,031 cwts. in the corresponding period of 1851. In 11 months ending the 5th of December last, the importations reached 456,872 cwts.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

A course of lectures upon Free-trade, Education, Law, and Parliamentary Reform, will be delivered in town during the present month, by Samuel Gordon, Esq., of Dublin

W. J. Bidgeth, Esq., Comptroller of Customs at Stockton, has been promoted to Collector at Rochester; and Robert Cullum, Esq., Comptroller at Dover, is appointed Comptroller at Stockton

Lieut.-Colonel Sir T. Mitchell, Surveyor-General of New South Wales, has just arrived from that colony, and brought with him a diamond of good form and of the finest water, weighing three-quarters of a carat, found at the gold diggings at Ophir, West of Bathurst. Sir Thomas has presented that specimen to the Museum of Practical Geology, Jermyn-street

From Norfolk, U.S., we have a brief account of the wreck and total loss of the British steamer *Manxtrooper*, bound from Liverpool for this port. She struck, on Christmas-day, a few miles south of Carrituck Inlet. Fortunately, no lives were lost.

During the past year 142 vessels, of an average tonnage of 208, and of an aggregate of 29,815 tons, have been launched from the builders' yards on the Wear, showing an increase on the preceding year of 4822 tons, and a decrease of four vessels: and for the years 1851-52, an increase of tonnage of 13,312 tons, or upwards of 25 per cent.

The negotiations between Austria and Russia relative to the junction of their telegraphic lines are nearly terminated. The Russian telegraphic line is to be taken from St. Petersburg. The junction is to be effected on the frontiers of Gallicia by a special line, which is not to be connected with the German telegraphs

A circular has been issued from the Horse Guards, extending to officers in the army the privilege hitherto enjoyed by non-commissioned officers and privates with respect to the use of barrack libraries

An unprecedented quantity of moisture has fallen this season all over this country and other parts of Europe. In America it has been little better; in Africa and India, none; a remarkable amount of rain has also fallen. Much damage must have been done to the winter cereal crops generally.

The Rev. Philip Smith, Professor of Mathematics at New College, London, has been appointed head master of the Protestant Dissenters' School, Mill Hill, vacant by the resignation of Mr. Priestly.

A court-martial has been held at Portsmouth on a Royal Marine named Patrick Brady, for threatening to blow out the brains of Sergeant Saunders; when he was found guilty, and sentenced to receive forty-eight lashes and eighteen months' imprisonment.

A discovery of 301 old coins has been made on a farm of Tenterhill, Whitingham; they comprise crowns, half-crowns, shillings, and sixpences, of the reigns of Philip and Mary, Elizabeth, James I., and Charles I., of England, and some Spanish coins of Philip IV. The entrance value is about £5

During the past week Charleroi, Namur, Manage, Monseron, and Laulnes (Belgium), Pistoja, Peacia, Prato, Poggebonsi, Impoli, and Pontudera (Tuscany), have been placed in communication with the Submarine Telegraph-office, Cornhill

A fine golden eagle, taken in Strathglass, is at present in Inverness, intended as a present to the Emperor of France

Shocks of an earthquake were felt at Acapulco, on the 4th and 5th of December. Property to the value of 200,000 dols was destroyed

Alfred Waddington, who was condemned at the late winter jail delivery, for murder at Sheffield, was hung on Saturday, at twelve o'clock, at York Castle. From 8000 to 10,000 spectators were present, and conducted themselves very orderly

The American steamer *Western World* has been lost on the Mississippi, near New Orleans; twelve or fifteen lives were lost. Among the passengers were two British travellers—Captain the Hon Henry A. Murray, R.N., and Mr. Mildmay. They both escaped uninjured, but lost all their papers and baggage

James Kaley, the Scotch giant, who exhibited in a *café* on the Boulevards, died lately at Paris, almost suddenly, aged twenty-seven years; his height was nearly eight feet. Though apparently of a great power, he was in reality of a very weakly constitution. He was never married, and died almost in poverty

Messrs. Gibbs, Bright, and Co., the owners of the *Eagle*, are about to present Capt Boyce with a very handsome silver salver, for having the vessel from Melbourne to London in the short space of seventy six days, the quickest known

The newest notion in Boston, America, is a lady, who, calling herself the "Veiled Vocalist," sings at the Melodeon, and gives the proceeds of her concerts to the paupers

The new Belgian press law came into operation on the 1st inst., when the booksellers of Brussels removed from their windows all such books and pictures as might subject them to penalties under the new system of restriction

The *Journal pour Rire*, of Paris, has of late ventured to give some sketches of passing events, and for this offence it has been fined 47,000 francs, or nearly £2000 sterling.

Suicides have been very frequent lately in Paris. Dr. Fiard has thrown out his brains, at his residence in the Rue Hauteville; a dressmaker, in the Rue St. Jacques, suffocated herself with charcoal; and two other persons drowned themselves in the canal.

At a meeting of the Aberdeen Town Council on Monday, it was resolved to petition for the abolition of University tests, in all chairs, except the Theological

Inspector Hall has had the satisfaction to receive from Sir Richard Mayne, C.B., a first-class certificate of good conduct, and from the late Government a pension of £128 per annum.

The inquest on the late dreadful accidents at Oxford have been continued for three days, and then adjourned to Monday next

The late Mr. T. Phillips, of Brunswick-square, has left £6000 for founding a professorship of physical sciences in St. David's College. A few years ago, the same benevolent gentleman gave £3000 to that college, to found six scholarships for natives of Wales and Monmouthshire

THE report of the death of Sir Charles Lemon is premature. Sir Charles has had a severe attack of paralysis, but the accounts last received are more favourable, and give some hopes of his recovery

The monster steamer *Parana*, which left Southampton the 2nd of December last, arrived at St. Thomas on the 19th: she took out 1276 tons of coal, and had 80 tons left when she arrived at her destination. Her average daily consumption was 70 tons. Her greatest daily speed was 288 miles

Bisalow Church, Derbyshire, which was re-opened last week, has been ably restored, in the Early English style of architecture, from designs by sir Joseph Paxton; the contractors being Mr. Watts, of Ashover; Mr Savage, of Chesterfield; and Mr. Green, of Baslow

The Duke of Wellington has consented to be named a Vice-President of the Royal Highland School Society, vacant by the death of his illustrious father

The Adelaide (Australia) Mining Company has declared a dividend of £100 per cent!

T. [illegible] Hall for the benefit of the Cheesemongers' Benevolent Institution took place on Tuesday last, at the London Tavern, and was numerously attended.

A singular accident befel the Peninsular and Oriental Company's ship *Cognet*, on her being launched, in the Thames, last Monday afternoon. After sliding sixty or seventy feet down the slip, she stopped, her stern sank into the ground, and her bow was raised in proportion, off the slip. All efforts to move her into the stream have hitherto proved ineffectual.

On Wednesday, a new order was issued by the Police Commissioners, for all officers, either on duty or police offices, acting as clerks at the different stations, or attending theatres or private parties on the no. it by and gentry, to wear a distinguishing armlet. In the event of non-compliance, a fine will be inflicted in the first instance, and afterwards dismissal

The Queen of Hanover is sufficiently recovered to drive out, but is still so poorly, that all Court ceremonies on New Year's-day were postponed

The London and Westminster Bank have advanced the rate of interest allowed on the deposit receipts from 1 to 1½ per cent. from the 1st inst.

The barque *Eglinton* has been lost thirty miles north of Perth, Western coast; the crew all saved except one lady (a Mrs. Batram) and the Boatswain.

On Wednesday last, the village of Weston Underwood, in the county of Bucks, so well known to lovers of English poetry in association with their poet Cowper, was the scene of great rejoicing, on account of the coming of age of Courtney R Throckmorton, Esq., the heir to the extensive estates of Sir Robert Throckmorton; when the whole of the inhabitants, young and old, were regaled with abundance of good cheer

An impostor (pretending to be deaf and dumb), of the name of [illegible] has managed to levy contributions and obtain money [illegible] by various pretences at Newcastle, by means of an order and [illegible] book of the Deaf and Dumb Asylum there. After his appearance on he was so cautious that his imposture was only exposed [illegible] the following manner. As he is only about five feet three inches [illegible] he had both about seven feet in depth was prepared for him [illegible] was stuffed fairly warm without sending him, and he was ordered [illegible] up and go on. Little thinking it was so deep, he jumped in [illegible] a distance, and, on coming to the surface, roared for assistance in a fine [illegible] voice, tipped with the true Irish brogue, very much to the amusement of the [illegible]. When tried, he was found guilty—seven years' transportation

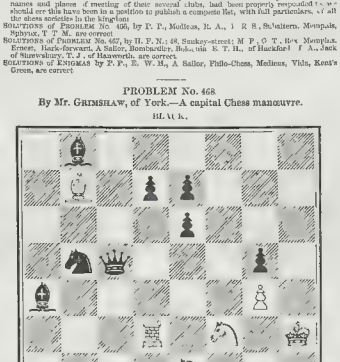
By Mr. GRIMSHAW, of York.—A capital Chess manœuvre.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN THE METROPOLIS.

Fine game just played in a match between Herr Löwenthal and Mr. Brien, of Oxford. The former giving the odds of "the exchange," that is, the Queen's Rook, for the adversary's Queen's Knight

(Before playing the game, the reader must be careful to remove Black's Q R, and White's Q Kt from the board.)

BLACK (Mr. L.)	WHITE (Mr. B.)	BLACK (Mr. L.)	WHITE (Mr. B.)
1. P to K 4th	P to K 4th	30. Kt to Q 3rd	R to Q sq
2. Kt to K B 3rd	P to Q 3rd	31. Kt to K B 4th (g)	Q to K 4th
3. P to Q 4th	P takes P	32. Q to her B 4th	B to K B 2nd
4. B to Q B 4th	B to K 2nd	33. Q to K 2nd (h)	B to K B 4th
5. P to Q B 3rd	P takes P	34. Q to her R 6th	R to K sq
6. Q Kt takes P	P to Q B 3rd	35. Kt to Q 3rd (i)	Q takes K P
7. Q to her Kt 3rd	Q to her Kt 3rd	36. B takes R (ch)	K takes B
8. B to K B 4th	P to Q Kt 4th	37. R to K sq	Q to her 5th (k)
9. B takes Kt	R takes B	38. R takes B	B takes R
10. Q to her B 4th	Q to her B 4th	39. Q takes Q R P	B to K B 2nd
11. Q to her Kt 3rd	P to Q Kt 4th	40. Q takes Q B P	Q takes Q
12. B to K 3rd	Q to her B 5th	41. Kt takes Q	B takes P
13. Q to her R 2nd	P to Q Kt 5th (a)	42. Kt to Q 3rd	P to Q Kt 6th
14. Q to her R 4th (b)	B to K B 3rd	43. K to B 2nd	K to B 3rd
15. K Kt to Q 2nd	B takes Q Kt	44. K to his 2nd	B to Q Kt 8th
16. P takes B	Q takes Q B P	45. Kt to Q Kt 2nd	K to his 4th
17. Castles	P to Q R 4th	46. K to Q 2nd	K to K B 5th
18. Kt to K B 3rd	R to Q sq	47. K to his 2nd	B to K 6th
19. R to Q B sq	Q to K R 3rd	48. K to his B 3rd	K to his 4th (l)
20. Kt to K Kt 5th	Q to K Kt 3rd	49. P to K Kt 3rd	K to his B 3rd
21. P to K B 4th	P to K B 3rd	50. K to his 4th	K to his 4th
22. P to K B 5th	Q to K sq	51. P to K R 3rd	P to K B 6th
23. B to K B 4th (c)	Q to K Kt 2nd (d)	52. P takes P (ch)	K takes P
24. Q to Q sq	P to Q 4th	53. K to Q 2nd	K to Kt 4th
25. Kt to K B 3rd	P to Q B 4th	54. Kt to R 4th	K takes P
26. Q to her B 2nd	P to Q 5th	55. K to B sq	K to Kt 6th
27. Kt to K 5th	B to K sq	56. Kt to B 6th	B to his 7th
28. P to K B 6th (e)	P takes P (f)	57. K to Q 2nd	K to B 6th (m)
29. B takes K R P (ch)	R to K Kt 2nd	58. Kt takes P	

And the game was drawn.

(a) The game now assumes an interesting aspect. Without great caution on Black's part it is obvious he will lose his Kt.

(b) This appears his best resource. If he had moved the K Kt to Q 2nd, White would have retired Queen to her R 6th, and have retarded Black's Castling

(c) A very fine move. The object of which the ensuing should endeavour to discover himself.

(d) If White had taken the Kt, the following moves will prove that he must have lost the game —

BLACK.	WHITE.	BLACK.	WHITE.
23.	P takes Kt	26. P to K 5th (ch)	K takes K B P
24. B takes Q P (ch)	K to B 3rd.	27. Q to her 3rd (ch)	K to Q 3rd
25. Q to her Kt 3rd (ch)	K to Q 4th (best)	28. P to K B 4th	

And White has no resource.

(e) The critical portion of the game is played with great cleverness by Mr L.

(f) If he had taken the Pawn with his Queen, he would have lost her. Thus:—

BLACK.	WHITE.	BLACK.	WHITE.
28. Q takes P		30. Kt to K Kt 6th (ch)	B takes Kt
29. Q takes P (ch)	Q to K 2nd	31. B to Q 6th, &c	

(g) Threatening to take the Queen's Pawn will be fatal to Black.

(h) Interesting to take the King's Rook with the Bishop, and then play Q to K Kt 4th, and a regular fine attack.

(i) Kt to K 4th (ch) appears to us stronger than this move

(k) Mr. Brien was guilty of a grave error here. If he had simply played his Queen to her B sq, challenging an exchange, the game was his own

(l) Again White plays wrongly. If he had now moved his King to Kt 4th, instead of retaining him, he could not have saved the game

(m) One more, Mr. Brien had the victory in his hands. He should have played the King to B 5th: and it will be found he could have won

THE HALIFAX ST. GEORGE'S CHESS-CLUB.—The annual meeting of the above society was held at the White Lion Hotel, on Wednesday evening the 5th of January, when a highly satisfactory report of the progress of the club was laid before the members by the secretary and treasurer, showing that the numerical strength of the club had been increased fully one-third since its formation in December, 1851; and, during the past year, the club had been honoured by the presence of H. Staunton, Esq., as chess champion; and Herr Löwenthal, the celebrated Hungarian chess-player, who have both been elected honorary members of the club. The finances were stated to be in a flourishing condition, notwithstanding the heavy expenses consequent upon the purchase of handsome tables and men, and the other requisite furniture, the club being founded on the same principles as the original Halifax Chess-club, which was established in May, 1846, and dissolved in January, 1847; and of which Mr. Cronholm, the president of the Halifax St. George's Chess-club, was the president from May, 1846, to October, 1846. A vote of thanks was unanimously passed to the officers, who were requested to continue their services for the current year.

LONDON AND NORTH-WESTERN RAILWAY.—AMERSHAM BRANCH

A very crowded meeting of the landowners, lessees, occupiers, and other persons interested in supporting the proposed railway from the Watford station of the London and North-Western Railway, through Rickmansworth, Chorleywood, Chenies, and Chalfont St. Giles, to Amersham, was held on Wednesday, at the Crown Inn, Amersham; Wm. Weller, Esq., in the chair.

The chairman having briefly explained the object of the meeting, and alluded to the great advantages which the neighbourhood must derive from the [illegible] communication,

Mr. West congratulated the meeting on the prospect which they now had [illegible] the liberality of the London and North-Western Railway, of [illegible] communication with the Metropolis. He could not [illegible] that there could be any opposition to the project, and he begged to move a resolution in support of the intended line (Cheers)

Mr Morton seconded the resolution, believing that there could not be a second opinion with regard to the advantages likely to be derived from the line

Mr Fuller, of Chesham, rose to move an amendment approving of the proposition for constructing the railway, but expressing an opinion that its terminus should be on Chesham Bois Common, so as to accommodate both Chesham and Amersham

Mr. Hepburn seconded the amendment, which gave rise to a long discussion, to which it was urged that the Parliamentary notices having all been given, the line could not now be altered; that the terminus proposed in the amendment would be inconvenient for both towns; that as the terminus proposed in the bill would be almost equally advantageous to Chesham in that of the amendment, whilst the latter would add much to the expense of constructing the line; and that if the present opportunity were lost, they might never get a line in the neighbourhood at all, whilst it would be very easy hereafter, if deemed advisable, to construct a small branch line to Chesham. It also appeared that the opposition, in a great measure, hinged on the influence of a landowner who is opposed to the introduction of such modern innovations as railways, and who was fearful that hereafter some plan might be brought forward for extending the line so as to interfere with his property.

On a division taking place the amendment was negatived, and the original resolution carried by a large majority.

On the motion of the Hon. C. Cavendish, M.P., who gives the project his most strenuous support, seconded by Mr Blake, a committee was appointed to communicate with the neighbouring landowners on the subject, and a vote of thanks given to the London and North-Western Company for their liberal offer to make the line.

A vote of thanks to the chairman closed the proceedings

PROVINCIAL INTELLIGENCE.

NEW LITERARY AND SCIENTIFIC SOCIETY.—A public meeting was held in the theatre of the old Philosophical Institution, Birmingham, on Monday, for establishing in that town a Literary and Scientific Society, upon an extensive and comprehensive scale. It may appear strange, but it is nevertheless true, that in Birmingham, associated as it is with the names of Boulton, Watt, Priestly, and other illustrious scientific men, and in which town the British Association has held two of its meetings, such an institution does not at present exist. The Mayor occupied the chair; and amongst those present were Lord Lyttleton, Ven. Archdeacon Sandford, &c. The plan embraces three museums the first of which will be devoted to the raw materials of the industry of this district, geological and mineral optical specimens, &c.; the second to articles illustrative of manufacturing processes, as well as to finished specimens of different trades and countries; the third to machinery and models. The other features of the scheme comprise a chemical laboratory for lectures and classes, a [illegible] room, with a [illegible] and general library of reference, and [illegible] hall for the reception of sculpture and other works of art. Another department will be devoted to mining records, showing the dimensions and position of seams in the different mines of workings of the district

FREE LIBRARY AT LIVERPOOL.—This establishment continues to be thronged daily by hundreds of well-conducted persons. The statistics up to the third day since the opening give a truly gratifying result, 82,000 persons having been passed and examined in that period, giving an average of 632 volumes per day, exclusive of the readers of the different periodicals

THE HIGHLAND SOCIETY.—From communications which have passed between the secretary of the Highland Society and gentlemen in Berwick, it appears probable that the show for next year will take place in that town

MISSING COLLIERS.—Great anxiety has been experienced as to the fate of a fleet of colliers which sailed from the Tyne on Sunday week. Fifteen of these vessels, however, arrived on the following Friday in a very crippled condition, and their crews exhausted. Six or seven of these vessels have not been heard of, and it is feared that the surviving crews bring intelligence of several disasters on the Northumberland coast during the storm

SOUTHAMPTON, MONDAY.—THE MAILS.—The *Teviot*, Capt. Onslow, took her departure this afternoon, with the mails for the West Indies. She took out about 50 passengers, among whom are Sir Charles Watson, and Don Berenger Monte Videal Maximo of Buenos Ayres, and specie value £200,000 sterling. The *Tay*, with the mails from the Brazils and River Plate, is due on the 16th inst. The *Iberia*, Capt. Bowen, with the mails from Egypt, Malta, Lisbon, Cadiz, and Gibraltar, is due on Friday next. The U. S. steam ship *Hermann*, Lieut. Higgins, having had her damages repaired, sailed this morning, for New York.

SYSTEMATIC INCENDIARISM. On Christmas-eve a barley rick on a farm near Coney Barks, was fired; and the next night, another neighbouring farm. On New Year's-eve, a barn in the centre of the village was discovered to be on fire, and nine fine buildings, with a number of pigs and sheep, were burnt alive, despite every effort to save them. The next night, an attempt to fire several houses by placing lighted lucifers in the thatch, was detected in time to prevent much damage. But on the Tuesday following, a similar attempt was unhappily successful. Seven houses and a number of labourers' cottages were injured or destroyed, and two men killed by the falling upon them of a wall. Up to the last accounts received, the perpetrators of these fiendish acts had not been found. A reward of £200, and a free pardon from her Majesty to any one coming forward to give such evidence as will fix the guilt upon the offenders, has been offered. It may be stated that suspicion attaches to persons not of the working class

DIABOLICAL ATTEMPT TO UPSET A RAILWAY TRAIN.—Last week four wooden sleepers were placed across the down line of rails of the Manchester, Sheffield, and Lincolnshire Railway, the evident object of the creature who had placed them there being to upset the first train that might come down the line. Fortunately, the first train was one with goods, and not passengers, and no very serious mischief resulted.

SCARCITY OF COALS IN SOUTHAMPTON.—There is at the present time such a scarcity of coals in Southampton, that 1,400 tons have been brought by rail from London for the *Orinoco* steamer, which leaves there on the 17th inst.

THE OCEAN PENNY POSTAGE.—A public meeting was held at Beck's Hotel, Birmingham, on Tuesday evening, at which the Mayor presided, when resolutions were passed unanimously in favour of the proposed ocean penny postage.

LANDSLIP UPON THE SOUTH-DEVON RAILWAY.

The late gales and the long-continued wet weather, have had a serious effect upon the South Devon Railway, lying along, as it does (between Exeter and Teignmouth), close to the sea, and under friable red sandstone cliffs.

During last week, the traffic was partially interrupted by an immense slip or fall of the cliff, near the entrance to the Holcombe Tunnel between Dawlish and Teignmouth. Our Illustration shows the state of the line, with the fall of the cliffs, which covered the railway and carried away a portion of the sea-wall

Before the rails could be cleared the passengers and luggage were conveyed over the turnpike road, from Dawlish to Teignmouth, about four miles. All the vehicles and horses that could be procured in these towns were put into requisition for this service; and there was for a day or two a revival of the old-fashioned modes of travelling, to the great satisfaction of the old turnpike-gate keepers. Some odd incidents arose in consequence: one good lady was indignant at being obliged to put up with an open country cart; but, on the guard delivering a sight of her ticket, it was found to be a "Parliamentary" one, which settled the business.

As soon as a portion of the mass lying on the rails had been cleared, the trains resumed running up to the slip, and then discharged their passengers on the other side. The passengers walked across the damaged portion, and entered a train waiting on the other side. This arrangement necessarily caused considerable delay in the arrival of trains; otherwise, no serious inconvenience resulted. The traffic has been resumed as usual.

A large number of labourers were employed day and night, in clearing the rubbish; and the damaged sea-wall will have to be rebuilt. The scene at night, with the large fires of the workmen, the roaring of the sea immediately below the line, and other accessories, was very striking.

ENTERTAINMENT TO THE PATIENTS, AT THE MIDDLESEX COUNTY LUNATIC ASYLUM, COLNEY HATCH.

NEW YEAR'S FESTIVAL AT COLNEY HATCH.

ONE of the most interesting features of the non-restraint system of treatment of lunatics is the celebration of periodical festivals, in which the patients are allowed to participate; and such rational recreation, doubtless, in many instances, induces habitual cheerfulness, and thus proves one of the aids by which the moody sufferer is often restored to reason. An entertainment of this description was given to the patients in the Middlesex County Lunatic Asylum, Colney Hatch, on Tuesday evening, the 4th inst. The numbers of the patients present were—males, 200; females, 327

Several of the committee of visiting justices and other magistrates of the county, with their friends, and many of the neighbouring gentry with their families, to the number of upwards of 100, were present. The entertainment consisted of a few tableaux, performed by the officers of the establishment, accompanied by music; also, solo singing by several patients; dancing, in character, Ethiopian serenading, by attendants and servants, &c. The patients partook of tea, cakes, fruit, and spiced beer; and afterwards danced together. The festival was given in the exercising-hall of the institution; the room was gaily decorated with flags, and a temporary theatre was built for the occasion, these preparations being entirely the work of the officers and patients. The cost of the whole, including refreshments, did not exceed £30.

NEW COINAGE FOR CAMBOJA.

BIRMINGHAM bids fair to *mint* money for all the world; and we have now to add to its long list the kingdom of Camboja, for which the specimen here Engraved has lately been executed. The Sovereign of that country, a short time since, sent an order to Messrs. W. P. Hammond and Co., London, per Sir J. José d'Almeida and Sons, of Singapore, for the manufacture at Birmingham of a complete set of coining machinery, intended to constitute the Royal Mint of Camboja; and the accompanying Illustration is taken from proof impressions of the dies; the entire die being sunk in exact imitation of ivory copies designed by native artists, and forwarded for this purpose by his Majesty of Camboja. On the obverse of the coin is the image of the Malay cock, which appears to rejoice in the possession of only one leg. The cock is the heraldic emblem of the Malays, and constitutes the supporters to the Royal arms of Camboja.

The reverse of the coin represents the entrance to one of the principal religious temples of the country, and, in conjunction with the cock, is emblematical of civil and religious supremacy.

This coinage is remarkable, chiefly as being, we believe, the first ever executed in Europe by order of any Sovereign in the China Seas; and is interesting as evidencing the progress of civilisation in those parts of the world, as well as showing a disposition on the part of this Malayo-Chinese nation to admit the superiority of Europeans in the arts; and to concede, though possibly unwillingly, the fact that the "Fangqui" or "white-devil" nation, as our Celestial brethren complimentarily term us, are, after all, not altogether the barbarians they once thought us.

The kingdom of Camboja is situated between the two more powerful states of Siam and Cochin China, the rulers of which countries have, in accordance with the most approved Oriental fashion, availed themselves, at various times during the past century, of the comparatively weak Government of Camboja to appropriate large slices of that country. This course, which is perhaps not without its counterpart in Europe, has deprived the Cambojan monarch of the greater portion of his former sea-coast possessions; leaving him still, however, the mouths of the magnificent river, the "Markhaum," equal in size to the Danube, and flowing through one of the finest plains in the world. The capital of Camboja is Kongpoor, computed to contain half a million of inhabitants.

NEW COINAGE FOR CAMBOJA.

Camboja is only separated from the Burman territories (the seat of our present hostilities) by the kingdom of Siam; and being situated about midway between Rangoon and Canton, is destined, possibly, to become of much greater political importance than at present.

LANDSLIP UPON THE SOUTH DEVON RAILWAY, BETWEEN DAWLISH AND TEIGNMOUTH.—(SEE PRECEDING PAGE.)

OFFICIAL SEAL FOR THE VICE-KING OF SIAM.

THIS is another instance of the employment of British art for official purposes in the East; the accompanying Illustration representing the impression of a new Seal lately manufactured by Mr P. G. Dodd, of 79, Cornhill, for the Second or Vice-King of Siam. The cost of arms has on either side standard supporters, each representing seven distinct tiers of umbrellas, and the middle part, or shield, is composed of a native hair pin on top, next a small vase, a larger vase, and a stand. The Siamese denote their rank by trifles for instance, the addition of fringe to the umbrellas would be *ante-Royal*.

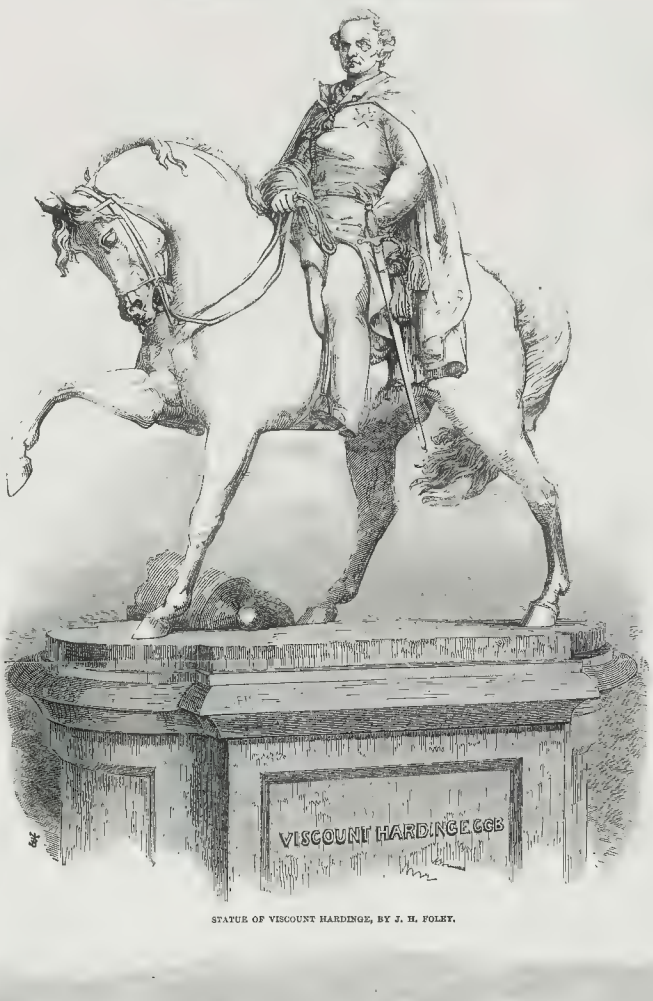
The arms are cut on a pure specimen of yellow amethyst, and set in elaborately wrought massive standard gold scroll work, surmounted by two shifting handles; the principle handle is formed of a choice specimen of faceted cairn-gorum; the other, of carved ivory. This jewel seal cost seventy guineas, complete; and the same manufacturer has executed a ring of similar excellence, for the finger of the King.

OFFICIAL SEAL FOR THE VICE-KING OF SIAM.

EQUESTRIAN STATUE OF LORD HARDINGE.

THIS noble group of sculpture is the work of Mr. J. H. Foley; and is the result of a subscription raised in India, and commenced shortly after the battle of the Sutlej; to commemorate the gallant services of Lord Viscount Hardinge in those important actions, and his Lordship's able government of our Indian Empire. The height of the statue is 13 feet 4 inches. We understand it is intended to be erected upon a pedestal of red granite, 10 feet high; thus making the height of the entire group 23 feet 4 inches.

Mr. Foley has modelled the horse from Lord Hardinge's favourite Arab, "Meanee," which bore his Lordship through all his Indian battles, and escaped unhurt, with the exception of a slight skin-wound in the chest, occasioned by a shot. The animal is still full of fire, and the sculptor has sought, in his design, to express the characteristic eagerness for action in this noble war-horse.



STATUE OF VISCOUNT HARDINGE, BY J. H. FOLEY.

ATHENS.

THE city of Athens, towards the close of last October, was the scene of a violent hurricane; and among its devastating effects was the unroofing of the British Chapel, the following details of which will be read with interest, more especially by "the many travellers who have witnessed the toleration of the Greeks in allowing our services to be performed with bell rung and open doors, and the many who have for years seen the exact and uninterrupted discharge of the duties of the British chaplain," by whom the following particulars of the storm have been communicated to a friend in London:—

On the 29th October there occurred in this city a storm of wind and rain, increasing to a gale at nine P.M., and to a hurricane from ten to half-past eleven. The streets of Athens presented the next morning a scene of desolation, being strewed with branches of trees, tiles, glass, sign-boards, cornices, &c. Upon repairing to our church (which I knew was exposed to the southerly gale) I found a deplorable state of things: the whole of the roof of the south-west side, and great part of that on the north-east, had been torn off, the windows broken, and the few trees we had round it torn up by the roots. Inside, of course, desolation reigned. A river of water was running down the pulpit steps, the font half full of rain water, sand, &c.; the damage done to the church alone being estimated at several thousand drachmas. Panaghi, however, at the risk of a broken head, had gone early to the church, and remained there till midnight, and by his exertions the furniture was in a great measure preserved, as were also the books.

The Chapel, which has been thus desolated, is the small building, with a bell tower, shown in the right side of the accompanying View of the city, from a calotype taken shortly before the late storm. We hope that the publication of the above details may induce our countrymen, by a small subscription, "to restore a sacred edifice where all the objects for which it has been erected have been carried out with a zeal and a discretion which does honour to all those concerned."

The writer of the above letter continues:—

Two of the columns of the Erechtheum on the west side have also fallen, as I am broken in pieces. The two beautiful cypresses, one by the Tower of the Winds, the other by the mosque in the Agora, are down; one of them snapped in two, ten feet from the ground. There was immense damage done to the Palace-garden, where all the large trees are down; the interior of the Palace greatly injured on the south side. (The Royal Palace is the extensive building nearly in the centre of the accompanying View.) The large trees in the square, opposite the British Minister's, all blown down. At the Piræus upwards of sixty caiques and boats are utterly destroyed. Two large merchant ships laden with corn are lost, and the *Amelia* corvette is wrecked on Salamis, having on board the families of several officers, including thirty-six women, and among them Rosa Botzaris, now Madame Caradja. Two men were lost, but all the women were saved.

The fall of one of the columns of the Temple of Jupiter Olympius is then described. Of this catastrophe we have been favoured with the following account by an eye-witness, communicated to our Journal by Mr. W. H. Bellot, F.R.C.S.E., Surgeon Royal Cheshire Militia:—

On the night of the 26th of October the centre pillar of the three which formed a part of the inner south peristyle of the Temple of Jupiter Olympius, at Athens, was thrown down by a gale from the south-east. The column fell due north, and lies prostrate, the drums (the sections of the shaft) preserving nearly their relative positions, although separated. The lowest drum retains its situation on the base, the base and it being both inclined to the north, at an angle of, perhaps 45 degrees. The fallen pieces lie horizontally, and nearly touch each other, like bricks arranged to knock each other down in their fall. The upper half of the capital, with its Corinthian volutes, is completely capsized. The square marble base of the column rested upon two square courses of coarse lime-stone, two feet thick each course. The soft earth giving way under the north side of the pillar, the course broke across from east to west, and when the column was inclined at a certain angle, the second drum (or section) slipped off the first or lowest, carrying with it all the upper column in one piece. The column fell at a right angle to the long diameter of the Temple, which lies east and west. The drums were each connected by two small iron bars, five inches long and an inch and a half square, fitted with lead into the marble, so as to prevent the oxidation of the iron discolouring the marble. These bars are either drawn from their sockets or broken across. The centres of the planes of the drums are left rough, and some have a square hole cut, which, perhaps, was for an iron bar. The iron bars used are placed near the circumference, opposite each other, in the line of a diameter of the circle. The pillar is capable of being re-erected.

THOMAS BELLOT, F.R.C.S.E., Surgeon, Royal Navy.

ATHENS.—FROM A RECENT CALOTYPE.

LAW AND POLICE INTELLIGENCE.

NEW RULES.—Lord Campbell, on taking his seat on the bench on Tuesday, said, that he had the satisfaction to announce that the Judges had this day signed a body of new rules for regulating the practice of the three superior courts of common law by a uniformity of system. The new body of rules would be equally applicable to all the three superior courts, and were intended to establish a uniformity of practice, so far, at least, as the Judges had the power in the cases to which it applied. Yet before the rules they had agreed to could come into operation they must be laid before the two Houses of Parliament, and on the expiration of three months they would, unless disapproved of by either House of Parliament, become law, and come into actual operation; and he hoped that they would then be found materially to improve the administration of justice.

THE LAW OF DIVORCE.—A very important measure will be introduced in the House of Lords on the re-assembling of Parliament, by Lord Brougham, by which the present tedious system of divorce will be abolished, and a new statute framed, doing away entirely with the enormous fees which are now paid. By the new law, the preceedings in the Ecclesiastical Court, and also the action at law, will be dispensed with.

THE QUART AND PINT BOTTLE QUESTION.—At the Brentford Petty Sessions, Bayliss, of the Railway Hotel, at Twickenham, appeared to answer an information laid by the Inspector of Weights and Measures for selling a certain quantity of beer in quart and pint bottles which were not of the imperial measure. The Bench said, as hundreds of people with their eyes wide open were in the habit of purchasing these bottles, well knowing that they did not contain the full measure, they should not convict the defendant. The system of the brewers who supplied the publicans were the parties in fault if any, and therefore the present information must be dismissed.

MARYLEBONE.—William Clarke, of the Jew's-Harp, Edward-street, Hampstead-road, has been fined £5 and costs for keeping a disorderly house. The case excited a considerable degree of interest, inasmuch as it involved the question as to the legality of licensed victuallers having judge and jury clubs at their houses on Sunday evenings. Kelly, who deposed that at eight o'clock in the evening of Sunday, December the 26th, he went in plain clothes to defendant's house, and paid twopence for admission to a judge and jury club, which was held upstairs. He there found about two hundred persons—men, women, and children; and in the centre of the room was a raised platform, so as to give a good idea of a court of law. Mr. Long considered that the exhibition held was a real attack to bring the administration of justice into contempt; but, apart from all considerations of that nature, the holding of such meetings on a Sabbath evening was highly reprehensible.

CHARGE OF CONSPIRACY AND ROBBERY.—At Lambeth police-office, last week, Henry Goodsheil Johnson, a military-looking man, well known in disreputable localities as "Captain" Johnson, was charged with conspiring with others, not in custody, to cheat and defraud Miss Sarah Stewart of railway shares worth £1000, and with stealing two gold seals, a diamond ring, and other articles, her property. Mrs Stewart, a widow, let part of her house at Islington, furnished; Johnson applied to see the apartments; he gave a reference to the Prince of Wales Hotel, Air-street, there, a woman, supposed to be the heiress, gave him an excellent character. Mrs Stewart was deceived, and accepted the man as a lodger-Second, Johnson pretended that he was a nephew of Lord Palmerston, and showed a letter which he said he had received from his uncle. The ruse was so plausible that he obtained considerable influence over his landlady; he even offered to marry her, which she treated as a joke. However, as he was short of money for a time, she lent him, by instalments, £180. He advised her to sell her railway shares, as he could put her in a way to make better use of the money—bring it into a "house," so that she might more easily calculate her income. The scoundrel-landlady was weak enough to give him authority to sell the shares; and he was to deposit the proceeds in the London and Westminster Bank; instead of doing so, he kept possession of the money, and he tried hard to marry her, and his property—that from Mrs. Stewart's house, and some of hers to. He wrote a note, saying he was gone to Brussels. He was discovered at Grosvenor-park, Camberwell, living with a female upon a scale with grand style. The police had their suspicions excited by his changing a great many fifty-pound notes in the neighbourhood. Under examination, Johnson treated the matter very coolly. On the re-examination on Wednesday last further evidence corroborated the charge, with this singular additional fact—Mr. John Hawes, of Aldenham, near Bedford, said that, in 1846, the prisoner took a house belonging to him at Bedford, representing himself to be the son of a Capt. Johnson, who had lived at Bedford some years before, and was dead. He remained. Having been a great favourite in the place, the prisoner got into excellent society, and, without having paid a single crown to a single soul, he managed to fleece the confiding people of the town to the amount of £700. On one occasion the prisoner did him (Mr. Haward) the honour of paying him a visit, and, swaggering into his counting-house, told him that he wanted to see the cash-book, which was accordingly produced, and, by his spacious manner, managed to do him out of £80, besides his rent. Mr. Elliott expressed it to be his intention to send the prisoner for trial on the charge of forgery. Mr. Hawes and Mr. Haward and Mr. Haward should be borne out by evidence, he should commit him on these charges also; and, therefore, remanded him for a future day, to have the evidence taken in writing in order. The prisoner seemed much surprised and chap-fallen, and was removed.

A robbery, to the extent of £700, was committed on Friday, the 7th, in the house of Mr. Prince, a fancy bazaar-keeper, Beckford-row, Walworth-road, during the absence of the family. A man, named Frederick Butler, has since been examined and remanded, on suspicion of being concerned in it.

FORGERIES IN THE CORN TRADE.—During the last few days a case of great magnitude has been brought to light. Robert Ferdinand Pries, of Grove road, Brixton, has been examined on a charge of uttering forged bills of lading, by which he obtained £18,000, and other amounts, in all £35,000. The prisoner, it appears, had been engaged other things, was a letter to his wife, in which he "expressed his sorrow for having deceived her, and begged her to look with care to their children, and intimated that it was his intention to put an end to himself." This letter was afterwards burned. Pries, however, took another course, and was arrested at the North Western Railway station one o'clock just as the train was about to start. When stopped, the officer demanded his property, and the prisoner gave up a carpet-bag, containing new cashes, and also a canvas bag, containing £100 in gold. The prisoner was remanded. On this important matter the papers of Tuesday state:—

"The famine of Messrs. Collinan and Stolterfoht, with liabilities to the amount of between £500,000 and £600,000, has been announced as "unpaid. Their suspension has arisen in consequence of heavy losses sustained by advances on what have proved to be forged securities."

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The late advance in the rates of discount by the Bank Directors, though viewed as a precautionary measure, had considerable influence in the Consol Market in the early part of the week, especially as it was stated in some quarters that a further rise would take place in them. The national securities, consequently, declined to some extent, and they experienced the worst effects on Thursday afternoon, when it became known that the "Parlour" had broken up without any increase in discounts being agreed upon. A portion of the speculative buyers have contended that great injury will be inflicted upon the trade and commerce of the country, from the recent division of the Directors; but such opinions are not aware that our trade with the Continent is so much against us, that it promises to absorb a very large portion of our bullion. A decrease in the stock of two or three millions would bring higher discount quotations, and inevitably check our present onward progress as a nation.

The Board of Trade returns for the month, ending on the 5th ult., show an increase in the total value of British-manufactured goods of £914,478. During the eleven months of last year, the exports were valued at £85,349,798, against £83,314,272 in the same period in 1852 showing an increase of £2,035,526.

Several parcels of stock for the reduction of the National Debt have been purchased above par. On Monday, Bank Stock was 214½. The Three per Cents Reduced marked 94; the Three per Cent Consols, 94¾; and the New Three-and-a-Quarter per Cents, 104¾. Consols for Account being 104⅝. Long Annuities, 1860, were 9⅛; India Bonds, 78s.; and Exchequer Bills, 67s. to 70s. premium. The market on Tuesday and Wednesday was very flat, and prices tended downwards—the Three per Cents having gone down to 100 for Money. Numerous fluctuations took place in the quotations, and on Thursday the Three per Cent Reduced and Three per Cent Consols opened heavily, at 93⅞; but they subsequently recovered to 94¼ sellers I know. The New Three-and-a-Quarters were 104⅜. The New Three-and-a-Quarter per Cents, 104⅜; and Consols for Account to 104⅜. For the 15th inst., Consols were 93⅞. India Stock was 273 to 274. India Bonds marked 77 79; and Ex-hequer Bills, 67s. to 70s premium. Bath Sea Stock marked 110¾.

In addition to the Australian supply of gold, £384,000 has been received from Mexico, the West Indies, &c., and £96,000 from New York. The shipments to the Continent have been on the increase.

Large amounts of paper, first-class, have been discounted by the Bank of England, this week, at its minimum rate—viz., two-and-a-half per cent. annum. In Lombard-street, good paper is done at two-and-a-quarter two and three-quarters per cent.

Although 48,000 dollars have come to hand on account of the Mexican dividends, that stock has ruled heavy. All other foreign securities have been of a very inactive market, and prices have not been supported. Turkish stock has been done at ¼ to ¾ premium; and sweetish, ¾ discount. On Tuesday, Brazilian Bonds, Small, were 103; Grenada Deferred, 12½ to 12; Mexican Three per Cents, 20¾. Peruvian Six per Cents, 103¾; Ditto, Three per Cents Deferred, 64½; Portuguese Four per Cents, 40¾; Sardinian Five per Cents, 93; Spanish Three per Cents, 48¾ ex div.; and Dutch Four per Cents, 98¾. Bargains have been concluded in Danish, Five per Cents, at 108; Equador, 3¾; Russian Four-and-a-Half per Cents 104 to 103⅝ ex div.; and Dutch Two and a Half per Cents, 66¾.

Most railway shares have been depressed, but the Canada Agricultural have been 25s to 26s; Peel River Land and Mineral, 2½ to 3 prem.; South Australian, 7½ to 8; Van Diemen's Land, 19 to 21; British American Land, 50 to 60; North Australian, 1 to 1½ prem.; Union Bank of Australia, 72½ to 73½; Bank of Australasia, 52½ to 53½; London Chartered Bank of Australia, 2¾ to 3 prem.; English, Scottish, and Australian Bank, 18 to 19 prem.; Bank of India, China, and Australia, 1¾ to 2; Great Nugget Vein, 1¼ prem.; Port Phillip, 1¾ prem.; Australasian, 4 to 5 prem., Australian, 3 prem.; Australasian Royal Mail, 4¾; Crystal Palace, 1; Eastern Steam, 3; General Steam, 2¾ to 2¾; General Screw Steam, 50¾ to 51½; Peninsular and Oriental Steam, 90¾ to 93; Royal Mail Steam, 80¾ to 81½.

From the latest exchanges, we perceive that gold is 0.58 per cent. dearer in Paris than in London; and 0.41 dearer at Hamburg than here. It is cheaper by 0.42 per cent. at New York than in London; but the profit on shipments is trifling in the extreme.

The failure of Collinan and Stolterfoht—a firm largely engaged in the foreign corn trade has been productive of much uneasiness in some quarters.

The last weekly statement of the Bank of England is distinguished by important changes. In the issues department the notes decreased £77,220, and the amount reserved in the "till" being lessened £385,225: the active circulation payable on demand was larger by £328,005. The bullion in both departments exhibited an £20,377,683, being a decrease of £221,220. Private securities continue large, the amount being £16,375,726.

Numerous fluctuations have taken place in the market for Railway Shares. Parties buying and selling for cash, have been greatly guided in their operations by the value of money. The traffic receipts are still good. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 10¾; Ambergate, Nottingham, and Boston Junction, 6¾; Bristol and Exeter, 106½; Caledonian, 67; Eastern Counties, 13½; Eastern Union, 10; Ditto, B and C, 7¾; East Lancashire, 73; Great Northern, Stock, 79½; Ditto, A Stock, 40¾; Ditto, B Stock, 120¾; Great Southern and Western (Ireland), 105¾; Great Western, 92¾; Leeds Northern, 16¾; London and Brighton, 107; London and North-Western, 129¾; London and South-Western, 91¾; Manchester, Sheffield, and Lincolnshire, 20¾; Midland, 70½; ditto, Birmingham and Derby, 47; North British, 38; North Staffordshire, 12¾; Scottish Midland, 63; Shrewsbury and Birmingham, 67, South-Eastern, 81¾; South Wales, 38; Thames Haven, Dock, and Railway, 22½; Waterford and Kilkenny, 6¾; York, Newcastle, and Berwick, 71; ditto, A, 70; Purchase, 94.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 149½; Lowestoft, 10½; South Staffordshire, 9.

PREFERENCE STOCKS.—Bristol and Exeter, 110¾; Caledonian, 106; Eastern Counties Six per Cent, 14¾; Great Northern, 127; Great Western (Four-and-a-Half per Cents), 109¾; Manchester, Sheffield, and Lincolnshire, 13¾; North Staffordshire, 10; North Western, 103¾; Norfolk Extension, 24¾; North British, 101, South-Eastern, 26.

FOREIGN.—Dutch and Erquelines, 6¾; East Indian, 2¾; Great Indian Peninsular, 7¾; Grand Junction of France, 7¾; Northern of France, 24¾; Paris and Lyons, 23¾; Paris and Strasbourg, 30¾; Quebec and Richmond, 3; Rouen and Havre, 20¾; Sambre and Meuse, 8¾; Western of France, 18¾.

Gold Mining Shares have given way to some extent, with a heavy market. Agua Fria, 1¾; Anglo-Californian, 1¼; Ave Maria, 1¼; Port Phillip, 2¼; West Granby, 1¾; West Mariposa, 1¼.

FRIDAY EVENING.—Consols have been exceedingly flat to-day, at barely yesterday's decline. The unfavourable advices from Paris, and the continuous shipments of bullion to the Continent, are the leading causes of the present depression in our Market. The Three per Cents have been done at 93⅞; Three per Cents Reduced, 100¾; New Three-and-a-Quarter per Cents, 104⅜; and for the Account, 104⅜. The Unfunded Debt very little is doing. Foreign Bonds and Railway Shares are heavy.

THE MARKETS.

CORN EXCHANGE (Friday).—During the present week the arrivals of English wheat up to our market constitute but a limited supply, viz., 2910 quarters, chiefly from East and Kent. Fresh up-to-day the supply by land carriage was small; hence the show of samples of each red and white, of several qualities were moderate, and offer to sale on the spot very heavy, but low and middling kinds sold slowly, at barely late rates. A few parcels changed hands for exportation. Only 700 quarters of foreign wheat have come to hand this week. There was rather more inquiry for good heavy parcels, at full currencies. All other kinds were but little noticed. Barley—The supply of malting barley is moderate. The trade were very scantily supplied with both English and foreign barley. Fine malting parcels were fully 1s per quarter dearer than last week, and other sorts nearly as much. Grinding and distilling sorts. Malt—the supply of which was very moderate—sold slowly, at late figures. The arrivals of oats into London, since Monday last, have been very large. Prices were fairly supported at every business. In beans, peas, and flour no change took place.

ARRIVALS: English wheat, 2910 quarters; barley, 1,200; oats, 8,300. Foreign: wheat, 1,260 flour, 1,410 sacks; 3,100 barrels.

English Wheat.—Essex and Kent, old, 42s to 52s; ditto, white, 44s to 56s; Norfolk and Suffolk, red, 44s to 47s; ditto, white, 46s to 50s; rye, 36s; beans, 34s to 36s; grinding barley, 24s to 28s; distilling ditto, 29s to 31s; malting ditto, 32s to 36s; Lincoln and Norfolk ditto, 34s to 36s; brewing ditto, 36s to 38s; Kingston and Ware, 52s to 60s; Cheveller, 60s to 64s; Yorkshire and Lincolnshire feed oats, 17s to 22s; potato ditto, 21s to 25s; Youghal and Cork, black, 17s to 20s; ditto, white, 19s to 23s; Galway new, 20s to 22s; old, 23s to 26s; grey peas, 34s to 36s; maple, 35s to 38s; waste, 26s to 30s; pollard, 27s to 29s; per sack; fine flour, 50s to 52s; seconds, 46s to 48s; Essex and Suffolk ditto, 44s to 47s; per 280 lbs. *Foreign:* American flour, 23s to 25s per barrel; French, 34s to 36s per sack.

Seeds.—Rapeseed is held for more money, with a good inquiry. Linseed and cakes are quite as dear as last week. In other articles of seed no alteration deserving notice.

LINSEED—Hull, sowker, 50s to 52s; Baltic, crushing, 48s to 48s; Mediterranean and Odessa, 46s to 47s; linseed cakes, 6l 15s per quarter. Coleseed, 50s to 52s per last. Rapeseed, mustard-seed, 7s to 8s; white, ditto, 7s to 10s; cast tares, 4s 6d to 5s per bushel. English canary-seed, 47l to 48l per last of ten quarters. Hempseed, 42s to 44s. Carraway, 42s to 44s per hundredweight. Coriander, 18s to 19s per cwt. Tares, 3s to 4s per bushel. English rapeseed cake, 27l to 28l per last of ten quarters. Linseed cakes, English, 12l to 12l 5s per thousand. Rapeseed, 6l 15s to 7l per ton. Rape-cakes, 4l 15s to 5l 5s per ton. Canary, 30s to 32s per quarter.

Bread.—The prices of wheaten bread in the metropolis are from 7d. to 7½d.; of household ditto, 5½d. to 6d. per 4lb. loaf.

Imperial Weekly Average.—Wheat, 48s.; barley, 29s. 8d.; oats, 18s. 6d.; rye, 32s. 1d.; beans, 34s. 8d.; peas, 36s. 8d.

The Last Weeks' Average.—Wheat, 44s. 3d.; barley, 29s. 9d.; oats, 18s. 6d.; rye, 30s. 5d.; beans, 35s.; peas, 35s. 6d.

Duties.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Teas.—The show of samples on the private market continues good, yet a full average business is doing in most kinds at late rates. Common congou, quoted at 9½d., is selling at from 10d. to 10½d. per lb.

Sugars.—West India qualities have scarcely sold at full rates of currencies; but Bengal and Mauritius have given way 6d per cwt., owing to the large supplies brought forward by the late steamers. Fine West India, 42s 6d to 43s; fine to good ditto, 41s to 42s; fine Mauritius, 42s 6d to 43s; crystallized Penerang, 43s to 44s 6d; fine yellow Manilla, 42s to 43s; middling to good, 38s to 40s 6d.; refining to fine Dutch, 37s to 38s 6d.; fine Bengal, 38s to 39s; middling yellow, 32s 6d to 34s; fine white Benares, 39s to 40s; fine grainy yellow, 36s to 38s per cwt. Molasses, goods scarcely, at 25s 6d to 26s 6d. per cwt. Crushed fine Well to Bermuda in bond is worth 21s to 22s 6d per cwt.

[illegible]

[illegible]

Rice.—The importations are wholly confined to immediate wants. Pinky Madras has sold at from 10s. to 10s 6d. per cwt.

Fruit.—All kinds are very slow to sale, at last week's currency.

Provisions.—The demand for all descriptions of butter has become active, and prices have advanced 5s. to 4s. per cwt. Bacon is in fair demand, and prices have realised 56s. to 58s. Lard has improved in value 1s. to 2s.; Irish Singleton 88s. to 90s. per cwt. Pork, 2s. to 3s. per cwt. Hams, at 2s. per cwt. more money all other articles without change.

Tallow.—A steady business is doing, at 40s to 40s 6d. on the spot. The nearest quotation for forward delivery is 39s. 6d. per cwt. Stock, 20,000 casks. Delivery realised 50s to 52s. 6d. per cwt.

Oils.—Linseed oil is in good request, at from 30s 6d to 31s 6d. per cwt. All other oils are nearly, and quite, unaltered.

Spirits.—Rum continues to move off freely, on higher terms. Proof Leewards, 1s 11d to 2s.; East India, 1s 10d to 1s 11d per gallon. Brandy, 1s 10d to 1s 10½d per gallon. Steady, steady, and clearer. Genevas, 2s 2d to 2s 11d per gallon.

Wines and Teas.—Messrs. Gilbey, 42 Ibs 12s 6d to 14s. above ditto, 43 Ibs to 45s and above 45 lbs to 41 per hogd. Trade steady.

Wool.—Again this week business is at a full standstill. In foreign and colonial qualities next to nothing is doing.

Hops.—Our market continues to be very moderately supplied with all new hops, for which a fair average business is doing, at full prices.—Mid and East Kent pockets, 80s to 120s.; Weald of Kent ditto, 80s to 110s.; Sussex ditto, 80s to 96s. per cwt.

Coals (Friday).—Hasting's Hartley, 19s. 9d.; Smith's West Hartley, 19s. 9d.; Kelloe, 18s.; South Hartley, 18s.; Original Hartley, 18s.; Eden Main, 17s. 6d.; Kenny's, 17s. 6d.; Tanfield Moor, 15s. 3d per ton.

Smithfield (Friday).—To day's market was very scantily supplied with beasts both as to number and quality. For all kinds the demand ruled steady, at fully Monday's advance in the quotations, and a good clearance was effected. The supply of sheep was very limited. The sale for that description of stock was firm, but we have no further advance to notice in prices. Although the number of calves was somewhat extensive for the time of year, the veal trade was steady, at extreme rates. There was rather more inquiry for pigs, at full currencies. Mich cows moved off slowly at from £14 10s to £19 each, including their small stuff.

Per 8lbs to sink the offals.—Coarse and inferior beasts, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 2d.; prime large ditto, 4s. 4d. to 4s. 6d.; prime Scots, 4s. 8d. to 4s. 10d.; coarse and inferior sheep, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 0d.; prime coarse-woolled ditto, 4s. 2d. to 4s. 8d.; prime South Down ditto, 4s. 10d. to 5s. 0d.; large coarse calves, 3s. 8d. to 3s. 10d.; prime small ditto, 4s. 0d. to 4s. 4d.; large hogs, 3s. 10d. to 3s. 8d.; neat small porkers, 4s. 4d. to 4s. 6d.; middling stores, 3s. 2d. to 3s. 4d.; prime ditto and store pigs, 12s. to 20s. each. Total supplies: Beasts, 4,040; cows, 126; sheep, 23,660; calves, 270; pigs, 270.

Newgate and Leadenhall (Friday).—The supplies were very extensive, yet the demand ruled steady at full prices.

Per 8lbs by the carcase:—Inferior beef, 3s. 2d. to 3s. 6d.; middling ditto, 3s. 6d. to 3s. 10d.; prime large ditto, 3s. 8d. to 3s. 10d.; prime small ditto, 3s. 6d. to 3s. 8d.; large pork, 3s. 6d. to 3s. 8d.; inferior mutton, 3s. 0d. to 3s. 4d.; middling ditto, 3s. 6d. to 3s. 8d.; prime ditto, 4s. 4d. to 4s. 6d.; veal, 3s. 10d. to 4s. 4d.; small pork, 3s. 2d. to 4s. 0d.

FRIDAY, JAN. 14.

WAR-OFFICE, JANUARY 14.

1st Foot Assist.-Surg. T. K. Brady to be Assistant-Surgeon, 4th Foot. Lieut. J. W. D. Adair to be Lieutenant, vice Bennett, 29th Foot. Lieut. R. Bennett to be Lieutenant, vice Adair, 31st Foot. To be Cornets:—the Hon. Edward Vere Savage, 4th Light Dns; E. C. H. Massey to be Captain, vice Perkins, 4th Light Dns. Lieut. Arthur Gould to be Lieutenant, vice Massey, Rangers. W. G. H. T. Perkins to be Ensign, vice Gould, Assist.-Surg. J. Neale to be Assistant-Surgeon, vice Brady, 1st Foot. Assist.-Surg. Egan to be Surgeon, vice Sellon, 31st Foot. Assist.-Surg. W. stances which led her to write her very popular work:—

"Long before it was ever written down at all," she says, "it was told to a circle of children, and then, as fast as it was written, it was read to them; and there was a great deal of laughing and crying among these children, you may be sure, and a great deal of hurrying that it might be got through with. So you see, the story belongs to children very properly. In the dear little *Eva*, you have before you the picture of a Christian child. Learn of her, dear children, to be as thoughtful as she was, however poor and weak, as she was, ready always to speak and act kind and gentle words to every one, whatever their condition in life may be, and try to do all the little good that lies in a child's power."

BANQUET TO THE AMERICAN MINISTER AT MANCHESTER

MANCHESTER has closely followed the example of Liverpool in giving a hearty welcome to Mr. Ingersoll. The new Minister from the United States arrived at Manchester on Friday morning (last week), and, in company with the Mayor, proceeded to visit some of the largest industrial establishments in the borough. In the evening his Excellency was entertained at a banquet in the Town-hall, which was elegantly fitted up for the occasion. The Royal arms, carved, gilded, and emblazoned, were displayed over the entrance-door of the rooms, and were flanked by the Royal standard and the British ensign. A carved silver Prince of the Prince of Wales, with his motto, "Ich dien," was placed over the other entrance door, flanked by the British flag and the star-spangled banner of the United States. The company included some of the most influential merchants and manufacturers of Manchester. The Mayor (Mr. R. Barnes) presided, on whose right sat the Hon. J. R. Ingersoll and there were also present the Lord Bishop of Manchester, Mr. John Bright, M.P. Mr. I. Bazley, President of the Manchester Chamber of Commerce; Mr. James Heywood, M.P.; Mr. J. Cheetham, M.P.; Mr. [illegible] M.P.; Mr. W. Brown, M.P.; Mr. J. A. [illegible] President of the Manchester Commercial Association; Mr. Brotherton, M.P.; the Mayors of Liverpool, Warrington, Wigan, Bolton, Stockport, &c.; Messrs. R. H. Greg, Salis Schwabe, E. Loyd, Jun., A. Henry, W. Eatwistle, W. Langshaw, F.R.S., R. Birley, R. N. Philips, H. Ashworth, the [illegible] &c.

It was announced that addresses of congratulation to his Excellency had been unanimously agreed to by the Chamber of Commerce and the Commercial Association. The health of the guest of the evening having been proposed by the chairman, coupled with the wish that the "close and intimate relations now happily existing between the people of this country and the United States, may be perpetual"—

His Excellency, Mr. Ingersoll, made an eloquent speech in acknowledgment of the toast. He touched upon the amazing progress in population and wealth of Manchester and the surrounding country, and showed how the prosperity of the United States, and the prosperity of Manchester depended upon one another. America produced 3,000,000 bales of cotton per annum, two thirds of which were taken by this country; nor was there much danger for a century or two to come that India or Egypt would rival America either in the actual product of the long staple or the quality. Here then was ground for supposing that the harmonious intercourse between the two countries, founded upon original family affection, would be continued by such signal benefits given upon the one side and reciprocated upon the other. But perhaps the most valuable portion of his Excellency's speech had reference to the subject of education. We claim the privilege of telling our brethren across the Atlantic some harsh and disagreeable truths about the existence of slavery in the United States. Mr. Ingersoll, on the other hand, tells us how infinitely behind his countrymen we are in [illegible] and facilities for popular education. "You have, in England [illegible] said), some higher courses of education than [illegible] and places of education in the United States; but the system of popular education that abounds there might perhaps befamiliarly known to you, not without advantage. Our common schools are attended, so far as most of the States go, by every poor individual, every child of a poor man, that chooses to attend them; and an education sufficient for all the purposes of life is given, so that there were two years ago—and of course there are more now—4,000,000 individuals going through a course of instruction in the United States, or about one-fifth of the inhabitants of the country. I speak for my own particular place of residence, Philadelphia, when I say there are 50,000 poor individuals at this moment who are educated at these public schools, without any cost to the parents, most of them being unable to pay anything for them." Mr. Ingersoll also adverted to the magnificent provision made for education by the late Stephen Girard, called the Girard College of Orphans in Philadelphia; and also to the Houses of Refuge, where the very young, who are either exposed to the actual commission of crime, or liable to the temptation of crime, are withdrawn from evil example, and placed where they can be partially educated and instructed in some trade.

Mr. Bright subsequently addressed the company, and replied to some remarks made by the Earl of Derby, at the Liverpool dinner to his Excellency. Lord Derby, in his happiest manner had vindicated the institution of an hereditary peerage. The good sense of both nations had known how to qualify and moderate the contrary and opposite extremes which threatened danger to their respective liberties. England had curbed the power of the monarchy and aristocracy, while the United States had a counterpoise to the national will in the American Senate, which checked the tendency to an unqualified democracy. Mr Bright now protested against the soundness of Lord Derby's argument, and the justice of a parallel which seemed to imply that the people of England have in their House of Lords, an assembly equal in wisdom, character, patriotism, and durability, with the Senate of the United States. The hon. member reminded his audience that the Americans "have education not thwarted by theology or by sects, that they have religion as much as we have, though no sect is dominant; that they have legal reforms, although they have no Lord Chancellor with £14,000 a year; that they have peace without any great standing army; that they have respect from all the nations of the world, without great squadrons on every coast; and, further, we may bear in mind that they have an admirable system of representation, without rotten boroughs; and when they have a general election, it is not a scene of general demoralisation through every portion of the country, as it unfortunately is with us."

The truth of these remarks cannot be seriously impugned: but the taste which led to the introduction of irritating topics at such a meeting has been rather sharply questioned. The American Minister, it is argued, ought not to be compelled to hear English politics discussed under the pretence of praising American institutions, and it is alleged that a dinner will be but ill-spent [illegible] demonstrations of respect to the representative of the United States, if he is to be drawn into the vortex of English party politics.

The banquets to Mr. Ingersoll at Liverpool and Manchester, and the strong and absolute social necessity which they disclose, for peace and harmonious intercourse between the two countries, have made an agreeable impression upon the public mind. The menacing debate in the American Senate on the relations between Great Britain and the United States, and the somewhat irritating speech of General Cass, were calculated to excite some misgivings, which have, however, been [illegible] by the pacific sentiments uttered by our statesmen and [illegible] on the north of England.

The banquet at Manchester, was provided by Mr. Johnson (from the Queen's Hotel), proprietor of the Queen's and Albion Hotels.

THE ILLUSTRATED LONDON NEWS.

No. 604.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, JANUARY 22, 1853. [SIXPENCE.

PROPOSED REFORMS IN THE UNIVERSITIES OF OXFORD AND CAMBRIDGE.

THE spirit of rational and Conservative reform now pervading more or less all ranks of society in this country is happily not confined to an investigation into the nature of our political system. It takes a far wider range, and seeks with earnestness and sincerity to adapt our existing institutions—political, social, educational, or industrial—to the wants and requirements of the age. It was, we think, under a strong sense of the existence of such a spirit, and of the necessity of conforming to it, that Lord John Russell stated to the House of Commons, in 1850, during the debate on Mr. Heywood's motion respecting the English and Irish Universities, that it was the intention of the Government to advise her Majesty to issue a Royal Commission to inquire into the state of the two great Universities of Oxford and Cambridge.

In August of that year the commissions were issued, and the public now possesses, in the form of two bulky blue books, the highly-interesting results of the labour of the Commissioners. The report upon Oxford was published upwards of six months ago; and it will be remembered, that the late illustrious Duke of Wellington passed some of the last days of his life in studying the volume, to which his attention was particularly due, as Chancellor of the University. The report on Cambridge has more recently made its appearance. Looking at these two reports in connection with the question of educational reform at our Universities, the public will admit that many of their suggestions are worthy of attention, as encouraging a liberal and enlightened view of the responsibilities and duties of these ancient and richly-endowed seats of learning. The very wide distinction existing between the mode of instruction in operation at our Universities and at similar institutions on the Continent, cannot fail to strike all whose tastes or inclinations lead them to inquire into our University system, and to compare it with what actually exists abroad. In Germany, and elsewhere, the teaching by accredited professors of the University actually forms a part of the University course, whilst with us the system has degenerated into an empty name. It is, doubtless, true that our Universities boast of professors at the present day whose acquirements admirably fit them for the discharge of the important duties of instruction in the several branches of learning to which they are attached. But as an attendance upon their lectures forms no part of our University course, it gives the students no advantage in the contest for University honours. The lectures are therefore but scantily attended. This decline of what certainly ought to form a part of our system of University education, is mainly owing to the great extension of the practice of private tuition. College tutors are appointed by the heads of the colleges to which they respectively belong, and, being recognised as college officers, exercise, amongst their other duties, the functions of lecturers. These lectures the students of the college are expected to attend and they are delivered with a view to the examinations in the college. Private tutors are men who, having distinguished themselves by their attainments, are sought after by the students, and selected by themselves to assist them in the race after University distinctions; but, this system of private tuition is not recognised as a part either of the discipline of the University or of the course of instruction in the different colleges. Moreover, both these classes of tutors conduct their lectures and their instructions with a view to the general examinations which the students are destined to pass in order to obtain the degree which is the ultimate object of their residence at the University, whether they enter into the lists of competitors for honours or not.

The professors, on the contrary, conducting their lectures with no such end, or, rather, their instructions being in no way connected with them, the very natural result follows, viz., that they are deserted for those which have a more immediate and visible connexion with the hopes and aspirations of the student. In Germany, on the other hand, the professorial system exists to the exclusion almost of every other. The lectures of the professors in the different branches of study are delivered with a view not only to the instruction of the students, but to the examinations which they have to pass in them; and the tutorial system, as practised here, is wholly unknown.

Certainly, we should be sorry to see the foreign system entirely

LANDING GOLD FROM "THE AUSTRALIAN" STEAM-SHIP, IN THE EAST INDIA DOCKS.—(SEE NEXT PAGE.)

adopted in England; but, if we look at the present state of literature and science, and the list of eminent names furnished by our English Universities to swell the ranks of the learned, we fear there would be too much reason to blush at the comparison which might be instituted between ourselves and the Continental States. This, probably, arises in no small degree from the fact that our University professorships afford no sufficient means of existence to induce individuals of distinguished talents to devote their time and attention entirely to the pursuit of their favourite studies.

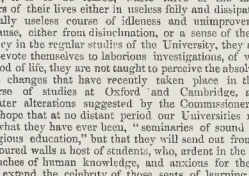
Most people will agree in the recommendations of the Commissioners of both Universities, in favour of an extension of the professorial system of instruction; not only on the ground of its probably tending to the production of men of greater eminence and of European renown in all branches of learning, but because it would materially enlarge the usefulness of these venerable establishments as places for the general education and sound instruction of all who resort to them.

But a reform of our Universities would indeed be incomplete that aimed only at a revision of the system upon which instruction is to be imparted, without at the same time extending, on a sound and rational basis, the course of that instruction itself. Professor Liebig, in a letter quoted in the Oxford Commission report, says, "That it is a requirement of our times to incorporate the natural sciences as means of education into the University course, is not perhaps doubted any where except in England." Is it doubted even here? Does there not, on the contrary, exist a well-founded conviction that University education ought no longer to be confined to the study of the dead languages and mathematics? Are not reasonable and practical men agreed that it should embrace the no less important subjects of jurisprudence, philosophy, history, political economy, and the natural sciences? It is certain that there is only one effectual way of promoting the study of any branch of learning or science at the Universities, and that is to introduce them as subjects of University examination. Without this, all efforts are useless, and no scheme of instruction can have any practical effect. It will be in vain to expect students to devote themselves with earnestness and diligence to the acquirement of other branches of knowledge, so long as all chances of University prizes and emoluments are confined by our college authorities to proficiency in the science of mathematics, or to an extensive and accurate acquaintance with Greek and Latin. Let it once be made known by the benchers of our Inns of Court that, before a person can be qualified for the profession of a barrister-at-law, he must have gone through the University course of legal studies, which should not be of a merely practical, but of a general nature; let it once be known that for the profession of diplomacy, a competent knowledge of international law and history is absolutely necessary, and we shall soon see those studies pursued with eagerness. Many of our University students now, it is to be feared, waste three of the most precious years of their lives either in useless folly and dissipation, or in an equally useless course of idleness and unimprovement, simply because, either from disinclination, or a sense of their own deficiency in the regular studies of the University, they are unwilling to devote themselves to laborious investigations, of which, at that period of life, they are not taught to perceive the absolute necessity. The changes that have recently taken place in the prescribed course of studies at Oxford and Cambridge, and the still greater alterations suggested by the Commissioners, encourage the hope that at no distant period our Universities may not only be what they have ever been, "seminaries of sound learning and religious education," but that they will send out from their time-honoured walls a host of students, who, ardent in the pursuit of all branches of human knowledge, and anxious for their own fame will extend the celebrity of those sents of learning, and render them as practically useful in a practical age as they were in those darker days when they were originally founded.

GREAT DELIVERY OF AUSTRALIAN GOLD.

ON Saturday afternoon, the *Australian* screw steamer arrived with her valuable freight at Blackwall, and was immediately boarded by Mr. Superintendent Evans, of the Thames Police, acting under the direction of the Commissioners of Police, and a party of river constables, for the protection of the bullion on board. The *Australian* entered the East India Docks the same evening, and was hauled to the west quay in the Import Dock, for the purpose of discharging the bullion. The officers of the ship and the directors of the Company to which she belongs, were allowed to remain in the vessel during the delivery.

The landing of the gold was effected by raising the boxes from the hold of the vessel by means of a crab worked by men. The various marks, seals, &c., on the boxes were each noted down by officials on board; and



BOXES OF AUSTRALIAN GOLD

then the boxes were let down a "slide," and were steadied in their progress as they came down by men who placed them on small two-wheeled trucks. The marks, seals, &c., were again noted by other officials, and the trucks, with their golden loads, wheeled off to the waggons on which they were piled, to be taken to the Bank of England.

The scene was particularly interesting, and the first box was an object of much curiosity, as it was the precursor of so many others, all containing the precious metal. The number of boxes, we believe, was between 300 and 400. Police officers were on the deck of the *Australian*, and also by the side of the vessel, the mounted escort being stationed outside the dock gates.

The gold was deposited in two covered waggons, and left the dock for the Bank, under an escort of mounted police, commanded by Superintendent Steed, of the H, and Superintendent Howle, of the E, divisions. When opposite Limehouse Church, the off-wheel of one of the waggons came off, and caused a detention of three quarters of an hour. The wheel having been replaced, the waggons again proceeded, amidst the cheers of the crowd, and arrived in safety at the Bank of England.

The *Australian* also brought the Victoria Nugget (328 ounces weight), presented to her Majesty by the Government of Melbourne. It was found between three and four feet from the surface, in the Bendigo Creek Diggings, Mount Alexander, about ninety miles from Melbourne, by Mr. Harrow; and was sold by auction at Melbourne by Messrs. W. H. Tennant and Co., on September 23, the Government being the purchasers. The advertisement of the sale temptingly states —

NOTE.—It ought to be remarked that the steamer calls at Adelaide, King George's Sound, Swan River, and the Cape of Good Hope where the passengers can land and post letters. [illegible] Only five to the [illegible] London Docks, and by [illegible]

The Victoria Nugget is engraved at page 56.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, January 20th.

At last, it appears, the problem is solved, the question is settled, and the French, having an Emperor, are to possess an Empress. It is said here, by the best-informed, that Napoleon's last matrimonial disappointment occurred on the other side of the Channel, and that it has decided him to adopt his present course, that of ceasing to a share of his throne,

"Half in love, and half in spite,'

a young lady whose name has of late been constantly associated with his but whose fair fame, he it said, has never been impeached, notwithstanding the trying position she has occupied. Mdlle. de Montijo, Comtesse de Teba, is of ancient Spanish lineage; her mother is, we believe, Irish. Of remarkable beauty, high spirited, gifted, and with unusual talents and accomplishments, she will doubtless do credit to her elevation, and establish in the Court the order and decorum it stands so highly in need of. We are assured, on authority we cannot doubt, that the contract is made out and signed, that all the necessary preliminaries are being arranged with the utmost despatch, and that the marriage is to take place as early as possible.

The establishment of the Empire in France has brought about a remarkable change in the ideas and pursuits of the upper classes in society —a change which the ball of last week at the Tuileries has developed in a very striking manner. The Emperor himself has originated the movement, by his order and by his example; hence it must of necessity be followed—by the few willingly, by the many most reluctantly. The difficulties in the way are numerous, and we doubt not will stand in the way of many who hitherto have desired nothing so ardently as the privilege of appearing at Court. The event to which we allude is the necessity of all of the nobler sex who aspire to that honour contributing to an exhibition of an agricultural nature, just established by, as we said, Imperial orders and Imperial example—the exhibition of *cattle*. By those who possess fine ones, the event is of course hailed with extreme satisfaction; but they are decidedly in the minority. Our habits of late years have been so little favourable to the development of the race, that the calves of the present day, instead of being full, large, and muscular, have, for the most part, dwindled into poor, lean, attenuated things, totally unfit for the purposes of exhibition. As, however, no man may appear on any state occasion without possessing a *pair*, the current price of which is the topic in the topic *par excellence* of every *salon*, and, when nature fails to produce, the desired requisite, art is called in, and the poor things are actually *stuffed* with fat less digestible substances than the Norfolk turnip. Oil they, by this unnatural process, acquire the roundness and fair proportions necessary to make them assume an appearance sufficiently presentable not to disgrace the exhibition.

The ball at the Tuileries was, as your readers have doubtless heard already, most magnificent. *Sa Majesté* was gracious to the greatest degree, danced most of the evening especially the graceful old *trois temps valse*, which example will, doubtless substitute it once more for the timeless *deux temps*, which of late years has, as we think, so unjustly had the preference—walked about *faisant des gracieusetés*, shaking hands *a l'anglaise*, which is a subject of general remark, and, in short, making himself as popular as it is so easy for an Emperor to make himself for the time being. "Le Roi va parir!" exclaimed a peasant, beaming with pride and delight, to his comrades who had assembled to see the departure of the Royal hunt of the *Grand Monarque*. "Vrai qu'est ce qu'il dit?" inquired an envying brother clown. "Il m'a dit, 'Ote-toi, vilain! que je crache!'"

Paris has completely awoke from the trance hanging over the gay world of which we spoke last week, and is donning silks and satins, plumes and flowers, jewels and ribbons, with a regardlessness of expense perfectly frightful. Minsters, public functionaries of all denominations, and a certain, but somewhat limited, number of private individuals, are opening their *salons* almost nightly. Gaiety and splendour are the order of the day; and public balls are commencing at the Italiens and the Opéra Comique, as well as the usual Carnival balls at the Grand Opera. The theatres have not much that is new to boast of

At the Variétés an amusing piece, "M. le Vicomte," is being given. M. le Vicomte is a *fils de famille*, who, having been brought up from the *mois de nourrice* in village retirement, is as genuine a clown as any of the mattes about him. When he has arrived at years of discretion, M. le Comte, his papa, suddenly remembers his existence, sends for him, and sets to work to marry him forthwith to a charming young widow; a process to which the Vicomte, who loves a Suzette or Rosette *de village*, resolutely opposes himself, while the papa acts as proxy, and makes desperate love to the son's behalf. M. le Vicomte, however, proving hopelessly *récalcitrant*, papa has to marry the widow himself, and the clownish sprig of nobility returns to his village and espouses his Blowsabella. The acting of Percy, in the part of the hero, is, as is always the case in such pieces, the soul of the thing, and in his hands the Vicomte is made highly amusing

At the Cirque d'Hiver the Pantomime Espagnols are the chief attraction. They are two young spaniards; small, slight, dark, macabre, with romantic faces and gipsy eyes of wondrous lustre, who, with no instrument but a tambourine, produce a series of sounds and movements utterly bewildering and indescribable At their entrance, the orchestra strikes up the cachucha, the movement of which they follow on the tambourine, at first quietly, only by a tremulous movement of the fingers, but gradually their faces become animated; a sort of feverish excitement begins to display itself in their movements, the tambourines quiver like agues in their nervous grasp, until at last a kind of fury seizes them: they leap, spring, whirl, twist, beat the tambourines with their heads, heels, knees, elbows, shoulders, like creatures possessed; and then, in the midst of movements too violent and rapid for the eye to follow, stop, as if suddenly transfixed: calm, grave, reflective, absently beating the instrument with the tips of their fingers, as though they had never stirred from the position they had assumed on entering. But the extraordinary part of the performance is, that from the moment the tambourine has begun to sound, till they make their departing bow, it has never for one second ceased to tremble, or lost the cachucha measure, in the midst of the wildest evolutions; and at the conclusion the *pendant* takes place it between their knees, and, by the tremulous movement of the muscles of their legs, they, without apparently making the slightest motion or effort, keep up the measure as before. The clown (Fremp) performs the most extraordinary feats of equilibrium we have ever witnessed

It is said that M Demidoff, husband of the Princesse Mathilde, is attacked with a fatal malady, which threatens shortly to terminate his existence. Art will lose in him one of its most constant and liberal patrons.

The sale of the gallery of the late Duc d'Orleans has been the rendezvous of all the artists, amateurs, and *bons mondes*. The pictures, though many of them terribly mutilated in 1848, sold, for the most part, extremely well, and included many of the *chefs-d'œuvre* of the best modern French painters. A collection of inedited letters of Madame de Staël, addressed to the Comte Wolf de Baudissin, has just been discovered, and is, we believe, about to be published. The letters are said to be in her most brilliant style brilliant to excess, like all her correspondence

THE EMPEROR'S MARRIAGE

The *Moniteur* of Thursday contains the following:— The Bureau of the Senate, the Bureau of the Legislative body, and the Members of the State Council, will meet on Saturday, at noon, at the Palace, to receive a communication from the Emperor respecting his marriage.

We have much pleasure in recording our doubts that our valiant friend Lord Cowley met in Paris first introduced the Emperor's *fiancée* to the British public. In our Paris correspondence of December 4th, our readers will find all the particulars about Mademoiselle de Montijo, which our correspondent assured us at the time were "perfectly authentic," and which have proved to be so.

All the world knows that for some time past Louis Napoleon has in vain sought to find a lady of the rank of Princess, combining all the qualities desirable in a person to be raised to the pre-eminent position of Empress of the French. After his visit to Belgium it was almost officially announced that the Princess de Wasa, who was the object of that visit, was to be his partner on the Imperial throne. Then occurred the subsequent interference of Russia and Austria to prevent the marriage; the promise of the Czar to find the young lady a suitable husband; and her final betrothal to Prince Albert, the heir presumptive to the Crown of Saxony. Unsuccessful overtures were then made to the daughter of the Duchess of Brancnau, who was considered an eligible choice, as the descendant of Prince Eugene, and consequently a connection of the Bonaparte family. Similar overtures were made for the daughter of the King of Sweden, who has the recommendation of being of French extraction, and being a distant relation of his own, through the Clarys. Since then a sister of the King of Spain has been spoken of; and very lately, Prince Lucien Murat made a winter journey to Dusseldorf, for no other purpose than that of demanding the hand of a very young princess, the daughter of the mediatized Prince of Hohenzollern-Sigmaringen. But without ever be addressed himself some difficulty was started. The Brazilian Princess was more nearly connected with the Orleans family than with the Bonaparte family; the Swedish Princess was refused to him, because the King her father was in dread of the anger of his powerful neighbour the Czar; and her Highness of Hohenzollern-Sigmaringen was pronounced by her relations, if not by herself, as "over young to marry yet." In short, wherever he turned, Louis Napoleon found that there were obstacles in his way; and it became at length clear to himself, as well as to others, that the great powers of Europe were determined, if possible, to prevent him from finding a wife at all. Louis Napoleon has now laid aside all idea of hunting after Princesses, and has determined to raise to the Imperial throne a young lady whose principal qualifications for that high rank are her beauty and the admiration with which she has inspired his Majesty in the course of a personal acquaintance of some months standing

Every one who has visited Paris within the last few months must have heard of the beautiful Madlle. de Montijo, a young Spanish lady of high rank, who recently appeared in the highest circles of Parisian society, and who has of late become more particularly a subject of conversation in consequence of the evident admiration with which she had inspired the Emperor, and of the great attentions which he on all occasions paid her. She was a constant guest at the Elysee, and on all occasions the attentions of the Emperor were most conspicuous. However high the rank of the other guests, he never lost an opportunity of talking or dancing with Mdlle. de Montijo. With the exception of the wives of Ambassadors, Ministers, or officers of State, Mdlle. de Montijo and her mother were the only two ladies invited to take part in the splendid hunting parties given some weeks ago in the forest of Fontainbleau, and more lately at Compeigne Such pubic and extraordinary attentions on the part of the Chief of the State were of course the subject of conversation everywhere, but few seriously imagined that the affair would go beyond admiration, and perhaps a little flirtation. He has, however, determined to drop all considerations of rank and station, and to raise the beautiful Mdlle. de Montijo to the Imperial throne

Mdlle. de Montijo is the daughter of a grandee of Spain, the late Duke of Penamando, and is herself, in her own right, Countess of Teba. Her mother, the present Duchess of Penamando (more generally known simply as Madame de Montijo), is of Irish origin Her name was Fitzpatrick, and her father was for many years British Consul at Malaga, and she married a young Spaniard to whom she was much attached It appears that when Miss Fitzpatrick's marriage was proposed to her husband was only a younger son, with scarcely any fortune. Afterwards, the eldest members of his family having died off, he succeeded to the rank of grandee of Spain, and to the titles of Count de Montijo, Duke de Teba, and Duke de Penamando. The eldest sister of Mdlle. de Montijo is the present Duchess of Alba and Berwick, the descendant of the celebrated Duke of Berwick, the natural son of James II. of England. The young lady herself is about twenty-five years of age. She is exceedingly beautiful, but her beauty partakes more of the character of her mother's than of her father's country. Her complexion is fair, and her hair a light auburn, but her eyes are dark. She is remarkably handsome and graceful in her figure, but not above the middle height. Her manners are lively and agreeable, and she is said to have a particularly fascinating smile.

It is stated that the civil marriage actually took place on Wednesday night; that the religious solemnization will be held on Saturday week next, and that Prince Napoleon Jerome, the Emperor's cousin, will be married at the same time to the daughter of the Prince of Wagram, grand-daughter of Marshal Berthier.

One would have supposed, as some complaints have been made regarding the laxity of morals at the Court, that the French people would have been well content to see the Emperor united to a young, beautiful, and accomplished woman, capable of presiding with grace over the festivities of the Court. But all the accounts which have hitherto reached us agree in stating that this match *de* has produced an unfavourable effect upon the public mind. If the Emperor had chosen a French woman, the daughter of some distinguished subject, the female portion of his subjects might have felt proud that a marriage with a foreigner, who is not of a princely house, is an act which wounds the *amour propre* of the nation in every possible way. Louis Napoleon's enemies, of course, appeal to the marriage as a proof of his want of influence abroad, which renders him unable to obtain a Princess of even a fifth or sixth rate house. Yet, as the moral character of Mdlle Montijo is excellent, and her beauty is said to be such as to excuse a great deal in a man of less elevated position than the Emperor, we think it extremely probable that any dissatisfaction will subside, and that the Parisians will discover that the Empress looks enchanting in her Imperial robes

Every description of security on the Paris Bourse has continued to decline in value since our last After making every allowance for the reaction consequent upon excessive speculations, the fall which has taken place is inexplicable, except upon the theory that under the apprehension of coming changes there is a general disposition to dispose of all French securities, and transmit the money to other countries for safer investment The Budget of 1854, which has just been presented to the Senate, exhibits a total of 2,000,000 francs, and an augmentation in the estimates of expenditure, as compared with 1853, of 57,000,000. The greatest augmentation is in the Public Works. The War estimates exhibit a reduction of 9,000,000 fr. There is an item in the new estimates of 2,262,000 fr. for "artillery and engineering works for the defence of the sea-coasts, both in France and Algeria." Every year the actual expenditure greatly exceeds the income, and so long as this is the case France is on the high road to bankruptcy

Meanwhile incessant activity prevails in the dockyards of France. A few days ago a scheme was announced by which the strength of the steam marine of France will be greatly augmented. It is stated that twenty ships of the line are building in the French dockyards, the greater number of which are to be fitted with screws and steam engines. There are also fifteen other vessels of different classes building, which are to be all propelled with screws. It is argued that either Louis Napoleon has some distinct purpose in view in creating this enormous fleet of screw line-of-battle ships and frigates, or that he is preparing himself for the day when a war policy may be a condition of existence for the Empire. The rapid and continuous fall in the French rentes would seem to denote some anticipated danger to the peace of Europe, for a mere excess of expenditure over income in any one year would not be sufficient to account for the panic It is somewhat significant that the *Moniteur* a few days ago, published an article against the English press, containing expressions from the most violent invectives which have recently been directed against Louis Napoleon by the London journals. A professed quotation from the *Times*, describing in the most severe terms the *régime* of Louis Napoleon, appears to be a forgery. The impression prevails in Paris that the Emperor's object is to create an anti-English feeling among the population. The Bank of France has borrowed money in London on every description of foreign security—a measure which has been made by the Bank of England raising the rate of discount twice in the course of eight days. How Louis Napoleon will confront a commercial crisis remains to be seen.

M. Fould, who complained that he was not so well paid as some of the other great functionaries, many of whom have from 200,000 francs to 300,000 francs of annual income, has had an addition made to his salary of 50,000 francs.

The Bourse of Wednesday was the most disastrous that has been experienced by the speculators for a rise since the *coup d'état* of December. The Three per Cents opened at 73f. 50c. and closed at 75f. 90c. for the end of the month, being a fall of 1f. 80c., or nearly 2 per cent, as compared with the closing price of the previous day Railway shares fell nearly 15 per cent in value. The expedients resorted to in order to avert the fall, if adopted for an individual, would, it is said, indicate an approach to bankruptcy.

SPAIN

The Government are still pursuing that relentless system of persecution against the press, which, it had been hoped, had been mitigated by the recent modification of the Press laws. Thus, the *Diario Espanol*, the *Nacion*, the *Clamor Publico*, and the *Epoca* of Madrid, of the 9th, were seized by the police for containing, as was said, articles of great violence. General Narvaez had addressed a long petition to the Queen, dated Bayonne, imploring her Majesty to relieve him from the humiliating position in which he has been placed by what he calls flagrant injustice

GERMANY

Austria is arming in the direction of the East. Important reinforcements have been lately sent to Southern Croatia and Dalmatia, and numerous troops of the line have been stationed in the so-called "military frontiers."

The Austrian journals declaim against the Turkish expedition to Montenegro and the employment of Omar Pacha, who is termed the "irreconcilable enemy" of the empire—the ground of Austrian indignation against the Turkish General being that he foiled all the intrigues of Austria and of Austrian agents in Bosnia. The Austrian journals openly accuse "perfidious Albion" of spiriting on the Moslems to the attack of Montenegro

We hear from Vienna of the death of the Archduke Rainer, ancient Viceroy of Lombardy

The First Chamber of Prussia has definitively voted the bill modifying the constitution; that is to say, declaring that the Parliament shall assemble only every two years, and that the members be elected for six years. The bill will, for certainty, meet with much opposition in the Second Chamber

Baron Prokesch von Osten has been nominated to the Presidentship of the Germanic Diet.

ITALY.

The intelligence from Tuscany of the death of M. Francesco Madai is unfounded The Madiai [illegible] nothing the exertions made by Prussian and British influence to obtain their release, and promises of the Government of Tuscany that their imprisonment should be of very short duration.

TURKEY AND MONTENEGRO.

We hear from Trieste of the arrival at that port of the Vice-President of the Senate of Montenegro, Georges Petrovitch Niegusch, cousin of the reigning Prince. He was on his road to Vienna and St. Petersburg, on a special mission—no doubt, to solicit aid for the Montenegrins against the Turk.

General Baron Kollner, Adjutant of the Emperor of Austria, and General Manuila, Governor of Dalmatia, had arrived at Cattaro, an Austrian port at the foot of the Montenegrin territory. Although so near the sea that a stone might almost be thrown into it from the mountains overhanging Cattaro, the Montenegrins have no port; nor does their territory in any part come down to the shore; and they are dependent on the Austrians for permission to pass all goods intended for exportation, or received from abroad by the Adriatic

Different Austrian battalions in Italy have received orders to march to Dalmatia to strengthen the Austrian army there Omar Pacha (the Turkish general) arrived at Scutari on the 7th of January, at the head of a large body of troops, and proposed commencing the campaign at once, without awaiting the spring. The Montenegrins appear resolved on a determined resistance. Prince Danilo had gone to Grahovo to concert common measures of defence with the Voivode of Wojatich, an independent Prince, who has declared himself for the Montenegrins.

Abd-el-Kader, accompanied by his suite, had arrived at Brussa on the 31st ult. Free admission to the Dardanelles was immediately granted by the Sultan, and the Emir was admitted to an audience.

The Russians, wishing to give a proof of their devotion to the Sultan, have offered to send 18,000 men against Montenegro. The Pacha has forbidden the Turks to speak of the affairs of Montenegro under pain of death.

The Russian Synod had decided to send the Montenegrins some valuable church services and ornaments, in proof of their sympathy.

DENMARK.

The Ministry of M. Bluhme-Ischerning having been defeated in the diet—the Lower House has been dissolved. The members gave nine cheers for the King and then separated. An appeal to the people will show whether the Danish Minister will be more successful than Lord Derby.

The Danish Government has laid before the Upper House a bill for extending Free-trade to Iceland.

UNITED STATES

By the *Canada* we have advices from Halifax to the 7th inst. The defeat of the Derby Ministry produced a great sensation. The fishery question was said to be settled; and the treaty giving reciprocal trade between the United States and the provinces of Canada, was drawn up, and had been approved by the Ministers both of the United States and Great Britain. It only awaited the sanction of the British Government to make it complete. The steamer for New York was detained in the Mersey for twenty-four hours, and did not sail from Liverpool until Sunday morning last. The delay was ordered by the Admiralty at the instance of Lord J. Russell, and was occasioned by the wish to forward dispatches enabling the British Minister at Washington to ratify the treaty before the termination of Mr. Pierce's presidency. It is said that not only the North American fisheries, but the question of reciprocity and the free navigation of the St Lawrence, have engaged the attention of the negotiators

The vessels reported as being on their way from California had arrived at New York, with gold dust to the value of 3,000,000 dollars.

The *Atlantic* arrived on Thursday, bringing intelligence from New York, four days later than that previously come to hand.

There has been a terrible railway accident, by which the President Pierce's son has been killed. The President himself narrowly escaped destruction

The correspondence on the proposition of England and France to America, for a mutual agreement guaranteeing the possession of the Isle of Cuba to Spain, has been published. Mr. Everett has declined to become a party to such an agreement.

THE BURMESE WAR.

Intell gence has arrived of the re-capture of Pegu, on the 21st of November. After his inexplicable delays, the English commander, it was [illegible] to move up the river from Rangoon, and by the 21st of December intrenched, with a considerable force, to resist Pegu General Godwin had with him infantry, sappers, miners, and artillery, numbering 1000 men under arms, to say nothing o. the crews of the steamers. Pegu was no sooner reached than mustered Soldiers were landed on the river bank during the night, and, after a sharp fire from the stockade, carried the place at the point of the] ayonet. The Burmese resisted to the last, for the wooden barrier existed between them and the invaders, but retired the instant the head of the column showed inside." The loss in killed was five, and in wounded thirty-four; and this comparatively small loss, says a writer from India, is said to have arisen from men being unwieldy, "landed close under the guns of the stockade." Some of the enemy, on the same information, " fled to Zoonghie, from whence they would rejoice to be frightened beaten away does not spp.y to such warfare. All the evidence afforded from Burmah seems to tell in precisely the same direction "Had the city been retained when it was captured some months before, as it ought to have been," the lives lost on the present occasion might have been spared; and we might have been spared, too, the cost of embarkation and transport and the price of the delays in the small, like warfare on the Irrawaddy. No sooner was this grand engagement over than General Godwin sailed down the stream again to Rangoon, only leaving four hundred sepoys to hold his prize."

It is now stated that an advance upon Ava is not only not contemplated, but even forbidden; that the war, in the ordinary sense of the term [illegible] is to say, the operations of the British army against the Burmese army—is to be discontinued; that a tract of territory south of a line drawn from Prome to the northern extremity of our Tenasserim provinces is to be seized and annexed; and that the next campaign the enemy from the country so occupied we are to have to further concern with them. Intelligence (distinctly ascertained) has been received by way of Arracan that the Burmese are erecting strong stockades on their own side of the Aeng Pass, for which the abundance of teak in the neighbouring forests affords them every facility. Troops have accordingly been assembled on the British ads of the mountain, which will effectually prevent the descent of the enemy into the province.

WAR BETWEEN BUENOS AYRES AND ENTRE RIOS.

War is once more the chief feature in our intelligence from the Argentine Confederation Buenos Ayres and Entre Rios are the contending parties. [illegible] has been declared by General Urquiza, who, notwithstanding the [illegible] movement of Buenos Ayres of Sept. 11th, still assumes to direct the [illegible] General republic. General Juan Madariaga left Buenos Ayres Nov. 11th, with an army, consisting composed of 1600 men, cavalry and infantry; and, on the 14th, General Hornos disembarked in the port of Don Basilio, in Entre Rios, and immediately threw himself into the province. According to his first despatch, everything was going on favourably, but he admits that part of his forces had sustained a defeat. Advices from the province of Entre Rios, published at Monte Video, state that the Buenos Ayres general, far from meeting with the success and encouragement of which their despatches boast, have rushed upon certain ruin, but the only fact in their communications is the route of Madariaga, that Hornos was retreating, that the whole province was flying to arms on behalf of its ch f, and that 4000 men had joined Urquiza's flag within four days

DANIEL WEBSTER.—When Daniel and Ezekiel were boys together, they had frequent literary disputes, and on one occasion, after they had retired to bed, they entered into a squabble about a certain passage in one of their school-books, and having risen to examine some of the authorities in their possession, they set their bed clothes on fire and nearly burned their father's dwelling. On being questioned the next morning, in regard to the accident, Daniel remarked "*that they were in pursuit of light, but got more than they wanted.*"

OBITUARY OF EMINENT PERSONS.

JOHN HAMILTON DALRYMPLE, EIGHTH EARL OF STAIR, K.T.

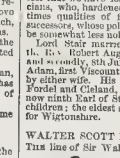
THIS venerable and much esteemed nobleman, one of the greatest and most influential landed proprietors in Scotland, died on the 16th instant, at his seat, Oxenford Castle, county of Edinburgh, in the 82nd year of his age. His Lordship was eldest son of Sir John Dalrymple, 4th Bart., of Cousland, one of the Barons of the Exchequer of Scotland, by Elizabeth his wife, only child of Thomas Hamilton Macgill, Esq.; and heir and representative of the Viscounts Oxenford. He inherited the baronies of Dalrymple, Barjarg, Stair, and the [illegible] Peer was the chief, has long acted a prominent part in public affairs. The first Viscount Stair, James Dalrymple, was an eminent lawyer, appointed Lord President of the Court of Session, and raised to the Presidency of the Court of Session, and raised to the Presidency of the Court by Charles II. His son John, 1st Earl, the well-known Secretary of State, obtained unenviable notoriety by the part he took in the massacre of Glencoe. John, the 2nd Earl, this nobleman's eldest son, was the famous military commander so distinguished under Marlborough, and in the subsequent wars with France. He attained eventually to the rank of Field Marshal, and filled, at one time, with high honour and credit, the important post of Ambassador-Extraordinary to Louis XV

The nobleman whose death we record, entered the army in 1790, went to Flanders in 1794, and served until the return of the troops in 1795. In the October of the latter year, he accompanied the expedition to Hanover; and, in 1807, was present at the siege of Copenhagen. He became a General in 1838; and obtained, in 1843, the Colonelcy of the 9th Foot. After quitting active connexion with the army, he busied himself in politics, and espoused the Liberal cause at a time when its friends were few. At several elections he contested Mid Lothian, but always unsuccessfully, until the Reform Bill passed, when he became its first freely-chosen representative. His advocacy of reform had always been consistent and energetic, and was, perhaps, the most influential in North Britain. "In the decease of this nobleman," says our contemporary, the *Scotsman*, "we feel that we have lost one more of that fine old race of Liberal politicians, who, hardened and strengthened in adversity, carried into better times qualities of firmness and earnestness with which some of their successors, whose political nursing has been more tender, may possibly be somewhat less nobly endowed."

Lord Stair married first, 23rd June, 1795, Harriet, eldest daughter of the Rt. Hon. Robert Augustus Johnston, who lately died, 16th October, 1853; and secondly, 8th June, 1825, Lady Admnina Duncan, fourth daughter of Adam, first Viscount Duncan, the hero of Camperdown; but had no issue by either wife. His Lordship's only brother, North Dalrymple, Esq., of Fordel and Cleland, succeeds to the family honours and estates, and is now ninth Earl of Stair. He has been twice married, and has several children; the eldest son, John Dalrymple, Viscount Dalrymple, is M.P. for Wigtonshire.

WALTER SCOTT LOCKHART-SCOTT, ESQ., OF ABBOTSFORD

THE line of Sir Walter Scott's descendants is well nigh extinct. When the great novelist died, he left two sons, and a grandson to perpetuate the lineage of his house, long the first object of his pride and ambition. But within the short space of twenty years, sons and grandson have all died issueless, and there remains but one grandchild, now alive, Mrs. Hope, Mr. Lockhart's only daughter, the wife of James Robert Hope, Esq., D.C.L., the eminent Queen's Counsel



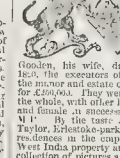
Mr. Lockhart Scott, who died unmarried on the 10th instant, at the early age of twenty-seven, was last surviving son of John Gibson Lockhart, Esq., by Charlotte Sophia, his wife, the elder daughter and heir of the favourite companion of Sir Walter Scott, Baronet. His elder brother's memory is preserved in the writings of Sir Walter, under the playful sobriquet of "Hugh Littlejohn." He died in early youth.

LADY AUGUSTA BARING

HER Ladyship, whose death took place at Vevey, in Switzerland, on the 9th inst., after a short illness, was the sixth daughter of Robert, late Earl of Cardigan, and sister of the present Earl, as well as of the late Countess Howe, and the present Countesses of Winchester and Lucan. She was born 26th January, 1808; and married, 21st June, 1827, Henry Bingham Baring, Esq., M.P.

MRS. WATSON TAYLOR, OF ERLESTOKE-PARK, WILTS.

THIS lady, who became about [illegible] years ago by the death of her only brother, Sir Simon R. Taylor, Bart., of Jamaica, [illegible] resided [illegible] in England, died on [illegible] 5, Upper Eccleston-street, aged seventy-one. She was the eldest daughter of Sir John Taylor, Bart., R.E.S., of Lisson-hall, in the island of Jamaica, by Elizabeth Goodlen, his wife, daughter and heir of Philip Houghton, Esq. In 1808, the executors of her uncle, the late Simon Taylor, Esq., bought the manor and estate of Erlestoke, with those of Edington and Coulston, for £500,000. They were settled upon Mrs Watson Taylor, as sole heiress; the whole, with other landed property, being entailed on her by a male and female in succession by her husband, George Watson [illegible], M.P. By the taste and lavish expenditure of the late Mr. Watson Taylor, Erlestoke-park was rendered one of the most sumptuous private residences in the empire; but, in the course of time, the depreciation of West India property and other causes led to a public sale of the splendid collection of pictures and the other contents of the mansion, which, after the late years been held on a yearly lease by Lord Broughton. The present inheritor of the extensive estates of the Taylors is Mrs. Watson Taylor's eldest son, Stephen Watson Taylor, Esq., who is married to the Hon. Miss Charlotte Hay, second daughter of the Marquis of Tweeddale, and sister of the Marchioness of Dalhousie and of the present Duchess of Wellington.



COLONEL DOMINICK BROWNE.

THE death of this venerable and respected gentleman occurred suddenly, at Boldgrove, on the 3rd inst. The deceased, Colonel Dominick Browne, was the only son of James Browne, Esq., of Browne-hall, in the county of Mayo (made to Dominick, Baron Oranmore and Browne), and was born on the 3rd October, 1778. Early in life, Colonel Dominick Browne entered the army, and served for many years in the 14th Light Dragoons On his retirement from that corps he was made Lieutenant-Colonel of the South Mayo Regiment of Militia, which appointment he held until his death. He was also a Deputy-Lieutenant and magistrate of Mayo, and served as High Sheriff of that county, in 1831. He married, the 28th July, 1809, Augusta Louisa, youngest daughter of the Honourable Colonel Arthur Browne, second son of John, first Earl of Altamont, grandfather of the present Marquis of Sligo, by whom (who died 11th August, 1850) he leaves six sons and three daughters. Of these, the eldest son, Arthur Browne, succeeds to the old family estates; the fifth son, Major Henry Browne, has distinguished himself in the service of Hungary during the late war in that country

NATHANIEL ALEXANDER, ESQ., LATE M.P. FOR THE COUNTY OF ANTRIM

THE death of this gentleman occurred on the 8th inst He was born in 1815, the eldest son of the late Rev. Robert Alexander, by Catherine, his wife, daughter of the Right Hon. John Staples; his grandfather was the Right Rev. Dr. Nathaniel Alexander, Lord Bishop of Meath, grandfather of the late Earl of Caledon

Mr. Alexander was first returned for Antrim in 1841, at the vacancy caused by the elevation of General O'Neill to the peerage, and he continued to represent that constituency until 1852. He married, April 7th, 1840, Florinda, second daughter of Edward Hayden Hagley, Esq., and granddaughter of the second Lord Castlemaine, by whom he leaves issue.

ROBERT FORREST

ROBERT FORREST, an eccentric character, was a [illegible] in his art. He was [illegible] a [illegible]-man in the quarries of Clydesdale. The [illegible] of his [illegible] was the "Wallace wight," which occupied [illegible] years in the [illegible] and was followed in the [illegible] by [illegible] which, [illegible] the [illegible] of Sir Walter Scott, and also the well-known statue of John Knox, in the Necropolis, Glasgow. One of his most admired productions is the statue raised in 1843 to the late Mr Raith, of Haddington. In 1852 Mr. Forrest opened a public exhibition of his statuary, in a gallery, on the Calton-hill, Edinburgh. It commenced with the display of four equestrian works. This undertaking was under the patronage of the Royal Association of Contributors to the National Monuments. The exhibition succeeded and flourished. In progress of time the gallery extended itself to a number of its sculptures to about thirty groups, and took permanent rank as one of the most popular sights in Edinburgh. Mr. Forrest's genius was of a bold and lofty style; the samples of his skill, particularly those taken from the human figure, display remarkable boldness of attitude, great accuracy of proportion, and minute attention to detail. His chefs-d'œuvre bear proof, in a high degree, of striking originality and masterly execution. To the serious loss of art in Scotland and elsewhere, and to the deep grief of all who knew him, that able sculptor died on the 9th ult.; he was, at the time, in his sixty-third year. Robert Forrest, during his talented career, earned reputation and profit; but the retiring modesty of his disposition, in some measure, impeded the full justice due to his claims upon the public

WILLS.—The will of the late Earl Somers, who died in October last, has been proved, the acting executors being the present Earl (heretofore Viscount Eastnor), the son; and the testator's brother, the Hon. and Rev. James Somers. To the Countess Dowager a power is reserved, and she is well provided for by the will, as well as by marriage settlement. The three daughters also receive a large income, arising from property under the will of their maternal grandfather, the late Earl of Harrowby. Liberal annuities and legacies are left to servants; the residue and real estate is left to the present Earl Somers, the only son. The personalty is valued at £30,000 ——The late Earl of Newburgh (a Roman Catholic) has by his will left nearly the whole of his personal estate to Stonyhurst College. The will is in dispute in the Prerogative Court; and should it be declared a valid one by that court, the question as to the legality of the bequest under the Mortmain Act will have to be determined in another Court.

SANDOWN CASTLE.

ALTHOUGH the constructions of this maritime fortress dates but from the early part of the 16th century, and is but an indifferent specimen of castle building, except for purposes of defence, Sandown is attached to a Lieutenancy of much higher antiquity, being under the command of a Captain and Lieutenant, who are subordinate to the Lord Warden of the Cinque Ports.

By way of strengthening the natural defence of the coast, Henry VIII. built along it a line of castles at Deal, Walmer, and other points, of which Sandown is one. There were formerly two mounds of earth, called Great and Little Bulwark, between Deal and Walmer Castles, and another between Deal and Sandown; each having embrasures for cannon, and forming a line of batteries along that part of the coast which is still supplied with deep water, and remains of these defences exist On the sea-shore, about half a mile northward from Deal, is Sandown Castle; which derives its name from the sand downs that extend along this coast from Peperesse to Deal, a distance of somewhat more than four miles; their general breadth being about a quarter of a mile.

The noble which induced Henry to erect this line of fortresses is thus quaintly narrated by Lambard, in his "Perambulation of Kent":—having shaken off the intollerable yoke of the Popish tyrannie, and espying that the Emperor was offended for the the divorce of Queen Katharine, his wife; and that the Frenche King had coupled the dauphine, his sonne, to the Pope's niece, and married his daughter to the King of Scots, so that he might more justly suspect them all; they saw very truly one, Henry determined, by the aide of God, to stand upon his own garde, and [illegible] and therefore, without sparing any cost, he built [illegible] platforms, and block -houses, in all needfull places of the realme, and amongst the other, first among lest the ease and advantage of descending on land in this part should give occasion and hardiness to the enemies to invade him, he erected, neare together, three fortifications, whiche might at all times keepe and beate the landing-place; that is to say, Sandowne, Deal, and Walmere."

Sandown consists of an immense round tower in the centre, connected with four lunettes, or semicircular outworks, the whole being surrounded by a deep fosse, and having additional defences and batteries towards the sea. The entrance is by a drawbridge and gate on the land side, the upper part of the central tower contains a spacious cistern for water; below a large vaulted apartment, bomb-proof, for the garrison. Some substantial repairs and alterations were made in the castle during the war with France; and between this castle and Sandwich Haven two additional forts were constructed for the more complete security of this part of the coast.

The Castle of Sandown has been used as a prison-house. Here, during the civil wars, the celebrated Colonel John Hutchinson, Governor of Nottingham Castle, and member of the Long Parliament, was confined for eight months, and died here, Sept. 11, 1664, "the same day of the month and the same day of the week that the wicked soldiers fetched him out of his own rest and quiet condition at home, eleven months before, viz., on Thursday-day, about seven o'clock at night, the 11th day of September, 1664, that being the same day and hour as the 11th day of October, 1663." Colonel Hutchinson had been removed here from the Castle of Sandowne, where he had been committed on suspicion of treasonable practices. At Sandown they show a sedan, in which he was brought to the fortress; the chair in which he customarily sat is also preserved here, and a portrait of the stanch Parliamentarian hangs in one of the apartments of the Castle.

MONTENEGRO; ITS VLADIKA AND PEOPLE.

THE military operations directed against the little state of Montenegro by the Turks have invested this obscure and rugged tract of country with a hidden interest in the eyes of all European politicians. A knowledge of the character and habits of the people, and of the nature of the country they have to defend, is essential to the formation of a just judgment upon the probable duration of the war. The subjugation of Montenegro by Turkey does not seem likely to be effected by the Porte without the expenditure of much blood and treasure. There is also a strong probability of Russian interference, for Montenegro has for some time been considered as under the protection of Russia. The Czar has for some years past defrayed more than half the Government expenses of the little state, and intimate relations have in consequence existed between the Court of Petersburgh and Montenegro. When the late Vladika of Montenegro died, in 1830, a *locum tenens* was sent from Russia to govern the country until the consecration of the new Vladika, which took place at St. Petersburgh in 1833. The Montenegrins have in many wars vindicated and maintained their independence against the arms of Turkey, and it is not probable that the Czar will suffer a section of the Greek church, which looks up to him as its head, to fall under Moslem sway without interposing his powerful mediation in their behalf.

Montenegro is situated between 42 deg. 10 min. and 42 deg. 56 min. north latitude, and 20 deg. 22 min east longitude, including Kutska, the most easterly district, which has recently separated itself from Montenegro. The country is bounded on the west by Cattaro, on the north by the Turkish province of Herzegovina, and part of Bosnia, and on the east and south by Albania. Its extent is said to be eighty or ninety geographical square leagues. The population is estimated at about 100,000, but the number of fighting men estimated at 20,000. Montenegro contains few or no towns. The total number of villages is between 200 and 300, the largest of which does not contain a population of more than 1500. None of them are walled, and in the more secluded parts of the country they are of the rudest construction Not more than fifteen or twenty villages are on the banks of rivers, for valleys are rare in the country The general aspect of the country is mountainous, some parts presenting a sea of immense waves turned into stone. Trees and bushes grow amidst the crags, and afford shelter for the inhabitants against an invading foe. In the rugged districts of Cevo the fissures in the rocks are like those of a glacier, which no horse could pass over without breaking its legs. The mountains are limestone, as in Dalmatia; but in no part of that country do they appear to be tossed about as in Montenegro, where a circuitous track barely traced by some large loose stones, called a road, enables a man or, foot with difficulty to pass from one crest to another

This is not a country for the operations of cavalry or artillery, and much of the advantage which a disciplined army offers over an irregular force is lost when the broken nature of the country offers such facilities as guerilla warfare

The Montenegrins are a people of undoubted and [illegible] Their independence, and their constant wars and repeated victories over the Turks, entitled them to be regarded as a free people. Until, did the Turks make an inroad upon Montenegro either in large or small numbers without [illegible] [illegible] The border fields and feats of English and Scotch history are outdone in hatred and ferocity by the outrages inflicted upon each other by the Montenegrins and their Turkish neighbours. Such is the savage warfare of this people, that the heads of the slain are exposed as trophies, and medals are given for those who have taken a stated number. The arms of the Montenegrins consist of guns, pistols, and yataghans, to which the Vladika has lately added some rifles and a few [illegible] guns are very long, and carry to a great distance. [illegible] locks are flint and steel. They are very good [illegible] and their marching shot is quickly followed by the use of the yataghan, when they can close with their enemy. Their mode of fighting is generally from behind rocks, when their foes are numerous; and the nature of their country enables them to adopt this mode of warfare with great advantage. The Turks have more than once overrun Montenegro with

CINQUE PORTS. SANDOWN CASTLE, KENT.

large armies, ravaged the valleys, and burnt the villages and crops; but the mountain fastnesses have always been intact, and the invader has paid dearly for his advance in the losses that accompanied his retreat.

Sir Gardner Wilkinson says that their hatred of the Turks is excessive, that they detest and execrate them; and the brilliant victories they have obtained over their Moslem opponents excite the Montenegrins, that the mere supply of bread, powder, and ball, with the countenance of European powers, would enable them to overrun the greater part of Herzegovina and Albania. The injuries which they have received from the Turks, and the habits they have acquired by pillaging them, have bred the most savage sentiments between the nations, which have been kept alive by the barbarous custom adopted by both parties of cutting off the heads of the wounded and the dead. Hatred of the Turk is paramount with the Montenegrin to all ordinary considerations of honour or humanity. Both men and women are very robust, and are known to carry 175 pounds weight over the steepest and most rugged rocks. All appear muscular, strong and hardy. In stature they are much above the middle height; some are very tall, and they are well proportioned.

The Government of Montenegro is primitive and peculiar. It may be called Republican, all affairs relating to the public good being settled in the General Assembly. Every village or department has the right of electing its own chiefs. By the theory of the Constitution, the ruler of Montenegro ought to be appointed to his office by the popular voice, and the General Diet has the right of his election. But the supreme power has long been confined to one family, so that the elective principle, in the appointment of the chief magistrate, has not for many years been really carried out. The Vladika (which signifies Prince, or Ruler) also united in his person all the temporal as well as the spiritual power. He is not only high-priest, judge, legislator, and civil governor, but has also the command-in-chief of the army. The Vladika of Montenegro is, in fact, the only remaining instance of the military bishops who played so distinguished a part in the wars of the middle-ages. The present Vladika was originally intended for the military profession, and no man can point a cannon or a rifle with more precision than he can. It is said that he can hit with a rifle a lemon thrown into the air—a singular accomplishment for a Bishop, but one which not unnaturally adds to the confidence he enjoys among his troops. The office is hereditary in the house of Petrovich; but as every Vladika is consecrated Bishop, and cannot marry, the succession always falls to a nephew, or some other member of the family. The present Vladika succeeded his uncle, who died when he was about fifteen years of age. When Sir Gardner Wilkinson visited Montenegro six or seven years ago, the Vladika was about thirty years of age. He says:—

THE VLADIKA OF MONTENEGRO.

His majestic height, of about six feet eight inches, may well command the respect of a primitive and warlike race. He is also handsome and well proportioned to his height. He has a small beard, and his long dark hair flows over the back of his neck, his head being covered with a red Fez cap. His eyebrow is arched; and the expression of his countenance is mild and amiable.

His general costume is military, like that of the country, though richer and covered with a scarlet pelisse, bordered with fur. He wears the full short blue trousers of the Montenegrins, with white stockings and black shoes; and two rather singular additions to his dress are a black silk cravat and black kid gloves.

His pontificial robes are very different; but these he seldom wears. They consist of a long robe open in front, over another of the same length, girded by a sash round the waist; and his head is covered with the black round upright cap, usually worn by Greek priests; from which a black veil falls over his shoulders.

The Vladika, in his interview with Sir Gardner Wilkinson, appeared particularly desirous that the English should feel an interest in the welfare of his country, which, from the vicinity of Corfu, and from the fact of the Montenegrins having co-operated with us in our attacks against the French in the Bocche di Cattaro, he thinks has some claims on our friendly notice. England, however, can have but little sympathy for a people whose mode of warfare is so little consistent with the customs of civilised nations.

At Tzetinje, the residence of the Vladika, a village consisting of nineteen or twenty houses, Sir G. Wilkinson counted, upon a tower, the heads of twenty Turks, fixed upon stakes round the parapet, the trophies of Montenegrin victory. Below, scattered upon the rock, were the fragments of other skulls, which had fallen to pieces by time—"a strange spectacle in a Christian country, in Europe, and in the immediate vicinity of a convent and a Bishop's palace."

To the credit of the Vladika, it must be stated that he has done all in his power to prevent the marauding expeditions into Turkey which have now brought the armies of the Sultan upon the Montenegrins. The Turks have frequently marched through the valleys and destroyed the villages, but the people have been still unconquered, and it will take a long time to subdue their mountain fastnesses.

We are indebted for the materials of this sketch and the accompanying Illustrations to Sir Gardner Wilkinson's "Dalmatia and Montenegro," published by Mr Murray—a work which, besides giving the latest account of this singular people, contains a summary of their history, and of their wars with the Turks. The work is beautifully embellished with views of the mountain scenery of Montenegro, and cannot fail to be perused with interest at the present crisis in the history of this unconquered corner of the old kingdom of Servia.

PASS TO MONTENEGRO, ABOVE CATTARO.

THE ITALIAN BOULEVARDS, PARIS.—SKETCHED ON NEW YEAR'S EVE.

THE ITALIAN BOULEVARDS, PARIS.

The extraordinary mildness of the present season, especially in France, has been incidentally noticed in the letters of our Paris Correspondent in the last fortnight. This skiey influence has kept up the excitement of the festal season; and the Boulevards and Champs Elysées have boasted of their lines of promenaders and groups of *flaneurs*—the whole scene partaking of the gaiety of late spring or summer.

Another Correspondent writes, date Jan. 4. "The last two or three days have been particularly favourable to the trading carried on in the temporary fabrics that line the Boulevards. A bright sun and a clear if not entirely unclouded sky, with a breath of air, and just as much cold as indicates the presence of winter, have caused the thoroughfares to be crowded once more."

But our Artist's Scene is retrospective, carrying us back to the eve of the New Year and showing us the Boulevard-ites Italiens Paris on New Year's Eve, or rather early morning on the *premier jour de l'an* with, the *nuit blanche* ended, who, at the end of the year erect their stalls on the Boulevards, for the sale of those small articles of multitudinous variety, which are presented as New Year's gifts to children, and also to "children of a larger growth." The scene itself is very peculiar and interesting, the Boulevards showing their architectural features by the gas-lamps; and ere the grey dawn has yet brought out their most salient characteristics; the stalls in varied forms, and closed, or partially so, according to the goods sold there, or the wealth of their occupants, some of whom are busied getting their arrangements ready for the coming day, and others wrapped up against the eager air, keeping watch and ward.

The *chiffonniers*, prowling along with their hooks and lanterns, are to a stranger not the least singular part of the scene, whilst the *gardiens de ville*, with military air and measured tread, see that "all's well."

THE BURMESE WAR.

The accompanying Scene, sketched from the seat of the war in Burmah, shows a Watering-party in the Bassein Creek, near Rangoon, formerly the most commercial port of the Burman Empire. The watering-party consisted of one company of her Majesty's 51st Regiment, who were sent, under the charge of Captain Anderson, to protect, from any attack of the Burmese, the sailors while getting water for the use of the Hon. East India Company's steamer *Feroze*, from a small tank near the shore; this being the first time that any of the Madras troops landed.

INCIDENTS OF THE BURMESE WAR.—A WATERING PARTY AT THE BASSEIN CREEK.

CALENDAR FOR THE WEEK.

SUNDAY, January 23rd Septuagesima Sunday. Duke of Kent d., 1820.
MONDAY, 24th Frederic the Great born, 1712.
TUESDAY, 25th—Conversion of St. Paul. Robert Burns born, 1759.
WEDNESDAY, 26th.—Brazil discovered, 1496. Jenner died, 1823.
THURSDAY, 27th.—Mozart born, 1756.
FRIDAY, 28th Admiral Byng shot, 1757.
SATURDAY, 29th.—George III. died, 1820. Reformed Parliament met, 1833.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JANUARY 29, 1853.

THE ILLUSTRATED LONDON NEWS VOLUMES, from the Commencement (May 14th, 1842) to December 1st, 1852, inclusive, 21 VOLUMES, may now be had through all Booksellers and News-agents.—Price of the Complete Set, bound in strong paper, for exportation, £11 11s.; bound in cloth, elegantly gilt, £12 12s. Any single Volume can be had separately. Price of Volume I., cloth, 21s. II. to XVII. (Double), each, 10s. XVIII., 21s.; XIX., 10s.; XX., 10s.; XXI., 10s., or by Post Covers, 4d. per Volume less. The price of a single Back Number, a month after the date of publication, is 5d. Covers for Binding the Volumes, 2s. 6d. Binding Cases, 2s. Portfolios, 4s. A liberal discount to merchants and shippers.—Office, 198 Strand.

TO CORRESPONDENTS.

J. B., Ashworth.—The returns of the Board of Trade do not specify the value of the imports from the United States, but merely the quantities of individual articles. The total value of exports to the United States from this country for the year ended January 1, 1853, is stated at £14,919,51. In the following year they were £14,362,976. The returns up to January 5, 1853, will be published about the middle of next month. CHRISTIANUS is informed that he may get the information he wants by writing to Mr. Herand, 2, Cloudesley-terrace, Liverpool-road, Islington.
A SUBSCRIBER SINCE 1842.—The promised Engraving of the Funeral Procession of the Duke of Wellington is in progress.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 22, 1853.

It required but little political sagacity to foresee that the difficulties of Louis Napoleon would by no means be brought to a termination by his success in the great object of his ambition. It required tact, prudence, courage, and good fortune for such a man to change the temporary Presidentship of an unpopular Republic, into the hereditary dignity of Emperorship; but all these high qualities, admirably well as they may have been displayed, will need to be exerted in a far greater degree, together with many others equally essential if he expect to secure his own happiness, and that of the country, which he has called himself to govern. Many as were his difficulties while merely President—they are all increased a hundred fold now that he is Emperor. Curiosity is sated—he has reached the goal; his foes and his friends know the best and the worst of him; his foes take the measure of his life, and weigh their chances against it; while his friends clamour for the reward of their exertions in his behalf, and for the most part reckon their services at values impossible to admit, and inconvenient, if not dangerous, to deny. And these are, perhaps, the least of the evils he has to confront. Individual foes may possibly be conciliated, and importunate friends may be put off with instalments; but nothing will satisfy the great bulk of the nation but the realisation of hopes which the ablest an l most honest of men would find it difficult to fulfil. Finance, that prosaic monster, is greater than Emperors, and more insatiable than their ambition. A fair balance-sheet—the income equal to the expenditure—a well-fed and a well-employed multitude, these are the matters which no Cæsar, however almighty, can despise or neglect without the usual penalty—liability to civil strife and impending revolution.

Already these difficulties have commenced. A commercial crisis, staved off from day to day by incredible shifts, manœuvres, and sacrifices on the part of the Government, threatens to burst over the country. The public securities, kept factitiously at a high nominal price, are finding, like water, their natural level. Their downward tendency—without a pause, but simply from the collapse of the energies and the cunning that kept them at an unnatural rise—betokens the general sense of insecurity.

There has no doubt been some increase in the occupations of the people in Paris: builders and house-decorators have been largely employed, and trade has to some considerable extent enjoyed the advantage of the comparative but forced quietude of the political world during the last few months; but, with a system of taxation which is already oppressive, and in face of a deficit of two millions sterling, with an expenditure estimated to be greater this year than it was during the year that is past by nearly 60,000,000 francs, and with the chances of a bad harvest all over Europe, it is impossible not to fear that the first year of the French Empire will be an anxious, if not a dangerous one to France as well as to the Emperor. Upon the question of the Emperor's [illegible] the less sanguine foreigners and even the French themselves, who are more interested in the matter than the rest of Europe, do not seem to look upon it with much favour. The downward tendency of the Funds has, in the meantime, been aggravated by it.

The most important subject of public discussion this week is the arrival of the *Australian* and her brilliant cargo, and the authentic information that new gold-fields are almost daily discovered in our invaluable colony, richer even than those with the names and marvels of which the public is already familiar.

To [illegible] to appreciate with tolerable correctness the effects of these new and almost incredible discoveries on the future condition of society, it is necessary to be acquainted with the laws which determine the value and the distribution of the metals, and affect the prices of all commodities. The most remarkable illustration of these [illegible] effects, which the discovery of America, and of the great quantities of gold and silver brought from thence, had upon the prices of goods in Europe in the sixteenth and seventeenth centuries. It is almost universally known, that in the sixteenth century, particularly towards the middle and latter parts of it, prices rose very considerably throughout Europe; that they continued to rise gradually till about the middle of the seventeenth century, and then continued nearly stationary till about the middle of the eighteenth century, when they again rose, and as the rule though there was a long interval of exception just prior to the last French revolution continued to rise till some years after the close of the present century. Since that period the tendency of prices has been to decline, and, in general, to decline rapidly. At the present time the precious metals seem likely to decline very much in value, and money prices to rise in proportion. These subjects—namely, the laws which determine the value of the precious metals and historical illustrations of changes in their value, mingled with controversial remarks on some opinions of several eminent political economists, occupy the principal part of a very interesting book just published by Mr. Stirling,* and give it a [illegible]

* "The Australian and Californian Gold Discoveries, and their probable Consequences, &c." in a Series of Letters. By Patrick James Stirling, Esq., author of the "Philosophy of Trade." Edinburgh: Oliver and Boyd.

[illegible] it a secondary title. We prefer, however, to call attention at the present time to a far more interesting question which the author discusses.

Beginning with 1846, the year before gold was discovered in California, Mr. Stirling computes, from various authorities, the whole annual supply of gold and silver for all the world, excluding the produce of China and Japan, at . . £12,362,677
Of which might be appropriated for other purposes than coin £4,840,000
And allowing for the wear and tear and loss of coin 1 per cent. on £340,000,000, in circulation, the sum required to replace it is . . . £3,400,000 } £8,240,000
And there was left to be annually coined as money, and added to the general stock £4,122,677

There is reason to believe, from actual returns, that somewhere betwixt £4,000,000 and £5,000,000 was the sum annually coined by all the great commercial nations of the world.

In 1848, an entirely new supply of from £800,000 to £1,000,000 was obtained from California; in 1849, about £4,000,000; in 1850, £14,000,000; in 1851, £17,000,000; and in 1852, about £20,000,000. In 1851, gold fields, richer even than those of California, were discovered in Australia, which have already yielded about £10,000,000, and are said to be capable of supplying £100,000,000 a year. Taking a moderate estimate, the new supply of the precious metals in 1852, £20,000,000 from California and £10,000,000 from Australia, will be £30,000,000 more than in 1846, or two-and-a-half times as much as now; and the supply is at present more likely to be continually enlarged for some years than to decrease. Now as a much smaller increase to the supply had a great effect in raising prices after the discovery of America, the problem which deeply interests the whole society—the problem which Mr. Stirling undertakes partly to solve—is the effect which this very large increase of the precious metals, but particularly of gold, will have over future prices, and over the future fate of society. It is his deliberate conviction that great mercantile and social changes will ensue, and a greater disturbance in the existing relations of property than has been known for three centuries. The actual burden of the National Debt he supposes may be reduced two-thirds, but the great multitude of fundholders and persons of the middle and lower ranks—"tens of thousands of feeble old men, aged mothers, unprotected sisters, widows, orphans, charitable and provident institutions, and those dependent on them, who would have to sustain the weight of which landowners, merchants, and manufacturers are relieved." "The nominal amount of the dividends will remain the same, but the value will be diminished;" "vital interests will be affected, families will be impoverished, and suffering will be felt in every joint and member of the body politic." The Government will have to pay threefold for all it consumes; the pay of all its servants will be raised threefold; there will be great additional taxation; and a long period of commotion may be expected, such as ensued between the accession of the first James and the restoration of Charles II. If landlords and manufacturers cheerfully submit to the exactions of the Chancellor of the Exchequer, "from all the classes with fixed money incomes we must be prepared for a long cry of suffering and distress." "Our paupers, too, being a class of annuitants, will join in the general cry." "The enhancement of price" is thought "to have had as much to do with the introduction of Poor-laws, in the time of Elizabeth, as the abolition of the monasteries;" and we are taught to expect "a great fall in the real value of wages," and "a great augmentation of poor-rates." "The capitalist" is not, "ultimately, to be in a better situation." Such of the clergy as have incomes varying with the price of corn will not be affected by the change; but all the creditor classes, all the recipients of fixed incomes, will be sufferers. Apprehensions, too, are expressed for the stability of the Government. The possible preventive of all these evils, Mr. Stirling suggests, might be found in recurring to the silver standard, but he does not absolutely recommend it, "because a change of the standard involves questions of justice and equity," and "political economy does not afford all the elements required for a solution" of the practical question of legislation.

These lugubrious predictions obviously rest on the mere numerical proportions between the gold and silver obtained from the mines and the money in use. Mr. Stirling does not take into consideration the great additional stimulus which the discoveries are giving to enterprise, and the great increase of wealth, diffused amongst all compensating fundholders, landowners, and others, and lessening the number of paupers—which must be the consequence. To doubt that such a vast increase as is now taking place in the quantity of gold annually obtained, will have, from the influence of money over all transactions, corresponding effects over the whole of society, would be absurd; but the greatest authorities differ as to what will be the nature and degree of those effects, and they certainly have not yet arisen in any alarming shape so as to warrant recommendations to change the natural standard of value. Two celebrated French writers, M. Léon Faucher, in a pamphlet translated by the Governor of the Bank of England, "On the Influence of the Precious Metals," and M. Michel Chevalier, in a pamphlet translated by D. Forbes Campbell, Esq., "Remarks on the Productions of the Precious Metals," take directly opposite views. M. Faucher thinks the addition "cannot produce a deep or a durable impression on the almost incalculable mass of wealth already existing in the world." M. Chevalier agrees with Mr. Stirling, and affirms that "the supplies of gold now pouring into Europe must at no very [illegible] occasion an immense rise in the price of all commodities." Other great authorities are equally at variance. They differ not only as to the effects of the gold on future prices, but as to the effects on the quantity of disposable capital, on the rate of interest, on increasing enterprise, and as to the effect almost on every branch of society. It is, therefore, quite premature to suggest any kind of legislation with reference to effects which are yet unknown, and are not even correctly conjectured. As a general rule, we may say that as the discovery and the getting of the gold have not sprung from legislation, it should in no degree try to forestall or direct their effects, but watch them, and adapt to them as they arise, as antique and very generally erroneous regulations.

LORD JOHN RUSSELL.—As considerable misapprehension appears to exist regarding Lord John Russell's position in the present Government, and as it has even been stated in quarters, usually better informed, that failing health would probably before long oblige him to give up the [illegible] he will be back in new fields. Both his friends and political supporters will be glad to learn the true facts of the case, which we can give from authority. The permanent arrangement made on the formation of the present Government, and ever since maintained, [illegible] was that Lord John Russell should lead the House of Commons, and in case of the absence of [illegible], that Lord Clarendon should be the Secretary of State for Foreign Affairs, but subject to this arrangement, Lord John, at the urgent solicitation of some of his colleagues, agreed to take the seals of the Foreign Office till the meeting of Parliament, at which time he would hand them over to Lord Clarendon. No change has since been made, and Lord John will, accordingly in the course of a month give up his temporary post to his successor *Globe*. [A correspondent observes, on the above announcement, that the Earl of Clarendon and his Under Secretary, Lord Wodehouse, will be both in the Upper House, and that, most likely, some further change will take place, in order that some one connected with the colonies should be in the Commons.]

MR. DISRAELI.—A paragraph, stating that the Right Hon. B. Disraeli has made arrangements to travel for the space of two years, for the ben fit of his health, has been contradicted by the *Times*, which states "that the right hon gentlen an never was in better health, and had never less intention of absenting himself from his parliamentary duties."

THE COURT.

WINDSOR CASTLE.

The investiture of his Grace the Duke of Northumberland and the Most Hon the Marquis of Londonderry as Knights of the Garter, in the room of the late Duke of Hamilton and the Duke of Wellington, has been the most interesting feature in Court circles during the past week. The ceremony took place on Wednesday. The Knights Companions and officers of the order having entered the Chapter-room, her Majesty's Royal veil and pleasure that the vacant stalls in the Royal Chapel of St. George at Windsor should be filled, was signified by the Chancellor The Knights Companions then proceeded to the election, and the suffrages having been collected, Her Majesty Queen Adelaide, buckled on, his Grace's left leg, the Chancellor pronouncing the usual admonition. Garter, in like manner, presented the Ribbon and George, and her Majesty, assisted by Prince Albert, put the robe on his back. The noble Duke's left shoulder, the Chancellor pronouncing the admonition. His Grace again kissed Her Majesty's hand, and having received the congratulations of each of the Knights Companions, retired. The Chapter then proceeded to a second election; and the Chancellor having collected the suffrages, presented them to the Queen, who commanded him to declare that the most Honourable Charles William, Marquis of Londonderry, G.C.B., had been duly elected a knight of the most Noble Order of the Garter. His Lordship was invested by the Sovereign with the Garter, Ribbon, and George, with the like ceremonies. Their Royal Highnesses the Prince of Wales, Prince Alfred, the Princess Royal, and the Princesses Alice and Helena, and her Serene Highness the Princess Adelaide of Hohenlohe, witnessing the ceremony of the investiture.

In the evening the Queen's dinner-party, in the Waterloo Gallery, included the following:—Her Royal Highness the Duchess of Kent, his Serene Highness the Prince of Leiningen, her Serene Highness the Princess Adelaide of Hohenlohe, the Duchess of Sutherland, the Duke of Norfolk, the Duke and Duchess of Bedford, the Duke and Duchess of Northumberland, the Duke of Cleveland, the Marquis of Breadalbane, the Marquis of Salisbury, the Marquis of Exeter, the Marquis of Camden, the Marquis of Londonderry, Earl Fitzwilliam, Earl of Clarendon, &c. On Saturday last the Marquis of Breadalbane had an audience of her Majesty, and kissed hands on being appointed Lord Chamberlain.

The Duchess of Sutherland has succeeded the Duchess of Atholl as Mistress of the Robes.

The Viscountess Canning has succeeded the Countess of Charlemont as Lady in Waiting to the Queen

Lieutenant-Colonel Hon. Edmund Phipps, Groom in Waiting to the Queen, has succeeded Lieut.-Colonel Hon. N. Hood has succeeded Lord Byron and Lieut.-General Sir Frederick Stovin as Lord and Groom in Waiting.

Their Royal Highnesses the Duke and Duchess Augustus of Saxe-Coburg have left Claremont for Portugal, on a visit to the Queen Donna Maria and King Ferdinand

The Duchess of Inverness gave a delightful ball to a distinguished circle of guests, on Tuesday night, at Kensington Palace. The festivities were prolonged until a very late hour.

The Marquis of Londonderry arrived in town on Tuesday evening, from Wynyard, and, on Wednesday, left Holderneese House, for Windsor Castle, to attend his installation as a Knight of the Garter. The noble Marquis remains in town to-day to hear the Speech and the Prince Consort

The Chancellor of the Exchequer and Mrs. Gladstone arrived in town, on Saturday, from a visit to her Majesty, at Windsor Castle

We are happy to state that Lady Morgan is recovering from the severe illness by which she has been so long confined.

A matrimonial alliance is about to be solemnised between the Hon. E. Russell, son of the Baroness De Clifford and Miss Elliott, niece of Lady Hislop.

A CABINET COUNCIL was held on Monday afternoon, at the Foreign Office, Downing-street. The Ministers present were the Earl of Aberdeen, the Lord Chancellor, Earl Granville, the Duke of Argyll, Viscount Palmerston, Lord John Russell, the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, the Right Hon Sidney Herbert, and Sir William Molesworth. The Council sat two hours and a half.

CHURCH, UNIVERSITIES, &c.

HIS Excellency the Earl St. Germans has appointed, as one of his chaplains, the Rev. Dr. Tighe Gregory, rector and vicar of Kilmore, on the Manor of Dungan, and the earliest advocate now living of the national education system in Ireland. He was likewise one of the Viceregal Chaplains during the Lieutenancy of the Marquis of Anglesey, Earls Fortescue, Bealborough (deceased), and Clarendon.

THE Senatus Academicus of the University of St Andrews at their last meeting, unanimously conferred the degree of LL D on Thomas Miller, M.A., F.R.S.E., Rector of the Academy of Perth, author of a "Treatise on the Differential Calculus, with its application to Plane Curves, to Curve Surfaces, and to Curves of Double Curvature."

PREFERMENTS AND APPOINTMENTS.—The following have recently been made: The Very Rev. H. I. Tighe, D.D., Dean of Leighlin, has been appointed Dean of Ossory, in succession to Dr. Graves, Provost of Trinity College, Dublin; the Rev. J. C. Blomfield, M.A., has been appointed a Rural Dean of the Diocese of Lincoln; the Hon. and Rev. A. G. Campbell, B.A., Rector of Kingston, Dorset; the Rev. J. C. Adams, B.A., to Hawkchurch, Dorset; the Rev. W. Sheppard, to Kilpeck; the Rev. S. Andrew, M.A., to Hallaton, Leicestershire; the Rev. Alfred Bligh Hill, M.A., to High Roding, Essex; the Rev. C. W. H. Sibley, M.A., to Great Leighs, Essex. *Incumbencies:* The Rev. — Davies, M.A., to St. Mark's Church, Whitechapel; the Rev. William Peterson, M.A., to Trinity Church, Cranbrook; the Rev. John Wilcox, M.A., to Hixon, Staffordshire; the Rev. George Knowling, M.A., to St. Paul's, Stonehouse. *Vicarage:* The Rev. H. S. Pollard, to Ecclington, Lincolnshire. *Curacies:* The Rev. J. B. Anstice, B.A., to Holy Trinity, Dorchester; the Rev. W. D. Tyson, M.A., to Barrow-Twyford, Derbyshire; the Rev. W. Greenslade, M.A., to Stoke Sub Hamdon, Somersetshire; the Rev. J. M. Jessop, B.A., to St. John's, Broughton, Lancashire; the Rev. C. H. Andrews, to St. Pancras, London; the Rev. W. S. Revers, B.A., to Rampton, Cambridgeshire; the Rev. M. Davies, M.A., to Bettiscombe, Dorsetshire; the Rev. C. J. W. Ord, B.A., to Bottesham, near Newmarket; the Rev. John Brooks, B.A., to Walton-le-Dale, Preston.

WANDSWORTH LITERARY AND SCIENTIFIC INSTITUTION.—The first *soirée* of the members and friends of this institution was held at the Eagle Assembly Rooms, on Tuesday last; at which the Rev. H. Moseley presided, and made a most excellent and impressive speech upon the advantages of institutions and meetings which were calculated to rail forth the mental powers of the people. The company were also addressed by Dr. Leeson, Mr. A. Coleman (the treasurer), Mr. H. Gore, Mr. D. Nicholson, Mr Blackmore, and Mr. Charles Pearson, who, at the request of the meeting, explained, with the assistance of diagrams and models, his proposed railway improvements and city improvements. A most extensive variety of objects were exhibited, including specimens of arts, manufactures, new inventions and the curious, models in motion, objects of natural history. The rooms were again thrown open for exhibition on Friday.

ELEMENTARY DRAWING FOR FEMALE CLASSES.—The following are the new rules for the management of the metropolitan female schools of art, Gower-street:—Pupils before entering the elementary school must be able to draw copies of the letters I, O, and S, which may be obtained at the school, and they must also have a knowledge of the names of the English geometrical forms, which are contained in a text book of definitions of practical geometry, to be obtained at the female school, and no student will be admitted without examination upon such book. Students desirous of entering the upper school must make drawings from the most advanced examples in the elementary school, and have a knowledge of the elementary laws of colour. A text-book of the laws of colour may be obtained at the female school. Every applicant for admission to the upper school will be examined." The new fees are as follows:—General class, before ten, 2s.; elementary classes, 3s. per month, 7s. for three months, and 10s. for six months; advanced classes, 4s. a month, 5s. for two months, and 12s. for six months. Tickets for the figure and antique classes, four months, 1l. 1s. Terms, 1l. 1s. a quarter." The classes meet in the day-time as usual, but no pupils under 14 are allowed who cannot attend in the day is to be forthwith established.

THE STATISTICAL SOCIETY.—The monthly meeting of the Statistical Society was held on Tuesday evening, the president in the chair. Among those present were:—Lord Stanley of Alderley, Vicepresident of the Board of Trade; Mr. Holt Mackenzie, Mr. W. L. Melville, the Chevalier Hebeler, Consul General for Prussia; Messrs. C. Babbage, F.R.S., C. Jellicoe, F. Goldsmid, W. Spence, F.R.S., F. G. P. Neison, and Dr. Guy. Mr. Pare read an elaborate paper on the subject of the Property and Income-tax, in which he contended that incomes ought to be taxed according to their nature; and that it was not an English love of money, but the English love of justice, which had created dissatisfaction with the existing arrangements. Mr. Babbage restated his well-known views, and urged the necessity for an agreement in certain principles before the question could be argued with the hope of arriving at a satisfactory conclusion.—The question was adjourned to the next meeting.

The mean reading of the barometer for the week, at the height of eighty-two feet above the sea, was 29·40 inches On the 17th the reading descended to 29.05 in the evening

The mean temperature of the week was 42·8°, which is 0·8° above the average of the same days in thirty-eight years The direct on of the wind has been for the most part from the south-west; on the 17th and 18th it was from the north-west; and the reading of the thermometer descended to 30°, a point lower than any since December 1. The mean temperature of every day was above its average. The fall of rain in the week was six-tenths of an inch.

JAMES GLAISHER.

Jas. Sham, Jan. 21, 1853.

HEALTH OF LONDON.—During last week, 1596 children were born, according to the numbers reported to the Registrar-General; of these births 755 were boys, and 841 were girls, exceeding the average number for eight years by 164. The expected number of deaths from calculation taken from the preceding ten years, was 1252; the number reported was 1001, showing a reduction of 251 below the expected number, and proving the general condition of the public health to be still good, as it has been for some time past. The classes of diseases in which the greatest differences from the average numbers appear, are those of the lungs and of the organs of respiration. The expected number of deaths from these causes at this period of the year is 384 in the week. In last week, 159 persons only died from these diseases, viz., from laryngitis, 11; from bronchitis, 27; from pleurisy, 4; from pneumonia, 58; from spasm, 7; and the remainder diseases of the lungs, 7. The average number for those diseases are 3, 91, 1, 97, 35, and 14, respectively

ROYAL GEOGRAPHICAL SOCIETY.—At the meeting on Monday next, at the Royal Institution, Albemarle-street, the following papers will be read: 1. The Ascent of the Upper Nile, by Mr. Brun Rollett, of Savoisina; communicated by the Chevalier Negri, Sardinian Consul, at Trieste. 2. Project across Africa by a Moorish caravan from Zanzibar to Angola, with remarks on the same by Mr W. D Cooley. And 3. An Account of two Expeditions made into Central Africa by the Furanys, communicated by Dr. Barth through Dr. Beke.

PROPOSED BATHS AND WASH-HOUSES FOR ISLINGTON.—A poll has been taken in the parish of St. Mary, Islington, on a proposal made in the vestry for adopting the Baths and Wash-houses Acts in the parish. At the close of the poll, last evening, the numbers were—for the motion, 664; against it, 493. As the act requires a majority of two to one, in order to give effect to its provisions, the motion is lost.

PRIZES FOR WORKING MEN.—The rector of Whitechapel, in the name of himself and a committee of influential parishioners, has offered prizes of seven, five, and three guineas respectively, for essays on working men, upon the following subjects:—What are the chief obstacles to the improvement of the labouring classes in their houses, their habits, and their health, and what are the best practical means of removing them? The essays, which are to be as short as possible consistent with clearness, are to be sent in to the rector before the end of March.

NEW WATER ACT AND THE METROPOLIS.—A portion of the new act to make better provision respecting the supply of water to the metropolis (13 and 16 Vic., cap 64) will shortly take effect. By the 19th section, all water companies, on or before the 31st January in each year, are to prepare and transmit an abstract of the year's receipts and expenditure, to the Town Clerk of London and to the vestry clerk of each parish supplied with water, not within the city of London, under a penalty of £20 for each default; and the copy of the account so sent is to be open to inspection of all persons, at all reasonable hours, on payment of one shilling of each inspection Another part of the act will come into force in a few months. Within a year of its passing (the 1st July) a map of the underground works of the companies is to be made and kept at the principal office of each company, and open to inspection to all persons interested in the same within a particular district, who may take copies or extracts from the one

AUSTRALASIAN PACIFIC MAIL STEAM-PACKET COMPANY.—[illegible] the Australasian Pacific Mail Steam-Packet Company, proposed vessels are now [illegible] and the first of the [illegible] will be despatched hence on the 1st of March next. It is expected that the passage to Port Phillip will be performed in 70 days, and to Sydney in 75 days. The vessels are to be of 1,000 tons burthen, and are to be fitted with engines of 200 horse-power each. Five steamers had originally been proposed to be built for the service of iron, and the contract was entered into with Messrs. Mare and Co., of Blackwall, to construct the first vessel, but it is intended to commence the operations with wood, and to have the remainder constructed of iron by degrees, and to follow in monthly succession. The report was adopted, and some formal business transacted.

LONDON JOINT-STOCK BANK.—On Thursday the half-yearly meeting of this company was held in the banking house Mr. Hankey, jun., in the chair, when a report was presented, showing the net profits for the six months including £10,132 1s. 4d. brought forward from the previous account, to be £20,066 2s. 4d., which would enable the directors to declare a dividend at the rate of six per cent per annum, with a bonus of one per cent, both free of income-tax, and to add £1066 2s. 4d. to the reserve fund, which would thus amount to £146,813 8s. 2d. The report was adopted, and the usual formal business transacted.

PHOTOGRAPHIC SOCIETY. On Thursday, a meeting was held at the Society of Arts, John-street, Adelphi Sir Charles Eastlake, President of the Royal Academy, in the chair—at which it was resolved to establish a Photographic Society, with a view of improving and extending a knowledge of the art. Sir Charles Eastlake was elected president, and the subscription fixed at £2 2s. a year.

LORD ELDON.—A commission *de lunatico inquirendo*, touching the state of mind of the Earl of Eldon, has been held at Shirley-park, Croydon, Lord-ship's residence, by Mr. Commissioner Winslow and a jury of seventeen gentlemen. From the evidence it appeared that up to June, 1851, Lord Eldon had performed all the duties of his station in the most satisfactory manner; but in that year, it is thought from close study, his health gave way; on the 6th of June, 1851, it became necessary to call in Dr. Sutherland, and from that time Lord Eldon has been incapable of managing his own affairs. The death of Lady Eldon, in November last, rendered the present inquiry imperative, as up to the time of her death she had managed the property of her husband, and had also managed him with great affection and tact. It

THE TURON GOLD DIGGINGS.

COMMISSIONER ISSUING LICENSES TO DIG FOR GOLD, TURON RIVER.

THE GOLD FIELDS OF AUSTRALIA.

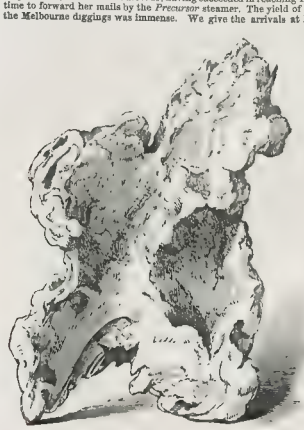
THE Overland Mail has brought remarkably late dates from the Australian colonies: the *Formosa* steamer, which left Sydney Nov. 9, Port Phillip Nov. 16, and Adelaide Nov. 19, having succeeded in reaching India in time to forward her mails by the *Precursor* steamer. The yield of gold at the Melbourne diggings was immense. We give the arrivals at Melbourne during the first days in November in order that the relative productiveness of the Victoria gold fields may be seen

Nov. 6. Bendigo and Forest Creek (V. Co.), 56,247 ounces; Nov. 8. Ovens (Gov.), 2463 ounces. Nov. 10. Ovens (V. Co.), 717 ounces; Nov. 10. Ballarat (Gov.), 18,075 ounces. Nov. 11 Mount Alexander (Gov.), 21,000 ounces; total, 98,502 ounces. The exports of the previous week reached the enormous quantity of 162,501 ounces, of which the *Roxburgh Castle* had already shipped 162,501 ounces. It was expected she would take in 50,000 ounces more so that the *Sandwich Castle* will bring home the largest cargo of gold yet shipped from Victoria

The *Great Britain* steamer reached Port Phillip on the 12th of November. The last part of her passage was performed with great speed: out of the large number of passengers only one died on the passage

While the average yield from the Victoria mines is steadily upheld at £400,000 per week, the produce from those of New South Wales has experienced a considerable augmentation. The yield of gold in the diggings, both of Victoria and New South Wales, is indeed immense. Five new gold fields have been discovered in the two colonies, and the intelligence had been received from New Zealand of extensive gold discoveries in that province. At the first of the newly-discovered localities, we hear that Boro and the country all around Goulburn is highly auriferous. The next new field is Cunawang, where copper and lead mines had already been discovered at an earlier period. The country about Lake George contains gold, and the summer will reveal extensive and rich alluvial diggings in that locality. The Tuena gold field has advanced to the rank of "diggings" in the interval between this and the last mail. The number of the diggers are stated to be daily augmenting, and abundant yields and fresh claims are mentioned. The daily gains of the diggers vary from a quarter of an ounce upwards to half an ounce and one or two ounces. The largest yield which has as yet been obtained at Tuena amounted to 24 ounces, which a party of three cleared in one day. The diggers are as yet few in number, and the yields, as is usual in such cases, are comparatively small. It is expected that a larger mining population will place Tuena on a level with the richest and most renowned gold fields of New South Wales. "The more new comers," says a correspondent of the *Goulburn Herald*, "the better, as then our mines will have a fair chance of being properly tried. There is room for thousands, and all the necessaries of life are at a very low rate; a man may live for 10s. a-week."

The Ovens is another of the new diggings which have sprung up in the interval between this and the last mail. Several thousand miners are at work in that locality. Parties are mentioned, who in three weeks obtained 433 ounces, and others have cleared from £100 to £200 each in a few weeks. Gold has been found in a variety of places round the Ovens; and it is confidently asserted that the whole district is highly auriferous.



THE VICTORIA NUGGET OF GOLD (WEIGHT, 328 OZ.), PRESENTED TO HER MAJESTY.

The old fields, that is to say the fields which were quoted in former reports, still maintain their distinguished position. The Turon is yielding largely

THE TURON GOLD FIELDS.

In the next page will be found intelligence of the immense productiveness of the Australian gold fields, and the almost fabulous gains acquired by some of the diggers. We append in this place a short description of the Illustrations which we are this week enabled to publish of scenes and incidents at the gold diggings.

GOLD-BUYER'S HUT, TURON RIVER.

ISSUING LICENSES.—RECEIVING GOLD FOR ESCORT.

Every miner on the Turon is subject to a tax of 30s. per month for the license to search for gold, which license secures to him three yards of river frontage. However far away he is working, he must, on one of the first three days of every month, go to the Commissioner's tent, to take out that license, for which he pays either money or gold. This tax falls particularly heavily on the employer of labourers, who, having paid for the requisite number of licenses, which entitle him to a claim, is again obliged to pay 30s. per month for every man he employs to work that claim. Public meetings were held on the subject, and the Legislative

CORPORAL GEORGE SUTTOR.

Council was petitioned, but without avail. The Commissioner's tent presents an animated scene every Monday, when it is thronged by those who wish to transmit their gold to Sydney or Bathurst by the Government escort, which leaves Sofala every Tuesday morning, and arrives at Sydney the following Thursday. The charge for conveying the gold to Sydney is 8d. per ounce, and the Government is not responsible for loss. As each man delivers his gold, it is weighed by the clerk, who gives a receipt for it. Whoever brings that receipt to the Treasury at Sydney, receives the gold.

ASSISTANT-COMMISSIONER RECEIVING GOLD FOR ESCORT

GOLD-BUYER'S TENT.

Gold is universally bought by all storekeepers on the Turon; and many persons are likewise employed by the Sydney merchants solely for that purpose. Usually the scales and weights are correct, and the buying and selling is carried on equitably on both sides. Constantly exposed to trickery and depredation, the gold-buyer should be a man of

THE TURON GOLD DIGGINGS.

firmness and well versed in "colonial experience." The money and gold is deposited in an iron safe, which is either sunk in the ground or attached by chains to the uprights of the tent or hut.

GEORGE SUTTON.

The most prominent amongst the mounted police at these gold fields is Corporal George Sutton, a very fine specimen of the civilized aboriginal Australian. A good horseman, he does more with his little red waddy in dispersing a crowd than three of his British comrades. He is also very useful in Bush expeditions, and possesses all the native instinct and thorough Bush knowledge in an eminent degree.

SOFALA.

Upon a flat nearly opposite the rich diggings of Golden Point is the town of Sofala; in front the Turon winds gently along, and the huge hill of Wysgden, where a new gold field has been discovered, lies between it and Bathurst. The rise of this township was fairy-like; when the writer of this first passed through Sofala the post-office and a store stood alone upon the flat. After a few weeks' absence down the river he returned: the town was formed—streets and lanes of tents and bark huts, a circus, a theatre of Ethiopian serenaders, a Royal hotel, blacksmiths' forges, stores, stables, and auctions, with here and there an aboriginal native strolling listlessly about, or going back into the Bush to cut bark for his promised tobacco or rum

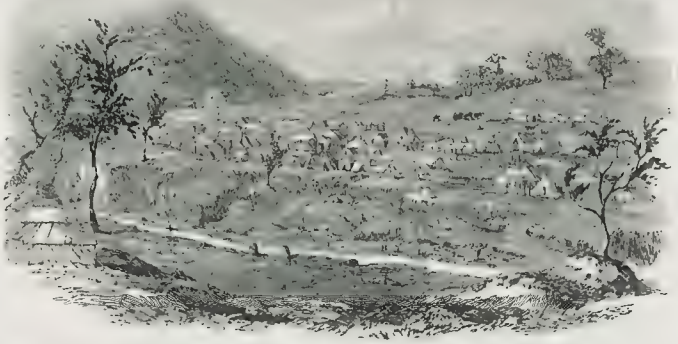
OAKEY CREEK.

The vicinity of the junction of Oakey Creek with the Turon has proved the most prolific spot yet worked on that river. Nearly opposite lies Monday Point, where Messrs. Hume sold their claim of thirty feet frontage for £700. And close again is Ration-hill, for a small extent of surface diggings there Mr. Thomas Campbell paid to two boys the enormous sum of £900. Oakey Creek derives its name from the extreme quantity of the beautiful swamp oaks which fringed its banks with their dark feathery branches. Now, alas! they are sawn down into sleepers, or hewn into pick handles

Can we place any thing of more absorbing interest before our readers than the following extracts from our file of Australian papers, relative to gold fields distant very many miles from each other?

An experienced man writing from Mount Alexander, on the 17th instant, says.

Some of the gold finds around this creek have been numerous and heavy. On Tuesday last, one man picked out a noble solid piece, about nine pounds of pure gold, besides a great quantity of smaller nuggets around it—in all worth £900 or £1000—at one swoop. Another party on coming down to the pipeclay, found between nine and ten pounds of gold, resting on the rock. Many men with their families have evidently come up here now to settle permanently, for to exhaust the gold at the Mount will take many years yet—1880 won't see it out.



SOFALA, TURON RIVER.—GENERAL VIEW.

JUNCTION OF THE OAKEY CREEK WITH THE TURON RIVER.

Another, dating his letter from Eureka, near the first Ballarat gold field, writes:—

During last week a party at Little Bendigo obtained, in a day, two hundred and eight ounces, which every day since has increased as the party gets further into the dip of the rock. This party certainly deserves success, for they sunk the hole where no other party was sinking, and having been some months unfortunate, were determined in the event of that hole proving a failure, to bid farewell to the diggings. A great many instances of equally good luck are daily coming to my knowledge. Everything is now wearing a brighter aspect. It may be safely asserted that Eureka, if not now, will soon become the "El Dorado" of Victoria.

A gentleman at Daisy-hill, at the Pyrenees, thirty or forty miles further west, says:—

On the 10th of September, since my last communication, the Daisy-hill Diggings have advanced in public favour. The surface soil is universally auriferous, and in spots extremely rich, a party having in one afternoon procured forty-two ounces of gold. I believe I am correct in stating the average return from the surface washing at one ounce per day per man. A nugget weighing thirteen ounces was picked up on the surface on Saturday last.

And a letter dated at Reid's Creek, at the Owen's River, quite in another direction, being 180 miles north-east of Melbourne, contains the following passage:

A person on the ground reports that a party of four got seventeen and a half ounces of gold in one day, and that he and his companions were making an average of eight ounces daily between them. The worst success ascertained was two ounces and upwards per man per day. This individual observes that he never saw at either the Mount Alexander or the Turon diggings the gold run so regular, and that where the diggers are now at work there is room for 4000 or 5000 people. The nuggets they have been picking up weigh, in many instances, from a quarter to half an ounce. There are now about one hundred people on the ground. The distance of these diggings from Melbourne is 180 miles on the Sydney road, and fifteen miles from the township of Wangaratta

A pound of gold a day at Wattle-tree Flat is no uncommon thing (says a correspondent of the *Melbourne Herald*).

Silver Wattle-tree Flat has turned out enormously rich; one Adelaide party took out in one fortnight 44 lb. of gold, and began a new hole and got down on the rock to-day, and had 4 oz. to begin with. Another man, named Nicholson, from Adelaide, came up to Golden Point, Upper Forest Creek, in the early part of the year, and collected in a short time 45 oz.; he then returned to Adelaide. He came back again last month, dug a hole in the Silver Wattle Flat, and in a few days took out 29 lb. of gold, and he has gone down to town again

A man at Bendigo found in a deserted hole 52 lb. of gold in one week Never was such a lottery! Between Little Bendigo and Aberdeen's stores on Forest Creek, three plain working men have realised between them during three months about £7000! The poor fellows seem actually puzzled as to what to do with their accumulated hoard of wealth. The same correspondent in the creeks and tributaries of Mount Alexander says

The gold, whether in small or large nuggets, lies under the soil around us most y in "pockets;" hence the strange occurrence frequently, when two contiguous parties dig close to each other, that one may find a very handsome "pocket" of gold, and the next party may not realize a single dwt. Many may dig down to the very rock, then "drive" several feet, and then leave off without finding a spec, while, perhaps, one more foot might exhibit to their wondering gaze a glorious heap or pocket of nuggets One such instance I will give. A digger had tried ten holes to no purpose; in the last he tried he went down 21 feet through a very hard substance without success. Disgusted, as he termed it, with his bad luck he struck work and left the place. By-and-by a set of new comers, by chance, tried his deserted pit, and in 18 inches more further down came upon a heap of gold weighing just 18 lb. On the original owner hearing of their success he was like to lose his senses with vexation; however, fate at last proved propitious, and he is now enjoying his good fortune elsewhere.

Boys and girls can help at surface washing—

Along the banks of Forest Creek itself are thronged crowds of men and boys, and even women and girls, busy with tin dishes and cradles, re-washing the soil brought down by the late heavy rains, most of them making from half an ounce to two and three ounces a day.

The correspondent of the *Melbourne Herald* says, in conclusion:

As an old hand at the diggings, let me strongly recommend all new comers *never to despair*, or feel disappointed at a run of bad luck, on their first operations; for the chances are ten to one that, by due patience and perseverance, they will gain a prize—a true digger's pocket

Wages, though still high at Sydney, have considerably fallen, in consequence of the large number of fresh arrivals in the colony. Wages throughout the gold colonies, indeed, are less exorbitant, and labour of all kinds is more freely offered.

The following extracts from a letter, written by a young man in Australia to his friends in England, will be found to contain a graphic account of the way of life of the gold diggers, and the hardships which await the emigrant to the gold fields

Golden Point, Forest Creek, Victoria, June 1, 1853.

I wrote to you from Adelaide, just before starting on the overland journey to the Mount Alexander diggings. We were just four weeks and three days on the way. The weather, which was terrifically hot, continued so until the last three weeks, when the rainy weather set in suddenly, which caused great numbers to flock back to Melbourne, Adelaide, and other places. Rheumatism is beginning to be very prevalent, owing to the violent exercise taken during the day, and the intense cold of the nights and mornings; and canvas tents are not the most comfortable habitations in such weather. Dysentery, too, is exceedingly common all over the diggings, from the impurity of the water one is obliged to drink; but since the rain has visited us we have nothing to complain of on that score, for nearly all the holes are full of water. There has been but little rain in the country generally, since last August

Since my arrival here I have been ill for a fortnight: it is the only indisposition I have had since I left England. There have been a great

PART OF THE TOWNSHIP OF SOFALA, TURON RIVER

many deaths at the "diggings;" and the Commissioner (Mr. Wright) has just had a cemetery fenced round, about half a mile from head-quarters. When we left Adelaide there was nothing at all doing there; every one was leaving, or had left, for the "diggings," and it was like a deserted city.

Labourers and mechanics, for some months before the "diggings" turned up, were wandering up and down the streets in search of employment, but could get none, although hundreds of them would have worked for their rations only. Almost all the principal merchants and men of the town failed owing to the difficulty of getting in money from the country. E. N. Hawker, for example, is one of the wealthiest men in Adelaide, and has always had numerous flocks and herds, and much land, but was in the way of turning his capital into cash, except at a ruinous loss, and therefore, excepting the land of which he was possessed, became a bankrupt. Mr. Hawker received notice of dismissal. In fact, by all accounts, Adelaide was then much in the same state as it was about the years 1844 and 1845, just before the Burra and other copper-mines were discovered, which set it on its legs again. The Legislative Council lasted but a very short time; four of its members I have met with at the diggings.

All labour is by daylight or very soon after. One of each party stays at home to mind the tent and do the cooking. The rest are off directly it is decided as to whether they may happen to be working—sometimes four or five miles away from it, as well as a great way up the "diggings" is from three to four hundred per cent, dearer than in England. The tea and sugar are frequently damaged, in fact, damaged goods and the worst of everything are sent here for sale. Besides this, although there are, of course, many honest men among the thousands who are here, the whole place is overrun with convicts Vandemonians, and the scum of all parts of the world, and murder and robberies are very frequent occurrences. I saw one man shot in the head, but, rather than lose the hole he had taken a small bag of washing-stuff. This occurred before many persons. Indeed a man's life is thought very little of here.

A most extraordinary sight can perhaps hardly be seen than that on Forest Creek, Forest, and Back Creeks, and on the Government gutta and gullies also at Bendigo. One might walk twenty miles a day, for weeks, and see holes varying from ten to forty feet in depth by eight feet square (those being the limits allowed by the license), and generally about eight inches wide apart, most of them undermined for some distance at the bottom. In some parts of the creek the diggings extend in this manner a quarter of a mile in width and many miles in length. This part of the country was quite uninhabited until the last seven or eight months, except by a very few of the aborigines. It shows one plainly what men will go through for gold, when working for their own gain entirely, instead of for masters. It would have been years before the face of the earth could have been so worked and turned up by the same number of hired men. But all this has been described by a few months. The quantity of gold sent by the escorts to Melbourne and Adelaide is very large, but when you consider the thousands working from daylight till dark, and that out of a hundred successful hands there are more than ten times that number barely living, you will see it is all a lottery. Take the case of one man for instance, who found nothing one day: he got ninety-eight pounds weight of gold from a hole in less than two weeks. Many others, who sank close by him, got hardly anything—some not more than one or two pounds—after a great depth through hard stuff, taking nearly two weeks to get to the rock or bottom where the gold is found.

Our parts think of moving off to the Bendigo next week, to try our luck there. I propose to proceed to Melbourne, which place I have not yet seen, and from thence, by water, to Adelaide. £2 15s. per oz. is now the price given for gold at Melbourne.

We have been favoured with the following interesting extracts from the letter of a gentleman in Van Diemen's Land

HOBART TOWN, VAN DIEMEN'S LAND, Sept. 1, 1852.

In this colony there has been, within a few months, an enormous increase in the cost of all the necessaries of life, many of which have advanced at least 200 per cent. To give you some idea of the state of affairs here, the following list shows the difference between the prices of certain articles when we arrived two years ago, and at present:—

		1850.			1852.	
		£ s. d.			£ s. d.	
Meat per lb.	..	..	0 0 3	..	0 1 0	
Bread per lb.	..	..	0 0 1½	..	0 0 3½	
Butter per lb.	..	..	0 1 2	..	0 3 0	
Coals and wood	..	..	0 15 0	..	1 15 0	
Servant's wages per annum			15	..	25 0 0	
Boots, shoes, washing &c., advance 100 per cent.						
House rent advance 50 per cent.						

Gold is here the all-absorbing talk: people seen really to have no thought for any other subject. The yield at the gold fields is enormous: the quantities brought into Melbourne alone by the escorts now average at least £2,000,000 sterling per month! It is the poor hardworking man, who has been used to labour and enjoy only the coarse of comforts, [illegible] And oh, the tables are turned," and the labourer and mechanic is rapidly becoming the "gentleman of wealth," while the latter is with much reason into indignation and ruin from the total want of labour.

[illegible] myself in not being involved in any farming establishment at these [illegible] Under existing circumstances everything would have been [illegible] fitted to the diggings. Large and valuable properties are thrown out of cultivation; and many hundreds of thousands of sheep will be left unshorn for this season at least. Shopkeepers of every description, and [illegible] are rushing rapid fortunes. [illegible] digger is perfectly reckless of money, and pays no less than a sovereign to ask for anything that the successful digger fancies, for either himself or his wife. Ladies and gentlemen can scarcely get common civility in the shops. Drunkenness and debauchery prevail to a fearful extent, and the streets are now scarce y passable for a respectable female.

The colony of Adelaide, like this, has suffered seriously by the gold discoveries; all the labourers have left. Here we are doing a fair business, though we pay high even for these, for example, the class of servants we paid £12 a year for when we arrived in 1850, are now £25 a year

We find the following advertisement in the *Portland Herald* (South Australia). The writer does not appear to be a member of the Society of Friends but the plain sentiments he displays are not unworthy the most [illegible]

[illegible] Life, that they may have part in the tender mercies of their Gracious Preserver.

A SCHURMAN.

March 31, 1852.

FEMALE EMIGRATION.—Mr. Lindsay, the well-known shipowner, has just announced his intention of starting his monster Australian emigrant ship, the *Caroline Chisholm*, from Southampton. This ship will convey 600 females (each of good character) to Australia, and the young woman [illegible] will be sent out to Australia with the young women

ARRIVAL AT MELBOURNE.—The *Marlborough*, 1600 tons, one of Smith's fleet of teak-built Indiamen, arrived at Melbourne on the 4th of November, after a passage of 78 days from the Lizard. She took out 325 passengers, the whole of whom arrived in perfect health and in high spirits.

JAMAICA.—Private letters from Jamaica give encouraging accounts of the prospects of copper-mining in that island. It is stated that copper will yet make Jamaica more wealthy than ever she was in her palmy sugar days."

ST. GEORGE'S HALL, LIVERPOOL.—The interior of St. George's Hall is at present being thoroughly renovated. It is intended to line the side wall s, as high as the galleries, with a polished rose granite dado (which is now fixed), and above to be enriched with polished marbles in colours. The balustrades will probably be of black marble. The six [illegible] opening into the hall will be in bronze, the panels open work, with plate-glass introduced between the inner and outer doors. [illegible] will be filled in with [illegible] and [illegible] The [illegible] will be [illegible] and [illegible] The [illegible] will be [illegible] The [illegible] will be [illegible] The [illegible] will be

MUSIC.

NOTES OF THE WEEK.

In the place of event, rumour has been very busy this week, as to the revolutions now in progress in some of our principal musical institutions. Thus, it is asserted that it is doubtful whether Costa will resume his post as Conductor of the Philharmonic Society, owing to a misunderstanding with one of the present directors, a distinguished English composer. Then, as regards the new Philharmonic Society, it is given out that there are to be three conductors for six concerts; and among the names were those of Spohr and Lindpaintner—the former having obtained permission of his sovereign to visit once more this country. Lindpaintner, the worthy Kapellmeister of Stuttgardt, is a respectable composer and a steady conductor; but the presence here of a third or first-rate German professor, is not calculated to impart much liveliness to the new Philharmonic schemes, especially when it is known that Benedict, Mellon, Sainton, Hallé, Regondi, Harper, Horsley, Henry Smart, and Macfarren, are all his superiors, and are now in London. In the meanwhile, the question is asked again and again, in the places where musicians and amateurs meet to congregate, how is it, that Berlioz, who, as a composer and conductor, achieved such wondrous triumphs last season; and who, in Weimar, recently created such an immense sensation, in the land of musical congress, by the operatic as well as symphonic productions, has not been re-engaged?—The post on of the two Italian Opera houses is at present enveloped in a cloud of diplomatic mystery. Report says that Bunn will be Lord of the theatre open; but report is very contradictory as to whether it will be the Lyric market establishment or the Covent-garden one. What is certain is, that sum gumption has been, or is, under negotiation; and what is probable is, that Mr. Frederick Gye will ren ain the lessee of one or both Opera houses. A few days must decide, as the prospectuses, angular or plural, ought to be promulgated early next month.—A letter from St. Petersburgh announces that the Russian autocrat not in despair at a serious accident which has happened to Mario. The great tenor was playing *Russel*, in the "Huguenots" to Madori's *Valentina*, when in leaping through a window, from which he was to see the St. Bartholomew massacre, he missed his footing, he fell and sprained his foot dreadfully. Various remedies had been applied, but when the letters left he was still suffering severely, and was, of course, unable to appear on the stage fortunately. Tamberlik is still in the company.—It is rather curious that whilst Verdi's "Luisa Miller" has not been a financial success at the Italian Opera in Paris, the French version is in active preparation at the Imperial Opera. After a sharp war with the managers and the press, the company of Parisian 'Chequers" is again in full operation.—The Emperor of France is distributing the crosses of the Legion of Honour in profusion amongst the musicians, whilst the King of Prussia is not less liberal in the award of orders and distinctions to *artistes*. From the Prussian capital we learn the arrival of Viardot on her way to St. Petersburgh, to appear as *Fides* in the "Prophète." From Vienna has arrived the news of the death of Madame Weiss, who died the forty-seventh night a famous dancers who attracted so much attent on at Her Majesty's Theatre some seasons since.—Carotta Grisi and Certto are engaged at the Italian Opera-house in Vienna; and the long-vexed question of *Saffo* has been settled with Mr. Gye for the Royal Italian Opera.—A letter from Mdlle. Wagner is in town, stating that she will not come to London this season, fearing a renewal of the terrors of the Channel and his music is not a German papist has stated that her place of imprisonment for life, if she had sung a note in London last year, in public or private, would have been the Tower!!—A paragraph has lately appeared in the columns of some of our contemporaries, to the effect that an edition had just been made to the library of the British Museum of a special Music Catalogue, in fifty-seven folio, as of this great labour had been recently published. This is a mistake; the catalogue is the work of T. Oliphant, Esq., the hon. secretary of the Madrigal Society, who left it quite finished two years and a half since, and for whose publication he has since been in the library within six months of that time. Mr. Oliphant worked assiduously for ten years at the British Museum.—The marvellous popularity of Madame Lavenu has been proved by her visits to Cheltenham, Sheffield, and Brighton, within the last fortnight. She sang at concerts in these three towns with marked success. On the 31st she will commence her engagement with Mr. Beale, for a tour in the provinces, the celebrated pianiste, Madame Pleyel, being also secured for a month's series of concerts, Dublin being included in the list. Madame Florentini will also sing, on Monday, at Mr. Allcroft's annual concert at Exeter-hall, for which, as usual, a monster programme has been provided, including all the available artist, native and foreign, now in London.—On Tuesday last the "Harp Union" had another delightful *matinée* at Erard's Rooms, in Great Marlborough-str. t; the programme included Herz and Bochsa's duo, for two harps, in Rossini's "Donna del Lago," played by Mr. T. H. Wright and Mr. H. J. Trust; Oberthür's "Nocturn," for three harps, executed by Messrs. Trust, Wright, and Boleyn Reeves; Dussek's "Duo Concertante," in B flat, performed by Messrs. Wright and B. Reeves; and a duo in Rossini's "Mosè," by Messrs. B Reeves and Wright. There will be another meeting on the 31st ultimo.—We subjoin a letter from an English amateur in Italy, dated Milan, the 6th instant:—"An opera, by Mazzucato, entitled 'Luigi V.,' which was first produced at Parma a few months since, and there met with very brilliant success, and in consequence of which, the composer was created a chevalier by the Grand Duke, has been recently brought out at La Scala, at Milan, on the commencement of the present Carnival. It reserves from the German school more than the Italian, which is likely to make it a greater favourite in England than in Italy, where the gymnastics of admiration for the Verdi style of composition still continues, to the exclusion of nearly all other works of celebrated composers, and thus holds music, as it were, in a state of bondage. In the 'Luigi V.,' Cazzaniga, and Brambella (both it is to be observed, pupils of Mazzucato), sustain the principal female parts, supported by the Chaberti and the tenor Negrini. The primadonna Cazzaniga (sister to Signora Malaspina) is undoubtedly the most interesting and beautiful female singer at present in Italy, and will shortly be heard in London, being engaged for the Royal Italian Opera for the ensuing season. The leader of the instrumental portion of the new opera are of the very highest order; and among the beauties of the vocal parts are a charming duet for the soprano and the contralto, 'Le vidi-ah chi non piana,' in the first act; a very fine quintet and grand chorus in the second act; and two arias for the tenor—one in the second, and another in the third act. Notwithstanding, however, its undoubted merits, and the fureore which it created at Parma, it has been but coldly received at La Scala (although it still annoys its enemies), arising from prejudices entertained by the Milanese against the composer, in consequence of his having married into a family against whom they entertain an inveterate dislike, from the arbitrary conduct of one of its members during the late revolutions. However, nearly all the English singers and the pupils who go to Milan, endeavour to procure Mazzucato for their master, and invariably speak highly, not only of his great professional ability but also of his amiability and modesty."—We regret to announce the death of Harper, the celebrated trumpet player. He attended rehearsal at Jullien's, of the Thursday's concert of the Harmonic Union, was taken ill, removed to Mr. Surman's house in Exeter-hall, and died a few hours after the attack. The cause of death is not known. He was born in 1786, at Worcester.

NATIONAL SPORTS.

The steeple-chase calendar, which is beginning to look "like business," contains three fixtures for next week, viz.: Newton on Monday, Londesborough on Thursday, and Oundle on Friday: they do not excite any particular interest. The coursing appointments are numerous, commencing on the fourth Tuesday, viz., the An ebble (Middlesex), Southminster, Spiddal and Southern (Cork). Lee-Bridge takes place on Wednesday, and Haverah-park and Greta-bridge on Thursday.

TATTERSALL'S.

MONDAY.—A great number of horses were backed for the Chester Cup, but only three to any amount, viz., Lady Evelyn, Constantine, and Scarcrow, who are thought to be very well in. The following were the averages:—

SPRING STEEPLE-CHASE.	
3 to 1 agst Cardinal gelding	4 to 1 agst The Screw
LIVERPOOL STEEPLE-CHASE.	
11 to 1 agst Oscar (t)	25 to 1 agst Half-and-Half
100 to 6 — Sir F. Laurie (t)	25 to 1 — Kt. of Gwynne (t)
METROPOLITAN HANDICAP	
25 to 1 agst Sir Peter Pennell (t)	30 to 1 agst Snowden Dun-
25 to 1 — Gingerbeer (t)	30 to 1 — Pudley (t)
CHESTER CUP.	
20 to 1 agst Lady Evelyn	50 to 1 agst The Butcher
40 to 1 — Constantine	100 to 1 — Sheephook (late G)
40 to 1 — Scarcrow	100 to 1 — Bunbow (t)
50 to 1 — Indian Warrior	100 to 1 — Avonmouth (t)
50 to 1 — Sandal	100 to 1 — Thrift (late Sandiacre)
50 to 1 — Four-and-Coal	100 to 1 — Mentague (t)
50 to 1 — Black Doctor	100 to 1 — Bardie (t)
	100 to 1 agst Provocation (t)
DERBY.	
12 to 1 agst West Australian	25 to 1 agst Cleddau (t)
15 to 1 — Pharos (t)	60 to 1 — Orlando (t)

PLYMOUTH GARRISON.—It is understood that Major-General Sir John Holt, K C B (through ill health), has resigned the office of Commander-in-Chief of the Western District, and that he will be succeeded by Sir Harry G. B. Smith, Bart., G.C.B., the Hero of Aliwal and Sobraon.

There are rumours that Exeter is to be made a garrison town, and that a competent force of infantry and artillery will be stationed there forthwith.

CHESS.

TO CORRESPONDENTS.

MILES.—The present state of the second contest between Horwitz and Williams, we believe to be—Horwitz 4, Williams 2 (draws) 1. Of the games, as far as we have seen of them, we can see nothing favourable for any one player or the other. It is to be hoped that Mr. Horwitz's gallant challenge to the winner, will lead to a series of games more worthy of being recorded.

BRITISH CHESS-CLUB.—We have to thank the Honorary Secretaries of the St. Albans, the Shrewsbury, the Preston, the Birmingham and the Birmingham and Edgbaston Chess Clubs, for the list of a number of their present clubs.

J. T. Taylor, &c.—Your "Ars Combinatoria in Chess," and, when thoroughly grasped in the rudiments, study to "Chess Eccentricities" are correct.

C. J. S., West Brunswick.—We are obliged by the games forwarded, and shall give them due attention.

L. B., Tiverton.—You must examine Problem No. 468 more attentively, and you will find it alike correct and ingenious.

CHESS, Cambridge.—See the notice in "D. W. H.," in our last Number.

——, Wakefield.—Your problems are both inadmissible.

C. P. Sanford is absent from the committing of Three Problems until he has acquired some further knowledge in the powers of the pieces.

E. H. of Newish.—The problem you refer to was probably printed incorrectly, as the solution in three moves is apparent at a glance.

SOLUTIONS OF PROBLEM No. 467, by Ernest, Hensel, J. M. of Sherburn, G. P., Mathew, D. C. L., Iota, H. L., Rev. F. M. S., M. P., F. R. S., are correct.

SOLUTIONS OF PROBLEM No. 468 by J. P. W. Ernest, P. A. of Norwich, J. P. of Richmond, H. F. N., H. X., D. D., Pillo-Chess, Alfa, Ardens, Southron, T. E. B. of Woodford, Beverus, E. P. H. of Basildon, W. B. of Leamington, are correct.

SOLUTIONS OF ENIGMA, by T. W. P., M. P. Benson, Alethes, Cambridge, Trueblue, Skier, Rob Roy, are correct. All others are wrong.

SOLUTION OF PROBLEM No. 467.

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to K R 2d (ch)	P to K Kt 6th (best)	3. Kt from K B 6th	Q takes Q (best)
2. Q to K R 6th	P to Q B 4th (best)	4. B to K 8th (ch)	R takes B

22. B to K 3rd	Kt to K B 3rd	57. P to Kt 6th	P to K 5th
23. Kt to Q R 4th	Kt to Q 2nd	58. P to Kt 6th	R takes P (ch)
24. R to K 3rd	Q R to K B sq	59. K takes R	P to R 6th
25. R to his 2nd	R to Kt 3rd	60. P to Q Kt 7th	P to R 7th
26. B to K Kt 4th	Q R to K sq	61. P to Q Kt 8th (Queens)	P to R 8th (Qua checkine)
27. B to K B 3rd	P to K R 4th	62. K to B 5th	Q to Q B 8th (ch) (m)
28. P to K R 4th	Q R to K B sq		
29. B to K 4th	P to K 4th	63. K to Kt 4th	Q to Kt 7th (ch)
30. P to K Kt 3rd	K R to K B 3rd	64. K to K 4th	Q to her R 6th (ch)
31. P to K B 3rd	Q R to K B 4th	65. K to Kt 7th	Q to her R 8th (ch)
32. Kt to K 4th	Q R to Q Kt sq		
33. Kt to Q B 3rd (c)	K R to K B 3rd	66. K to R sq	Q to K B 6th
34. B to K Kt 2nd	P to Q Kt 4th	67. Q to Kt 7th (ch)	K to Q 3rd
35. Kt to Q B 3rd (c)	Kt to K B 3rd	68. P to Q B 7th—wins.	
36. Kt to Q R 4th	Kt to K Kt 5th		

(a) It is very doubtful whether B ok could have preserved the doubled Pawn ultimately, but he might have maintained it for some time by playing Kt to K 2nd.

(b) If Q Q Kt 3rd, would certainly have been better.

(c) Black might have got a fine, but not lasting, attack, by advancing the Pawn to K 5th.

(d) We are at some loss to understand why Mr. L. did not take the Q B Pawn with his R instead.

(e) Had White played his Bishop to K R 3rd, as we think he ought to have done, Black would have moved P to Q B 5th, giving up the exchange.

(f) It is now clear, that he had taken the Pawn with his Bishop, Black would have gained a piece by playing R ok to K 4th.

(g) We should have preferred playing the Kt to K B 3rd; for, suppose—

WHITE.	BLACK.
41.	Kt to K B 3rd
42. K to Q 3rd	Kt takes R
43. It takes Kt	P to Q B 4th

with, we think, a winning game.

(h) Had he taken the offered Pawn, Black would have moved his Kt to K 4th.

(i) Kt to Q 4th (clearly) would, perhaps, have been better.

(k) He should rather have moved his Kt to Q 5th.

(l) The position now is one of exceeding interest and difficulty.

(m) That is a beautiful termination, but, after all, merely amused by this move. Mr. Brien should have stocked at K Kt 8th, and he must then have drawn the game.—ED.

WHITE.	BLACK.	WHITE.	BLACK.
62.	Q to K Kt 8th (ch)	65. K to Q 5th	Q to K B 6th (ch)
63. K to Q 8th	Q to K R 7th (ch)	66. K to Q B 5th	Q to K 6th (ch)
64. K to Q B 5th (best)	Q to K B 7th (ch)		

And White must either give up his Pawn or submit to a drawn game.

CHESS ENIGMA.

No. 730.—SCHACHZEITUNG.

White—K at Q Kt 2nd, Rs at K Kt 2nd and K 7th, Bs at K B 6th and K R sq, Kts at Q 7th and Q B 3rd, P at Q B 4th.

Black—K at Q 3rd, Q at Q B 5th, Bs at K R sq, and Q R 8th, B at Q Kt sq, Kt at K B 6th, P at Q Kt 2nd

White, playing first, gives mate in four moves.

THE DEPARTMENT OF PRACTICAL ART.—The TREASURY have, on the application of the secretary mentioned the delivery unopened at Marlborough house of casts and other fragile examples of ornamental art from the Continent, for the use of the schools under the superintendence of this department

ROYAL COLLEGE OF SURGEONS.—The following gentlemen have been admitted members of the College:—Messrs. A. S. Wood, London; R. Welch, Taunton; J. G. Paine, Brighton; W. Coulthard, Bornea; S. Tucker, Australia; F. Macdonald, Old Kent-road; S. J. Burrowes, London; and C. Vaudin, Jersey.

NAVAL AND MILITARY INTELLIGENCE.

LENGTHENING THE "MARLBOROUGH" (120 guns).—This highly useful and saving nautical operation has been performed in Portsmouth Dock-yard, by the master shipwright of that yard, who lengthened the *Windsor Castle* (now the *Duke of Wellington*) in the same way at Pembroke Dock-yard. The *Marlborough* will now be proceeded with as a screw three-decker, and will probably mount 140 guns.

PRESERVED MEATS.—A board of naval officers (Lieut. Pym, Master-Commander Allen, and Surgeon Edward d'Auvergne), have been engaged in inspecting the preserved meat sent into Deptford victualling-yard. This board was appointed for that purpose, as a large quantity of the provisions and preserved meats now in store will be supplied to the expedition about to be sent to the Arctic regions, and it will be gratifying to know that the preserved meats furnished to them will be in good condition and a'l of the very best quality

SHIP LAUNCH.—Her Majesty's screw steam-frigate *Tribune*, of thirty guns and 300-horse power, was launched last week at Sheerness. The following are the principal dimensions. Length between the perpendiculars, 192 feet; length of keel, for tonnage, 163 feet 5½ inches; breadth, extreme, 40 feet; breadth, for tonnage, 42 feet 6 inches; breadth, moulded, 41 feet 10 inches; depth in hold, 12 feet 11 inches; burden in tons, 1570 58-94.

ROYAL MARINES.—Her Majesty, by Order in Council, dated November 27, has been pleased to direct that 1300 men be added to the strength of the corps of Royal Marines. The re-distribution of the corps is as follows:—102 divisional companies; each will rem ain the same of 1 captain, 2 subalterns, 3 sergeants, 3 corporals, 3 drummers, and 89 privates; making a total of 105 in each company. And 10 Artillery companies; each company to consist of 1 captain, 4 subalterns, 8 sergeants, 7 corporals, 4 bombardiers, 3 drummers, and 146 gunners; making a total of 172 in each company. The above augmentation does not add a single officer of non-commissioned officer to the corps, as it is confined exclusively to the addition of 13 privates to each of the 102 companies at Chatham, to each of the 27 companies at Portsmouth, to each of the 25 companies at Plymouth, and to each of the 25 companies at Woolwich; and 17 gunners to each of the 10 artillery companies at Portsmouth.

ROYAL SAPPERS AND MINERS.—An augmentation of this highly useful corps will take place after the close of the financial year in April next, as it could be greatly increased without any additional expense for officers, as it has always been commanded by officers of the Royal Engineers. The Royal Sappers and Miners consists of 22 companies, consisting of 100 men in each, or a total of 2200, equal to the strength of two battalions of the Royal Artillery

SELLING OFF.—The General Commanding-in-Chief has refused to allow the Lieutenant-Colonelcy to go in the 85th Light Infantry. Two applicants in the regiment have also been refused permission to sell out. It seems that Lord Hardinge does not approve of officers selling out after ships have been taken to convey their regiment on foreign service. "Sell or exchange" was the imperative alternative of the Duke. "Sail" is the mandate of Lord Hardinge.—*United Service Gazette.*

RECRUITING.—Labour in the provinces being extremely dull, owing to the continuance of wet weather, scarcely a week has passed since the order for recruiting was issued from the Horse Guards, but above 100 recruits are sent up to London from the country districts. Recruits for the 2nd Light Dragoons (ordered home from India), must be of the same standard (5ft. 7in. to 5ft. 9in.) as those cavalry regiments on home services; whereas for those stationed in India and the Cape, they are taken at 5ft. 6in. The recruiting parties belonging to regiments in Australia find no difficulty in raising men to serve in those colonies. Several recruiting parties have been called in; but those for the Royal Artillery, cavalry regiments, and the Royal Marines are still actively engaged; these corps being more parties as to age, height, and character, their levies do not come in so briskly.

CREWS IN AUSTRALIA.—Mr. JAMES BAINES, of Liverpool, accompanied by Captain J. W. Forbes, of the ship, *Marco Polo*, and Captain Alexander Newland, had an interview with the Right Hon. T. Cardwell, at the Board of Trade, on the subject of shipping crews by the crews in Australia.

WE understand that the Government have lately been making inquiries at the various railways, for the purpose of ascertaining what number of carriages, waggons, and engines could be placed at their disposal, and what facilities could be afforded in the event of any sudden emergency—should the time unhappily arrive.

THE ARCTIC EXPEDITION.—At a lecture given at the Russell Institution, on Tuesday by Mr. Peter Lund Simmonds, it was stated that it was not intended to send a steamer out with Captain Trollope as a tender to the *Rattlesnake*, which is very much to be regretted, as it is exceedingly doubtful if the *Rattlesnake*, which is to winter in the Gulf of Boothia, will be able to reach Behring's Straits before the close of the open season.

BRITISH MUSEUM.—A deputation of the trustees, consisting of the Right Hon H. Goulburn, Lord Mahon, the Bishop of London, Sir Robert Inglis, Mr. Hallam, the Rev. H. H. Baber, Mr. Panizzi, and Mr. W. R. Hamilton, attended by Sir Henry Ellis, had an interview with the Earl of Aberdeen and the Chancellor of the Exchequer, at the official residence in Downing-street

THE GREAT METROPOLITAN POULTRY SHOW.

In our Journal of last week, we noticed this novel metropolitan Exhibition at the Baker-street Bazaar. We have engraved several objects of more than usual interest for the present number. The success of the Show was very great on Monday, when the charge for admission was 5s., there were some hundreds of visitors; and, on Wednesday, when the admission fee was 1s., there were upwards of 5000 visitors; and similar numbers on Thursday and Friday.

We subjoin a statement of the number of classes and pens exhibited, and it may be observed that each pen contained from two to four animals:—

Fowl.	Classes.	Pens.	Fowl.	Classes.	Pens.
Spanish	.. 8 ..	.. 36	Game	.. 8 ..	.. 48
Dorking	.. 7 ..	.. 70	Hamburg	.. 8 ..	.. 47
Cochin China ..	.. 7 ..	.. 249	Poland	.. 9 ..	.. 37
Malay	.. 5 ..	.. 10	Bantams	.. 3 ..	.. 13

There were also 45 pens of other breeds of fowls, 11 pens of geese, 33 pens of ducks, 10 pens of turkeys, 249 pens of pigeons, and 48 pens of rabbits.

At the sale by auction, by Mr. Strafford, on Thursday and Friday, the competition was very great, especially for the Cochin China classes. Few of the Spanish fowls were sold, owing to their high reserved prices.

The most important sales effected in the Cochin China classes were the following:—

Class 15, Cochin China (pairs only), first prize, pen 81, Mr. John Biddell, Guildford: this pair fetched the extraordinary price of £49 7s. Pen 82, Mr. Cooper, Guildford, second: sold for 10 guineas. In this class Nos. 83 and 84, belonging to Dr Gwynne, although not prized, sold, one pen for £7 10s., and the other for £8 10s; and pen 78, belonging to Mr. Smith, of the Old Jewry, was purchased for Mr. Majoribanks for £19 3s.

In Class 17, Cochin China (white), the first prize, pen 5, belonging to the Rev. Dr. Allen, Englefield-green, hatched only in June and July last, fetched £26 5s.

There were a number of pens sold at the auction by Mr. Strafford at extraordinary prices, which were not allowed to compete for prizes, being exhibited by members of the committee For instance No. 97, a single Cochin China pullet, silver cinnamon, bred from Mr. Gilbert's Queen, the reserve price for which was fixed at £5 5s., was sold for 18 guineas; No. 98, belonging to the same gentleman, "the Queen herself," a splendid buff hen, was sold for 18 guineas; No. 87, a cock and pullet, buff-coloured, from the stock of Mr Fairie, the hen breed by Upcher, sold for £11 5s.; No. 91, cock and pullet, buff, sold for £12; and No. 94, a buff pullet, bred from the same stock as the pair which fetched £40 7s., sold for £6 10s.

The Engraved Specimens are some of the Cochin Chinese and game fowl, and a few pigeons. The prices of the latter birds varied from 1os. to £5 per pair.

The black short-faced tumblers belonging to Mr Eaton were much admired; as were a pair of yellow short-faced tumblers, and a pair of flying beards.

CHINA FOWLS PRESENTED TO THE QUEEN.—By the last steamer from the United States, a cage of very choice domestic fowls, was brought to her Majesty Queen Victoria, a present from George P. Burnham, Esq., of Boston, Mass. The consignment contained nine beautiful birds—two males and seven pullets, bred from stock imported from Shanghai direct from the interior of China. The fowls are seven and eight months old, but are of mammoth proportions, and exquisite plumage—light silver, grey bodies, approaching white, delicately traced and pencilled with black upon the hackle and tail, wings and tail. The parent stock of these extraordinary fowls weigh at maturity upwards of twenty three pounds the pair; whil, their form, notwithstanding this great weight, is unexceptionable. They possess all the rotundity and beauty of the Dorking fowl, and, at the same age, nearly double the weight of the latter. They are denominated Grey Shanghais in contra distinction to the Red or Yellow Shanghaes, and are considered, in America, the finest of all the great Chinese varieties. That they are a distinct race, is evident from the accuracy with which they breed, and the very close and early date to which imported them, the whole of these birds being almost precisely alike, in form plumage, and general characteristics. They are said to be the most prolific of all the Chinese fowls. At the time of their shipment these birds weighed about twenty pounds the pair.

PRIZES FROM THE METROPOLITAN EXHIBITION OF POULTRY AND PIGEONS.

1. BLACK FANTAILS.—MR. C. C ADKINS, EDGBASTON

CLASS XXV., NO. 2.—MR. W. DEXTER, SECKINGTON.

CLASS XXII., NO. 7.—CAPTAIN W. HORNBY, NEAR PRESCOT.

GAME FOWL.—(SEE PRECEDING PAGE.)

NEW CHURCH AT KINGSWOOD, SURREY.

THE hamlet of Kingswood—annexed to the vicarage of Ewell, lying five miles from its parish church—has lately been provided with a church of its own, built entirely at the expense of Mr. Thomas Alcock, M.P., the owner of the manor, and adjoining his beautiful castellated residence of Kingswood Warren. The church, which is cruciform in plan, is a substantial building in the Early Decorated style, with a massive and lofty central tower There are no pews, the whole of the seats being open. The architect is Mr. Ferrey, of London. It has been five years building, the men upon it being employed at seasons when work was not to be obtained elsewhere.

The church was recently consecrated by the Bishop of Winchester. After the ceremony, a substantial dinner was served in one of Mr. Edgington's large tents, to which all Mr. Alcock's tenantry, labourers, and the inhabitants of the district were invited. About 400 partook of Mr. Alcock's hospitality, exclusive of a large party who dined at the hon. gentleman's residence.

The Bishop of Winchester occupied the chair; and at the conclusion of the dinner his Lordship rose, and thanked Mr. Alcock for the kind way in which he had assembled them together beneath that tent. It was a great privilege to meet not only the clergy and laity of the district, but so many of the poor inhabitants—a class whom it had been Mr. Alcock's greatest pleasure to have around him, and for whose wants, both spiritual and temporal, he was anxious to provide. They had that morning met together in God's house, and he rejoiced they had met together again at that hospitable board without reference to rank or station. There were times when it was pleasing to see neighbours rally round neighbours; and when the object in view was to promote the spiritual welfare of all, what could be more gratifying—what more delightful to contemplate? There was one circumstance in connection with the day's proceedings to him peculiarly gratifying. That was the second church he had been called on to consecrate in that neighbourhood, and both of them were built at the sole expense of the same individual; and in the whole of his experience there was no instance of similar liberality. And the churches erected by their respected host in that neighbourhood, where he could worship with them, were not the only instances of his liberality; for, in another parish with which he had become connected, he had given a sum equal to the amount of the whole property he possessed there, in providing for the spiritual necessities of the inhabitants. His conduct showed that he was anxious to promote the happiness of his neighbours, that he cared not only for their bodies, but also for their souls. He saw beside him an aged relative of Mr Alcock, who had been permitted to lay the last stone of that new building which had been consecrated to the worship of God—a circumstance that must have been so gratifying to his feelings that he might almost adopt the language of Simeon, "Now lettest thou thy servant depart in peace, for mine eyes have seen thy salvation."

This address was followed by the company drinking the healths of Mr. Alcock, the Bishop of Winchester, and Col. Alcock, sen., which terminated the interesting proceedings

NEW CHURCH AT KINGSWOOD.

LAUNCH OF THE PENINSULAR AND ORIENTAL COMPANY'S STEAM-SHIP THE "VECTIS."

ANOTHER splendid addition to the mercantile steam navy has been constructed by the Messrs. White, of Cowes, for the Peninsular and Oriental Company, and was launched on the 11th instant. The new vessel is named *Vectis* (Isle of Wight) is of 1000 tons burthen, and is destined for the new line of contract between Marseilles and Malta.

This is the first steam-packet, or vessel of any magnitude, constructed on Messrs. John and Robert White's "Improved diagonal principle;" being an improvement in ship-building, to the exclusion of frame timbers, &c., which, in the words of their circular, they have patented "as a practical method of building large vessels more than as a new scheme."

The requirements and reasonable demands of our great commercial steam-packet companies, and the mercantile marine generally, for an improved method of building wooden ships, so that they might be stronger, more buoyant, and carry a larger cargo in proportion to their tonnage, with equal or even greater speed -induced the Messrs. White to turn their attention to the subject; and having satisfied themselves by models and experiments, they undertook to build ships of any magnitude, with great speed and greater internal capacity, by a combination of planking, without the necessity of ribs or frame timbers. Among the advantages over the old system which Messrs. White's "Patent Improved Diagonal Principle" offers are—

1. The timbers or frame are dispensed with; consequently greater buoyancy and internal capacity are produced; and being able to have finer lines, greater speed must be the result.

2. Greater internal capacity for measurement goods, the sides being no thicker than an iron ship, with ribs and ceiling, and no drainage being required.

3. Greater durability; there being no vacant spaces, as between the timbers on the old method, which contain foul air generated from the bilge water, or collect dirt in the openings; and, above all, they may be made *fire-proof*, by having the "saturated planking" used internally. Added to these advantages, are greater strength in all directions safely in case of accidents; and freedom from rats and other vermin.

The *Vectis* measures 1000 tons, and is destined to have engines of 400-horse power, by Messrs. John Penn and Co. From the sharp construction of this vessel, she looks more like a "river boat" than one destined to be the carrier of our commerce. It may be urged on behalf of the "new principle," that it possesses the confidence of another of our leviathan companies; there being on the adjacent slip, in an advanced state, a steamer of twice her tonnage, namely, 2000 tons, to be called the *Solent*, and intended for one of the Royal West India Mail packets; and, in the course of last week, was laid the keel of another steamer, of 450 tons, for the Peninsular and Oriental Company, to be constructed on the same principle.

Everything being in readiness for the launch, Mr. Thomas White, in his eightieth year, advanced to the bows of the vessel, and with a dash of the bottle "broad on her bow," proclaimed aloud *Vectis* with "success to the first of the new school." In a moment afterwards the dogshores were knocked away, and the beautiful craft gradually and majestically glided into the water. She was immediately taken charge of by the Pilot and conducted to the Medina Dock, there to be finished. The launch, on Tuesday week, was witnessed by a great concourse of spectators.

LAUNCH OF THE PENINSULAR AND ORIENTAL COMPANY'S STEAM-SHIP "VECTIS," AT COWES.

STATUETTE OF THE MARQUIS OF DALHOUSIE, K.T.
BY E. W. WYON.

STATUETTE OF THE MARQUIS OF DALHOUSIE, K.T

IT will be remembered that during the sojourn of the Nepaulese Ambassador (Jung Bahadoor) in England, in 1850, his Excellency was most hospitably received by our leading nobility; and, with the view of perpetuating his grateful remembrance of such acts of friendship and kindness, Jung Bahadoor, upon his visit to Birmingham, commissioned Mr Collis (successor to Sir E. Thomason) to execute in metal a series of statuettes, of which that of the Marquis of Dalhousie, Governor-General of India, is one. The modeling of these statuettes has been confided to

Mr. Edward W. Wyon from whose model the accompanying Illustration has been drawn. He per[illegible] executed

It will be seen by the [illegible] that the Queen has

The Queen has been pleased to direct letters-patent to be passed under the Great Seal of the United Kingdom of Great Britain and Ireland, granting unto James Andrew, Marquis of Dalhousie, K.T., the office of Constable of Her Majesty's Castle of Dover; and also the office of Warden and Keeper of Her Majesty's Cinque Ports, and of the several Members within or appertaining to the Ports and their members, and likewise all writs of the same whatsoever.

An Illustration of Sandown Castle, one of the Cinque Port fortresses, will be found in an adjoining page.

LAW AND POLICE INTELLIGENCE.

QUEEN'S BENCH, THURSDAY.—ACHILLI *v.* NEWMAN.—This case was tried before Lord Campbell and a special jury at the sittings after Trinity term, when a verdict was given in favour of Dr. Achilli, and a rule *nisi* was afterwards obtained to show cause why there should not be a new trial, on the ground that the verdict was against evidence. Sir Frederick Thesiger on [illegible] to show cause, said he did not [illegible] a very long address. He was not sure [illegible] Mr. Serjeant Kelly. At the past [illegible] Lord Campbell said the Court would hear further arguments at ten o'clock [illegible]

In the Queen's Bench, on Wednesday, Constant Derra de Moderatville was associated at Birmingham with the Baroness von Rock) obtained a rule to a new trial against Messrs. Parsons [illegible] Peyton, and Pyland, who were resident at Gas [illegible] Birmingham, to recover from them compensation in damages for having falsely and maliciously, and without reasonable and probable cause, charged him with having, by false pretences, obtained a sum of money from one of the defendants. The cause was tried before Mr. Baron Alderson at the last summer assizes at Warwick and the plaintiff was nonsuited.

A case was brought before the Rolls Court, on Tuesday last, in which Mr. Hudson is said to be [illegible] North Midland Railway Company for the restitution of the value of a large number of shares in the East and West Riding and the Hull and Selby branches, amounting to upwards of £12,000, which, it was alleged, had been taken, appropriated, and disposed of by him, without the authority of the company, and in direct violation of a rule and resolution. The Solicitor-General (with Mr. R. Palmer and Mr. Hindmarch) appeared for the plaintiffs, and Sir Fitzroy Kelly appeared for Mr. Hudson. The case having been finished on Wednesday, the Master of the Rolls has promised to give judgment in the course of two or three days.

CORN TRADE FORGERIES.—The case of the great forgeries in the corn-trade by Robert Ferdinand Pries, was heard again at the Mans on-house, on Tuesday; additional facts were stated on other cases; and the prisoner was remanded till next Tuesday, when he will be brought to be fully committed. It appears that Pries is a native of Rostock, in Mecklenburg. Prior to commencing business as a merchant on his own account, he was in the employment of a wine-merchant in Mark-lane as clerk, where he had the means of forming an extensive connexion.

At Bow-street office, Elijah Eagle, a young man in the employ of Messrs W H Smith and Son, extensive news agents and publishers of the Strand, was charged with embezzling sums of money due to his employers. He was a clerk in their employ, and was in the habit of receiving sums from various railway stations where news papers and books were sent, instead of making proper returns he pocketed the money, but in the end was detected. He was fully committed.

CAPTAIN JOHNSTON has been re-examined at Lambeth office, on the charge of obtaining money, under false pretences of Mrs Stewart. A new charge has also been brought against him of the following nature:—Mr Dawson a tailor and draper, at Bedford said in 1851 the prisoner came to him at Bedford and ordered some clothes against Johnson. He gave a note to a friend order the clothes, also for the habit of borrowing his horses to drive him about. In the beginning of November he ordered the horse of a man living at Bedford, to drive to Northampton with, saying he should be back on the following evening, but from that day until that present he [illegible] and might right on him. He [illegible] Mr Howard who had given evidence at the former examination, stated that he had application to meet [illegible] prisoner's desire to Bedford to accomplices—a Captain Douglas—who assisted him in his swindling practices. There was one tradesman present at whom he had swindled to the tune of nearly £200, and [illegible] the sum [illegible] purchasing from him a valuable horse for which he [illegible] but which was worthless as not to be worth the paper on which [illegible] Mr Wells, an upholsterer, said that the prisoner [illegible] whole of the furniture to furnish his house, and he [illegible] to the prisoner had been [illegible] He [illegible] make [illegible] prisoner for [illegible] of Mr. Stewart, he remanded him for further inquiry in the case of horse-stealing.

THE quarterly meeting of the Royal Naval Benevolent Society was held at the Thatched House Tavern; Admiral Pell in the chair. The statement of accounts showed that [illegible] of the society [illegible] amounted to £[illegible] 5s. 5d, and the [illegible] of £1[illegible] 5d, leaving a balance of £1[illegible] 5d.

On Monday a special half-yearly general meeting of the governors was held at the Thatched House Tavern, St. James's-street, the London Tavern, Bishopsgate-street, Sir Thomas Herbert Maddock in the chair, for the purpose of [illegible] the report of the committee for the [illegible] Widows [illegible] The [illegible] shown that the receipts for the year amounted to £[illegible] 6s. 6d., and the disbursements to £54 0s. 8d., and legacies amounting to £309 16s. 10d.) to have been £2,775 [illegible], and, after all the [illegible] expenses and bonus [illegible], there was left a balance in hand [illegible]

On Friday week, Messrs. Hall [illegible] to public competition all [illegible] of 87 acres of freehold land, situate at Mount Bathurst, New South Wales, belonging to Mr. W. C. Wentworth, the member for Sydney. The auctioneer estimated its value from that of the adjoining land, of which [illegible] had been sold; for £ [illegible] but the vendor would not [illegible] [illegible] The highest offered at the sale, which, being much below the anticipations of the owner, the property was withdrawn.

ELECTRIC TELEGRAPHS.—The importance of instantaneous telegraphic communications in astronomical observations has not failed to attract the serious attention of scientific men. From a recent number in the [illegible] M. Arago a [illegible] the Academy and Sciences [illegible] of the [illegible] which will [illegible] [illegible] by [illegible] their becoming universal. According to M. Arago, an exclusive telegraphic line between the two observatories would be established long ago had it not been for the difficulties encountered by Professor Airy. Those difficulties may be at an end, so that the night not to exist, and might easily be removed.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

On Thursday, after an unusually protracted discussion, the directors of the Bank determined to raise the rate of discount to [illegible] per cent per annum. It is generally expected that the first effect [illegible] will be a determination [illegible] more steadiness to commercial affairs.

During the earlier part of the week the market for the national securities has been very much [illegible] [illegible] [illegible] the [illegible] of the Bank of England, the increase of the [illegible] amount of loans and [illegible] [illegible] the Bank Parliament [illegible] [illegible] [illegible]

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE, Oxford-street. MONDAY, JANUARY 24th, Tuesday, Thursday, and Saturday, at 8, in accordance with the Lord Chamberlain's regulations, ends at 37 CUPID; or, DOROTHY'S FORTUNE, and the Pantomime. Wednesday, Friday, and the Pantomime. Friday: Twelfth Night, and the Pantomime.

THE GOLD FIELDS of AUSTRALIA.—The Hon. WOODEHOUSE LAWSON has just finished his researches upon the spot by J. S. Prout, Member of the New Society of Painters in Water-colours, is EXHIBITING DAILY, at 30, REGENT-STREET, next the Polytechnic. Among the principal scenes are:—Plymouth Sound—Melbourne—The Port of Sydney—South Sea Whale Fishery—Diggers at Work—The Road to the Diggings—Mount Alexander—Ovens Gorge—The Blue Mountains—Summer—Still Creek—Upper encampment at still Diggers by Moonlight. The descriptive Lecture, by the Artist, at Three and Eight, by Mr. Prout, who resided many years in the colony. Admission, 1s.; Central Seats, 2s.; Gallery, 6d. At Twelve, Three, and Eight o'clock during the holidays.

LAST TWO WEEKS.—BARTLETT'S Great DIORAMA of JERUSALEM and the HOLY LAND. Painted upon the spot by the Artist. Open daily, with grand sacred vocal music, conducted by Mr. J. H. Tully. Daily, at Three and Eight o'Clock. Admission, 1s., 2s., and 3s. 6d.—ST. GEORGE'S GALLERY, Hyde-park-corner.

ROYAL POLYTECHNIC INSTITUTION. —NEW EXHIBITION. An OPTICAL and MUSICAL ILLUSTRATION of DISSOLVING VIEWS by DORAM. Lecturer, Mr. J. H. Pepper, L.C.P. Bachelier-ès-ès, and Mr. Crispe. Dissolving Views, &c.—Admission, 1s.; Schools and Children under Ten years, Half-price.

ST. MARTIN'S-HALL.—Singing School: Director, Mr. JOHN HULLAH.—The following new ELEMENTARY CLASSES will COMMENCE on MONDAY, JAN. 24th: Children's Class, [illegible] Classes, [illegible] Classes, [illegible] Classes

THE DUKE OF ARGYLL.

LORD PRIVY SEAL.

George John Douglas Campbell, Duke of Argyll, Earl of Argyll, Marquis of Lorn and Kintyre, Earl of Campbell and Cowal, and holder of a long string of other titles, is the son of the seventh Duke, by his second wife, the daughter of John Glascol, Esq. He was born in 1823. In 1844 he married the eldest daughter of the second Duke of Sutherland. He succeeded his father in the Dukedom in the year 1847.

The noble Duke's maiden speech in the House of Peers was delivered on the 25th of May, 1848, on the motion for the second reading of the Jewish Disabilities Removal Bill. He supported the measure in a strain of clear and forcible argument, mainly on the ground that the Jews were abstractedly entitled, as a matter of right, to all the privileges of subjects, and that there was no sufficient ground of argument on the side of the exclusionists. At the same time he repudiated, in eloquent language, the inference of Mr. Macaulay, that religion had nothing to do with the question, or that "Christianity had no more to do with our Legislature than it had to do with cobbling!" He believed that Christianity had nobler and wider fields of action than those defined by the exclusionists, and argued that Christianity was best advanced by not maintaining these distinctions, which only produced division and perverted Christian union. This speech made a decided impression on the House in favour of the young orator. In the course of the same year (1848) the Duke of Argyll spoke frequently, on various topics - on Corrupt Practices at Elections; on the Scottish Law of Entail; on the Scottish Marriages Bill; on the Sugar-duties; on our Interference with the affairs of Sicily; and always with an insight and a closeness of reasoning indicative of a thorough acquaintance with his subject.

At the opening of the session of 1849, the Duke of Argyll opposed the amendment to the Address moved by the present Earl of Derby. The noble Duke eulogised Free-trade in respect of its results, and stated that the Scottish farmers, especially, were friendly to it. On all convenient occasions he has expressed his approval of our present system of commercial legislation; and, as a general rule, gave the support of an enlightened and liberal Conservative to the various measures of the Russell Administration. In March, 1850, the noble Duke brought before the House of Lords the case of a Mr. Ryland, who, he alleged, had been unjustly treated in Canada and during that year and the year 1851, he occasionally spoke on the most important questions before the House—more especially on those affecting Scottish interests.

THE MOST NOBLE THE DUKE OF ARGYLL, LORD PRIVY SEAL.

In the affairs of the Church of Scotland the Duke of Argyll had, from his earliest manhood, taken a deep interest. In 1842 he published a letter to Dr. Chalmers on the subject, more especially in reference to the Earl of Aberdeen's abortive attempts to settle the question in 1840, in which he developed his views.

In 1849 he published a work on the Scottish Church, entitled "Presbytery Examined;" an essay, critical and historical, on the Ecclesiastical History of Scotland since the Reformation. This work, which soon reached a second edition, involved its author in some controversy. He was assailed by no fewer than six avowed champions of opposite views to his own, each of whom published his opinions in a separate form. There were also countless anonymous strictures. On the whole, the book was admired for the clearness of its style and the amount of knowledge it displayed.

In the year 1851 the Duke of Argyll addressed to the Bishop of Oxford a letter in reference to the protest of the Bishop and his clergy against the Pope's pretensions to divide England into certain new dioceses. When the Ecclesiastical Titles Bill came before the House of Lords, in July 1851, the Duke delivered a masterly speech on the general question, which attracted very general admiration.

The Duke of Argyll has always taken a deep interest in literature and science. He is known as a sound practical geologist. In the early part of last year he delivered an address to the members of the Athenæum Institute at Glasgow, on "the importance of literature to men of business;" an essay full o a pure and generous sympathy for the classes of the population to whom it was chiefly addressed.

The Duke is hereditary Master of the Queen's Household in Scotland, and hereditary Sheriff of Argyleshire; also Vice-Lieutenant of that county (appointed 1847). Last year he was elected Chancellor of the University of St. Andrews. The Duke is a powerful and eloquent speaker, and likely to make a first-rate Minister.

(*Continued from page 61.*)

The freightage of the ship will be about 1400 tons. The freight-deck, strongly secured from accidents, is roomy and cleanly. It is perfectly clear from stem to stern, in consequence, mainly, of the small space occupied by the machinery of the ship, and affords, beside the freighting space proper, a considerable supply of store-rooms and recesses, always useful for the stowage of precious articles. The coal-hold is below the freight-deck, and is abundantly spacious to contain the entire mass of fuel required for the outward and return voyages of the ship. It is, in fact, contemplated that the vessel will be able to carry her coals for the longest trips out and back, even should the voyage be extended beyond the customary route of the American packet steamers. The advantages are secured, besides, of a saving of room, security from spontaneous combustion, and a greater degree of cleanliness, from the use of the anthracite than by the employment of the British bituminous coals.

The experiments already made with the engines of the new ship promise a very auspicious commencement of her career. The operations of the machinery, so far as the different portions have been tried, are perfectly smooth and accurate, and the revolutions of the wheels of the vessel have taken place with all the regularity and order which was to be expected of them. The prognostics of success are very promising. The public will await the result with eager interest. But one opinion can be expressed in regard to the probabilities of the plan. The necessity of a new motive power is every day more pressing. Advantages must be gained by the application of the leading principles of nature to new uses, and the inventor who shall accomplish this feat will entitle himself to the lasting gratitude of the commercial and travelling world. It is to be hoped, in view of the labour and ingenious resources which have been expended upon a project that seems so feasible as this, that the honour of the new *motor* may be finally awarded to the studies of Captain Ericsson.

THE CALORIC SHIP "ERICSSON."

THE ILLUSTRATED LONDON NEWS

No. 605.—VOL. XXII.] SATURDAY, JANUARY 29, 1853. [SIXPENCE {WITH SUPPLEMENT, GRATIS.

LOUIS NAPOLEON'S MARRIAGE.

THE English press has but too often had occasion, as the only free press in Europe, and as, to some extent, the guardian of the liberties of the old world, to comment, in severe terms, upon the public conduct of the Emperor of the French. It has denounced his policy; condoled with the people over whom he rules, upon the loss of the last vestiges of their dearly-purchased freedom; and expressed its conviction, founded upon an impartial survey of the past, as well as upon a just appreciation of the present, that he would not always be able to govern that brave, generous, and high-spirited nation upon the brute-force principle on which he has hitherto acted. At times the comments of the English press have been of an acerbity calculated to produce irritation in the mind of the Emperor, if not to imperil the good understanding that yet subsists between the two Governments. However greatly such a result ought to be deprecated, it is scarcely possible to desire that the free opinion of this country should have been otherwise expressed. It is so obviously the interest of Great Britain, that her rich, her powerful, her intelligent, and her nearest neighbour should be happy and prosperous, in the full enjoyment of that sober constitutional freedom which is the highest result of civilisation, and the best guarantee of peace, that the leaders of public opinion in this country could not be otherwise than alarmed at the establishment of so stringent a despotism as that of Louis Napoleon. But the hostility expressed has been towards the system, and not towards the man. Up to the day—now nearly fourteen months ago—when he totally destroyed the liberties of France, public opinion in this country went strongly with him, and was as strongly directed against the obstructive, obstinate, and factious Legislative Assembly that prevented every peaceable solution of the immense difficulty which then oppressed the energies, and perplexed the intellect of France. But the case was altered when he turned the victory of December, 1851, to such liberticidal account. It was not because he chose to be declared President for ten years, or because, at a later period, he was proclaimed by acclamation hereditary Emperor of the French, that the English press and the English public looked with unfavourable eyes upon his policy. It was because he strove to eradicate every symptom and remnant of the freedom which so polished a nation deserved to enjoy—and which, sooner or later, it must possess—that all impartial observers in this country considered him to be a short-sighted and violent man, blinded by ambition and passion, obstinately attached to an exploded principle of Bonapartism, and recklessly determined to endanger not only the internal and external peace of his own country, but of the whole civilised world. For these reasons the English press, with but few exceptions, looked upon his acts with alarm and sorrow, mixed at times with indignation; and indulged the hope that, for their own sake, if not for that of others, the French would close the era of revolutions—not in a military despotism, too unnatural to last, but in a safe constitutional system, under Louis Napoleon, or some other person.

Against Louis Napoleon himself—the evident choice of the French people—the only Sovereign or chief possible for France at the present time, there was really no ill-will. On the contrary, we believe that any relaxation of his pitiless system, showing a determination on his part to govern by reason, and not by the sword, and to allow the French the liberty of speech and writing, which is natural in so advanced a state of society as theirs, would have been hailed in this country with loud acclamations. We think the Emperor himself will see, in the expression of opinion which the announcement of his approaching marriage has called forth, a striking proof that the English are predisposed to judge of him favourably, whenever his public policy or his private conduct will permit them to do so. If he be indeed the free choice of the French nation—if he be the Sovereign on whom the mass of the people have set their hearts—whatever strengthens his position, whether it be a marriage or a treaty, becomes a guarantee for the future peace and good government of his country. It is only ill-established and disputed despotisms that are cruel and sanguinary; and, for this reason, if Louis Napoleon be the necessity of France—as everything seems to show—every circumstance that tends to support his cause, and to weaken that of his opponents, must be looked upon as an advantage. In his extraordinary career all the incidents are surprising, theatrical, romantic, and marvellous. His marriage is no exception to the general tenour of his life. Among Roman Catholic Royal houses—and none other would have been suitable alliances for him—his choice was limited. He tried among them wherever there was a prospect of success, and failed egregiously. At last he did what he should have done at first. He chose for himself; made the heart (for even this apparently cold and hard man has a heart) the arbiter of his destiny in marriage, as meaner mortals have been accustomed to do, and wooed and won a lady of private, though of noble station, qualified in every way to adorn the Imperial throne to which he offered to raise her.

There are some passages in the remarkable speech in which he announced his determination to his assembled Senators to marry Mademoiselle de Montijo, at which good taste, as well as good feeling, might take offence. It was not a chivalrous act to sneer either at the Protestantism of the Duchess of Orleans, or at the *status* of the princely house from which she sprang. Neither can it be considered a sign of political wisdom on his part to have depreciated in his speech the Royal and Ducal houses of Germany, with some of whom he strove to form a matrimonial alliance; nor to allude in such pointed terms to the misfortunes that befell Napoleon I. after the repudiation of the Empress Josephine, for an Austrian Princess. As an *ad captandum* argument for the great populace and soldiery, the allusion was perhaps a skilful one, but its effect upon the minds of the Continental Sovereigns cannot but be irritating. In other respects the speech was exceedingly well calculated to serve its purpose, and there can be little doubt that, except among the upper classes of French fashionable society, where the Emperor never had, and probably never will have, many friends or admirers, it will produce a good effect. The peasantry, the soldiery, and the shopkeepers will be satisfied. He could not have pleased the French masses so greatly by any possible Royal alliance that he could have formed. It has, perhaps, struck the Emperor, as it strikes others, that it is a pity he did not take this step in the first instance, and before being goaded into it by the refusal of other ladies with whom he was anxious to form alliances for reasons of State policy; but, taken all in all, his determination and his reasons for it have been received with respectful sympathy, if not with applause. In this country, even more than in France, it has been felt that he has taken a right course. There is a boldness as well as a generosity in the deed, which go to the heart of the multitude; and identify him with the people in the most momentous action of his, as of every other man's life. It is impossible not to feel an interest in such a career and in such a character; and equally impossible not to feel a solicitude for the happiness of the brilliant and estimable lady who is to be raised to so perilous a height, amid so sensitive and peculiar a people as the French. We cordially hope, for the sake of all Europe, with whose history, past and future, this man and his family are so intimately associated, that his personal happiness may be increased by the change in his condition—that the stability of his throne may be secured by it—and that, among its first consequences, may be a relaxation of the intensely military and despotic system which, since the days of the *coup d'état*, has weighed upon the French people. But let him look well to the national exchequer. It is there that the rock of danger is situated. With a free Parliament, and a moderately free press, he may avoid a financial convulsion. Without them, not even his happy marriage will enable him to steer clear of that, and of many other dangers.

MADEMOISELLE DE MONTIJO.—EMPRESS OF THE FRENCH.

THE EMPEROR'S MARRIAGE.

The civil marriage of the Emperor will take place at the Tuileries, on the evening of this day (Saturday). At eight o'clock this evening the Grand Master of the Ceremonies will proceed, in two of the Imperial equipages, to convey the Imperial *fiancés*, with their illustrious mother, and the Ambassador of the Queen of Spain, to the Palace of the Tuileries, where they will be received by the Prince Napoleon Joseph and the Princess Mathilde. Around the Emperor, in the family *salon*, will stand the Cardinals, the Marshals and Admirals, the Ministers, the Grand Officers of his Household, and the Ambassadors and Ministers Plenipotentiary of his Imperial Majesty now in Paris. The cortège will proceed to the Salle des Maréchaux, where the ceremony of the civil marriage will be accomplished. At the end of the *salle*, next the garden, two chairs of state will have been placed on an estrade, one on the right for the Emperor, and the other on the left for the future Empress. At the foot of the estrade, on the left, will be placed a table, on which will lie the civil register of the family of the Emperor. On the entrance of his Majesty and of the future Empress, the company will rise and remain standing to the end of the ceremony. The Minister of State will receive the declarations of the Emperor and of her Excellency Mdlle. Eugénie de Montijo, Countess de Téba, and will declare them united in marriage. The President of the Council of State will present a pen to the Emperor, and next to the Empress The act will be signed by their Majesties, by her Excellency the Countess de Montijo, by the Minister of Spain, the Princes and Princesses according to their rank, and by the witnesses appointed by his Majesty. After the ceremony the Empress will be conducted back to the Elysée with the ceremonial observed for her coming.

The religious ceremony of the marriage will take place to-morrow (Sunday the 30th) at Notre Dame. The cathedral will be fitted up with great splendour The Emperor will leave the Tuileries at half-past twelve, and will enter by the grand door of the cathedral. Mass will commence at one o'clock. It has been decided that the Empress shall wear a diadem on her entrance to the cathedral. the civil marriage being considered as raising her to that rank. Her carriage will be drawn to Notre Dame by six white horses. M. Auber, lately appointed Director of the Imperial chapel, will superintend the music during the ceremony. He will have M Adam under his orders Mr. Halévy will fill the place occupied by M Paer under the Monarchy.

The Archbishop of Paris (who will perform the ceremony) went to the Elysée on Tuesday to pay a visit to the Countess de Montijo

Immediately after the ceremony the Emperor and his bride will set out for St. Cloud, where they will pass a few days.

The ladies of the household of the new Empress have been nominated. The Princess of Essling is Grand Mistress; the Duchess de Bassano, Lady of Honour. There are six Ladies of the Palace, a Grand Master (Count Tascher de la Pagerie), two Chamberlains, and an Equerry.

The Ministerial papers state that all the despatches received by the Government from the departments are "unanimous" in testifying to the satisfaction experienced by the people at the Emperor's marriage. The peasants and operatives are said to have expressed the warmest enthusiasm at reading the communication from the Emperor to the Senate and *Corps Législatif*.

It is fully expected that the marriage will be accompanied by an extensive, if not a general, amnesty. The exiled generals will, it is said, shortly receive a "pardon"

On Saturday last, at twelve o'clock, the members of the bureaux of the Senate and Legislative Body, and the members of the Council of State, waited on the Emperor at the Tuileries, to receive the communication relative to his marriage, when his Majesty pronounced the following address.

I yield to the wish so often manifested by the country in coming to announce to you my marriage.

The alliance which I contract is not in accordance with the traditions of ancient policy, and therein is its advantage. France, by its successive revolutions, has ever abruptly separated from the rest of Europe. Every wise government ought to try to make it reenter in the pale of the old Monarchies. But this result will be more surely attained by a straightforward and frank policy, by loyalty in conduct, than by Royal alliances, which create a false security, and often substitute family interests for those of the nation Moreover, the example of the past has left in the mind of the people superstitious feelings. It has not been forgotten that, for seventy years, foreign Princesses have not mounted the Throne but to behold their race dispossessed and proscribed by war or by revolution. Our own days alone seemed to bring happiness, and to live more than the others in the memory of the people, and that woman—the modest and good wife of General Bonaparte—was not the issue of Royal blood. It must however be admitted, that, in 1810, the marriage of Napoleon I with Marie Louise was a great event It was a pledge for the future, a real satisfaction to the national pride to the ancient and illustrious branch of the House of Austria, who had been so long at war with us, was seen to solicit the alliance of the elected chief of the empire. Under other circumstances, on the contrary, the *amour propre* of the country had to suffer, when the heir to the Crown solicited, fruitlessly, during several years, a princely alliance, to obtain it only in a secondary rank, and of a different religion

When, in presence of old Europe one is borne on by the force of a new principle to the height of ancient dynasties, it is not by giving an ancient character to one's establishment (*établissement du blason*), and by seeking to introduce oneself at all costs into a family, that one is accepted. It is rather by ever remembering one's origin, by preserving one's own character, and by accepting frankly, in presence of Europe, the position of parvenu—a glorious title, when one obtains it by the free suffrages of a great people. Thus, obliged to depart from precedents followed to the present day, my marriage became a private affair, and there remained only the choice of the person

She who has been the object of my preference is of distinguished birth. French in heart, by education, by the recollection of the blood shed by her father in the cause of the empire, she has, as a Spaniard, the advantage of not having in France a family to whom it might be necessary to give honours and fortune. Endowed with all the qualities of the mind, she will be the ornament of the throne; in the day of danger she would be one of its courageous supporters. A Catholic, she will address to Heaven the same prayers with me for the happiness of France. In fine, by her grace and her goodness she will, I have the firm hope, endeavour to revive, in the same position, the virtues of the Empress Josephine.

I come, then, Messieurs, to announce to France that I have preferred the woman whom I love and whom I respect, to one who is unknown, and whose alliance would have had disadvantages mixed with sacrifices. Without disdaining any one, I yet yield to my inclinations, but after having taken counsel from my reason and my convictions. In fine, by placing at the independents, the qualities of the heart, domestic happiness, above dynastic prejudices and the calculations of ambition, I shall not be less strong because I shall be more free

Soon, proceeding to Notre Dame, I shall present the Empress to the people and to the army; the confidence they have in me assures me of their sympathy; and you, Messieurs, on learning better to appreciate her whom I have chosen, you will show that on this occasion also I have been inspired by Providence

Special messengers have been sent by all the Ambassadors in Paris to their respective Governments, bearing the message of the Emperor respecting his marriage

There is much more confidence upon the Bourse, and the money market has slightly rallied, but the improvement does not seem entitled to the tone of the [illegible] which explicitly avers that the institutions of other countries, and alluding, in language of an insulting character, to the advances made by Austria in bringing about the marriage of Maria Louisa to Napoleon. The term used in describing the action of the Austrian Court is "*briguer*" which means, "to manœuvre in order to obtain a thing"—an offensive expression which cannot fail to be resented at Vienna. It is said that explanations have already been required of M. Drouyn de Lhuys, and that an evasive answer has been given. The feeling of resentment which Louis Napoleon still cherishes for the Orleans family is shown in stigmatising the marriage of the late Duke of Orleans as an alliance with a Princess of secondary rank and different religion.

The Senate and Legislative Body are convoked for the 14th of February.

There has been another sale, or rather attempt at sale, of some remaining portions of the Orleans property. Some portions of the property at Eu were put up at 500,000 francs, and there was only one bidding of 50 francs. The lot was therefore knocked down at 500,050 francs A lot in the Morbihan. put up at 120,000 francs, had the same fate. It is reasonable to infer that these lots were purchased by some friend of the family, in order to comply with the terms of the decree. The transfer duty must be paid, but this sacrifice will be more than covered, if, by keeping the property from being sacrificed now, there should at some future period be a better market. The personal property has been greatly sacrificed, with the exception of the pictures of the Duchess of Orleans, which brought enormous prices. The other portions of property in the late sale on the account of that princes were comparatively given away. It is asserted that what was sold for less than 300,000 francs, cost more than a million and a half.

The port of Marseilles was connected a few days ago with the submarine telegraph. The arrangement will, of course, facilitate the transmission of messages on the route to India and Australia, &c.

FAMILY OF THE EMPRESS.

We have been favoured by an obliging Scottish correspondent with the following particulars respecting the family of the Empress Eugenie:

The Duchess of Montijo's grandfather, Mr. Kirkpatrick, of Conheath, Dumfries-shire, was a gentleman of large landed property, in right of his father; her grandmother was Miss Wilson, of Keldon Castle, in Galloway. The Duchess's father (grandfather of the Empress), Mr. William Kirkpatrick, went early in life to Malaga, where he was British Consul for many years, and where he married the only daughter of Baron Grevenne. He had three daughters by the marriage: the eldest, Maria, married Count Montijo, father of the Empress. In conformity with Spanish custom, Miss Kirkpatrick preferred using the title of Countess to that of Duchess; the former being the older title, and therefore, more highly esteemed in Spain. All the sisters were educated in Paris, and were detained there nine years, along with their mother, Mrs. Kirkpatrick, on account of the war with England. They returned to Spain in 1814, when peace was proclaimed, but not before visiting London, where the three Misses Kirkpatrick remained for some time, and where they were much admired I may mention that they were among the first who appeared in London with the high bonnets Harriet, the second sister, married a Count, whose name I forget, and was soon a widow Carlotta, the youngest, married a cousin, Mr. Thomas Kirkpatrick, whose mother was heiress of Cargore, Dumfries-shire, and whose father was British Consul at Havre, but both died young. The Duchess of Montijo's father died some years ago at Malaga, as also did Mrs. Kirkpatrick, who was poisoned by mistake by some wrong medicine administered to her. The Duchess has one aunt alive in Dumfries, and several cousins who live in Brussels—men of independent fortune

Mdlle. de Montijo's father belonged to one of the most ancient of the noble houses of Spain He was a grandee of the first-class, of a family which, for several centuries past, has contracted alliances with the oldest and most glorious houses in Europe. The Count de Montijo fought bravely under the standard of France, as colonel of Artillery in the Peninsular war. At the battle of Salamanca he lost an eye, and had his leg fractured. When the French army were driven out from the Peninsula, the Count accompanied them in their retreat, and continued to serve in the French army. He was decorated by the Emperor himself for the courage he displayed in the campaign of 1814. When the allies marched upon Paris in 1814, Napoleon confided to the Count the task of tracing out the fortifications of the capital, and placed him at the head of the pupils of the Polytechnic School, with the mission to defend the Buttes de St. Chaumont. In executing these duties, he fired, it is said, the last guns that were discharged before Paris in 1814. The Count died in 1839, when Mdlle. Eugenie was twelve years of age. The true *sangre azul* of the great Alonzo Perez de Guzman, who defended Tarifa in 1292, flows in her veins. The first Count de Téba was created about 1492, by Ferdinand and Isabella, for his gallant conduct before Granada. Her grandfather, Palafox, was the heroic defender of Saragossa, against the French invaders of Spain—a fact which is not so strongly insisted upon by the Government papers as the military exploits of her father. When the Count de Teba was about to marry Miss Kirkpatrick, the daughter of a Consul at Malaga, it was necessary, as he was a grandee of Spain, to obtain the King's consent. The descent of the Kirkpatricks was rather less illustrious than that of the defender of Tarifa, but the Scottish heralds set to work with such diligence that a suitable pedigree was produced, and Ferdinand exclaimed "Let the good man marry the daughter of Pingal."

The issue of this marriage was the lady who now attracts so large a share of the attention of Europe, and who combines, by descent, the pride and energy of the Spanish and Scottish races.

Mdlle. Montijo was born in Grenada, in the year 1827. She possesses considerable personal attractions, but more in the style of English than Spanish beauty. Her complexion is extremely fair—her features are regular, and yet full of expression and her manners extremely winning. In stature she is slightly above the middle height. The attractions of her person, the distinction of her manners, and the vivacity of her character, are well known to those fashionable circles in London in which she has been received during her visits to this country. The *tertulias* of the Countess de Montijo and her mother at Madrid used to comprise all that was most distinguished in rank and eminence in Spanish society. The English, particularly, were made welcome at her house, and few English gentlemen who have visited Madrid can have forgotten these receptions. The family usually quitted Madrid during the hot season, passing the summer at some watering place in the south of France. and the winter in Paris. The education of the young Empress has been superior to that generally received by Spanish ladies who do not travel, and she is said to be what the French call *spirituelle*.

M. Fould, the Minister of State, waited on Mademoiselle de Montijo on Tuesday, for the purpose of delivering over to her the diamonds of the Crown, many of which have been newly mounted for the occasion At th marriage ceremony she is to wear a diadem of diamonds and pearls—the pearls being arranged to represent orange-flowers. The head-dress, which cost 400,000f., is a present from the Emperor. The lace of her wedding-dress is to be of *point d'Alençon*, and will cost 10,000 francs. A duration of 3,000,000f. will be demanded for the Empress. She is said to be extremely charitable, and there are already indications that she will become exceedingly popular

BRIDE-CAKE OF THE EMPEROR OF THE FRENCH.

THE Bride-Cake for the Imperial marriage, of which the above is a representation, has been made by Messrs Farsell, the confectioners, of Cornhill. The cake weighs 320 lb., exclusive of the decorations. The design consists of a group of eight splendid cornucopiæ pouring out beautiful flowers, emblematic of Peace and Plenty, and surmounted by a vase of alabaster, exquisitely carved, with the eagles of France for supporters. The bouquet for the centre of the vase contains the fleur-de-lis entwined with the Spanish jasmine and Irish shamrock, overshadowed by the eagle's feather. The whole of the flowers are of English manufacture. The entire Cake, including the ornaments, was designed and completed within three days. The following are the ingredients of the Cake:—Dorset butter, 24lb.; loaf sugar, 24lb.; currants, 20lb.; raisins, 20lb.; flour, 56lb.; Jordan almonds, 42lb.; eggs, 32s.; lemons, 40.; orange, lemon, and citron-rings, 24lb.; three bottles Eau-de-vie; two bottles Crême de Noyeau.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

As your readers may imagine, but one topic has place for the moment here; and we add with regret, that few events have given place to more spiteful remarks, more curious sentiments, or more calumnious reports, than the marriage of Louis Napoleon with Mdlle. de Montijo—a young lady whose character, conduct, position, education, talents, and personal advantages, might be supposed to excite sympathy instead of malice. The fact is, that the Emperor's selection of a private individual to share his throne, has caused, in the female portion of the society, a degree of jealousy it is really difficult to conceive; and, alas! for the gallantry of Frenchmen of the nineteenth century, they find nothing better to do than to repeat the scandals originating in the *boudoirs* of the fairer part of the creation. Hence, the most extravagant tales are passed from mouth to mouth: histories that have never occurred, anecdotes destitute of the slightest foundation, conversations of which not one word has been uttered, go the round among those who do believe them, and of those who do not, but are glad to find auditors who will

To the credit of the hearts of both the high contracting parties we give the following details, little known, but *strictly true*:—For upwards of two years the attachment to which the seal is about to be given has existed on both sides. So high an opinion did Louis Napoleon entertain of the sense and discretion of the object of his affection, that, on the eve of the *coup d'état*, he revealed to her his plans, entreating her, with her mother, to quit Paris, fearing the possible issue of the struggle. She, in obedience to his wishes, consented; and her parting words were, "Remember, if you fail, my hand and fortune await you at Madrid." Honour to the Emperor, who has chained what was offered to the baffled and ruined adventurer! Mdlle. de Montijo has formally refused the jointure of 5,000,000 fr. placed at her disposal: her letter, signifying this intention is, we are informed by a friend who read it, a model of tact, dignity, and delicacy. Mdlle. de Montijo is, as our readers are already aware, of one of the most ancient families in Spain. She possesses at present a fortune of £4000 a year, which will be increased at the decease of her mother. A large portion of her income has yearly been expended in charity, and in aiding the less fortunate members of her family in Spain, indeed, her generosity and good deeds are unfailing, and cannot but render her popular among the people she is called upon to aid in governing. It is a fact that her political opinions tend wholly to the Liberal side, and that it is her earnest desire that her marriage should be the occasion for the declaration of the long-talked-of amnesty. It is hinted that the turn of feeling evident in the speech of Louis Napoleon, and the unreproved appearance in the press of certain articles which months ago would have called down the severest measures on the heads of the authors and the journals, are principally attributable to her happy influence

After the civil marriage there is to be a spectacle at the Court; and on Sunday the Imperial couple proceed, after the ceremony at Notre Dame, to St. Cloud, there to remain in retirement till the 7th of February, when they return to Paris to attend the ball of the Senate

There is little doubt but that a complete reform will be at once effected in the Court on the score of morality and propriety; a measure highly desirable, and calculated to produce a most favourable impression on all the respectable portion of society.

It appears quite certain that the marriage of the Prince Napoleon Jerome with the daughter of the Prince de Wagram is not to take place. The father, it is said, is not sufficiently assured as to the security of the position to risk his daughter's future on it. Doubtless, this want of faith will, in itself, produce some coldness between the Bonapartes and the Berthiers.

The ball at the Tuileries went off coldly, and produced little or no sensation, so much is the public mind occupied with the great affair of the day. Mdlle. Montijo was not, of course, present, having, on leaving her residence at the Place Vendôme, to take up with her mother, her temporary abode at the Elysée, bidden adieu to her friends for the moment, signifying that she could not accept any invitations, nor would she receive any visits, but those officially necessary, and those of the members of her own family, until the period of her marriage.

At the theatres, the chief attractions of the moment are two versions of "Uncle Tom's Cabin," at the Ambigu Comique and at the Gaieté. The former is, in itself, a piece full of stirring interest, admirably put together, admirably played, and with a most effective *mise en scène*; but it might pretty nearly as well be called an adaptation from the "Arabian Nights," as from the book of Mrs. Stowe, so little does it follow the thread of the narrative. Some of the principal characters are like *Hamlet*, in the strolling company's version of the play, "left out by particular desire;" others are so wholly transmogrifies as to lose every trace of identity with the originals; and even the title itself bears merely a family likeness to the one whose name it has adopted. That at the Gaieté is much more faithful to the text, and has, for that reason, infinitely more interest, to our taste The character of *Evangeline*, which in the other stirs the fate of the *Hamlet* alluded to, is rendered with singular delicacy and intelligence by Dinah Felix, the sister of Mdlle. Rachel; and Madame de Lacressonnière displayed all the energy of maternal love, all the depth of passion and feeling of *Eliza*, with a force of sentiment and dramatic power beyond all criticism. The scenery is managed with singular skill and effect, more especially that which represents the banks of the Ohio; it has a truth and a reality of locality and atmosphere difficult to conceive as the result of art. Both pieces have been received with immense applause, but we venture to predict a more lasting success for that of the Gaieté. The Opéra Comique announces for next Monday two new works. The first is an opera in one act, entitled "Les Noces de Jeannette;" the second, an adaptation from the well-known burlesque, "Le Sorcier, ou l'Auberge de Pierre." A variety of official and public fêtes are announced for the end of this and the commencement of the ensuing month. The *Bal du Sénat* will, doubtless, be among the most [illegible] at.

ITALY.

A trial has taken place in Genoa similar to that of the Madiai in Tuscany. The name of the accused is Daniel Mazzibuffi, twenty-five years of age, and a surgeon by profession. The trial took place with closed doors, but it is said that he was charged with having, in company with Captain Packenham, of the British navy, preached against the religion of the State, and in favour of Protestantism. He was sentenced to imprisonment for three years. Count Cavour, the Prime Minister, has promised to interfere, and it is probable that ere this Mazzibuffi is liberated

Fewer Englishmen now reside in Tuscany than before the revolution; half the lodgings in the town are unlet The Madiai and Mather affairs have had their influence in keeping away the English. Madiai, indeed, whose death has been prematurely announced, is labouring under an impression that he is being slowly poisoned. His best friends in Florence seem to fear more for his mind than his life at present.

Letters from Rome state that the Pope has had a severe attack of illness. It is doubted whether he will be able to assist at the coronation of Louis Napoleon

GERMANY.

Considerable sensation has been excited in Germany by the prescription of a new work by Professor Gervinus, entitled "Introduction to the History of the Nineteenth Century." The professor is cited before the legal tribunals, and the volume is everywhere seized by the police. Professor Gervinus believes he has discovered the laws by which the development of nations is governed—this law being the inevitable

tendency of civilised nations towards self-government and democracy. That a German professor cannot announce this "discovery" in a book dealing with the abstruse principles of political philosophy, is a sore scandal to modern Germany and its Governments.

The budget for the current financial year has been laid before the Finance Chambers. The receipts (97,559,160 thalers) show an increase of 3,281,860 thalers, as compared with the preceding financial year; but, on the other hand, the expenditure exceeds the extra revenue by 54,698 thalers.

Austria is said to have 100,000 more soldiers now than in 1848.

Louis Napoleon's assertion, that the Austrian Court "sought" the alliance which gave Maria Theresa to Napoleon, has given great offence at Vienna; and a disposition is said to exist in high quarters to seek a closer alliance with England. Events in the East, too, are causing the policy of Russia to be regarded with suspicion; and the Austrians are beginning to think that a Russian alliance may be purchased too dearly The designs of Russia upon Turkey are believed to be advancing towards a crisis; and the danger of the extinction of the Ottoman Empire by the intrigues of the great Autocrat of the North never seemed to be more imminent.

The Russian Catholic church founded some years ago by Dr. Kenge has at length expired.

TURKEY AND MONTENEGRO

The Turkish troops have forced their way into the Montenegrin districts Cettigne, the residence of the Vladika, is said to be menaced, but this, the capital, only consists of a score of houses, and its capture by the Turks would by no means show the war to be at an end. There are rumours of repulses of the Turks. A British frigate has been off the coast. The captain went on shore and had an interview with the Pasha of Scutari, after which he returned to Corfu Montenegro is to be surrounded by an army of 30,000 Turks, who are to attack it simultaneously

AMERICA.

By the *Asia*, which arrived at Liverpool on Wednesday, with 200,000 dollars in specie on freight, we have advices from New York to the 14th

The United States Senate had been again occupied with the discussion of the claims of Great Britain to the Mosquito coast and the territory of Honduras

A Panama paper states that Captain Collinson, of her Britannic Majesty's ship *Enterprise*, has been seen by some American whalers. This officer went in search of Sir John Franklin and his party, and was supposed to have been lost, as he had not been heard of for nearly two years. There were 100 whalers at Honolulu, of which only one was English.

From Mexico we hear that several leading officers of the Mexican army have pronounced in favour of the revolutionists. The papers are filled with accounts of *pronunciamentos*; and the Government of Arista is said to be doomed

From Jamaica we hear that the news from England relative to the Budget, and the refusal of the Derby Ministry to alter the Sugar-duties, had caused great discouragement

The news from California shows that provisions are very scarce and dear at the mines. Owing to the late rains the yield of gold in many districts will be immense

Miss Catherine Hayes was singing in San Francisco. Her concerts were giving great satisfaction, and she was nightly realising large sums of money. The auction system was adopted for the disposal of tickets. The first choice of a seat at her third concert in San Francisco was bid off at 1100 dols. by Empire Engine Company No 1, and was occupied by the foreman of the company. The second choice was knocked down to California Engine Company for 25 dols. A diamond cross, valued at 1200 dols, which was to be raffled for in San Francisco, it was designed should be given by the winner to Miss Catherine Hayes

Two steamers from California had brought to New York upwards of two million dollars in gold-dust. H.M.S. *Amphitrite* was to leave Acapulco early this month with 500,000 dols. specie for England.

The caloric ship *Ericsson* had had another trial trip at New York, with a large party of scientific gentlemen on board. The trip was in every way satisfactory. She went a distance of eighteen miles, with and against the tide, in two hours and a half, the engines only working at half-speed.

CAPE OF GOOD HOPE.

We have advices from Cape Town up to the 18th December. The general tenour of the news is still unsatisfactory. None of the powerful chiefs have yet been given up. Governor Cathcart, with 2500 men, had crossed the Orange River into the Sovereignty

Another of those unfortunate "surprises" by the enemy, which have so often during the war proved fatal to small parties of our troops, had lately occurred. About twenty of Montagu's Horse, under Captain Villiers, were passing between Chumie Camp and the Kieskamma Hoek, and, not being strong, they had dismounted and were leading their horses, with their rifles incautiously left slung in the buckets attached to their saddles. Suddenly about 100 rebel Hottentots fell upon them and commenced firing, upon which the whole party fled, leaving five guns and ten horses in the hands of the enemy, besides two which were killed. Captain Villiers was slightly wounded, and one of his men dangerously. A party from Chumie Camp, under Captain Reunie, 73rd Regiment, at once proceeded to the spot, but the foe had vanished with the booty

Reports have been received, which, however, want confirmation, that Moshesh has made a prisoner of the Rev. Mr. Giddy, a Wesleyan missionary, together with a number of the farmers, whom he had invited to a conference, and has sent a message to General Cathcart, requesting him to put the whole of them to death should the troops dare to enter his territory.

In consequence of the accounts received from the Australian colonies of the enormous prices which provisions and goods of all kinds were fetching, a number of sailing and two steam-vessels, usually employed in the coasting trade, had been despatched to Sydney and Melbourne, with large supplies of spirits, wine, flour, provisions of all kinds, boots and shoes, and clothing of every description. A number of passengers had also left for the Australian colonies

SOUTH AUSTRALIAN DIGGINGS.

We have been favoured with the subjoined extract from a private letter, dated "Dingley Dell, Mount Alexander, November 1, 1852" The writer says:—

In January, I have been extremely unfortunate since I have taken to digging. After three months' work I am not £10 better off than when I commenced. I have, however, accumulated a considerable quantity of stores, possibly worth about £10 more. The fact is, that—in my opinion, at least the best of these diggings are over. Whether the new ones on the Ovens will turn out well I cannot say. If they do so, I shall most probably go there

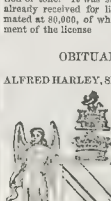
The present social state of the digging is frightful. Robberies of every kind, from bushranging to petty larceny, are of hourly occurrence; while murder has become so common as to excite little or no surprise. Deaths by accident, by the falling in of holes, and by being accidentally shot, are of frequent occurrence; so that a digger's life, though sufficiently exciting and romantic, in all conscience, is not very agreeable. The other evening my blankets and opossum rug, which I had left out to air, were stolen; and my neighbour's tent was opened, and six ounces of gold, a pistol, and pair of boots were taken. On the night of the public meeting, a friend and I, while returning home, were stopped I pulled out a pistol, and the fellows walked on. The same evening we heard a noise, rushed to the scene of action, and with the assistance of some Yankees, captured the fellows, disarmed them, and delivered them over to the police

November 7.—I lately paid a visit to Specimen Hill, with veins of gold in it. A company has been formed, under the superintendence of a friend of mine, to work them, and, I have no doubt, it will turn out very well. The country all about here is getting worked out. The diggers are all off to the Ovens, but I hear very few good accounts of it. Next week I leave my present party, but do not quite know whom I shall join. My notions of making a fortune by gold-digging have lately received a severe check. After three months' labour—which is a pretty fair spell, to live in this half savage kind of life, without any vegetables, beer, milk, butter, eggs, or any other luxuries; nothing but meat, tea, coffee, and bread I have cleared about £25, and I believe I have done quite as well as most people here

The "public meeting" alluded to by the writer was a meeting of the Forest Creek diggers, to consider the lawless state of the diggings. About 4000 persons were present, who adopted unanimously memorials to the Governor, praying for adequate police protection, and to the Legislative Council against the proposed export duty on gold. In the latter memorial, it is asserted, that the average earnings of a digger do not exceed an ounce per man per week, "which (they add) at the present price of gold, is not higher than the remuneration of any other description of unskilled labour." The diggers already pay a license fee of 30s. per month, or £18 per annum. If the proposed export duty of 2s. 6d. per ounce be levied, the memorial states that the gold-digger would be taxed at the rate of £24 10s. per annum, or very nearly one-sixth of his entire earnings, in addition to the ordinary Customs duties on tea, sugar, and articles of consumption The memorials, which were drawn up by the writer of the foregoing letter, are not the less effective from their moderation of tone. It was stated at the meeting that £460,000 had been already received for licenses. The number of gold diggers was estimated at 80,000, of whom more than half were said to evade the payment of the license

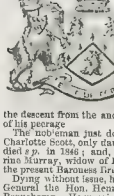
OBITUARY OF EMINENT PERSONS.

ALFRED HARLEY, SIXTH EARL OF OXFORD AND MORTIMER.



THE Earldom of Oxford has since the time of Henry II. been one of the most historic of our English titles, but it was when held by the illustrious De Veres that it acquired the halo that encircles its coronet Twenty Earls of that famous name enjoyed the dignity in succession, from the period of the first of the Plantagenets to that of the last of the Stuarts, and during that long course of years, scarce a generation passed without some one of the De Veres appearing honourably on the page of history. Aubrey De Vere, the twentieth and last Earl, died in 1702; and, as he left only daughters, of whom the heiress Diana married Charles Beauclerk, Duke of St Albans—the title then became extinct, and no revival took place until, in 1711, to the celebrated statesman, Robert Harley, who was created in that year Baron Harley of Wigmore, Earl of Oxford, and Earl of Mortimer. His Lordship's only son, Edward, second Earl, a great lover and patron of literature, made the valuable collection so well known at the British Museum as "The Harleian Miscellany." He died without male issue, and was succeeded in the family honours by his first cousin, Edward Harley, Esq., M.P., for Herefordshire, whose great grandson, Alfred, sixth Earl, was the nobleman whose decease we record. With him this historic Earldom again expires. His Lordship was born January 10th, 1809, and succeeded his father, December 28, 1848. He married, February 17th, 1831, Miss Eliza Nugent, reputed daughter of the Marquis of Westmeath, but had no issue. His Lordship's death occurred at his seat, Eywood, near Kington, on the 16th instant. His estates and co-heirs are Lady Langdale, Lady Charlotte Mary Bacon, Lady Anne San Giorgio, and Lady Frances Vernon Harcourt.

JOHN REGINALD PINDAR, THIRD EARL BEAUCHAMP.

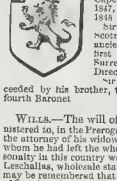


His Lordship died on the 22nd instant, at his town residence in Portman square, aged seventy-one. He was second son of William Lygon, Esq., of Madresfield Court, co. Worcester, M.P. for that county, who was created Baron Beauchamp of Powyke; and thus arose the descent from the ancient family from which Mr. Lygon took the title of his peerage

The nobleman just deceased married, first, March 14th, 1814, Lady Charlotte Scott, only daughter of John, first Earl of Clonmell, which lady died 2 p. m. in 1846; and, secondly, February 11th, 1850, the Hon. Catherine Murray, widow of Henry Murray, Esq., and daughter and co-heir of the present Baroness Sirr

Dying without issue, his Lordship is succeeded by his brother, Lieut.-General the Hon. Henry Beauchamp Lygon, M.P., now fourth Earl Beauchamp. He married, in 1814, Lady Susan Caroline Talbot, daughter of William, second Earl of St. Germans, and by her (who died in 1845) has, with other issue, a son and heir apparent, Henry, Viscount Ebrington, an officer in the 1st Life Guards

LIEUT.-COL. SIR HARRY LEANS DARELL OF COLVILLE, DARELL, BART.



THE death of this gentleman took place at Calcutta, in Sardinia, on the 4th of January. He had been shooting with Captain Payne Gallwey, in the Agiastra mountains, where he was seized with fever on the 31st December, and died after six days' illness. He was born in 1804, and entered the 39th Year. Having adopted the military profession, he served with much distinction in China and at the Cape; became Major of the 7th Dragoon Guards in 1847, and was made Lieutenant-Colonel by brevet in 1848

Sir Harry's family was a branch of the Darells, of Scotney, in Sussex; descended themselves from the ancient Yorkshire house of Darell, of Sessay. The first Baronet, Sir Lionel Darell, of Richmond-hall, Surrey, was Chairman of the Board of East India Directors, and M.P. for Reading.

Sir Harry Darell having died unmarried, is succeeded by his brother, the Rev. Sir William Lionel Darell, now the fourth Baronet

WILLS.—The will of the late Bishop of Meath has been administered to, in the Prerogative Court of Canterbury, by R. S. Palmer, Esq., the attorney of his widow and relict, now residing in Malaga, in Spain, to whom he had left the whole of his property, real and personal; the personalty in this country was sworn under £10,000.—The will of W. L. M. Leschallas, wholesale stationer, of Budge-row, has just been proved. It may be remembered that his death occurred by his own hands, on the 15th of Dec. last, he having an impression that he was in impoverished circumstances, whereas his personal property alone has been valued for probate duty at £140,000. The will bears date Jan. 6, 1852, bequeathing to Mrs. Levy, a legacy of £400; and leaving in trust to his executors £500 to be paid to such public charities, and in such proportions, as to them might seem expedient; and bequeathing to his executors absolutely the residue of his property in the following manner:—Two thirds to his brother, John Leschallas, and one-third to Mr. Charles Hullington, the manager of his business, whom he had appointed joint executors The testator, it appears, had drawn his pen perpendicularly through the entire will, which was written on three sides of foolscap, and had partially obliterated his signature to the attestation clause, but which was still legible, and had written these words beneath it, "cancelled by me, this 15th Dec. 1852, at half-past 7 P.M. M. Leschalles." But, to make this cancellation effective upon the document, it should have been done in the presence of witnesses attesting at the time. The Court, on being applied to, decreed probate of the will as it originally stood, which was accordingly granted on the 26th of January (instant), to the brother of the deceased, as one of the executors, Mr. Hullington having renounced. The late Earl of Falmouth died without making a formal will, but left a short testamentary document, which he executed on the 26th August last, by placing a cross therein instead of his title of honour, being at the time too feeble to write. It contained but two bequests, one being an annuity of £100, the other a legacy of £1000; and, with this exception, his Lordship died intestate, and the property goes to his mother, the Countess of Falmouth, being his nearest relative, and to whom letters of administration, with such documents annexed, were granted, the personalty alone being estimated for duty at £1,000.—The late Sir Robert Graham, Bart., of London and of Peasy and Dursley, in Gloucestershire, left his will dated 1850, as to property in Scotland, appointed his sole executrix. The will of the Reverend Sir Henry Peyton Bunbury, Bart., has been proved by his son Henry Mordaunt Bunbury, Esq., of Lyndon-house, Uppingham, who, with Lord Huntingfield, is named executor. The estate of Lord Wrottesley, deceased, was valued for probate duty at £40,000, which is exclusive of the freeholds, said to produce £8000 per annum. The heir to the estates is his only nephew, Robert John, being the only son of his only sister.

BANK OF ENGLAND NOTES. EMIGRATION.—Mr. William Howitt has written a letter cautioning emigrants to Australia against taking out Bank of England notes. The letter is dated from Phillip, Sept. 30; and in it he says, "Bank of England notes are utterly refused here, even by the bankers, except at a discount of 20 per cent. Numbers of persons are coming out daily. There are a thousand arriving at this port per diem, and not ten men out of each thousand are aware of this fact. In the ship in which I came (the *Kent*) there were numbers struck with consternation at the news. Some lost from £40 to £100 by their Bank of England notes; almost everyone something, more or less. Whoever brings Bank of England paper will assuredly and inevitably be mulcted of one-fifth of his money. I speak from actual experience."

OXFORD.—In the Convocation held on Thursday last, a grant out of the University chest, to the amount of £500, was given as a contribution to the great educational institution proposed to be founded in memory of the Duke of Wellington, K.G., the late lamented Chancellor of this University.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The following have recently been places: *Rectories*: The Rev. S. Andrew, to Hanwell, near Launceston; the Rev. Lord A. Hervey, *M.A.*, to Hemingbrough, near Bury St. Edmunds; the Rev. A. B. Hill, to High Rolling, Essex; the Rev. G. E. Hosken, B.A., to Luxulyan, Cornwall; the Rev. P. S. Bagge, M.A., to Walpole St. Peter's, Norwich; the Rev. H. Jellett, M.A., to Abinagh, Killanardish, diocese of Cloyne. *Vicarages*: the Rev. C. W. H. H. Sidney, to Gooderstone, Norfolk; the Rev. W. H. Jones, M.A., to Mottram in Longdendale, Lancashire; the Rev. H. S. Pollard, M.A., to Edlington, Lincolnshire; the Rev. D. L. Alexander, B.A., to Gauton, Yorkshire.

The Bishop of London has given notice to the authorities of the parish of St. Andrew Undershaft, the rectory of which lately became vacant by the death of the Rev. W. Antrobus, B.D., that he has suspended the tithes, &c., with a view to the apportionment of some of them to the augmentation of neighbouring and poorer parishes.

NEW CHURCHES.—From a Parliamentary paper, it appears that there are 580 new churches required in England and Wales. In the diocese of Canterbury 5 are required, in York 17, in London 58, in Durham 26, in Winchester 30, in Bangor 11, in Bath and Wells 2, in Carlisle 6, in Chester 21, in Ely 4, in Exeter 20, in Gloucester and Bristol 23, in Hereford 3, in Lichfield 73, in Lincoln 11, in Llandaff 35, in Manchester 80, in Norwich 6, in Oxford 14, in Peterborough 11, in Ripon 67, in Rochester 7, in Salisbury 5, in St. Asaph 5, in St. David's 19, and in Worcester 21. Several parts of London are pointed out—one part (Stockham), where there are upwards of 7000 people without a church, at which place £600 is required and only £1500 raised.

INAUGURATION OF SYDNEY UNIVERSITY.

THE opening of an University in the capital of New South Wales is an event greatly significant of the progress of the social and intellectual growth of the colony. Accordingly, the ceremony, which took place on the 11th of October last, in the Great Hall, College-buildings, Hyde-park, was attended by a very numerous audience. Soon after eleven o'clock the doors at the western entrance were opened, and every part of the hall appropriated to the general company was densely crowded before half-past twelve, when the doors were closed, and the ceremony of registering the names of the matriculated students was gone through. Professor Smith presented each of the young gentlemen to the Registrar, by whom their names were entered in the matriculation-book, the first name upon the list being Fitzwilliam Wentworth The matriculation entries having been made, the procession of those who were to take part in the official proceedings of the day was formed in the apartments of the principal, and entered the hall, the band of her Majesty's 11th Regiment playing the National Anthem

The Vice-Provost, Sir Charles Nicholson, conducted his Excellency the Governor-General to the state-chair placed for him in the centre of the dais, at the north end of the hall; and the scene at this moment was of the most animated character. On either side of his Excellency were seated the Fellows of the Senate. Before them again sat clergymen of all denominations, amongst whom we observed the Rev Messrs. Allwood, Grylls, Walsh, Walker, Turner, Priddle, Stephen, Smith, Dr. Steele, &c. On the left, was a numerous body of military and naval officers of the garrison and port. Near them were the French and other foreign Consuls, their glittering uniforms contrasting with the black gowns of the Solicitor-General and other leading members of the Bar, and of the young Alumni, who occupied the front seats. The Vice-Provost occupied a state chair on the right, a little in advance of his Excellency, and was supported by Professors Wall and Smith. On the extreme right of the reserved space was the Principal's chair; on the left, the Registrar's. A large portion of the area was reserved for the ladies. Over the Governor-General's chair was a shield bearing the Royal arms of England, and on his right and left, two others, with the arms of the Universities of Oxford and Cambridge. Over Dr. Woolley's chair was a shield bearing the arms of his own college, University College, Oxford. Immediately opposite, over the Registrar's chair, was the pure white shield of Sydney University; no arms yet emblazoned thereupon, but bearing the motto, "I will achieve."

Sir Charles Nicholson then rose and delivered an eloquent address, wherein he characterised the University as an institution founded for the promotion of all the higher branches of learning—an institution whose comprehensive design and ample endowment must enlist in its favour the sympathies of every generous mind, and afford a promise that the advantages which it holds forth may continue to be dispensed to the future generations of this colony, to the remotest period. In the year 1850 (continued Sir Charles) the Legislative Council passed an act to incorporate and endow the University of Sydney. The preamble to the bill declared it expedient for the better advancement of religion and morality, and the promotion of useful knowledge, to hold forth to all classes and denominations of her Majesty's subjects resident in the colony of New South Wales, without any distinction whatever, an encouragement for pursuing a regular and liberal course of education. To carry out those intentions, provision is made for the appointment of a Senate, consisting of fifteen fellows, to whom are confided the granting of degrees, honours, and rewards of merit, and the general regulation and management of the institution. If any further argument were required to illustrate the necessity of such a foundation as our University, it is afforded in the partial, if not complete, failure of every attempt hitherto made for the establishment of collegiate institutions throughout the Australian colonies

The learned Provost then glanced at the cause of this failure, which he referred partly to the limitation to some particular religious communion, whereas the University of Sydney has been placed upon a more comprehensive foundation. The second feature to which Sir Charles adverted to as characteristic of Sydney University is the high privilege accorded to it by the local Legislature, ratified and confirmed by a most marked expression of the Royal will, of granting degrees in the several faculties of arts, law, and medicine. A third auspicious attribute is its comprehensive design and character. Limited to no sect and confined to no class, its sphere of action is calculated to embrace men of every creed and of all ranks. Dispensing mere secular instruction, and leaving the mention of religious truth to the spiritual guardians of each denomination of religionists, the University presents the widest possible area for all who are willing to come within her precincts

Sir Charles then referred to the liberal provision made for the endowment of eighteen scholarships, of the annual value of £90 each, tenable for three years; these being open to the competition of the youth of the whole colony. Sir Charles then explained the steps taken for securing able and accomplished teachers, recommended by a committee of gentlemen in England, consisting of Sir John Herschel, Bart.; Professor Airy, Astronomer Royal; Professor Malden, of University College, London; and Henry Denison, Esq., formerly Fellow of All Souls, Oxford. Simultaneously with these steps were taken for obtaining books and apparatus from England, for the foundation of a library, and for the necessary illustration of the lectures in physical science. The philosophical apparatus, selected by Professor Smith, had already reached the colony; and our first consignment of books, of the value of £600, was daily expected. In conclusion, Sir Charles addressed himself to those for whose especial benefit the University had been established.

Loud applause followed; and, Sir Charles having resumed his seat, the Alumni were introduced by Professor Smith to the Vice-Provost and Senate, and took the prescribed oath.

The Principal, the Rev. John Woolley, D.C.L., then delivered the inauguration address (for which we regret we have not space). The number of matriculated students was twenty-three

BEAR HUNT IN THE PYRENEES.

RUMOURS having for some time reached Bagnères de Luchon, that several bears had been seen on the Spanish side of the Pyrenees, a grand bear hunt was organised on the 5th of November last. Among the persons who took part in this exciting and somewhat dangerous sport were many late deputies in the Chamber of Representatives, several members of the General Councils, and some English gentlemen. The party, who were suitably armed with fusils and hunting swords, and provided with dogs, succeeded in getting upon the track of the bears on the first day; but it was impossible to get within range of them. On the second day the bears were seen. M. Coulard fired at, and killed one, which proved to be a she-bear. The rest took flight. The news was soon conveyed to Luchon, and the next morning one superb animal was carried into the city, surrounded by the hunters, who, according to custom, fired off their guns in token of their success

Mr. Dudley Costello states that the valley of Lavedan, in which Argles is situated, is famous for the breed of Pyrenean dogs,

INAUGURATION OF THE UNIVERSITY OF SYDNEY.—(SEE PRECEDING PAGE.)

which are to be met with everywhere in the mountains, guarding the flocks and herds. Mr. D. Costello acquired a very fine specimen, only a fortnight old, which he took with him in a basket to London, and six months afterwards the largest kennel could scarcely contain it. These dogs are exceedingly strong, and are esteemed fierce; but their fierceness belongs rather to the wild life they lead, amidst bears and wolves, to which they prove formidable antagonists.

Mr. Paris, in his "Letters from the Pyrenees," says:—

Throughout the wild mountains of the Pyrenees the bear reigns supreme, although of late years it has become scarce, from the exterminating war that is waged against it. Whenever it is known that a bear is in the neighbourhood, the inhabitants assemble and hunt it to the death; and even amongst the most remote and almost inaccessible crags it often [illegible] who undertake regular campaigns against the race, for however strong and savage beast, it can run [illegible] as the guide asserts, and thus not to be encountered with impunity. For many are the narrow escapes and woful tragedies that the [illegible] can narrate, and I confess that the bold adventurer who has ordered [illegible] that a disadvantage where there was no [illegible] Mr. Paris from Luz, I [illegible] to nearly other [illegible] adventure that has [illegible] to [illegible] a Spanish muleteer [illegible] crossing the frontier by the Port de Venasque. Having [illegible] [illegible] [illegible] was very pressed with a string of mules into Spain, he was [illegible] by a [illegible] guide and looking quickly round, he beheld a bear within a few yards, gnashing its teeth and preparing for an attack: not a moment was to be lost,—he had barely time to snatch a knife from his pocket and to give a desperate cry to his distant companions, before the savage beast was upon him, and he was folded in its embrace. The pain from this fearful hug was so overpowering that he immediately fainted; but, upon regaining his consciousness, he found the bear laying by his side in the last agonies of death: he had possessed sufficient presence of mind to stab the monster as it rushed to close quarters, and the knife had done its duty. Besides the bear, the wolf and izzard inhabit these mountains. The former is the *Lupus Lycaon*, the black wolf or *lobo* of Spain. It is stronger in the limbs and shoulders than the common species, and is generally found in rocky and elevated ranges. They are exceedingly shy and ferocious and formerly frequented in vast numbers the passes of the Pyrenees where they have been seen bounding from bush to bush by the side of a string of mules, watching an opportunity to select a victim

BEAR-HUNT IN THE PYRENEES.

PHOTOGRAPHS FROM CALIFORNIA.

ALTHOUGH public attention has been of late directed to our golden possessions in Australia, it may be interesting to return to California, especially as we are enabled to present our readers with the accompanying Photographs of the Californian Diggings, from a work now preparing for publication by M. Saint-Amant, the distinguished chess-player, who has lately returned from a visit to Oregon and California, undertaken by order of the French Government. As M. Saint-Amant's mission was totally unconnected with any private speculation or personal interest, he judges with impartiality of what he sees; and his disinterestedness entitles his report to special attention.

California having been purchased from Mexico by the United States, the whole territory in which the mines lie, as well as all the other lands which were not private possessions held in virtue of old Mexican title-deeds, are represented by the Congress of the United States, which alone can dispose of them. It has not, up to the present time, conceded any of them, except a few indispensable portions to the state of California for public purposes. American citizens, known as *squatters*, have managed, through the generosity of their Government, to establish themselves on lands, which they may possibly be allowed to hold if really devoted to agricultural pursuits. As for the *placers*, the mineral localities, which were neither worked nor privately held under the Mexican domination, nothing has as yet been legally decided concerning them. They are in the meantime abandoned, without conditions, to the workers. Certain local arrangements and regulations are established, such as the edicts, which, by a payment of three dollars monthly, assimilate the foreign miner to the citizen of the state.

Usages, which may be called a popular code, at present regulate the affairs of the miners, and the division of the placers. It is, in fact, the miner who has constituted himself legislator. His elect, the Sheriff, is in each county, the executive agent; and in case of insufficiency of force, or of other need, immediate recourse is had to meetings, whose resolutions are supreme.

This sort of legislation has the merit of being in perfect harmony with the bold and democratic spirit of American genius, which wills that the land should belong to him who tills it.

The middle class of miners is the most numerous. Mining industry has rapidly progressed, by active and incessant experience, during four years Australia has the good fortune to profit by this progress, without having had to pass through the trials and mistakes which California, its elder sister, had to endure. It is evident that is carried on both more ch-

INDUSTRY BAR.

generally from half a dollar to a dollar a day per man. The same water often serves several times, and soon resumes its clearness when left to itself. For this kind of enterprise a large outlay is necessary, which passes into the hands of day labourers, diggers, and carpenters. The miner gets only the trouble of felling and cutting it. Only well-

SICARD, ON THE YUBA.

When the ground yields well, the expenses are trifling; though, in a country where labour is dear, economy is important. Take for example the placer of Sicard Bar, of which we give a View.

Although the river Yuba is always abundant in water, the miners on its borders, who wash in *longtoms* (lengthened rockers), the sands and quartzes of its steep margin, find it better to buy the water which is brought down from the neighbouring mountain, than to bring up themselves the river water to their diggings. For a long time this society of vigorous Americans have made fifteen or sixteen dollars a day. The greater part are now rich, and the society has been successively renewed. They employ numbers of negroes at four dollars a day (the average revenue of the miner is still valued between five and six dollars). The *claim* was a little below the tavern and store of Sicard, whose name it has retained. This old Provençal sailor lost an eye at the battle of Navarino; and he was one of the first to hasten from New Orleans and Valparaiso to California, where he made a rapid fortune upon the river Yuba. He did not, however, manage to keep it long, having gone into maritime speculations, through the pride of figuring as at once captain and owner of his ship. He was then only too glad to return to his former *El Dorado*, where, failing to enrich himself, he turned to agriculture, and established a farm in the neighbouring valley; where he was always ready, as well as Madame Sicard, to give work to his unfortunate fellow-countrymen.

The word *bar*, which signifies the tongue of land jutting into the abrupt course of the stream, is given to all the placers along the river, as the word *hill* is added to those on the mountains.

The town of Sicard contains about two hundred such houses. But this place must not be confounded with the gold placers. Its land contains indeed a little gold, but it has been well searched, and now supports the miner's houses, public establishments, such as hotels, playhouses, stores, cafés, bakeries, &c., which thus overlook all the placers of the district. The American population is mixed there with a full third of French. All sorts of people, indeed, are to be found now on this stony beach, where formerly nothing grew but the yeldra, a sort of nettle, the venomous sting of which is very dangerous. Above it rises a hill, beyond which one reaches the level of an enchanting country, and the ravines of which, though they have been often turned and returned, still pay, when there is enough and not too much water to work the ores.

This other point higher up on the same river, which has been *claimed* with almost unbroken continuity all along its two banks, up from Longbar to about twenty miles from where the Feathers river falls into the Yuba, is called Industry Bar.

Here are four partners, who, with a cart and mule, go down to the river to wash the produce of the researches they make at the top or on the side of the steep bank. They multiply the holes down to the solid rock, where the best gold beds are generally found. The country round about is mountainous, very woody, and quite picturesque. It is by means of a mixed system of "longtoms" and "rockers" that they do their washings. The "claim" had been already worked twice before falling into the hands of the three Canadians and the Irishman whom we found actively and successfully working there.

We must not quit the banks of the Yuba without carefully examining the preparatory works for laying its channel quite dry in the middle of summer, by drawing off its water, by means of a dam, into a lateral canal. Several companies, each working partner of which has ten feet of the bed of the river from one side to the other, have thus divided between them the channel of the Yuba, down which for ages it has rolled undisturbed its golden waters.

GOLD-WASHING ON THE YUBA.

ng to the nature of the placer and to the means and disposition of the diner. If he have little capital, he joins to his own gains the profits of ne labourer obliged to engage himself to him; and thus the chances are ore rapid. If he is reduced to reliance upon his individual exertions, s cannot make full use of favourable circumstances. There are few so rong-natured as as to be able to work in perpetual isolation. Associa- on supports, encourages, and facilitates the worker considerably; parti- larly in a place where selfishness operates in full force, and where man n neither ask nor expect anything of his fellow. The trials of the iner's life are severe, and his condition is one of the hardest— pecially if he have not the power completely to surmount the membrances of the affections he has left far off behind him. ir certain temperaments, the excitement of complete liberty and dependence recompenses its fatigues, privations, and dangers. The rst of all positions at the mines is to work for hire; the door of bright asions is then closed at once; and yet one who has no experience in work, and has nothing before him, must endure this means of ac- ring practical knowledge. With order and good conduct, he is soon ed from this apprenticeship, unless he be a man of colour, or a iness; but it is almost inevitable to the poor European freshly landed the gold coast, where the easiest and most productive positions are eady claimed.

Water being the principle and the means of the gold-working, the t and most lucrative positions are those which furnish to the miners means of washing their ores. On water everything depends; it is olutely necessary, in order to get at the gold; and art is brought in onstrain nature, either to lead a supply for the dry-diggings, or to rent its flowing continually in too great abundance in its natural annels. In California are daily practically illustrated the words of a brated engineer—"Rivers have been created to supply canals." By ns of pumps the water is raised out of the rivers; by canals it is led a distant mountain streams; and across valleys it is brought by ns of wooden aqueducts upon piles, and of large ditches cut in the ey ground of the hill sides. Frequently these canals cross and in- ect each other in all directions, presenting a formidable aggregation orks. The water is taken at the highest point, and in place of being to take its own course over cascades and down rapid falls, it is ed into an artificial channel down a gentle and well-managed fall, is made, along a course of often many miles, to irrigate the auriferous s, waiting the fecundating fluid at every step in its passage. Each r draws his supply of water either naturally, or by canvas pipes, pays the water company daily, in proportion to the volume drawn, to-do miners can undertake these heavy works; but, once completed, they yield enormous returns.

It should be added that the shareholders were neither in London nor Paris. They were the original workmen, and they continue to repair, keep up, and make good the rent of their canals, and to keep in person the keys of the reservoirs and sluices.

CALENDAR FOR THE WEEK.

SUNDAY, Jan 30.—Sexagesima Sunday. Martyrdom of King Charles I.
MONDAY, 31.—Hilary Term ends.

TO CORRESPONDENTS.

PHOTOGRAPHY.—Several parties have applied to us to recommend them where to purchase lenses, cameras, mercury-boxes, &c. As any such recommendation of ours would necessarily have the appearance of partiality, we must decline replying. Any of the London firms, and many in the country, will supply daguerreotype and calotype apparatus, which may be depended on.

E. C., Chesshunt.—Mr. Fox Talbot's traveller's Camera appears far too complicated and cumbrous to answer the purposes for which it is intended. We are not aware that the Photographic Society intend to publish any journal at present; all important information communicated will be immediately published in our pages.

BEDLWYN.—Your coins are only worth the price of old silver.

F. P., Hoyes Hall.—Your medal is a politico-satirical medal of the time of George II: bearing on one side the effigy of John, second Duke of Argyll (died 1741), and on the other that of Sir Robert Walpole.

LEO.—Henry Duc de Bordeaux, known as the Count de Chambord, is the legitimate heir of the Bourbons. His Royal Highness is son and heir of the late Duc de Berri, son of Charles X., King of France.

A SUBSCRIBER FOR SOME YEARS.—The title conferred on General Gink o was the Earldom of Athlone. It became extinct in 1844, when William Gustard-Frederick De Reede de Ginkle, 16th and last Earl of Athlone, died at the Hague. His widow, Wendela-Eleanor, daughter of M. Borcel, survives, and is now Countess Dowager of Athlone. Lady Elizabeth, sister and heiress of George Godart Henry, 5th Earl, is married to the Hon Frederick William Child-Villiers. For details of the services of the famous General, and for his descendants, refer to "Archdale's Irish Peerage."

E. H. Y.—Johanna de Huntingfield, daughter and heir of Sser de Huntingfield, Dominus de Southstoke, married, first, Sir Baldwin Bakepuz, by whom she had a daughter, Ada; and, secondly, Sir William Howard, by whom she had a daughter, Alice, who married John Ham Howard, by whom she had a daughter, Alice, wife of William de Colevyle, Peche, and was mother of Johanna, wife of Sir Edward Hull, by whom she had a daughter, Johanna, married to Sir Richard Bros, of Clayton. See Hart Mss. 1.57.

SHADE OF PITT.—The Earl of Aberdeen will complete his 69th year on the 28th of January. He succeeded his grandfather, as 4th Earl, when a minor

B. H. R.—Arms of HAYWOOD: Arg. three torteaux, in bend, between two cotises gu., all within a bordure of the second. *Crest:* On the stump of a tree, a falcon rising, all ppr.

HERALDICUS may find it a difficult matter to obtain information regarding the family of Alan of Co. Down, who took refuge, after the Battle of the Boyne, in Lisgoe, near Belfast, Ireland. Dublin, or Belleek, Fermanagh. Rocke R.N., Esq., of Sedbury, near Chepstow, Gloucestershire, is the representative of Lachlan Rocke, near Chippenham, who is, we believe, a descendant of the family of the celebrated Alan.

J. B. J.—The crest of Lawrence is, a demi turbot arg., tail upwards."

AN INTERESTED SCRIBBLER.—The family of the Edmunds was seated at Worsborough, county Cork, in the time of King James I. They were by marriage of Dalt [illegible] near Rotherham. Thomas Edmonds, Esq., of Worsborough, was created by the Royal Act of Stafford and Radnor Worsborough, was created by the Royal Act of Stafford and Radnor with devotion to the Royal cause in the great civil War. He adduced male descendant, Francis Offley Edmunds, Esq., of Worsborough, died Esq., leaving his elder sister, Maria Elizabeth, wife of Henry Martin, Esq., his heir. The Arms of the Edmunds are: "Per chev embattled or and sa., three fleurs-de-lis counterchanged. *Crest:* An ancient ship or and sa., three fleurs-de-lis counterchanged. *Crest:* An ancient ship of three masts under sail upon the sea, all ppr. *Motto:* Voilà tunc vella." There were many families of Edmonds, bearing different arms, in Hants, Bucks, Sussex, Cambridgeshire, Devon, and Oxfordshire.

P. F. Y.—The *Arctic Illustrated News* may be had, by order, of any bookseller.

A SUBSCRIBER, Rochester.—The cost of the ILLUSTRATED LONDON NEWS from the commencement to the end of 1846, nine volumes, bound, is £9/5/.

AN OLD SUBSCRIBER, Penrith.—A Crown-piece of William IV. can be obtained of Mr. Wellington, 17, Great Russell-street, Covent-garden.

A NOVICE IN HELIOGRAPHY, Ashburton, Devon.—The best lenses for Photographic portraiture are manufactured by Ross, but they are not less expensive than those of Voigtlander. Indeed, it is not possible to render a first-class lens cheap, as the delicate labour bestowed on it is very great.

A. C.—Possibly the star N Y was Regulus; the constellation Andromeda was [illegible] the three stars in N W were [illegible] the constellation Aquila; and the other stars in N W were [illegible] Information being [illegible] we cannot be more explicit. If more information be required, we will endeavour to procure it.

LLANGOLLEN.—Mr. Parry, Bath-road-terrace, Lowestoft.

LLANGYNOG.—More than twelve counties have been within the last two years.

CAMBRENSIS, Newcastle.—It was the father of John Parry who arranged, or, as some say, composed the Welsh melody "Bendy Jones."

PORTLAND-PLACE.—The first opera of Ferdinand Piery was "La Locanda de Vagabondi," written at the age of sixteen; and his forty seventh and last, "Olinde et Sophronie," was not finished. He died May 3, 1839.

A CONSTANT READER and SUBSCRIBER.—A Memoir of Charles Edward [illegible] can be had of Cox and Wyman, Fetter-lane, price 5s.

IVANHOE AND ITEM.—"Arg. two chev. sa. on a chief of the second a lion passant of the first. *Crest:* A hand [illegible] out of a cloud, holding a sword, blade waved, ppr."

A SUBSCRIBER.—Henry II., previously to his marriage with Eleanor of Aquitaine, bore for arms, "Gu. two lions passant guardant or;" but, after the marriage, adopted a third lion for Aquitaine.

WHY "Napoleon" is called III., rather than third Sovereign of the Napoleonic name.—Napoleon I was the [illegible] name. Napoleon II. was [illegible] son. Napoleon III. was [illegible] the Republic, and Napoleon III. [illegible] the Empire, and is the 3rd Napoleon only four years after the establishment of Napoleon abdicated the throne of France, [illegible] proceeded to [illegible] and proclaiming his son Emperor [illegible] the title of Napoleon II."

GEORGE HOGARTH.—Dr. Hogarth, the composer, was born at Gamersheim, in the duchy of Deux-ponts, 1783. His father was a physician.

SUSANNA.—Alice Perrers, the [illegible] and consort was Mary of [illegible] Lancaster, by other wives.

JOHN III. of Portugal, the third, had to [illegible] daughter of the Emperor Charles, and the fourth, his niece Anne, daughter of the Emperor Maximilian II.

JAPHET.—The venerable Baron Humboldt is living at Berlin.

THE ILLUSTRATED LONDON NEWS VOLUMES, from the Commencement (May 14th, 1842) to December 31st, 1852 (comprising of TWENTY-FIVE VOLUMES), may now be had through all Booksellers and News agents.—From the Office Volumes may be had through all Booksellers and News agents.—From the Office Set, bound in strong paper, for exportation, £14 10s.; bound in cloth, elegantly gilt, £15 15s. Vol. CDII., 21s.; or in Paper Covers, at 5s. each.

THE MADIAI AND THE PROTESTANT ALLIANCE.—A great meeting was held at Exeter hall, on Tuesday, on the subject of the Madiai in Florence; the Lord Mayor in the chair. There were present the Earl of Cavan, Mr T. Chambers, M.P., Rev. Dr. Ranting, Sir H. Verney, the Rev. T. Bunney, Sir W. Verney, Rev. W. Ball (of New York), Dr. Cumming, Mr. J. Candler, &c. The following resolutions were passed:—

1. That it has been the desire and prayer of the Church of Christ in all ages, "That God's way may be known upon earth, his saving health among all nations;" but in the whole history of the world, from the time of the Bible to the present day, there never was a more remarkable example of a wide, the free, the triumphant, of the Bible as it is the preaching of the Gospel as the appointed means to rebuke the sin of which means is to undermine the supremacy of Christ's kingdom, and to deprive men of its highest privileges; that it, therefore, with mingled feelings of regret and indignation, that this meeting has learned that there are at this moment many Christians imprisoned in the dungeons of Tuscany under no other charge than that of reading and discussing the Holy Scriptures, "which are able to make them wise unto salvation, through faith which is in Christ Jesus."

2. That this meeting desires greatly to acknowledge the efforts which have been made by the hearts of Rulers and Lords, and Governments of the living witnesses for the truth of God, and, having now seen the fruitlessness of any appeal to the assembly or the justice of the Tuscan Government, it authorises a memorial to be signed by the chairman, and presented to her most gracious Majesty, praying that, if that Government should continue to disregard the intercessions of the Protestant states of Europe, her Majesty will be pleased to take into her consideration the propriety of discontinuing all diplomatic relations with a Court which could thus show itself indifferent alike to the dictates of humanity and the claims of international friendship and courtesy.

3. That regarding the late proceedings in Tuscany as indicative of the real character of Popery in its dominant condition, and as heralding a fuller degree of all those oppressions of Popery in its dominant condition, and as heralding a fuller degree of all those oppressions of which this meeting has long complained, by which the British people have been deluded for many years past—this meeting renews its protest against all additional encouragement of a system so adverse to the commands of God, and so injurious to the best interests of mankind. Especially it adopts petitions to both Houses of Parliament, praying for the discontinuance of the endowment of Maynooth College, and for the withdrawal of some regulation which shall

[illegible] Kingdom.

The Rev Dr. Steane announced that the King of Prussia had applied to the Duke of Tuscany for clemency, but which had been refused. After thanks to the chairman the proceedings closed.

THE ZOOLOGICAL SOCIETY.—At the meeting of the society, held on Tuesday night (Dr. Gray, V.P., in the chair), the secretary read a letter from Mr. L. Fraser, Her Majesty's Vice-Consul at Whidah, addressed to Mr. Cuming. It contained some notice of the existence of a large quadrumanous animal in the interior, called by the natives Tarpar-po-har, which is supposed by them to be a chimpanzee, but which is described by Mr. Fraser to be most probably a Cynocephalus.

CITY RAILWAY TERMINUS.—On Wednesday the first general meeting of the shareholders of the City Railway terminus Company was held at the offices of the company, 65, New Bridge-street, Blackfriars. The room was crowded. Some details were entered into by Mr Charles Pearson (who announced his resignation of an honorary seat at the Board of Directors, in consequence of the Corporation not being the City Solicitor—demurring to his remaining there), to show that, when joined to the Dock Junction line, the northern suburbs, and the intended Bayswater and Paddington, the proposed line would pay first and second years, 4 per cent; third and fourth years, 5 per cent; and fifth and sixth years, 8 per cent. The directors going out by lot were re-elected; and on the votes of thanks to the chairman (Mr. Acton Ayrton) and Mr. C. Pearson, the meeting adjourned.

CHARING-CROSS HOSPITAL.—At a meeting of the committee, recently held, the secretary, in his report, stated that—"In the course of the last [illegible] 16,326 indigent sick persons were admitted on the books for relief, at a cost of £2363 4s. 04d.; of these, 1582 were in-patients, and 14,594 were out-patients (many of whom were visited at their own homes, the greater part were restored to health). The cases of accidents and sudden injuries amounted to the very large number of 2428. The hospital has proved eminently useful, and as the scale of operations admits of extension, the governors propose to open four additional wards, and, as a mark of respect to the memory of the Great Duke, they propose to call one ward the 'Wellington Ward'—this definition of a work of mercy to his honour being a more satisfactory mode of recording admiration and gratitude than the erection of structures merely ornamental, or costly statuary, however splendid."

THE LECTURES TO WORKING MEN, which were so popular last year at the Museum of Practical Geology, are to be recommenced on the evening of Monday, the 7th of February. We are glad to learn that the system of lectures has been much extended, and that different courses are adopted. The first course of six lectures will be delivered by Professor Robert Hunt, the subject being "The Practical Applications of Physical Science." These will be followed by a second course of six, "On the Elements of Geology," by Professor Ramsay; and these, again, by six "On the Principles of Natural History," by Professor Edward Forbes. Classes, and these only, will be admitted to these lectures upon payment of a registration fee of sixpence for each course. We are pleased to see the Government employing their officers in the work of communicating truly practical instruction to those to whom it will be valuable, and by whom it will, without doubt, be valued.

SHIPWRIGHTS FOR AUSTRALIA.—The shipwrights in Woolwich and other dock-yards have received notice that after each other is engaging with their families, to Australia, as they have so little hope of their petition to the Lords Commissioners of the Admiralty for an advance of wages, a place has been provided, and that of their present wages paid in private yards, being acceded to, and those who have a little household property are disposing of it to take their immediate departure for the cold fields of the Antipodes.

THE NEW MARKET AT BILINGSGATE.—Gas jets for illuminating the arcades in the new structure have been fitted to the cast iron pillars. They number eighty-four, two being affixed to each shaft. Besides these on the river side of the new dock, one can likewise be seen in the corner of brilliant light over the whole wharfage. The sub-market, for the sale of shell-fish is also brilliantly lighted with twenty-four gas jets. The whole of these lights are in addition to the arrangements provided for the commissioners of lights and paving, and are lighted during the winter months, or when the darkness of the weather may require it, which time the new premises (four o'clock in the morning), at which time the vast area presents a splendid appearance. The fountain in the centre of the [illegible]et has been put in full play, and, besides being ornamental, it is a great benefit in cleansing the surface. The exterior of the [illegible] street front is completed, and the interior is rapidly progressing. It is a very neat structure, consisting of an arcade for the sale of fish on the ground floor, with a suite of offices over. The space between the houses on the west side of the market and the arcades has been covered in with rough plate glass of extraordinary thickness, and on a laminated form. The houses on the west side of Darkhouse-lane have been purchased by Messrs Nicholson and Co., who intend to enlarge their wharf [illegible] on the site. The remaining houses in Darkhouse-lane, and those in the market, being the property of the City, will, when the leases fall in, be pulled down, and their site appropriated to the enlargement of the market.

TO NEW CRYSTAL PALACE.—The Lords Commissioners of her Majesty's Treasury have desired the proper authorities of the revenue to issue instructions to their officers to ensure all possible expedition and care being observed in the examination of the several packages of articles and other articles expected to arrive from the Continent, by way of [illegible] consignments, addressed to the New Crystal Palace Company or their agents in London.

FORTUNATE ESCAPE.—A gentleman well known in City circles, having been on a visit at the country seat of an eminent railway contractor, narrowly escaped destruction from the accidental discharge of a pistol. His attention was called to some novelty in the manufacture, and in pointing out the change, as he was unconscious of its being loaded, he pulled the trigger of one he held in his hand. The pistol went off, lodging the ball in the looking-glass, after having passed through the breast of his host's coat.

OMNIBUS STATISTICS.—There are daily plying through the streets of London 300 omnibuses, each carrying 500 passengers daily, or 3000 a week, which makes for the entire omnibuses 6.000.000 a week, or 300,000,000 passengers a year. Supposing each passenger paid a threepenny fare, the amount expended annually would be £3,000,000. An omnibus conchman driving an omnibus 60 miles a day, passing the same ground over and over again, would in the course of seven years perform a task extraordinary distance of 175,680 miles, or 821,640 miles in twenty-one years, which several coachmen have done without varying their route to any from Chelsea to the Bank. The manual labour employed comprises 1500 conductors—Conchmen at 30s per week; horse keepers, 2000; occasional drivers and hangers-on, 2000; total, 11,000. The value of the metropolitan omnibus establishment is estimated at £962,000, viz., horses worth £600,000; omnibuses, £300,000; harness, £6000; and stabling, £2000. The expenditure figures £787,600 for corn, £222,000 for straw, £100,000 for hay, and £78,000 for horse-shoeing; to which are to be added £140,000 for wear and tear, and £180,000 for harness, exclusive of stabling and its incidentals. The Government duty amounts to £38 5s.

POULTRY MANIA.—The unprecedented sum of £100 has just been paid by Mr. Chisholm, of Hollow-way, Holloway, for a pair of Cochin Chinese, to Mr. Fletcher, of Kensington, for his celebrated Cochin China cock. This fowl obtained the first prize and extra medal at the Birmingham poultry show in 1851; and is a dark mackerel and pullet, bred from him, took the prize at the great metropolitan show, and sold at the auction for £49 7s.

FIRES.—Several fires have occurred during the week, but, fortunately, not attended with any loss of life. The house of Mr. R. Tarlton, [illegible] Richmond-terrace, Commercial-road in the East, has been burnt, and the furniture much damaged.——The premises of Mr. Warren, linendraper, Leicester square, have been destroyed.——The Rose and Crown tavern, Lower Thames-street, has been slightly injured by fire.——Very considerable damage has been done to the premises of Wilson and Co., Friday-street, Cheapside, by a fire, through the escape of gas.——A house in Grange-road, Bermondsey, has also been injured.——An alarming fire has occurred, and much damaged Nos. 36 and 37, Sun street, Bishopsgate, tenanted by Mr. Ward and Mr. Shackell: the former was insured, the latter uninsured.

PROVINCIAL INTELLIGENCE.

THE AMERICAN MINISTER AT BIRMINGHAM.—Mr. Ingersoll was the chief guest, last week, at a public dinner given in his honour by the merchants and traders of Birmingham. Mr. Muntz, M.P., presided; and around him were Lord Calthorpe, Mr Spooner, M.P., Mr. William Scholefield, M.P., and Mr Hooper, M.P. The theme of the evening was the brotherly relation between England and America. Received with unbounded applause, Mr. Ingersoll, in returning thanks for his health, viewed generally the position and prospects of both countries, as well as their identity of interest; and he expressed a hope that the cordial relationship now subsisting might long be perpetuated. A generous rivalry and a generous emulation would endure to the permanent prosperity of both countries. Of all the kindness that he had experienced in England, none had inspired him with such depth of feeling as that reception of him by Birmingham men a town so largely interested in American trade, and in the prosperity of the country he represented. All the speakers cordially concurred in the expression of a hope, which Mr. Ingersoll stated met with his full approbation, that England and America should unite to check the encroachments of despotism, and protect the liberties of nations.

THE REFORM MEETING AT MANCHESTER.—A meeting of Reformers is about to take place at Manchester. The cards are being issued, and the invitation is to a "social soiree at the Town-hall, Manchester, on Thursday evening, February 3, at six o'clock, to meet the Free-trade representatives of the boroughs and of the two divisions of the county of Lancaster." The invitations are to all the leading Reformers and Free-traders of the county, and it is probable that a company of [illegible] persons will assemble. The following gentlemen have already accepted invitations:—Thos. Bazley, Esq., M.P., William Brown, Esq., M.P., John Cheetham, Esq., M.P., Thomas Milner Gibson, Esq., M.P., John Bright, Esq., M.P., [illegible], M.P., [illegible], Esq., M.P., James Pilkington, Esq., M.P., W. J. [illegible], Esq., M.P., Joseph Crook, Esq., M.P., James Kershaw, Esq., M.P., J. B. Smith, Esq., M.P.; Charles Hindley, Esq., M.P.; George Haddield, Esq., M.P. &c.

AURICULAR CONFESSION.—DEVON MEETING.—In consequence of the refusal of the High Sheriff of Devon to call a meeting upon the subject of auricular confession, as enforced by certain of the clergy of the diocese of Exeter, the requisitionists themselves called a county meeting, which took place at the Royal Subscription Rooms, Exeter, last week. The Earl of Morley and a large number of the landowners and magistracy attached their names to the requisition. The meeting was most numerously attended, the Earl of Devon in the chair. A resolution was adopted, setting forth that some of the clergy encouraged auricular confession of a Romanising character, and that legislative enactments on the subject had been already passed, and a memorial be presented to the Queen, praying for a Royal commission to examine into the matter; the memorial to be signed throughout the county, and to be presented by the Earl of Devon.

VILLAGES ITINERATING LIBRARY, IN YORKSHIRE.—An itinerating village library, on the plan recommended by the central committee of the Lyceum and Mechanics' Institutes, is now in operation, and consists of the following villages, under the name of the Castle Howard United Villages Itinerating Library, namely, Slingsby, Coneysthorpe, Bulmer, Welburn, and Coxwold, and Settington and Thornton, near Pickering, have expressed a wish to join the library. The library has been formed principally through the munificence of the Earl of Carlisle, and the zeal and energy of Mr. J. Fish, the railway missionary.

ENCROACHMENT OF THE SEA.—Experimental faggot groins have been made to the eastward of the sea-wall, at Dover. These are being placed down with a view to the retention of the shingle; and some hopes are entertained of their success, although practical men affirm that the proceedings will be of the slightest utility. The weather has been favourable for carrying on these works; but the late gales swept most the whole of the shingle out of this portion of the bay, which now presents a very miserable appearance.

MONUMENT TO "THE CORN-LAW RHYMER."—A monument in bronze, by Bureau, is about to be erected in Sheffield, to the memory of Ebenezer Elliott, the "Corn law Rhymer." The council of the Anti-Corn-law League have given a subscription of £20 towards the cost of the contemplated memorial. Mr. Bramley-Moore has given a second subscription of £5, and a like contribution has been received from Colonel Thompson.

SOUTHAMPTON EMIGRATION DEPOT.—The building for the reception of the Government emigrants, is in every way suitable for the object in view, viz., the comfort of the emigrant. Attached to the building are a dispensary, cooking offices, baths, washing houses, emigrating rooms, &c. The building is heated by steam, and lighted throughout with gas. The first of the vessels that will leave is the *Cressington Grange*, the *Calliope*, and another soon after. The cabins of these ships are roomy, and fitted up with every regard to convenience. There will be about 400 emigrants taken in each of the ships, and an experienced surgeon will be on board each vessel.

WALMER CASTLE AND THE CINQUE PORTS.—According to ancient usage, the appointment would have been conferred upon the Earl of Derby, the Premier, on the occasion of the office falling vacant, as in the case of the Earl of Liverpool and the late Duke of Wellington. The Marquis of Dalhousie, appointed to this office, has been for some time an arrangement made in 1847, on his taking the appointment of Governor General of India, which, in July next, he will have holden six years, and will be entitled to a pension. We believe that the noble Marquis expects to be two years longer in India.

HARWICH NEW DOCKS AND PIER.—The estimated cost of the construction of the proposed docks, pier, and other works, including the purchase of property, and all contingencies, is £400,000. It is proposed to construct these docks on a large tract of waste or mud lands, which are covered by the water at high tide, and are situate between Harwich and Bay Island.

THE UNITED STATES AND CANADIAN MAILS.—On Sunday morning the *Canada*, screw steam stone, sailed from the Mersey, with the usual mails, thirty four passengers, and a large and valuable cargo on board. She attempted to sail on Saturday; but, owing to the tide having ebbed too far, and a N.N.W. gale creating a heavy sea on the bar, the pilot considered it would be dangerous to attempt to cross it, and brought her back to her moorings.

A BOA-CONSTRICTOR AND ITS YOUNG ONES.—There arrived at Liverpool, this week, in the *Arrow*, Captain Wyatt, from Para, a huge serpent of the boa genus, respecting which we have received some particulars. The reptile is 16 feet in length, and was caught on the banks of the "mighty Amazon." Before it came into the possession of Captain Wyatt, it had satisfied its appetite by swallowing a full-grown goat. On the day the vessel left Para, the captain and crew were surprised to find that the serpent had given birth to 36 young ones. The "snakelets" were about 10 feet each in length. In six days after the birth, the mother devoured 29 pigeons, being the first food she had tasted for about three months. Captain Wyatt has disposed of the boa-constrictor and its progeny to Mr. Edmonds, the proprietor of a travelling menagerie, at present exhibiting in Manchester. The mother and three of the young ones have been conveyed to that town, but 33 of the snakelets have yet to be delivered to purchasers. The fate of this snake is not venomous, so that the young ones may easily be handled.

FEARFUL EPIDEMIC AT CROYDON.—The town and neighbourhood of Croydon are in a state of consternation, on account of the breaking out of a fever of a very fatal character. It appears that a board of health has been established at Croydon, and a complete system of drainage has been carried out, and in the necessary works for that purpose a great deal of ground has been disturbed, particularly in the High-street; whether from the miasma created by the disturbance of the old drains, or from any other cause, it would seem that a great many of the tradesmen and other persons residing in the High-street were attacked with a fever of a very serious character, and in very many instances ending fatally; it being a remarkable circumstance that those persons who have apparently the most healthy were the first to succumb to the disease. Dr. Southwood Smith and Dr. Sumner and were sent to report upon the cause and nature of the epidemic. Dr. Sumner, having taken down reports made by those gentlemen upon the subject:—"We have ascertained that a similar disease has prevailed at Oxted, a few miles from Croydon, before any disease of a fatal and was observed at Croydon, and we have to add that, from communication received by the General Board of Health, it appears that for many weeks past a similar epidemic has prevailed in various villages and towns both in England and Wales. We apprehend the cause of the disease is to be found at Croydon, as elsewhere, in the peculiarity of the present season; the combination of excessive moisture and heat appearing to have favoured, as was anticipated, the generation and spread of a low form of fever.

THE PINT BOTTLE QUESTION.—On Tuesday, at the Sunbury Sessions, John Wayte, of the Angel and Crown Hotel, Staines, was summoned before the bench to answer an information laid against him by Mr James Gregg, inspector of weights and measures for the Brentford division, for having sold a certain quantity of beer, as and for one quart and one pint, and in the sale thereof did use certain vessels or measures other than those authorised by law, the quart being deficient 12 ounces 14 drachms, and the pint 6 ounces 7 drachms deficient. The case excited considerable interest, in consequence of the prominent way in which the question had been recently brought before the public. The magistrates retired for a short time to consult, and returned into court, when the chairman said they having carefully considered the arguments that had been used on both sides, the Court was unanimously of opinion that the information had been sustained, and convicted Mr Wayte in the penalty of 40s. and costs. The fine was immediately paid.

FATAL COLLISION IN THE CHANNEL.—A fearful collision has taken place in the Channel, which terminated in the loss of the *Herald*, laden with a valuable freight from Madras, and, melancholy to add, the whole of her crew (with the exception of one man) and two passengers, invalided soldiers. It occurred during a heavy gale of wind somewhere between the Lizard and the Eddystone lighthouse. The *Herald* was the property of Messrs. Lidgett, Billiter street, London, was 400 tons register, was commanded by Mr. Verne, and manned by a crew of seventeen hands. The vessel with which the *Herald* came in collision was a schooner, which was supposed to have received the greatest amount of injury. Her weather, however, came on soon after the vessels got clear, and it was discovered that the *Herald* was in a sinking state. Its attempts to launch the boats several had their fires, and, as previously, only two of the crew survived, who were clinging to spars. Of these, but one, named John Gardner, was saved, who was picked up by the Danish barque *Fortress*. It is thought that part of one of the schooner's spars must have entered her side, and, breaking off, filled up the cavity, and the weather setting in more severe, the timber which occupied the hole was washed out, and so allowed the sea to make a clean sweep into her. The statement of those on board the schooner differs from that of the survivor of the *Herald*. They state that the barque ran into them, and that, dismasted as they were, they could have saved the whole of her crew, but that she bore away. They were knocking about for some time, when they were observed by the *Robert John*, pilot-boat, which contrived to take them into Fowey, on the island being lost. The *Herald* had a valuable cargo, but she is understood to have been well insured.

THE NEW BRITISH COLONY OF BAY ISLANDS.

A PROCLAMATION was issued by the British authorities at the Belize, July 17, 1852, announcing that her Most Gracious Majesty had been pleased to constitute and make the islands of Roatan, Bonacca, Utilla, Barbara, Helena, and Morat to be a colony, to be known and designated as the colony of the Bay Islands. The proclamation was signed by her Majesty's superintendent, Augustus Frederic Gore, Colonial Secretary.

This proclamation is regarded by certain parties in the United States as an infraction of the treaty of Washington, of July 1, 1850, which provides that neither party shall occupy, or [illegible], or colonise, or assume, or exercise any dominion over Nicaragua, Costa Rica, the Musquito coast, or any part of Central America. By the 4th instant, in the Senate, Mr. Cass said he would not have voted for that treaty if he had supposed it recognised the British claims to territory in Honduras. It was, however, distinctly stated by Sir H. L. Bulwer, when the ratifications were exchanged, that "her Majesty would understand the engagements of that convention to apply to her Majesty's settlements at Honduras, or to *its dependencies*."

The British title to Central America was recognised by President Polk in appointing a Consul to Belize, in British Honduras, March 80, 1847. The Consul was recalled by President Taylor's Administration on March 1, 1850, to avoid any charge of having recognised English authority in Honduras.

Thus the United States guards itself against the recognition of the new colony of the Bay of Islands, and questions indeed the territorial rights of Great Britain to any portion of Honduras.

We have been favoured by a Correspondent with the following sketch of his recent visit to the Bay Islands, and the proclamation of the British authorities, with the Illustrations engraved upon the next page.

In the south-eastern corner of the Bay of Honduras, nearly opposite to the now fast-decaying city of Truxillo, several small islands are situated, of rare beauty and picturesque appearance. Five are close to the north and eastward, are the Grand Caymans, once a flourishing dependency of Jamaica, but in modern days gradually dwindling away. The soil has become exhausted from constant cultivation; and, although wood and water is still to be found in the inland islands, the people are rapidly migrating, seeking other more productive lands, wherein to form new habitations. Of the places sought by these wanderers, the Bay Islands are the most accessible, offering a genial climate and fertile soil. Divided into several lakes, they run from east to west. The principal of them are called Utilla, Roatan, Barbarets, Bonacca, and Morat; Roatan claims to be the largest of these. It is about fifteen miles long, and about it is in that island. Many of the Caymans people have fixed their new homes. The elevation of the hills is not great, 1,200 feet being the mean element of the highest; but yet the scenery of both Bonacca and Roatan is bold and romantic, enhanced also a little by the lofty range of the mountains on the main, distant some fifty miles; there the towering peak of Congretery pierces the clouds—of old a volcano, but now its fires have been extinct for more than seventy years. At the foot of this range lies Truxillo.

Towards the end of July, 1852, finding myself in that town, I resolved to sail across to the Bay Islands, and judge for myself whether the accounts given by the Spaniards of their fertility and beauty were correct. A few hours' run brought us to the narrow entrance of Conchon harbour; but on rounding the Raye, at its mouth, we were surprised to see the taunt spars and low hull of a man-of-war, from which presently arose a chorus of voices. The sun had not long set, and by the reflected light from the cloud, our eager eyes could descry officers in the waist, and men crowding in the forecastle. On landing, in the morning, we were informed that these islands had lately been recognised by the British Government as a colony, and that H.M. brig *Pearl* had come from the new Governor and his suite to proclaim and set going this infant settlement.

The trade of these islands consists in supplying the New Orleans market with fruit; for which purpose large plantations have been opened of plantains, yams, pine-apples, and bananas. Many schooners are employed in this traffic, they run from the Mississippi to the Belize with cargoes of flour and salt pork; thence in ballast beating out to the Bay, where they quickly load with fruit, and return with a flowing sheet to their go-a head city. The opening of the railway from New Orleans to New York will, no doubt, increase the demand for the produce of the islands.

A general meeting of the inhabitants was called for the morrow, and preparations were being made for erecting a flag-staff, and putting the Court house in order for the coming ceremonies. I was much struck in my perambulations in the village with the numbers of young soldiers running about the houses, which are remarkably clean and comfortable. The people said their plantations were mostly to windward on the sea coast; and, accordingly, I set off to visit some of the nearest in "Cocoa nut Grove." On coming there I was astonished at the quantity of land in cultivation, and the luxuriant growth of plantains and bananas.

A narrow strip of cocoa-nuts runs along the shore opposite the dwellings of the settlers; these trees seem quite self-sown, and are too close together to allow of their yielding a full crop, or, indeed, ever attaining any degree of perfection. Limes, orange trees, guavas, had been planted, and several specimens of the cotton plant gave promise of its successful, if cultivated. There may be 300 people living on this portion of the settlement; most of them have abundance of poultry, and I was glad to see that they keep their pigs unmured in styes, instead of running wild, as in many other of the West India islands.

It was dark when I returned to my schooner, and yet I found all hands busily engaged in loading her with the produce of the land Great exception is necessary, as every hour of delay causes considerable detriment to the fruit, and consequent loss to the shipper; luckily however, the winds which prevail are, for nine months in the year, favourable for making a run to New Orleans.

It was late ere I retired to rest, as the fresh breeze and bright moonlight, not to mention the fragrant smoke of my havannah, beguiled the time insensibly away. On awaking in the morning, the sun had long risen, cloudless in a golden atmosphere of its own, looking as only tropical suns can look.

The *Persian*, a Symonite brig, was already dressed in her gay colours, and the harbour was dotted with small craft full of people, coming in from to windward, to be present at the recognition of their British relationship. About twelve o'clock I proceeded to the Court-house, which stands on a little eminence close to the beach, and commands a tolerable view of the whole bay. At the foot of the ascent a party of boy jackets was formed, vainly endeavouring to look stiff and soldier like, opposite the Court-house door was posted the guard of honour of Royal Marines. Several hundred people were here assembled, and many still were coming in from their plantations.

The islanders had not long to wait, for soon three of the *Persian*'s boats containing the Governor and his suite, touched the shore, and having landed, the party proceeded to the Court-house, where the Royal Commission creating the colony was read, under a Royal salute, and the union-jack hoisted amidst loud and continued cheering. Great satisfaction was expressed by all the men at the constitution of the colony. Many said, that, now property was secure, the place would go ahead; and the heartiest cheers that were given were on the reading of Mr. Wodehouse's commission as the first Lieut Governor.

I understand that it was mainly owing to a report sent home by this gentleman, that the British Government consented to erect the bay

NEW BRITISH COLONY OF BAY ISLANDS.

PROCLAMATION OF THE COLONY OF BAY ISLANDS

Islands into a colony. I was told that the Government is to be carried on by a House of Assembly, who may pass laws, subject to the approval of the Governor. This House is to consist of twelve members, to be elected by a majority of the votes of the adult male inhabitants of the colony. A magistrate is to be the only executive resident authority for the present.

Great liberality has been shown by the British Government in granting this constitution; and, from the short time I had to judge in, it appeared to me that the colonists of the Bay Islands have it in their own power to become a most prosperous and thriving community.

While still busy talking with some of the inhabitants on the subject of their new position, I perceived the dark face and lean form of my skipper hovering about in the crowd, evidently in chase of me. I guessed immediately that the voracious maw of our little schooner had at last been satisfied with the good things of Ruston; and so, surrendering myself to his guidance, soon found myself again at sea, and, with studding-sails alow and aloft, cracking on for the broad mouths of the deep Mississippi.

HARBOUR OF BAY ISLANDS, AND THE SPANISH MAIN.

SCENE FROM THE NEW COMEDY OF "ST. CUPID; OR, DOROTHY'S FORTUNE," AT THE PRINCESS' THEATRE.

THE PRINCESS' THEATRE.

The new play, selected by her Majesty for Court approbation previously to its public performance, was on Saturday, in accordance with previous announcement, produced on this stage. The plot—"if plot that may be called which plot is none" is connected with the risings in 1731 in favour of the Pretender; and relates to the peril of a concealed adherent, cousin and would-be lover of one *Dorothy Budd* (Mrs. Charles Kean), the daughter of *Dr. Budd*, a schoolmaster (Mr. Harley). The play opens with a consultation between a gouty *Mr. Under-Secretary Zero* (Mr. James Vining) and his nephew, *Sir Valentine May* (Mr. Walter Lacy), respecting the contents of certain letters brought in from the post-office, to be

AUSTRALIAN GOLD CONVEYED FROM THE EAST INDIA DOCKS TO THE BANK OF ENGLAND.—(SEE NEXT PAGE.)

officially examined for the detection of possible treason. The shrewd interpretation put upon the simple phrases of mere business or friendly correspondence by the Fouché-like Secretary constitute the wit of the dialogue, which here sparkles with the genuine Jerrold vivacity. Among the intercepted letters is one from *Dorothy Budd* to *Belinda Icebrook*, quaintly beginning, "This greeting, in the name of St. Cupid;" and then proceeding how her fortune had been told by an old gipsy, who, for sixpence and a battered thimble, had predicted that she should be married to a Duke, and live till forscore, with other matters equally pleasant. *Old Zero* finds this singular billet full of treason—translates St. Cupid into St. George, Duke into King, and all into politics. *Valentine* feels interested in the writer, and in the address, "Belinda Lilac, Lansingburgh;" in short, "I determined to visit the lady *incog.* The next scene, accordingly, introduces us to the schoolmaster's villa residence. *Dr. Budd* we find in great perplexity, because his attendant, offering gifts to the fair, has ushered himself. The poor girl has already begun to love the accomplished tutor, and is as anxious for his safety as *Valentine* is for *Bellefleur's*. An interview between them only serves to perplex matters, as they mistake each other's hints and suggestions; and *Valentine*, thus misled, in endeavouring to serve *Bellefleur*, incurs his resentment, to whom he has to give rather an unpleasant lesson in broad-sword exercise. We must now haste to the *denouement*. *Zero*, not less active than his nephew, has planted his spy, *Chester* (Mr. Ryder), at "The Lilacs," who knows *Bellefleur* well; but, ignorant of *Sir Valentine's* person, suspects in the supposed usher a Jacobite also. The Secretary himself shortly after appears on the scene, and at the solution of an attempted treason *Dorothy* and his nephew, in whines the former accuses the latter of having spoofed with her feelings and being a spy. The replies of the young man to her reproaches are interpreted by the uncle into admit acting on his nephew's part to conceal his complicity with the police movements, which he supposes him to be voluntarily assisting. An explanation with his uncle soon satisfies *Sir Valentine* of the state of things, and, through the agency of *Queen Bee*, he proceeds to secure the escape of *Bellefleur*. All this while, *Dorothy* thinks that it is himself who is in danger, and shows such unmistakeable signs of terror and affection that the *denouement*, having accomplished that his uncle's search has been entirely baffled, no longer hesitates to offer her his hand and title. Thus, *Dorothy's* fortune is made, though not a Duchess, she is a lady; and so far the equivocating stars are proved not entirely fatal, and, in the end, may even be proved to be entirely true. There is considerable obscurity and intricacy in the arrangements of the last act, which prevent an intelligible account of its incidents, without the sacrifice of too much space; and enough has been stated to indicate the outline of the story. More need not be given, as the merit of the drama lies not in its narrative, but in its dialogue, which it contains some of the best ever written by Mr Jerrold. Though witty, it is not overlaid with wit. The characters here are well sketched; and, it may be added, singularly well acted. Mr. Wallmaster, by Mr. Harley, was a "realised ideal; and his daughter by Mrs C Kean, one of the most charming and truth-like assumptions within our stage remembrance. Mr. Wright, in the *Spid*, was at once chaste and eccentric. Mr. W. Lacy was admirable in the gentleman of fashion; still better in his disguise: and, as a lover, warmed up to a sense of his situation, with true artistic skill. Mrs. Lacy, also, in an ignorant maid-servant, acted with exquisite *naïveté*.

With such advantages, the play could not be otherwise than successful. Nevertheless, the author has not been just to his reputation. Vain of his own blunt dialogue, he has disregarded the interest of his story, and the structural arrangement of his incidents; the result is, that the work is unequal; and, as a whole, the drama must be regarded by impartial criticism as a well-meant effort rendered abortive by an exclusive attention on the part of the author to one special excellence, in an art which requires even more peremptorily a laborious appreciation of others, which he has utterly neglected.

GREAT DELIVERY OF AUSTRALIAN GOLD.

IN our Journal of last week we illustrated the recent landing of a cargo of gold from the *Australian*, in the East India Docks. We now engrave the precious freight upon the road from the Docks to the Bank of England.

The boxes of gold were closely packed in strong vans, belonging to the Hon. East India Company, drawn by four stout horses each. Policemen on foot walked by the side of the horses, and mounted policemen rode beside each waggon. The scene shown in our View is part of the Commercial road, with the steeple of Limehouse Church towering above the houses. Near this spot a wheel of one of the waggons broke down, and the cavalcade was therefore brought to a halt, till the accident was repaired. Crowds of people collected, but the admirable arrangements of the police prevented any interruption to the transit of the enormous treasure to the Bank, further than was caused by the unforeseen accident to the waggon.

MUSIC.

THE MADRIGAL SOCIETY.

The 119th anniversary festival of this ancient musical society was celebrated with all due honour on the 20th inst., in Freemasons' Hall; the genial art veteran General Lord Saltoun occupying the presidential chair, with his usual spirit and urbanity. Ladies graced the gallery with their welcome presence, and the gathering of amateurs and professors was numerous, upwards of a hundred voices (including those of nineteen boys) being collected in the choir—after the banquet, the grace, "Non Nobis" being most impressively rendered. The toasts and oratory at this festival are confined within reasonable limits—amongst the inspiriting expressions were the health of the chairman, proposed by Major Oliphant, responded to by the company with musical cheers; and the health of the resident (Sir Cusack Roney) and the officers of the society—the parochial treasurer, Mr. Bauner, the indefatigable secretary, Mr. Oliphant; the zealous conductor, Mr. King; and the tasteful wine stewards, Messrs Bishop and Bingham. Mr. Oliphant made, as usual, a quiet speech—his "descant on a plane song" (to cite his own words) being much relished. Amongst the amateurs and artists present were—Messrs Bishop, Bingham, G. Benson, Rev. Mr. Cox, Fitzheraert, Salomons, Stuart, Bayley, H. Leslie, Evans, Campbell, F. Dawson, Robertson, Wass, Hatton, Grunebaum, Lyon, Ellis, Benham, Potter, Turle, Walsh, Leffler, Hatton, Goss, Forbes, Spencer, Ford, Howe, Coward, Barnby, Gypson, &c. The first part of the programme was of more than usual interest, as it was confined to six madrigals, recently discovered, or supposed to be lost, and which are supposed to have been written about the year 1616. Two of these compositions are ascribed to John Hilton, and another to W. Byrd, but some additional explanation as to the rare set of books from which they have been extracted, would be interesting. The one entitled "Out, alas!" contains some clever points. In the second part there were Palestrina's noble motet, "We have heard" (1650), A. Wilson's "My Lady, what I behold" (1585), Luca Marenzio's "So saith my fair" (1570), M. Cavendish's "Come, gentle swains" (1600), T. Weelkes' "Hark, all ye lovely saints" (1600), Quintana's "As sound of her sweet voice" (1570), and Sanders' "Waits"—the customary finale to these delightful meetings of a society which has been the means of rescuing from obscurity, and of perpetuating, so many fine words of the old masters.

THE HARMONIC UNION.

The second subscription concert at Exeter-hall on the 20th would have been unexceptionable as to selection, if the programme had been confined to Beethoven's "Ruins of Athens," and Mendelssohn's "Walpurgis Night." The whole care and attention of the managers ought to have been directed to a perfect rendering of these two works, instead of distracting the ear with a miscellaneous selection, the compilation of which was more an appeal to the taste of the frequenters of commonplace concerts, than an invocation of the highest considerations of art. The directors of the Harmonic Union should be impressed with the fact that there is a musical public ready to pay the principle laid down in their prospectus, but it is quality that must be sought for, and not quantity; excellence of execution in the *ensemble*, and not individual displays of soloists. Thus Mr. W. Sterndale Bennett's Pianoforte Concerto in F is far removed from that of the first and second-class pianists now in the metropolis; but the audience seemed thoroughly disposed to do the honourable to the American artiste, and his performance was cordially greeted; if he had been an Englishman his performance would scarcely have caused a hand. Herr Nabich's trombone exhibition was certainly wonderful in its way; but what has such a sensitive skill on such a blatant instrument to do with the high purpose promulgated by the Harmonic Union. Madame Florentini had been announced for "Frei schutz" scena, which she sings so finely in Italian; but, being hoarse, Mr. Benedict, the conductor, claimed the indulgence of the audience, and she substituted her piquant Spanish song, in which she was enthusiastically encored, after she had sung like a true *artiste*, with Mr Benson, Miss Dolby, and Mr. Weiss did good service in the works of Beethoven and Mendelssohn; and the chorus were getting into order, thanks to the intelligent training of the clever musical director. Mr. Henry Leslie's very fine overture, "The Templar," descriptive of the trial by battle scene, in which Ivanhoe defends the right of Rebecca against Brian de Bois Guilbert, was executed with much vigour and precision, and was loudly applauded. The overture we had occasion to eulogise when it was played by the Amateur Musical Society, and at the concert of the Society of Female Musicians, under Sterndale Bennett's direction.

SACRED HARMONIC SOCIETY.

The magnificent performance of Mendelssohn's glorious oratorio, "Elijah," at Exeter hall, on the 21st inst., under the able direction of Costa, was rendered remarkable by the fact, that the principal vocalists were all English. It is now quite evident there is ample ability enough in this country to sustain both opera and oratorio, if only a fair chance be given to our singers. Of Miss Dolby and Mr. Lockey it is quite unnecessary to write, as their beautiful delivery of the contralto and tenor parts is so well known and appreciated; but the first appearances of Madame Florentini, Miss Deaken, Miss Huddart, and Mr. Weiss, call for especial notice and eulogy. Madame Florentini's interpretation of the soprano part was noticed in the ILLUSTRATED LONDON NEWS when she sang it at Covent Garden; on this occasion, although she was suffering from severe hoarseness, which caused her to fail in the high notes of the grand air opening the second part, we have no hesitation in recording our opinion that no singer who has yet essayed this most arduous music has approached Madame Florentini in the true conception of the composer's intentions. This may be particularly observed in the scene of the Widow and the Prophet and in the air, "Hear ye Israel," before alluded to. Madame Florentini unites with a style full of the different attributes of the passionate and imploring woman, and of the lofty and devotional angel. Her unrivalled organ tells also exquisitely in the duet quartet, "For he shall give;" in the recitative of the miracle of the rain, in the quartet "Holy, holy," and in the trio, "Lift thine eyes." When Madame Florentini has conquered the nervousness incidental to such an essay, the most trying in the entire range of oratorios, she will be second to none as a singer of the sacred school. What she has to acquire is more distinctness in her enunciation and the decision of style, which time and confidence alone can give. Miss Deaken is a pupil of Mrs. Alfred Shaw, and is very painstaking. Miss Huddart, in some respects, reminds the hearer of the once celebrated Miss Hawes. She was brought up to the stage, and like her aunt, Mrs. Warner, has played both *Lesly Macbeth* and *Lady Teazle*. She has a good deal of stage knack and ought to study assiduously as she has natural capabilities of the most promising order. In the great air of deprecation of the Queen, "Have ye not heard?" the will of the singer and her intentions were good, but she lacked the skill and experience to carry out the conception. Her voice, in the lower range of the contralto register, is rich and powerful; and there is, therefore, a career before her, with such gifts from nature. Mr. Weiss achieved the most decided success he has met with since his entrance into public life. His delivery of the music of the Prophet he wanting in grandeur and inspiration, it is, at all events, free from the coarseness and boisterousness of Formès. Weiss is infinitely more correct in the text; in the airs exacting devotional feeling he was very successful, particularly in the "It is enough, O Lord!" He has a clear bold voice, which, should he feel disposed to quit the Arab life of the English operatic basso, and to confine his exertions to the grandest of all schools, that of oratorio. There would be so many points of excellence to indicate in the choral and orchestral execution, that a general term of praise can only be here awarded. Every year Costa appears to gain greater influence over his finely disciplined forces. "Elijah" was repeated on Tuesday night (Friday) will be announced; and, it is to be hoped, will be heard again and again this season.

NOTES OF THE WEEK.

It may be as well announced to some of our musical correspondents that, owing to the early hour to which the ILLUSTRATED LONDON NEWS is compelled to go to press, to meet its world-wide circulation, our weekly record of "things musical" can only extend from Thursday to Thursday; and, if some impatient amateurs are disappointed in not finding the proceedings of the week in our Saturday's impression, they must bear in mind that in many interesting and important communications of the march of music on the Continent, we are in advance of our contemporaries.—Under the sanction of the committee of management of the Royal Academy of Music, a directory, register, and almanack has been published by Rudall and Co., which will be found very useful as well as entertaining. An interesting account, albeit brief, is given of the London and provincial musical societies, besides a formidable list of the music published in 1852. The directory supplies a want long felt, it not only includes professors of every class, but also music-sellers and musical instrument-makers.—The sudden death of Harper, at Mr. Surman's house, in Exeter-street, opposite the Hall, was announced in our last week's impression. He was born in Worcester in 1786, and studied in London under Eley. He was in the East India Volunteer band, with Nicholson, the flautist; and it was Mr G. Smart who first discovered Harper's ability, and gave him an engagement at the Drury-lane oratorios. Harper was first trumpet at Her Majesty's Theatre, the Royal Italian Opera, the Ancient and Philharmonic Concerts, the Sacred Harmonic Society, and all the great provincial festivals, for upwards of forty years. His obligato in "See the Brgt Seraphim" has been heard, with all the great singers, native and foreign, in every part of Great Britain. He was most punctual in the performance of his duties, was an active member of the Royal Society of Musicians, and was a zealous supporter of the rights of his professional brethren. He has left two sons. Thomas Harper, who excels even his father as a trumpet-player, and Charles Harper, the first horn performer at the Royal Italian Opera. The band at Exeter-hall, on the 26th, played the "Dead March in Saul" as a tribute of respect.—Next week there will be some attractive concerts that of the famed pianiste, Mdme. Pleyel, at the Hanover-square Rooms; the first of sterndale Bennett's pianoforte performances, and the first of Mr. Ella's Musical Winter Evenings.—Mr. Allcroft presented his annual festival concert at Exeter-hall, which was crowded to excess, on Monday night. The instrumentalists were Mdlle. Conlon (piano), Salmon (violin), Case (concertina), Richardson (flute), and Hardy (horn); the vocalists were Madame Fiorentini, Miss Dolby, Mrs. Sims Reeves, Miss J. Harland, Miss E. Armand, the Misses Malcolm Alpine, Miss Kathleen Fitzwilliam, Miss R. Isaacs, Miss Alleyne, Miss A. Walker, Mdlle. Marie Doria (the Hungarian mezzo-soprano), Miss Messent, Madame and Signor F. Lablache, Messrs Sims Reeves, Brandt, G. Tedder, Manley, Corri, Lodder, &c. The programme included upwards of forty pieces. Messrs F. Mori and Kuchler were the conductors. The evening concert took place at the Beaumont Institution on Tuesday, at which Mad. Fiorentini, the Misses Dolby and Messent, Messrs. Drayton, A. Davis, and J. Howe, were the vocalists; Mr. H. Wells, flautist; and Mr R. A. Brown, organist and conductor.—A concert was given at the Whittington Club, on Thursday, under the direction of Mr. G. A. Cooper, Herr Anschutz being the conductor. The overture to Weber's "Der Freyschütz" was performed: the vocalists were Mdme. Zimmerman, the Misses Broughaun, Mrs. G. A. Cooper, Herren de Becker and Youghmans, with Herr Leunter, the violoncello.—Mr. Hullah's concert of Handel's "Solomon" will be performed by the London Sacred Harmonic Society, under Mr. Surman's direction, at Exeter hall.—Mr. Deudo has commenced his annual series of six quartet concerts at Crosby-hall, assisted by Mr. A. Mellon, Mr. Hill, Mr. Clementi, Mr. W. H. Reed, Mr Lucas, Mr. Lindsay Sloper, and Miss Dolby; a new quartet in C, by G. F. Graham, two violins, two violas, two violoncellos, was executed at the first concert; it made but little impression.—Signor Salabert gave an evening concert, at the Mortimer-street Rooms, last Tuesday.—The Hamburg papers are highly praising the singing of Herr Reichardt, the tenor, who visited London last season.—Mozart's "Don Giovanni" (sustained by Mdlle. Gruvelli, Mdlle. Bertrand, Mdlle. Vera, Signor Bosio, Signor Steudi, and Signor Calzolari), has been played at the Italian Opera in Paris, but with small success.—The Duke of Saxe-Coburg, the brother of Prince Albert has just finished another opera, entitled "Casilda," the poem by Herr Elvholz, which is to be produced at Coburg and Gotha.—The Prince Gustavus of Sweden, who died lately at Stockholm, composed a funeral march, which he dedicated to himself.

GEOGRAPHICAL DISCOVERY.—The Geographical Society of St. Petersburgh is about to despatch expeditions to make scientific researches in Eastern Siberia and Kamschatka, in the Caspian Sea and the neighborhood, and in different parts of the interior of Europe, Russian and Asiatic provinces of Russia. The expedition to Siberia excites the [illegible] expected that it will make some important [illegible] astronomy, botany, and geology. Twelve learned men are to accompany it for the express purpose of taking astronomical, magnetic, and meteorologic observations.

MEDICAL PRIZE.—At a recent sitting of the Academy of Medicine in Paris, M. Orfila announced that he had made a gift to the Academy of 28,000 francs, to found a prize of 2000 francs every two years, to commence in 1855. This prize is to be awarded alternately for a question of toxicology and for one of medical jurisprudence. The first question the prize is not to exceed the sum is to be 4000 francs the next time; and, if one more than [illegible] 6000 francs the third time. If the sum should remain on hand, it is to be paid over to the funds of the Association des médecins de la Seine, founded by M. Orfila.

DISCOVERY OF A BURIED CITY.—A buried city has been discovered in Egypt, named Abousir, about two hours' journey from Cairo, near the first cataract. An Arab having observed what appeared to be the head of a sphynx above the ground, drew the attention of a French gentleman to the circumstance, who commenced excavating, and laid open a long buried street, which contained thirty-eight granite sarcophagi, each of which weighed about sixty-eight tons, and which formerly held, evidently, the ashes of sacred animals. The French gentleman has got a grant of the spot from the Egyptian Pacha, and has exhumed great quantities of curiosities. The street, when lit up at night, forms a marvellous sight. It is upwards of 1600 yards in length. Many of the curious dog out have to be kept buried in sand to preserve them from perishing.

THE SOULS OF THE CHILDREN.

"WHO bids for the little children
Body and soul and brain?
Who bids for the little children
Young and without a stain?
Will no one bid," said England,
"For their souls so pure and white,
And fit for all good or evil,
The world on their page may write?"

"We bid," said Pest and Famine,
"We bid for life and limb;
Fever and pain and squalor
Their bright young eyes shall dim.
When the children grow too many,
We'll nurse them as our own,
And hide them in secret places
Where none may hear their moan."

"I bid," said Beggary, howling,
"I'll buy them, one and all,
I'll teach them a thousand lessons—
To lie, to skulk, to crawl;
They shall sleep in my lair, like maggots,
They shall plague the broad highway,
Till they grow too old for pity,
And ripe for the law to slay.

"Prison and hulk and gallows
Are many in the land.
Twere folly not to use them,
So proudly as they stand.
Give me the little children,
I'll take them as they're born;
And I'll feed their evil passions
With misery and scorn.

"Give me the little children,
Ye good, ye rich, ye wise,
And let the busy world spin round
While ye shut your idle eyes,
And your judges shall have work,
And your lawyers wag the tongue,
And the gaolers and policemen
Shall be fathers to the young.

"And the Law, for pastime,
Shall struggle day and night;
And the Law shall gain, but I shall win,
And we'll still renew the fight.
And ever and aye we'll wrestle,
Till Law grow sick and sad,
And kill, in its desperation,
The incorrigible bad.

"I, and the Law, and Justice,
Shall thwart each other still;
And hearts shall break to see it,
And innocent blood shall spill:
So leave—do leave the children
To Ignorance and Woe—
And I'll come in and teach them
The way that they must go."

"Oh, shame!" said true Religion,
"Oh, shame, that this should be!
I'll take the little children,
I'll take them all to me.
I'll raise them up with kindness
From the mire in which they're trod,
I'll teach them words of blessing,
I'll lead them up to God."

"You're *not* the true religion,"
Said a Sect with flashing eyes,
"Nor thou," said another scowling
"Thou'rt heresy and lies:"
"You shall not have the children,"
Said a third, with shout and yell;
"You're Antichrist and bigot—
You'd train them up for Hell."

And England, sorely puzzled
To see such battle strong,
Exclaimed with voice of pity
"Oh, friends! you do me wrong!
Oh, cease your bitter wrangling,
For till you all agree,
I fear the little children
Will plague both you and me."

But all refused to listen:—
Quoth they—"We bide our time;"
And the bidders seized the children—
Beggary, Filth, and Crime:
And the prisons teemed with victims,
And the gallows rocked on high;
And the thick abomination
Spread reeking to the sky.

The Daryn-i-noor diamond, said to be a purer gem than the celebrated Koh-i-noor, was recently sold at Calcutta for £5,000.

NEW COINAGE.—It has been suggested that a new coinage, auxiliary to silver, should be formed of what is called "redgold," composed of one part gold and six of copper, which would be nearly [illegible] proportions by weight of each metal. Of this compound crowns and [illegible] crowns could be coined, the latter of which would [illegible] about the size of silver fourpenny pieces. Their specific gravity would be great, and they would resist [illegible]; but any admixture of a larger proportion of [illegible] metals, or the mixture of even zinc, would render the action of the [illegible] ones visible. The employment of gold for silver would also tend to restore the equilibrium between those two metals, at present likely to be disturbed by the gold discoveries.

THE UNITED STATES ARCTIC EXPEDITION.—Active preparations are making in the United States to fit out the second exploring expedition for the Arctic regions, in search of Sir John Franklin, by M. Henry Grinnell. Its departure is fixed for April; and consists of the [illegible] Jones, which formed a part of the first expedition. She will be manned by a crew of picked men, commanded by Lieut. Kane, U.S.N. The direction to be taken will be the region of Smith's Sound.

EPITOME OF NEWS, FOREIGN AND DOMESTIC.

The Right Hon. Benjamin and Mrs. Disraeli have left Grosvenor-gate for Hughendon mansion, whence they are expected to proceed on a short visit ing tour previous to the meeting of Parliament.

Among the passengers arrived at Southampton in the Indian mail-steamer *Pigou*, was a gentleman from Australia, who has made a rapid fortune, amounting to £75,000, by gold-diggings in that country

A law-student in Coburg has been sentenced to two years' imprisonment for having circulated a work entitled "Have the People a Right to Effect Revolutions?" The author has contrived to escape from the Duchy.

Mr. David Steers, of the Junior United Service Club, has been appointed Deputy Assistant-Housekeeper of the House of Commons, in the room of Mr. George Woodhouse

The Hon. C. A. Murray, the British Consul-General at Alexandria, has returned from the United States, and is about departing for Egypt, to resume his diplomatic duties

Mr. Bolton, of the Hotwells Spa, Bristol, has laid down between 700 and 800 feet of pants ceramia pipe, for communicating with the new establishment at Zion spring, where his baths are. The tubing is seven eighths of an inch, and conveys, with distinctness, the notes of a small whistle placed at either end; by which means messages are conveyed between the two establishments, one at the foot and the other at the summit of the cliff

In consequence of the disclosure before the committee of the House of Commons, that Mr. Frail was in receipt of a salary of £300 a year from "W B," the Surveyor of Taxes for the Shrewsbury district has surcharged Frail for income-tax, which he has never paid before

The Duke of Parma has suddenly dismissed all the French ladies and gentlemen belonging to his household and to that of the Duchess. Among them are the Marquis de Nicolai, who has been conducted to the frontier by the gendarmes; and the Countess De Foret, of an illustrious family in Provence, who has been shut up in a convent.

The Pope has conferred the dignity of a Knight Grand Cross of the order of Pius IX. upon the young Earl of Shrewsbury, who is now at Rome

The new American caloric-ship *Ericsson* will make her first trip across the Atlantic to London, instead of to Liverpool, as originally intended.

Cardinal Diepenbrock, Prince Bishop of Breslau, lately died at the château of Johannisberg, in Silesia He was in his fifty-fifth year.

Coal is so scarce at Lisbon, that 40s. per ton has been asked for it to supply the *Medina*; but the Portuguese authorities assisted her, and enabled her to make her voyage to England.

The Queen of Spain has named a junta charged with the direction of the geographical survey of Spain. It is composed of five members and a secretary.

At a meeting of the counterpane manufacturers, held at the Swan Hotel, Bolton, it was decided to advance the present list of prices for weaving one penny in the shilling

A soldier who was about to be operated on at the Orleans Military Hospital for a wen on the cheek, expired under the influence of chloroform The Minister of War has ordered an investigation to be instituted, of which the results are to be submitted to the Sanitary Council of the Army

The Government of Saxe-Gotha has ordered an Exhibition of German and Foreign Industry, which is to take place in the month of August next, in the Palace of Friedenstein

The Marylebone Board of Guardians have directed the master of the workhouse to open a pantomime for the use of the elder boys, and supply the more youthful with skipping-ropes, hoops, &c.

Masks have been forbidden by the police authorities of Milan during the approaching Carnival

Two more companies of the Royal Artillery will be shortly added to the two now stationed in Dover, and 240 guns will be mounted

Lady Charles Thynne has been "received into the bosom" of the Roman Catholic Church at Chilton. Her Ladyship is a daughter of the present Bishop of Bath and Wells.

Gold in some quantity has been found at Bangalore. The Madras Presidency has long been known to be rich in the precious metal, but the search for it is now being extensively carried on.

The King of Denmark has given his approval to a project for establishing railroads throughout Jutland.

On Monday, John Williams, the hawker who had his arm so seriously injured by the late dreadful accident on the railway at Oxford, died in the Radcliffe Infirmary. This is the eighth victim to that accident.

The sale of the beautiful articles which belonged to the late Duchesse de Berri has been concluded. The amount of the several days sale was 806,903 francs

The sum of £800 has been subscribed in Leeds towards the erection of a statue to the late Sir Robert Peel and Baines

The increase to the population in Melbourne (Australia), in the month of October last, was 14,669 No less than 3000 were added to the population in one day

The King of Prussia has conferred the Order *pour le mérite* for Arts and Sciences on the Right Hon. T. B. Macaulay, of London, and Col. Rawlinson, of Bagdad

It is said that Messrs. Glyn have given their clerks an increase in salary, which example has been followed by Messrs. Grote, London Joint-Stock Bank, and London and County Banking Company no doubt, in consequence of so many resignations

A letter from Bagdad states that an English steamer had entered the Tigris, for the purpose of ascertaining whether it will be practicable to establish a regular communication with the Gulf of Persia

The late heavy rains have caused several parts of the cliff at Boulogne to give way. The establishment of the Humane Society has been injured by land slips. The Hotel du Pavillon has suffered considerably, the kitchen and other outhouses having been buried beneath the masses of clay and earth

An American has made a very great improvement in fire-arms. He has invented a rifle which can be simply and safely loaded at the breech, dispensing with the ramrod, and the wadding remains after the discharge to clean the barrel before re-loading

A very influential meeting has been held at New York to take into consideration the case of Madiai, imprisoned at Florence.

The Provost and Fellows of Eton have elected the Rev. Charles Old Goodford to the Head mastership of Eton College, in place of the Rev. Dr Hawtrey, promoted to the Provostship

Viscount Goderich, M.P., has recently delivered a lecture on entomology at Hull

Joseph Lamb, the head clerk in the goods department at the Northampton station, has absconded after robbing the company to the amount of £1,500 or £2000. He had been trusted to London, and is supposed has sailed for Australia

By the demise of the Earl of Scair, and the elevation of North Dairy, Esq., to the Peerage, Captain Dalrymple, M.P., assumes the long dormant courtesy title of Viscount Dalrymple

The *Lord Ashburton*, 1000 tons, laden with salt, was driven ashore at Rosslaas, Dundrum Bay. The vessel is in a very disabled state. The crew, 16 in number, are all saved.

The electric telegraph of Savoy has been opened at Turin, in presence of the President of the Council and other high functionaries. The first despatch was sent to Chambery:—"Let this be the first act of the union of the electric telegraph of Piedmont with Savoy." The answer returned was, "*Vive le Roi!*"

The Liberal party at Halifax intend giving a public dinner to their members of Parliament, Sir C Wood, Bart., and Mr. Frank Crossley, on Thursday next

Owing to great competition, the public can now ride from Ludgate-street, Edgeware-road, to Farringdon-street, for 2d.; a distance of nearly three miles; or to and from Tottenham-court-road to Pradestreet (westward), and to and from the same place to Farringdon-street (eastward), for 1d.!

A very large poultry show took place at Doncaster last week; and some fine pens of pigs were also exhibited

A free library has been opened at Hampstead: it is styled the Library of the North London Anti-Enclosure and Social and Sanatory Improvement Society.

The appointment of naval aide-de-camp to the Queen has been conferred upon Captain the Hon. Frederick William Grey, C.B. (1838), brother of Earl Grey.

The Arctic store-ship *Rattlesnake*, Commander Trollope, fitting at Sheerness for Behring Straits, has been taken out of dock. She will be ready for sea by the 4th February. She wants half a dozen hands to complete her crew.

Baron Lionel de Rothschild has been honoured with an invitation from the Emperor of the French to attend his approaching nuptials, and left London on Thursday for the purpose.

The people of Manchester are about to make another effort to raise a statue to the memory of their late highly-talented townsman, Dr. John Dalton.

Mr. Wilson, of Bishopwearmouth, sent out to Australia, in May last, boots and shoes valued at £250. He has just received a cheque for £925 for the consignment

CHESS.

TO CORRESPONDENTS.

6 B to Q 3rd	P to Q B 3rd	26. B takes B	P takes B
7. Kt to Q B 3rd	P to K Kt 3rd	27. K R to K sq	Q R to Q sq
8. Kt to K B 3rd	B to K Kt 2nd	28. Q to her B 3rd	Q R to Q 4th
9 Castles	K Kt to K R 3rd	29. K takes P	K takes Q B P
10 to K to K 3d	Castles	30. Q to her Kt 3rd	K to R sq
11 Q to Q B 2nd	B to Q 2nd	31. Q R to K 6th	Q to her B 2nd
12 B to Q 2nd	P takes P	32. Q to her Kt 2nd (ch)	K to Kt sq
13. K P takes P	R to Q B sq		
14. Q R to K sq	P to Q Kt 4th	33. Kt to K R 4th	Kt to K Kt 6th (ch)
15. P to Q Kt 3rd (a)	P takes P	34. K to Kt sq	Q to her B 4th (ch)
16. P takes P	B to K B 4th		
17. Q Kt to K 4th	P to K 3rd	35. K to R 2nd	R takes Kt (d)
18. P takes P	B takes K P	36. P takes R	Q takes P
19. Q Kt to K Kt 5th	B to K B 4th	37 K takes Kt	
20. K to R sq	Kt takes Kt		

And Black makes a drawn game by perpetual check

(a) White would have gained nothing by taking the Q Kt Pawn.
(b) We should have preferred taking the Kt with Kt
(c) Threatening to win the Rook.
(d) The only move to save the game

GAME played between Mr. COCHRANE and MOHKSCHLINDER.

(Petroff's Defence to the K Kt opening.)

WHITE (Mr. C.)	BLACK (M.)	WHITE (Mr. C.)	BLACK (M.)
1. P to K 4th	P to K 4th	14. B to K 3rd	Kt to K R 4th
2. Kt to K B 3rd	Kt to K B 3rd	15. Q to K B 3rd	R to K B sq
3. Kt takes P	P to Q 3rd	16. Q R to Q sq	Q Kt to Q Kt 5th
4. Kt to K B P (a)	K takes Kt	17. P to K 5th	K to Q B 2nd
5. B to Q B 4th (ch)	K to his sq	18. Q to K B 2d (d)	P to Q R 3rd (e)
6 Castles	P to Q B 3rd	19. P to Q 8th	Q P takes K P
7. B to Q Kt 3d (b)	Kt to Q R 3rd	20. P to Q 6th (ch)	B takes Q P
8. P to Q 4th	P to K Kt 3rd	21. R to Q K P (ch)	R to Q Kt sq
9. P to Q B 4th	B to K 3rd	22. P to Q 5th	R takes K P
10. Kt to Q B 3rd	Q to her 2nd	23. Q R takes B	Q takes R
11. P to K R 3rd	P to Q Kt 3rd	24. P takes Q	R takes Q
12. P to K B 4th	P to Q Kt 4th	25. P to Q 7th	R to Q 7th
13. P to Q R 4th	K to Q sq (c)	26. R to K B 8th (ch)	

And Black resigned.

(a) The merit of the Kt at this point is an invention of Mr. Cochrane's, and he considers it may be one of the sake of the attack We hope he will favour us with an analysis of it by-and-bye.—ED.

(b) A very precaution, to prevent the necessity of exchanging his K Pawn.

(c) The great advantage which the first player derives from the sacrifice of his Kt in the opening is in depriving his adversary of the right to Castle, and thus obliging him to keep his Queen's forces before his own place his King as safely

(d) How did carefully have been safe to throw up the K to Pawn, and attack the adverse Kt

(e) This was just the move White desired to facilitate his attack

CHESS ENIGMA.

White to play and mate in five moves

NAVAL AND MILITARY INTELLIGENCE.

THE estimates of the late Board of Admiralty are being revised by the new board at Somerset-house. Rear-Admiral Berkeley, C.B., is in the country; and Mr. Secretary Bernal Osborne, M.P., has proceeded to Chomel. Sir James Graham will himself move the navy estimates at the appointed time.

THE *Royal Albert* (120) has had the entire outline of the addition which is to be made at the stern, for the purpose of converting her into a screw steam-ship, put up. The work in her is proceeding rapidly, it being desirable to have her ready for launching as early as possible. Her engines (of 600 horse power), by John Penn and Son, are to be ready by the end of June next.

FIRE IN PEMBROKE DOCKYARD.—On Sunday night, a fire was discovered in one of the officer's cabins in this dockyard, which, from the fortunate circumstance of its early detection, and the prompt measures adopted for its suppression, did little injury. The origin of the fire remains a mystery.

ROYAL ARTILLERY.—The Master-General of the Ordnance has appointed Rear-Admiral Houston Stewart, C.B., to be his secretary.

We are informed that an increase of the army will be proposed soon after the meeting of Parliament, by the noble Secretary for the Home Department, Lord Palmerston.

ROYAL HORSE GUARDS.—Colonel Bouverie, having accepted an appointment in the Royal Household, is about to retire from the command of the Royal Horse Guards, and will be succeeded by the Earl of Cardigan.

COL. ARTHUR WELLESLEY TORRENS, late of the 23rd Foot, is appointed First Assistant-Quartermaster-General, in the room of Colonel Richard Airey.

THE MILITIA.—It is the intention of Government to call out the whole of the militia of England, for one lunar month's training, in April or May next. The force is to be out all over the country at the same time, with the object of checking the double, and even triple, enlistments, which it is suspected have taken place.

RECRUITING OF THE FORCES.—The recruiting of the Royal Marine corps on very satisfactorily, and if the recently-voted augmentation will soon be completed. The artillery recruiting also goes on favourably, and many fine young men are already raised on the augmentation. The lowering of the standard lately has much facilitated the raising of recruits

VOLUNTEER CORPS.—The question of forming Volunteer Corps under the sanction of Government has been revived, and certain propositions connected therewith have been favourably received at the Horse Guards.

NASMYTH'S ANTI-INVASION FLOATING MORTAR.

(To the Editor of the ILLUSTRATED LONDON NEWS*)*

January 24th, 1853.

SIR,—Having seen in a late number of the ILLUSTRATED LONDON NEWS a letter from Mr. Nasmyth, describing a bomb late-y invented by him, I have since given the subject a good deal of consideration, and have formed the opinion (contrary to that which I was inclined to adopt on first reading Mr. Nasmyth's letter), that though the bomb should act in every particular precisely as the inventor states, it would not be nearly as effective in practice as he seems disposed to think

I will now give the reasons which have induced me to form this opinion Mr. Nasmyth states that his bomb vessel, manned by three or four handy men could be propelled at the rate of eight or nine miles an hour—admitted. That it would not be affected by cold, or even by rolshot—admitted. That the concussion caused by its striking against the enemy's ship would cause the shell to explode—admitted. That the shell, when exploded, would pass through the enemy's ship, causing a breach under water which no ship could survive—admitted. That the shock of the explosion would not be felt on board the bomb-vessel also admitted. And that it could return to harbour to reload the submerged mortar: which I think very doubtful, for would not the more instant of self-preservation cause the enemy to grapple and board it at the moment of collision?

I also think, that if the enemy's ship were under sail, it could, if properly handled, elude the shock, and that if the bomb-vessel attempted to give it and failed, it would pass so close to the enemy, as to be easily grappled and secured, as it would be powerless unless coming end on.

If, however, the enemy's ship should be at anchor, firing on a town or harbour, or preparing to land troops, it could not elude the shock. True; but what is to prevent the captain from manning his boats and boarding the bomb-vessel, before it could come to close quarters?

I should think, also, that some kind of fender might be contrived which would prevent the action of the bomb, or at least render it very uncertain. Suppose, for instance, a strong framework, provided with stout trusses to keep it out from the ship's side, and on this frame a network of thick rope securely extended, and weighted so as to sink in water. Suppose the end of the shell, protruding from the mortar to come against this, it would be most likely to enter one of the meshes of the net, or, if it did come against the rope, it would slip off and enter the mesh before the pressure would be sufficient to cause an explosion, when the bomb-vessel could be grappled and secured.

I think I am justified by these reasons in forming and expressing the opinion that, though Mr. Nasmyth's bomb would be most destructive if applied as he proposes, *the number of cases in which it could be so applied would be in practice found to be very small*, and the attempts, whether successful or otherwise, would be in almost every instance followed by the loss of the bomb-vessel and crew.

My object in writing is not to throw any discredit on Mr Nasmyth's invention, but simply that if it should be tried, the efficacy of the means most likely to be used in repelling it should be also tried, so that if it should be adopted as a means of national defence (for which I think it may, to a certain extent, be useful), we should know its precise value and to what ext nt it could be depended on in actual warfare, which knowledge would obviously be of great practical advantage.

As I should think you would be desirous of promoting this object, I shall not offer any apology for requesting the insertion of this in your next, But remain, sir, your obliged servant, C. L.

LORD DRUMLANRIG AND MAJOR BERESFORD.—Some expressions used by Lord Drumlanrig at the Dumfries-shire election as regards Major Beresford, have led to a correspondence between them, which had nearly brought on a hostile meeting; but by explanations on both sides the affair has been peaceably concluded

LETTERS and newspapers for the Sandwich Islands are in future to be forwarded from San Francisco, to which place they will be sent by the West India mail via Panama, unless otherwise addressed. The postage, 2s. 4d. for letters not exceeding half an ounce, and 2d. for newspapers, must be paid in advance.

COAL AND IRON TRADE.—The coal trade is remarkably brisk, and every atom is swept off the banks that is drawn, and some of the ironworks must eventually stand for want of it. The iron trade also continues in a most satisfactory state; and had it not been for the rise of discount by the Bank of England, it is thought that another advance upon iron would have taken place.

MASONIC BALL AT SALFORD.

THE splendid ball represented upon the ensuing page was held, under distinguished patronage, in the Town-hall, Salford, on Thursday evening (the 6th). The company was very numerous; but Free masons, with ladies, were admitted; and as the brethren were required to appear in full masonic clothing, the hall presented a very brilliant spectacle. The room was also decorated with much taste: each window was hung with red and white draperies, wreathed with roses, banners and shields, bearing the insignia of the Knights Templar, were hung in various parts of the hall, intermingled with flags, masonic emblems, and other decorations. The use of the hall was kindly granted by the Salford Town-hall Committee. By the kind permission of Major Norke, the band of 1st Royal Dragoons was in attendance, and played several popular pieces. Hoghton's full quadrille band was in attendance for the dances. The company sat down to supper to dancing commences, in about half-past nine o'clock, and continued, with brief intermission, till four o'clock in the morning. The refreshments were provided under the care of Mr. Johnson, of the Queen's and Albion Hotels. The proceeds of the ball will be applied in aid of the fund for establishing a female orphan charity for East Lancashire.

BUST OF LORD DENMAN.

THIS noble bust of Lord Denman, the retired Lord Chief Justice of the Court of Queen's Bench, has been executed in marble by Mr. Christopher Moore, for the great hall of the Law Institution in Chancery-lane, where it forms a very appropriate tribute to a man who, by his high character throughout a long and active life, has been a distinguished ornament to the bar and bench of this country. His Lordship's features, remarkable for their firmness of character and dignity of expression, are well preserved in this bust, which, however, in its style of treatment has more of the ideal than mere portraiture. A memoir of his Lordship appeared in the ILLUSTRATED LONDON NEWS, No. 114

BUST OF THE RIGHT HON. DAVID BOYLE, BY PARK.

BUST OF LORD DENMAN, BY MOORE.—(SEE PRECEDING PAGE.)

BUST OF THE RIGHT HON. DAVID BOYLE, JUSTICE-GENERAL OF SCOTLAND.

THIS very fine bust has been recently executed for the Society of Solicitors before the Supreme Court in Scotland, by Mr. Patrick Park, R.S.A. It is an excellent likeness of the original, and a very favourable site has been secured for it in the Hall of the Society, in Edinburgh.

The Right Hon. David Boyle was born at Irvine, in Ayrshire, on the 26th of July, 1772, and is the only surviving son of the Hon. Patrick Boyle, of Shewalton, and grandson of the second Earl of Glasgow. Mr. Boyle was called to the Scottish Bar in 1793, and in 1807 was appointed Solicitor-General for Scotland. He was immediately afterwards elected member of Parliament for Ayrshire, and continued to serve in both capacities until 1811, when he was nominated one of the Lords of Session and a Commissioner of Justiciary. Before the close of that year he was promoted to the office of Lord Justice Clerk, which he held until 1841, when he was appointed Lord Justice-General and President of the Court of Session in Scotland, being the highest judicial office in that part of the United Kingdom. Mr. Boyle had thus officiated as one of the Supreme Judges for the almost unexampled period of forty one years when, in May last, he resigned the high functions which he had uniformly exercised with the entire approval of the Bench, of the Bar, and of the country.

Mr. Boyle, who has attained the venerable age of eighty, and has a numerous family, now resides in dignified retirement on his paternal estate of Shewalton, to which he succeeded on the death of his elder brother. He was made a Privy Councillor in 1829; and, on the occasion of his retiring from the Bench, he was offered a Baronetcy, as a mark of her Majesty's approbation of his long and faithful services; but he thought proper to decline the intended honour. Mr. Boyle was always distinguished for his noble personal appearance, which corresponded well with the dignity of his judicial demeanour. Sir Walter Scott has recorded that, at the coronation of George IV., he "showed to as great advantage in his robes of Privy Councillor as any by whom that splendid dress was worn on that great occasion."

The Faculty of Advocates and the Society of Writers to the Signet have each procured full-length portraits of this eminent Judge, by Sir John Watson Gordon; but the present Bust (by Mr. Park) appears as likely as either of those pictures to preserve the recollection of Mr Boyle's majestic and venerable features; while the accumulation of these memorials attests the respect and affection inspired by his judicial merits, and his amiable private character.

MASONIC BALL IN THE TOWN-HALL, SALFORD.—(SEE PRECEDING PAGE.)

CHINESE BOAT-RACE, AT HONG KONG.—THE START.

CHINESE REGATTA AT HONG-KONG.

THE characteristic antipathy of the Chinese to improvement has lately been overcome, by very gentle means; the Celestials having condescended to amend the build of their boats, from witnessing the superior swiftness of the English boats in the Regattas got up of late years at Hong-Kong, and actively promoted by the European residents. The *Overland China Mail*, in giving a report of the Chinese Regatta, says:—

We cannot help congratulating its committee on the great and manifest improvement in the harbour boats, attributable entirely to their exertions. Two years ago, the sampans were dirty, cramped-up, little cockle-shells, whereas now we have fine large roomy boats, fitted up with much taste, and kept very clean. It must be gratifying to the committee, also, to find that an appreciation of their endeavours is fast spreading throughout the community.

The sampan will be recollected among the curiosities of the Great Exhibition; so that the reader, by a glance at the boats employed in the races we have illustrated, will be enabled to judge of the improvement which the Chinese have made upon the old craft.

The Regatta at Hong-Kong was open to all licensed Chinese boats belonging to Hong Kong harbour. The following is a *résumé* of the sport:—

FIRST DAY, Tuesday, 2nd November.—Twenty-five sampans started

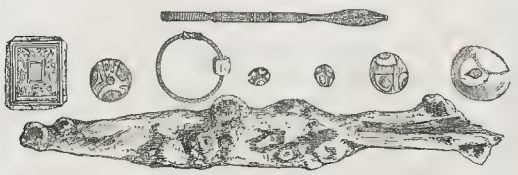
CHINESE BOAT-RACE.—THE WINNING BOAT.

for the prizes in splendid style, forming altogether the most beautiful sight ever witnessed at a regatta in China. Very early, one of the fastest of them, the *Dragon*, being close astern of the others, was driven by the tide across the bows of the *John Laird*, until too late to prevent her fouling, carrying away her sails, and unstepping her mainmast. About a hundred yards farther on, another of the leading boats carried away her topmast. After rounding the turning boat, the *Black Snake* took the lead, and crept far ahead; but, hugging the shore too closely, she got under the lee of the land, and several of the others came up and passed her. At this time, especially, the long line of boats creeping along shore, with their white sails glancing in the sun, formed a most picturesque scene. The *Black Snake*, having extricated herself, again pushed on, and seemed in a fair way of outstripping all her competitors; but she stood too far across the harbour, and was unable again to recover herself. Meanwhile, No. 348 took and kept the lead, rounding the rocks by little more than a yard, and came in first, pretty closely followed by No. 813. Then four tanka-boats made their appearance, each boat being pulled by three women. The lady sculler of one of them for some time vehemently objected to competing with the others, her boat being a new one, whereas theirs had seen some service. However, having overcome her scruples, the four started, the new boat leading; but her crew would appear to have expended their energies at the outset, for the others gradually passed her, and she came in last.

SECOND DAY, Wednesday, 3rd November.—Eighteen boats competed, and the race was exceedingly well contested. The favourites appear to have been the *Black Snake*, the *Dragon*, and the *Flying Fish*; but, either their sailing qualities were over-estimated, or their steersmen mismanaged matters. The skilful manœuvring of the pigmy fleet was exceedingly beautiful, especially when they opened the Ly-ry-li-moon. After rounding the rocks, they were only a few minutes in running down before the wind with studding and top-sails set, indeed every sail that would draw. The winning boat was No. 279. Seven tankas were in attendance, but the lady in the new boat was not among the number. The first boat in was No. 792. Next came the Duck-hunt, a most exciting scene. Two women only were allowed in each tanka-boat, the one in the bow being expected to secure the duck; but this they soon found to be no easy matter, for no sooner had the boat pulled up, and the woman stretched out her arm, than down went the frightened bird, or away it fluttered over the surface of the water. Truly it was a wild-*duck* chase. One, however, was secured by the boat that won the race; but the second duck defied their utmost exertions, and escaped altogether.

THIRD DAY, Thursday, 4th November.—In the third day's races the *Dragon* was the winner of the first prize; but in the second—*for all winning sampans*—there was some dispute in consequence of the two headmost boats intentionally fouling each other; and though in such cases, the laws of all regattas, in China and elsewhere, award the prize to the third boat, the umpire decided that the race should be run over again; but as very light winds prevailed for three days, and the boats could not afford to incur the expense of paying the additional hands, only three made their appearance on Monday at the starting-post, and the prize fell to the lot of the *Dragon*, whose crew were the original offenders. The week's amusements were wound up with a fancy dress ball.

We have to thank the committee of the Chinese Boat-races for this opportunity of illustrating their characteristic sport.



SAXON ANTIQUITIES DISCOVERED AT ROCHESTER.

SAXON ANTIQUITIES

RECENTLY DISCOVERED AT ROCHESTER, IN KENT.

THE labourers in the employ of Mr. Naylar, builder, of Rochester, whilst excavating recently for the foundations of several houses on Star-hill, near the High-street, Rochester, discovered a quantity of antiquities and the remains of about twenty skeletons. The skulls appeared narrow across the head, and unusually long from the forehead. There have also been found five spear-heads of iron; several bronze buckles, some of them very thickly plated with silver; and, besides these, were several brass rings, some six inches in circumference; also some ear-rings, with a skilfully-made split ring amongst them. The ear-rings are formed of gold wire rudely twisted into shape, with a bead on each; one of these rings has a very fine opal attached to it: the wires are extremely brittle. There were also a quantity of beads, striped with various colours. Mr. Naylar has a quantity of these beads, with one of very fine amber. There was also found a square metal belt ornament, richly chased and set with a table-cut coloured glass, with linen in the place of foil at the back of it. Among the other articles was a singularly formed implement of bronze, four or five inches long, beautifully inlaid with silver, the use of which it is very difficult to guess. A small portion of an earthen vessel was found with these remains.

There can be no doubt that these remains belong to one of the cemeteries of Saxon Rochester. It has been long known to antiquaries that Roman and Saxon cemeteries belonging to this city during the Roman and subsequent Pagan Saxon occupation, lay on the other side of the river, at Strood; and these have furnished great quantities of antiquities of a most interesting character, belonging to both those peoples. We

THE LATE DR. PEREIRA.—FROM A DAGUERREOTYPE BY MAYALL.

(SEE NEXT PAGE.)

are not aware that any traces of a cemetery had previously been found on the eastern side of the city; but it might be expected that there would be one there, and it was probably, like that at Strood, adjoining to a cemetery of the Romans, which here, as in all other cases, was placed outside the city walls, by the side of the high road or street.

The antiquities figured in our Engraving, as well as a number of others which have been since discovered on the same site, require no further remark than that they are entirely Saxon in character, and differ in no respect from the similar antiquities found in abundance in the Saxon cemeteries in Kent, with the exception only of the sceptre-formed implement, of which some unsuccessful explanations have been attempted. When we find articles of this kind, which have not been met with before, and which bear in themselves no distinct evidence of the purpose for which they were made, the cautious antiquary waits for some other discovery which will enable him to explain them. It may be added that these remains belong, in all probability, to the sixth century.

THE LATE DR. PEREIRA, F.R.S.

THIS distinguished physician, to the deep regret of all who knew him, died on the 21st instant, at his residence in Finsbury-square.

Jonathan Pereira, M.D., F.R.S., rose, through his own ability, energy, and perseverance, from a somewhat humble position, to become one of the most eminent physicians of the metropolis. In the early part of his professional career, he was a resident medical officer, or apothecary, attached to one of the public dispensaries in the city of London. In 1825 he was made a member of the Royal College of Surgeons. In 1840 he proceeded to the degree of Doctor of Medicine, and, in the same year, was admitted a licentiate of the Royal College of Physicians of London; and in 1842 he was elected a fellow of that collegiate body. He was ultimately appointed physician to the London Hospital, which responsible office he held at the time of his death. He was also Examiner in Materia Medica and Pharmacy to the University of London, and Professor of Materia Medica to the Pharmaceutical Society of Great Britain and one of the chief supporters of, and contributors to the *Pharmaceutical Journal*. His literary productions on various subjects connected with the science and practice of medicine are very numerous and valuable His wide-spread reputation as a medical writer was chiefly based on his "Elements of Materia Medica and Therapeutics;" a work which had already passed through a second or third edition, and which is one of the highest recognised authorities on the comprehensive subjects of which it so ably treats. Dr. Pereira was also a Fellow of the Royal Society, as well as of many other of the scientific societies of Great Britain, Europe, and America.

LAW AND POLICE INTELLIGENCE.

IN the Court of Exchequer, an action was brought on by Cassy against the Rev. F. E. Arden, on a promissory note, at three months' date, for £150. The defendant pleaded in effect—admitting that he made the note in question—that the said note had been obtained from him by one A. Graham by fraud and covin; and that he had never received any consideration whatever for the same. Upon the part of the defendant, stated that he should open this case by offering evidence to support the affirmative pleas which that gentleman had been in this extraordinary matter advised to place upon the record, in answer to what he would in the outset designate one of the most nefarious attempts at a swindle that had ever been brought under the notice of a court of law. Let him at once tell the jury that he was in a position to prove every statement he was about to make, and that that statement would disclose to them, and he hoped to the world at large, the system of deliberate fraud which had for some time carried on by a gang of advertising bill-discounting swindlers; and having done that, he trusted the exposure of that day would act as a wholesome warning to all persons who might be suffering from a temporary pecuniary pressure. Evidence and correspondence were put in, fully justifying the counsel's strong remarks; and Mr. Baron Platt having summed up, the jury at once gave a verdict for the defendant. Application having been made by the Court Lord then commented at some length on the various charges brought against Dr. Achilli. It was admitted that if a new trial were granted some of the charges could not be entered into, and there was no affidavit or suggestion that those charges could be made out on a future occasion. So that if a new trial were granted the defendant must still be brought up to receive the sentence of the Court. The rule must therefore be discharged, and the sentence of the Court pronounced. Sir F. Thesiger applied for costs. Lord Campbell (after consulting with his learned colleagues) said the defendant would be brought up to receive the sentence of the Court on Monday, when they would take the question of costs into consideration.—Rule discharged.

CORN-EXCHANGE FORGERIES.—Robert Ferdinand Price, who was remanded on several charges of uttering forged orders for the delivery of corn, and upon which he had succeeded in obtaining monies to the enormous extent of £50,000, was again placed at the bar before Alderman Carden, at the Mansion-house, for examination. Evidence having been given in the case of obtaining £9000 from Messrs. Montcaux and Prospere, the prisoner was fully committed for trial, and removed to Newgate.

"CAPTAIN" JOHNSTON has been this week again examined at the Lambeth police-court. No further evidence was offered by the Bedford tradesmen; and the magistrate, Mr. Elliott, expressed some surprise that the police-constable Brown was not in a condition, after three week's opportunity to inquire and find out, to say something about the character and antecedents of the prisoner; and, having fully committed the accused on the charge of Mrs. Stewart, remanded him to a future day for further testimony.

NATIONAL SPORTS.

THE coursing meetings to come off next week include the "Champion" gathering in Wiltshire—Amesbury the rendezvous, to occupy four days, viz., from Tuesday to Friday; the Baron-hill (Anglesea), on Tuesday; Baldock, on Wednesday; and Ireton, on Thursday. The steeple-chase register is blank

SAILING OF EMIGRANT SHIPS TO AUSTRALIA.—During the last few days no less than forty-three emigrant ships, taking advantage of the north-westerly winds, have taken their departure from Gravesend, Southampton, Plymouth, &c., for Port Phillip, Melbourne, Geelong, Adelaide, &c., with a considerable number of emigrants to the "golden regions," with their families, and valuable cargoes of merchandise.

A PERFECT RAILWAY BREAK.—Mr. Edwin Bates, of Welbeck-street, has discovered "A Perfect Railway Break," which will stop a train going at the rate of 30 miles an hour in a space of six yards with perfect safety, and, singularly enough, offers a reward of £100 to any engineer or railway board that will enable him to prove the value of his discovery.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The late advance in the minimum rate of discount by the directors of the Bank of England having partly checked the outflow of bullion to the Continent, and the Paris Bourse having been less excited than for some weeks past; there has been more activity in the Market for Consols, and prices have steadily advanced; the Three per Cents having risen to 99⅞ ⅞. The quantity of Foreign paper lately discounted at the Bank has been comparatively small; but in London and elsewhere, the supply has increased, notwithstanding the advance above noticed. The private bankers are very full of unemployed cash, and we learn that first class bills have been taken by some of them as low as 2½ per cent. The next return of the assets and liabilities of the Bank of England is fully expected to show more favourable results, as larger additions were made to the stock of gold last week.

The amount of business doing in the Consol market has been a full average one, and amongst the purchases has been a transfer of £30,000 Three per Cents, for the reduction of the National Debt. India Bonds and Exchequer Bills have commanded more attention. On Monday the Three per Cents were done at 99⅞ ⅞; the Three per Cents Reduced, 100⅛; and the New Three-and-a-Quarter per Cents, 103⅛ ⅜; Bank Stock was 326 to 327½; India Bonds marked 67s to 71s.; and Exchequer Bills, 68s. to 69s. prem. There was much steadiness in prices, both on Tuesday and Wednesday. On Thursday the Three per Cents Reduced were 100⅛ ⅜; Three per Cent Consols, 99⅞ ⅞; New Three-and-a-Quarter per Cents, 103⅛ ⅜; Consols for Account, 99⅞; Bank Stock, 327½; India Stock, 270 to 272; Long Annuities, 6 7-16ths ⅞; India Bonds, £1000, 67s; Ditto, under £1000, 71s.; Exchequer Bills, 69s. to 67s. prem

Very few shipments of bullion have taken place to France, whilst the imports have been tolerably extensive, viz., 650,000 dollars from the Pacific, 200,000 dollars from New York, and £99,000 from Australia.

In the Foreign House very few transactions worthy of notice have been reported, yet we have no material change to notice in prices. Mexican stock has ruled extremely heavy owing to the insurrection. From Equador we learn that the President has promised his early attention to the claims of the bondholders. A meeting of parties interested in Mexican Stock has been held, and at which resolutions were agreed to in reference to that future. On Thursday, Brazilian Five-and-a-Half per Cent Bonds were done at 88; Buenos Ayres Six per Cents, 65½; Ecuador, 6½; Grenada, Deferred, 11¼ ¾; Mexican Three per Cents, 22½; Sardinian Five per Cents, 77; Ditto B Stock, New Account, 97 to 96½; Ditto New, Deferred, 92¼ to ¾; Ditto, for the Account, 92⅝; Spanish Committee's Certificates, 5 to 4⅝, and 5⅛ per cent; Swedish Loan, 1⅞ dis.; Turkish ditto, 8 dis.; Dutch Two-and-a-Half per Cents, 59½; and Dutch Four per Cents, 97½ ⅝. Dealings have taken place in Austrian Five per Cents, at 88 prem.; Chilian Bonds, 105½; and Belgian Four-and-a-Half per Cents at 98⅜

Miscellaneous Shares have been steady. Australian Agricultural have sold at 22 to 23½; Peel River Land and Mineral, 3 to 3¼ prem.; Van Dieman's Land, 15 to 17; South Australian Land, 46 to 49; North British Australian, 1⅛ to ⅜ prem.; Scottish Australian Investment, 1⅞ to 2⅛ prem. Union Bank of Australia, 75 to 76; Bank of Australia, 79¾ to 80½; London Chartered Bank of Australia, 3⅜ to ¾ prem.; English, Scottish, and Australian, 1⅞ to ⅜ prem.; Bank of India, China, and Australia, 1 to ¼ prem.; Port Phillip Nugget Vein, 2¾ to ⅜ prem.; London and Westminster Bank Shares have been 36¾; Oriental, 47 to 46½; Australian Royal Mail, 5; Crystal Palace, 5; General Steam Navigation, 29; Peninsular and Oriental Steam Navigation, 104; Royal Mail Steam, 59 to 61. A dividend at the rate of 26 per cent per annum has been declared by the directors of the Bank of Australia.

Advices from the manufacturing districts continue very favourable. A large number of shipping orders is on hand, and nearly the whole of the artisans are well employed. The cotton trade is in a healthy state, notwithstanding the late rise in the raw material.

Further loans, to the extent of £182,000 have been advertised for Jamaica, Demerara, Trinidad, and St. Lucia, under the guarantee of the British Government.

The settlement of the account has somewhat interfered with the transactions in the Railway Share Market. Prices, however, have kept tolerably steady. The following are the official quotations at the close on Thursday:

ORDINARY SHARES AND STOCKS.—Chester and Birkenhead, 21¾; Bristol and Exeter, 107¾; Caledonian, 68; Eastern Counties, 12¾; Ditto, B and C, 7¾; East Lancashire, 78¾; Edinburgh and Glasgow, 75; Great Northern, 77; Ditto B Stock, New Account, 97; Great Southern and Western (Ireland), 104; Great Western, 89¾; Lancashire and Yorkshire, 79¾; Leeds Northern, 13¾; London and North Western, 121¾; London and South Western, 91; Manchester, Sheffield, and Lincolnshire, 34; Midland, 78; ditto Birmingham and Derby, 47; Newmarket Bury Extension, 3; North British, 37; North Staffordshire, 13¾; South-Eastern, 72¾; York, Newcastle, and Berwick, 60; York and North Midland, 56½

LINES LEASED AT FIXED RENTALS.—Clydesdale Junction, 53½; East Lincolnshire, 146½; Lynn and Bradford, 107½

PREFERENCE SHARES.—Eastern Counties Extension, 1¼ premium; Ditto, No. 2, ¼ premium; Eastern Union, 18¾; Great Northern, 117; South Yorkshire, Doncaster, Carr, Beverley, Market Weighton, and Driffield, 26; Caledonian, 7; Luxembourg, 7; Northern of France, 16½; Paris and Strasbourg, 30¾; Rouen and Havre, 19¾; Sambre and Meuse, 7; Southern of France, 4¼; West Flanders, 4¼; Western of France, 16½

Mining Shares have been somewhat inactive. On Thursday, Australian left off at 6; St. John del Rey, 29¾; Cobre Copper, 42¾; ouveau Monde, 2¾; Port Phillip, 2; United Mexican, 7¾; West Margaret, 1¾; Tuns, 1¾.

FRIDAY EVENING.—The Market for Consols has been steady to-day. In foreign stocks no change has taken place. The Three per Cents—Money and Account—have been done at 99⅞; the Three per Cents Reduced, 100⅛; and the New Three-and-a-Quarter per Cents, 103⅛. The unfunded Debt is certainly diminishing. Foreign Bonds and Railway Shares have commanded very little attention.

THE MARKETS.

CORN-EXCHANGE (Friday).—A full average supply of English wheat—4178 quarters—has been received up to our market this morning, and its general condition has proved very inferior. From up-to-day the receipts of that grain by land carriage were but moderate; yet the stands were fairly supplied with samples. Selected qualities sell slowly, at Monday's quotations; all kinds were very dull, and offered in lower terms—say fully 1s per qr. Upwards of 17,000 quarters of foreign wheat have come to hand, the number of samples was comparatively extensive. All descriptions met a dull inquiry, [illegible] with a finely autumn sample. In floating cargoes next to nothing was done, [illegible] were tolerably firm. With foreign barley we were largely supplied, but the sale of English [illegible] was very limited, at Monday's currency. Malt and other kinds were [illegible] of slowly, at late rates. The show of oats being large, the trade [illegible] dull, at 6d per qr less money. Beans and flour ruled [illegible] no alteration [illegible]

[illegible] 41,3; barley 8310, malt, 5603, oats, 2249, flour, 840. Irish [illegible] 2400, barley, 1000, malt, 1000, oats, 34,700, flour, 1040 sacks

Wheat, 4s to —, Essex and Kent, 43s to 50s; ditto, white, 45s to 50s; Scotch and Suffolk, red, 37s. to 39s; ditto, white, 44s. to 50s; rye, 32s. to 36s.; grinding barley, 25s to 26s.; distilling ditto, 27s to 28s.; malting ditto, 30s to 32s.; London and Norfolk ditto, 32s to 34s.; brown ditto, 30s. to 34s.; Kingston and Ware, 52s. to 54s.; Chevalier, 56s to 58s. Yorkshire and Lincolnshire feed oats, 17s. to 22s.; potato ditto, 18s. to 23s.; Scotch and Cork, 18s to 20s.; ditto, white, 19s. to 22s.; tick beans, new, 30s. to 34s.; ditto old, 32s. to 36s.; grey peas, 34s. to 38s.; maple, 36s. to 38s.; white, 34s to 36s.; boilers, 37s to 40s. per quarter. Town made flour, 41s. to 46s.; Suffolk, 35s. to 38s.; Stockton and Yorkshire, 34s to 37s. per 280 lbs.

Clover seed, 36s to 38s per cwt.; Coriander, 7s to 8s per bushel.

Canary.—Linseed and rapeseed are in good request, at full prices. Cakes move off freely, at late rates. Otherwise, the demand is in a sluggish state.

Linseed, English, sowing, 46s to 48s; Baltic crushing, 40s to 42s; Mediterranean and Odessa, 40s to 42s; hempseed, 37s. to 41s per quarter, Coriander, 9s. to 12s. per cwt. Brown mustard-seed, 7s. to 9s.; white, 8s. to 10s.; tares, new, 9s. to 9s. per bushel. English rapeseed now, 43l to 42l per last of ten quarters. Linseed cakes, English, £9 5s to £10 5s.; foreign, £9 15s. to £10 5s. per ton. Rape-cakes, £4 15s to £5 5s. per ton. Canary, 30s to 42s per quarter

Bread.—The prices of wheaten bread in the metropolis are from 7d. to 8d. per household [illegible] 5½d. to 6½d. per 4lbs. loaf

Imperial Weekly Average.—Wheat, 42s. 6d.; barley, 30s 5d.; oats, 18s. 7d.; rye, 32s. 9d. beans, 34s 10d.; peas, 34s 4d.

The Six Weeks' Average.—Wheat, 45s. 6d.; barley, 29s 10d.; oats, 18s. 6d.; rye, 30s. 11d.; beans, 34s. 10d.; peas, —

Duties.—Wheat, —; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Flour.—To show the supplies of the leading kinds of flour into London, the demand is less active, and prices are barely supported. Common second sorts cannot be quoted at 35l to 40l. per lb. Up to Saturday last, there had been 27,280 sacks against 28,840 sacks to that day.

Sugar.—On the whole a full average business has been doing in most raw sugars, at previous quotations. Refined goods were rather more sold from 56s. to 58s. for grocery, and 54s. for [illegible] grocery. Bastards, 37s to 38s; good to fine, 38s. 6d. to 41s; grocery, 34s. to 36s.; [illegible] fine yellow, Mauritius, 36s to 37s. 6d.; fine Bengal, 36s. 6d. to 40s per cwt. Refined goods are in moderate request, at from 48s. 6d. to 49s per cwt. Crushed still. The total [illegible] to the 22nd inst. were 264,347 tons against 303,161 for the last year.

Coffee.—Very few transactions have taken place in any kind this week; prices are, therefore, nearly supported. Common Ceylon is quoted at 45s. per cwt

Tea.—The demand for all kinds is heavy, but we have no sellers on lower terms

Rice.—Most kinds are steady. In the case of 4s. extra duty, prices are firm.

Provisions.—Irish butter continues in good request, and prices have improved 1s. to 2s. per cwt. In the value of hog lards and foreign, no change has taken place. The beef market is active, and the provision trade has upward tendency. Lard is in demand. Irish bladed is quoted at 7s. to 75s. for fine, and 90s. to 95s. for kegs. All other kinds of provisions support previous rates.

Tallow.—The demand is heavy, at drooping prices. P.Y.C. on the spot is selling at from 43s. 3d. to 43s. 6d. per cwt. Town tallow sells at 42s. 6d. per cwt. Rough fat, 2s. 8d. per 8 lbs.

Oils.—Generally speaking, the trade is firm, and prices are well supported. Linseed, 30s 6d per cwt.

Spirits.—The market for rum is active. Proof Leewards is selling at 1s. 11d. to 2s.; East India, is. 10½d. to 1s. 11d.; and Havannah, 1s. 10d per gallon. Brandy is brisk, and again dearer. Sales of cognac have been made at 1s. 9½d. to 1s. 10d. for Hennessy, and 1s. 9d per gallon. Geneva and corn spirits are quite as dear as last week.

Hay and Straw.—Meadow hay, £4 10s. to £4 15s; clover ditto, £5 15s to £5, and straw, £1 to £1 5s per load. Trade firm

Wool.—English wool continues to improve in value. Foreign and Colonial parcels are steady. The next public sales will commence on the 26th proximo. About 75,000 bales will be offered.

Potatoes.—Selected samples are scarce, and worth 140s to 150s. per ton. Other kinds are lower to purchase

Hops (Friday).—The demand for all new hops is steady, and last week's prices are well supported. In other kinds very few sales have taken place.—Mid-and East Kent pockets, 90s to £5s.; Wealds of Kent ditto, 60s. to £6s.; Sussex ditto, 52s to 80s. per cwt

Coals (Friday).—Hartley, 12s.; Tuesday, 12s.; Harton, 16s. 9d.; Hedley, 16s. 9d.; Horton, 16s. 6d.; Haswell, 16s. 6d.; Lambton, 18s.; Stewart's, 18s. 6d.; Gascoigne, 17s. 6d.; Hartlepool, 18s. 3d.; Tees, 16s. 3d. per ton.

Smithfield (Friday).—For the time of year to-day's market was moderately supplied with beasts, both as to number and quality. All breeds met a slow sale, but we have no change to notice in the quotations. The extreme figure for the best Scots was 4s. 2d. per 8lbs. The supply of sheep was somewhat in the increase, nevertheless the mutton trade was steady, and late rates were well supported. Old Downs sold readily at 5s. per 8lbs. Although the number of calves was good, the inquiry for them was inactive, and, in some instances, the currencies had an upward tendency. Very superior calves were worth 5s. 10d. to 6s. per 8lbs. Pigs were in fair request, at late figures. Milch cows moved off slowly, at from £14 10s to £19 each, including their small calf

Per 8lbs. to sink the offals.—Coarse and inferior beasts, 3s. 10d. to 4s. 0d.; second qualities ditto, 3s. 8d. to 3s. 10d.; prime large ditto, 4s. 0d. to 4s. 2d.; prime small ditto, 4s. 2d. to 4s. 4d.; coarse and inferior sheep, 3s. 8d. to 3s. 10d.; second quality ditto 3s. 10d. to 4s.; prime ditto, 4s. 0d. to 4s. 2d.; large coarse calves, 5s. 2d. to 5s. 4d.; prime small ditto, 5s. 6d. to 5s. 8d. large hogs 3s. 10d. to 4s. 0d.; neat small porkers, 4s. 2d. to 4s. 4d.; suckling calves, 4s. to 4s. 4d.; and capital sow pigs, 18s. to 20s. each. Total supplies: Beasts, 3804; calves, 170; sheep, 4200; pigs, 300.

Newgate and Leadenhall Friday).—A full average business was transacted in the markets to-day, at full prices.

Per 8lbs. by the carcase.—Inferior beef, 2s. 6d. to 3s. 0d.; middling ditto, 3s. 2d. to 3s. 4d.; prime ditto, 3s. 6d. to 3s. 8d.; inferior mutton, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 8d. to 3s. 10d.; prime ditto, 4s. 0d. to 4s. 2d.; small pork, 3s. 8d. to 4s. 0d.

H. Gardiner

INAUGURATION OF A MONSTER WINE-TUN, AT DIEPPE.

THE festal ceremony engraved upon page 80 represents a scene not altogether uncommon in wine countries, but rarely so grand as that after the present commemoration. The circumstances were briefly as follow:—A wine-merchant of Dieppe having built for Messrs. Mege, brothers, at Dieppe, an immense Wine-tun, stated that it was intended to be "the largest in the world," it was resolved to celebrate the completion of the work by a *fête*, which accordingly took place on Sunday last in France appear to be announced or finished. The huge Tun was accordingly covered in the premises of Messrs Mege; and here we have the scene of the inauguration, the great Tun full to the very bung-hole, and the ceremonial of the partaking of the festivities. The Tun is festooned with evergreens at the mouth, and one of the party having ascended by a ladder to the side, there performs the ceremony of inauguration. Meanwhile the company or fifty guests partake of a *dejeuner* within the Tun, and at the moment of the illustration, are quaffing bumpers of wine to the success of the great Tun. All the population of Dieppe is turned out to witness this Lucullan scene; some of the company being in the galleried houses, the portion of which, with its arched and balustraded *façade*, and dormer windows, and a spire rising just above the roof, have a picturesque effect. The scene is altogether redolent of the natural gaiety of a wine country

The great Tun, it is stated, will hold about 270 hogsheads. This capacity is, however, small in comparison with the Great Tun of Heidelberg, which holds 600 hogsheads; but this, in its turn, holds less by half than one of Messrs Barclay and Perkins's store porter vats; and a few years since there were at Messrs. Bentley's brewery, at Lambeth, a tun of sweet wine, containing 20,000 gallons; and another of vinegar, containing 56,709 gallons; or about three times the capacity of the new Dieppe Tun. One of the largest of Messrs. Hanbury and Perkins's vats will contain about 3000 barrels, or 108,000 gallons.

IMMENSE FALL OF CLIFF OF DOVER.

ON Thursday (last week) an immense portion of the cliff immediately at the rear of the Paris Hotel and Grant's distillery, at the end of Snargate-street, Dover, fell with tremendous violence, and great debris, consisting of many hundred tons of property, many hundred tons fell from near the base, and gave the warning note. A slip of several tons occurred on Monday night; and during Tuesday the surface at the top gave and cannons that the whole mass had sunk a few inches, which the state of the cracks below confirmed; the crack at the summit had also widened; and on Wednesday morning, the commanding officer of Engineers having reported to the Mayor that the cliff would fall, and might do so in an hour, the suspense and painful anxiety of the residents in the immediate vicinity may be more easily conceived than described. At the same time, the civil authorities resorted to precautionary measures for the protection of life and preservation of property. Policemen were also stationed to check the thoroughfare from Snargate street, and at night the force was increased, especially for the protection of those houses, the occupiers of which, with their families, had left the scene of danger. In the day, the Admiralty yard officials had arranged signals from the top of the cliff, by which a communication of approaching danger could be instantly conveyed to the yard, for sounding the alarm bell. This bell rang twice on Wednesday on the occasion of slight falls. A stormy night succeeded; but at early dawn the cliff was still standing, the cracks had not opened, and had separated from the mass, and appearances foreboded a speedy fall

On the following morning, the most prominent positions for viewing the cliff were crowded with spectators. At a meeting of the Board of Health, Mr. Duke stated that the portion of the cliff, immediately expected to fall included about fifty feet of the land recently purchased by Government; and that, consequently, it rested with the Board of Ordnance to stay the impending danger. The commanding officer of Engineers proposed to fill up the cracks on the surface with cements. After some discussion, it was decided that the Local Board should despatch a letter to the Ordnance; but, before this was done the largest portion of the loosened mass fell on the beach lying at the base.

At two o'clock, on Thursday afternoon, the owners of the property in dangerous proximity to the cliff had a private meeting at the Union Hotel, to consider the removal of the crown of the cliff. In the midst of the deliberation, an alarm was heard, and the persons assembled rushed out just in time to see the immense mass in motion.

An eye-witness, who was aroused by the cry of alarm that followed the first fall, describes the entire projection to have given way

(*Continued on page 80.*)

AMUSEMENTS, &c.

PRINCESS' THEATRE.—MONDAY, THE CORSICAN BROTHERS, THE SPITALFIELDS WEAVER Tuesday, Wednesday, and Thursday, LIFE'S LOTTERY. Friday, LET THE PANTOMIMES ALONE. Saturday, [illegible]

IMMENSE FALL OF CLIFF, AT DOVER.

(*Continued from page 78.*)

near the base, and burst forward, when the overhanging top shook for a second or two, and the next moment nearly 100,000 tons of chalk were moving towards the warehouses, &c., below, which were crushed like glass, and buried beneath the mass. The fall produced a sound like the roar of cannon, and was accompanied by a dense cloud of chalk dust. Some of the houses in Stroud-street were much shaken.

The large fall is stated to have exceeded 90,000 tons; and, if we add to this the fall on the night succeeding, 100,000 tons may be safely hazarded as the total mass beneath which the workshops of Mr. Rouse, coach-builder, lay buried; his loss being upwards of £1500. The injury to the distillery of Messrs. Grant is stated at £1000.

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXII.] SATURDAY, JANUARY 29, 1853. [GRATIS.

THE PRESS AND THE THEATRES.

WE have already drawn attention to the system which has long existed at the theatres of granting free admissions to newspaper orders. The system was originally intended, no doubt, as a recognition of the claims of the dramatic critic to a favourable seat for witnessing the performance; but its abuse, as soon as managers began to complain, led us and other journalists to abandon it altogether. But there are two sides to every question. The practice, and even the abuse of the practice, was never complained of while it was any way serviceable, or thought to be so, to managers or exhibitors. Mr. C. Mathews has informed the newspapers and the public that "press-orders were nightly presented to the amount in money of £25 (being a loss of £150 per week to the theatre); while the paying public was actually turned from the doors, and this *during the only eight or nine weeks of the season when*, unfortunately, now a-days, *anything like a profit* is to be expected."

Now this aspect of the question has been strangely overlooked by such of our contemporaries as have discussed it. It will be observed that it is not the order system of which Mr. C. Mathews complains, but the use of it during the eight or nine prosperous weeks of the season. During all other weeks, when the theatre is not prosperous, newspapers, it would appear, might have continued its use or abuse without remonstrance: and this statement, true of a part, illustrates the principle of the whole. So long as the theatre is prosperous, it will be chary of orders and free admissions; when otherwise, it will be prodigal of its favours;—when they cost nothing, the press is welcome to them; when they are money's-worth, it is requested to forbear.

But, now, let us look on the other side. If, under the system as proposed to be worked by Mr. C. Mathews, the admission of orders is to cost nothing to the theatre, is it to cost everything to the press? To answer this question properly we must ascend to the origin of the dispute between this very sharp manager and the newspapers. A critic in the *Morning Chronicle* having been free in his strictures on the performances at the Lyceum, Mr. C. Mathews thought fit, as he has told the public on his play-bills, to "deprive the paper of its privilege of writing two orders nightly to the theatre." The *Morning Chronicle*, nevertheless, continued to criticise the Lyceum performances, cheerfully paying, probably, for admission, and, on the Christmas extravaganza being produced, condemned the piece as "cold and heavy," and the scenery as "faded and dingy." Apparently indignant at what he considered a false judgment, Mr. C. Mathews rushed into a paper war with his supposed antagonist, whom he named, but wrongly; boasted of having deprived him of his privilege, threatened him with exclusion even if he should offer to pay, and unblushingly announced that the said privilege implied an obligation, on the part of the critic, to be friendly to the donor. This was too flagrant. The privilege which, according to Mr. C. Mathews' desire and view of the matter, should cost the manager nothing, and even be an advantage to him in helping to fill his house when nothing else would, was to cost the journalist everything—his independence of thought, and his liberty of that thought's utterance. If the critic spoke his mind, his paper was immediately "cut off" the free-list. It was thus, as the *Athenæum* tells the public, that on account of "critical recusancy" it has been debarred for years from admission to the Lyceum. The privilege, then, was meant by Mr. C. Mathews, and possibly by others, to be conditional in two points of view—(the candle burning out at both ends) and to be labelled, "Not to be used during prosperous periods," and "to be cancelled when it pleases the management to take offence."

The case in relation to the journals may be considered in so far to have been settled, by a declaration of independence. They have thrown up their privilege, and there is an end of it.

Upon a review of the whole of the case between the Theatres and the Press, we must say that we think it might have been adjusted—as it now, we trust, finally is—without all the hubbub about grievances and money losses which some of the managers who have stood foremost in giving publicity to the matter have obtruded upon the public, with a view—probably an erroneous one—of enlisting their especial sympathy. Although persons engaged in the production of theatrical and other exhibitions are not proverbial for excess of modesty, or of squeamishness in the adoption of the means by which they seek to attract public patronage; we think that a little more delicacy might have been shown than has been, when discussing an arrangement made with a great public interest, as the press undoubtedly is, which has unwittingly been led to accept of "privileges"—we cannot style them favours—at their hands. Before the proprietors of theatres and other exhibitions boast of throwing a stone at a great evil, they should pause, and recollect that the evil, as we have shown, was one of their own creating, one of which they reaped the advantage so long as it suited their purpose, and one which the proprietors of the principal public journals at once spontaneously resigned so soon as they had a hint of its having been made the subject of illiberal comment in the way of pounds, shillings, and pence. Let them be quite sure, also, now that the press has abolished its own "orders," that they have got rid of all the "abuses" which attach to the nightly occupation of the benches of their various establishments

But, first, in respect to pounds, shillings, and pence, Mr. C. Mathews talks very largely of £25,000 of money, or money's worth, which has been represented at his theatre by press orders during five years of management; and Mr. Webster, the respected manager of the Haymarket and Adelphi Theatres, with more scrupulous exactness, gives a return of the number of persons admitted to those two theatres severally in the course of the last three years upon press orders, distinguishing the number from each paper, and adding the money which

NEW BRIDGE OVER THE GRAND CANAL IN VENICE.—(SEE NEXT PAGE.)

those persons would have expended, supposing they had paid for admission: and the sum total is very formidable, some £10,000 or so. But there is one fact which does not appear upon these statements, and which the public ought to be made aware of before they come to decide upon the case between the theatres and the press.

It must not be supposed that these "privileges" have been conceded to the various papers by the theatres *mero motio*, or even simply upon consideration of the publicity given to the performances in the critical notices—or even as Mr. Mathews, with great vulgarity and great show of ignorance, suggests as part of a system of "cajoling" the critics "into saying what they don't think, by a nightly order;" on the contrary, in most cases, a further equivalent of money worth has been conceded by the proprietors of these very papers to the managers of the several theatres, upon a consideration of all the circumstances of the case. This equivalent consists in the insertion of advertisements of the theatres either at a reduced price, or for the advertisement duty alone; and in the case of many weekly papers, altogether gratuitously—an arrangement involving a positive loss or unrepaid expenditure for labour to the newspaper proprietor, and a positive gain to the like amount by the theatre-proprietor. Without going into other examples, in the case of three theatres we know that for a long series of years it has been their privilege to insert their daily advertisements in the morning and evening papers free of charge, excepting only that for the Government duty; their advertisements, if duly paid for, would have cost on an average, 8s. or 10s. a day; from which, deducting the 1s. 6d. duty, there has been a positive present made to the theatre-proprietor of 8s. 6d., or 8s. 6d., as the case may be, in return for the privilege—not daily used—of sending in "two to the boxes:" which twain, when they went in on an empty night, served to dress the house, and when they presented themselves on the occasion of an "attractive bill of fare," very generally had recourse to the pigeon-holing system) to content themselves with the slips or the lobby; to say nothing of the significant jeers of saucy box-keepers. In future, this reciprocity arrangement will probably be done away with; and the newspaper and its many "friends" will have to pay for admission to the theatre when they feel inclined to go, the theatre will pay for its announcements when and in what channels the manager may think desirable.

But will the voluntary cession of the newspaper privileges destroy the whole "abuse," and convert the whole of the visitors of the various theatres into money? We apprehend very far from it. It is a fact patent to all the theatrical world, that orders have at all times been used as a necessary means of filling the house, and making the audience comfortable; and also upon various special grounds—as for ensuring applause to new pieces, and to particular actors, &c. The privilege of issuing these orders does not rest with the manager. The heads of departments, and the principal actors have all their share, which they claim as a right. The tradesmen who supply various articles to the theatre, and all sorts of artificers about it, moreover—all these have occasion sometimes of showing a little civility or friendship, either in the way of zeal or forbearance, which is readily requited by an order for any reasonable number.

Lastly, we have to allude to a matter of positive dealing in which theatre orders have been habitually applied; we mean the rewarding of the various shops, large and small—butchers, bakers, green-grocers, &c. for the trouble of exhibiting the daily bills, by orders at stated periods An amusing instance of the extent to which the system is carried, of requiting men for actual service done to the interests of the theatre, not by money, but by orders (doubtless worth all the money), was afforded in the course of certain proceedings at Bow street, only the week before last; when the rival bill-stickers of certain theatres were had up for a complication of assaults and affrays, appeared, by the evidence of one of the witnesses, that it was the practice of the theatres to purchase exclusive sites for the display of their monster placards, by money payments, the promise of "orders," or otherwise. Of course the rights of admission so obtained for actual service done are marketable, and as such transferable; and if Mr. C. Matthews shudders with horror at the fact of a "guardsman" having once presented a newspaper order at his theatre, we hope he will be forbearing enough to possible personal peculiarities of a deputy bill sticker. In conclusion, we are led to suggest that there is a third party which has a right to be considered in this matter—namely, the public; and that if any change made to pay *us*, a head for the privilege of sitting in the boxes of a theatre—to say nothing of booking-fee, box-opener, cloak-keeper, &c.—they should have a moral certainty that it is the fair market price, and that their next-door neighbour is not a deputy bill sticker, who has purchased his ticket for a shilling or a pot of beer.

There are, in addition to these, many other topics to which attention might profitably be drawn with regard to the management of our theatres.

Serious doubts may be entertained whether the general charges of admission are not too high

Behind the scenes, as well as before it, reform also is needed. That fair play is not given to the dramatic genius of the country—that the poetic spirit of the drama is not cherished—that there is a desire to pander to the lower tastes, both in the subject and form of the dramas produced, is too conspicuous—that there is a want of judgment and capacity in managements—a want of impartiality in the selection of plays—a want of respect to *artistes artistes* applying for employment—a general offensive autocratic air of authority, favouritism, and patronage, —that these and other evils have subsisted for a long period—" grown with the growth and strengthened with the strength" of theatrical interests—cannot for a moment be denied. By this manager, an author is treated as having intended an insult, or committed an assault, if he submits a play to perusal; by another, he is treated with contemptuous neglect, no acknowledgment of his MS. rendered, no attempt to return it made; by another, he is civilly thrust aside, on the plea of pre-occupation; and by all, he is tolerated only, not welcomed—unless he be already a member in some sort of the theatrical close boroughs, whose favour he would propitiate Its courtesy and difficulty, such as genius meets with in no other department of literature, are encountered by the aspiring dramatist; and the difficulty increases in proportion to the merit and rank of his work, and the dignity of his aims Much of this corruption behind the scenes, the increasing competition of theatres will tend, in the course of time, to diminish. But, above all, the establishment of cheap theatres, under enlightened auspices and conditions, is the improvement of the popular taste, the plenary encouragement of dramatic genius, and the creation of poetical susceptibilities in the masses, would do more to correct managerial abuses than any specific whatever that can be adopted or proposed.

NEW BRIDGE OVER THE GRAND CANAL, VENICE.

THIS modernisation of old Venice, by the construction of an iron bridge over the Grand Canal, hitherto only crossed by the Rialto, promises to be a work of considerable interest. The municipal authorities had long entertained the desire to have this additional bridge, midway between the Rialto and the end of the Grand Canal, connecting the Campo San Stefano with the Piazetta delle Belle Arti; in order to facilitate the circulation between St. Mark's and the Sestiere del Dorsoduro; and thus allow the inhabitants of the former to enjoy the beautiful walk of the *Zattere*, whilst inhaling the refreshing air that comes sweeping over the lagunes from the far off mountainous district. Many projects were brought forward, and abandoned, either in consequence of their great expense, or of their inapplicability to the site destined to connect the populous quarters of the city. At length Mr. Neville, the English engineer, succeeded in obtaining the approbation of the city authorities, and a contract was entered into for the construction of the handsome structure which the Illustration shows completed. It will consist of a single span of 167 feet. There will be four girders, coupled, and carrying a platform of about 18 feet in width, for the circulation of foot-passengers, the ascent to the platform by two flights of steps. The balustrades, copings, and lower ornaments are to be of Gothic design, in cast iron. The Bridge itself will be supported in cast-iron abutments of a conical form, having the appearance of fluted pedestals. The ornamental portions of the structure are to be executed by a commission of the members of the Academy of *Belle Arti*.

The system itself is well known in this country as the lightest, most economical, and effective bridge yet employed in railway structure; and, besides the bridges put up by Mr. Neville himself, in 1849, on the Reading and Reigate Railway, many others of very large spans have since been erected; and, among the rest, the Newarkdyke-bridge, of a single span of 260 feet. But neither of these bridges can be compared to that about to be constructed over the Grand Canal in Venice, in point of elegance of form or lightness of execution. The iron-work is to be cast in England, and sent to Venice for construction.

Literature.

THE HISTORY OF THE JEWS IN SPAIN, LITERARY AND POLITICAL. By DON JOSE AMADOR DE LOS RIOS, Member of the Privy Council of her Majesty, the Queen of Spain, &c. Madrid: 1852. In Spanish, "Estudios Politicos," &c.

The author of the above work is not so well known in the literary worlds of Europe and America as many other Spanish writers; but our impression, from a perusal of his book, is, that he ought to occupy a distinguished position among authors of the first class. Unlike many members belonging to the contemporaneous literature of Southern Europe, he has neither coped nor servilely imitated Byron and Scott, the prevailing error of modern Southern writers; and, in addition to his talents as a *savant*, his style of composition is at once vigorous, fluent, and elegant; and the method and result of his researches extensive, original, and accurate. His writings, replete as they are with the nicer points of erudition, are devoid of every shade of pedantry; and the reader is equally charmed with his depth of learning, and his simple and graceful manner of imparting it

The work to which M. de los Rios has devoted so much attention and industry is of a very important and happily-chosen character, and his description of the advance of the Jews throughout modern Europe displays a brilliant picture of romantic incidents. In the history of the Hebrew race, there is something wild and extraordinary, in their dogged resolution their stern and silent courage—their constant and obstinate resistance. Spain, besides, is the country in which the social progress of the persecuted, yet ever-victorious Hebrew, is marked by the most extraordinary signs.

Immediately upon the settlement of the Jews in the Spanish dominions, a bold antagonism sprang up between the two races; and the causes of the collision between them can be distinctly traced. The chivalrous and peculiar genius—the selfish patriotism of the Israelites—violently opposed the intrusion of the exiled race, which, thus remaining in isolation, retained its inflexible individuality and its hatred to all foreign influence and intervention.

In the year 301, the Council of Illiberis sent forth an edict charging that the possessors of rural domains "should be forbidden to permit the Hebrews to bless the fruits of the earth." The deplorable superstition of the time inducing the belief that such a blessing "would cause the Christian crops to be destroyed and blighted."

In the following years another edict was issued, which ordered that "no Spaniard should live in familiar or private terms with any Jew."

In the centures following, it is well known that a most virulent and ferocious persecution was urged against the Jews; they were treated by the Gothic Kings as beasts of the field, and, as a consequence of this, when the Moors first invaded Spain, the crescent of Mahomet was joy fully greeted by the Jews, as their star of deliverance.

Thus, whilst the Christians, under Pelagius and Pavia, were taking refuge in their mountains and caves, and preparing themselves to recover, foot by foot, the possessions of which they had been deprived, the Jews and Saracens, forgetting their dispute, bound themselves in a bond of brotherhood against their common foe.

From that period, the paths of industry, commerce, and fine arts were open to the Jews; and, as they increased in wealth, they advanced also in refinement. The Jews then became the general purveyors for both Christian and Moor, possessing the monopoly of all trades, such as bankers, casters, carvers, shipowners, merchants, &c. But persecution still continued its barbarous and cruel work, and the Jews were frequently burnt on the charge of necromancy.

At this period (between the ninth and thirteenth centuries), the Jews, skilful, industrious, and saving, became the possessors of abundant wealth; and, as promoters of fine arts among a rude population, enjoyed great consideration. Among the very spirit of refinement which characterised them, and their antipathy to war and bloodshed, were held up to contempt by the ardent and chivalrous Spaniard, and looked upon as sufficient excuse for any anomaly which persecution would entail upon them. We do not find that any King except Alphonso the Wise dared to afford the Jews protection, and even that was precarious. The general opinion entertained of the despised sons of Israel may be judged of by the manner in which they are spoken of by both Lopez de Ayala in his "Rimado de Salacio," and by the author of the "Chronicle of the Cid." The vocabulary of abuse and invective is exhausted by them in denunciations upon this ill fated race. Notwithstanding this—in spite of laws and superstition—these obstinate Jews continued monopolising the callings of physicians; astronomers, merchants, astrologers, and counsellors of Sovereigns, and, at the end of the thirteenth century, had prospered to such an extent, as to be enabled to pay to the Bishops and Chapters of Andalusia, Murcia, and Leon alone, the enormous sum of 25,648,500 dineros

The number of Jews subjected to this taxation was 854,950; according to a document which our author has discovered in the records. Such a taxation was, properly speaking, a war of barbarism against civilisation; and nothing can be more gratifying than to see how moral courage and perseverance, aided by the influence of time and mental cultivation, can triumph over the greatest obstacles in the world.

This irrefragable truth might have received additional proof by the remarkable work of Don Jose de los Rios, had he not divided it into two sections, one devoted to the political progress and advancement, the other to the literary history of the Jews in Spain. This has a tendency to destroy the unity of the work, by presenting it under two distinct heads, and thereby confusing the real connexion between literature and politics.

In the literary section is shown the weighty influence of Rabbinical learning and Hebrew wisdom during the ninth and thirteenth centuries, upon developments of the Spanish language, which may be called the most powerful and concentrated tongue in Europe. Indeed, we should be inclined to regard the Jewish influence as great and as lasting as the Arabian (of not more so) in determining Spanish nationality, and in imposing a certain character upon Spanish literature

Nowhere have the origin and development of the Inquisition and its practices been analysed and exposed with more curious and more striking impartiality. The author modifies and cleans up much that is exaggerated and obscure in the work of Don Llorente, on the same subject, whose statements bear too much the impress of partial judgment and partisanship to be depended on.

When, in accordance with a barbarous policy, too much in harmony with the worst feelings of an uncivilised nation, the Jews were exiled from Spain, the same intellectual and moral powers which had struck down so many obstacles, and broken both the antagonism of national hatred and religious anathema, rose again to be triumphant over banishment, spoliation, and poverty, like the vigorous flower of the cactus amid the sterile rocks, or in the hot and sandy desert. Such is the dramatic chronicle of the sons of Israel.

The literary history of the Spanish Jews, after the second expulsion from Spain, relates to persecution, toil, and endurance under the greatest suffering, and is very analogous to certain events in modern history

Amsterdam became the haven of refuge for exiled Jews, and honourably offered an asylum to wealth, science, and independence. And Holland, in return, derived the greater part of its reputation for learning and enlightenment from the efforts of this persecuted and stricken people.

It was in Amsterdam that Baruch Spinoza, the able pupil of Moses Morteira, wrote in his cheerless garret those theories with which the philosophical world re-echoed. These facts which we have related give some colour to the favourite theme of Disraeli the younger, the late Chancellor of the Exchequer, that the Hebrew race is endowed with certain qualities that will ultimately cause it to prevail; nor is this highly gifted, but sometimes paradoxical writer singular in his opinion. Strabo, writing in the age of Augustus, says: "It is not easy to meet a place on earth where the Jews do not prevail when once admitted."

We have space for only a simple remark on the hostility of the Arab and Jewish races against Christianity. The Mahommedan Arabs, considered as such, possess sympathies little in common with Europeans, by whom they are instinctively repulsed. The fundamental elements of their character are incapable of modification; they know no joys but sensual ones, and the burning sun of their natural land is essential to their happiness; the Christian accepts the explation of the cross, and places his chief good in self-denial. Between such extremes no conciliation is possible, and when the Arabs ceased to be paramount, they disappeared altogether from Spain.

The Jews, on the contrary, though equally antagonistic in creed and customs, maintained their ground among the Christians, and repaid, with deadly hate, the oppressions under which they laboured. This hate made them dangerous enemies; but our author shows that, restrained as they were by the bigotry and the fears of their rulers, they yet lent to civilisation the most potent and essential elements.

Don los Rios has opened a somewhat small vein in an extensive mine; and his work must be measured by its real and not by its apparent value, for it marks the point of junction between two rival races and literatures—or rather between two words of antagonism and contradiction—the EAST and the WEST.

MY HOME IN TASMANIA, DURING A RESIDENCE OF NINE YEARS. By MRS CHARLES MEREDITH. Two volumes. John Murray, Albemarle-street

Mrs. Meredith is the wife of a settler in Van Diemen's Land, and her nine years' residence there has many of the features of romance. Her book begins with a clearing in the bush, building a house, laying out gardens, and making a home as much like an English home as the climate, condition of society, and all other circumstances, would permit. For this rough but necessary work—to result in a villa, with gardens and park, and all the elegances of a gentlewoman's country abode in England—Mr. Meredith had their path partly prepared by a senior Mr. Meredith; but in its progress came great floods, and worked great losses, exposed the family to danger, and put it to great expense. High prices stimulated expensive clearing and large outlays, which greatly reduced prices of produce converted into large losses, turned prosperity into adversity, and compelled the settlers to leave the nest they were forming with so much care, and accept a Government appointment in another part of the colony. Hence travels and voyages under great difficulties; hence, too, enlarged knowledge of the colony and its various natural productions; and hence personal adventures and historical references, woven in with personal observations; altogether making a very pleasant book. Mrs Meredith, in truth, is an artist of no ordinary accomplishments. She wields both pen and pencil with much force and much grace, tells her anecdotes in a lively manner, and illustrates her books by graphic sketches. In the latter she has been assisted by the Bishop of Tasmania, whose talents as an artist are considerable She excels, however, in description. She is a good natural historian, and fills in her landscapes with the productions of the islands —its trees, its flowers, its animals, and its men; making the strange, and, in some instances, rugged, features of the country instinct with its true animal and vegetable life. Her pages give us a clear and a brighter picture of Tasmania than we have before met with. She has the advantage of a novel subject, for Tasmania has attracted much less attention and been much less frequently described than New South Wales, and her delineations both convey information and give pleasure by their freshness and beauty Rich pictures of scenery, of rugged mountains and deep "placid pools" in the beds of torrents, when the snows have ceased to melt and the rain to fall, overarched by fine old trees that seemed to have lived to bend down and gaze on themselves in the calm deep water, till they had grown into their position, where "fine black cockatoos, merry craftsmen," plied "their skilful work of grub-hunting;" discoursing, doubtless, on the quality and obstinate resistance of their prizes, are mingled in the book with more homely descriptions of a settler's labours, the giving out stores, making butter and cheese, rearing pet calves, the looking after the operations of servants, the care of children, and all the troubles of a bush life, provided with tolerably large means, and aided by the services of convicts. The principal merit, however, in the book is its lively description of natural objects—the snakes, porcupines, kangaroos, wombats; the trees, shrubs, and flowers; the shells and minerals found on the island. One specimen, which we quote in preference only for its briefness, may entice the reader to peruse the whole book:—

One or two pairs of "Superb Warblers" lived close to the garden fence, and for a long time I tried in vain to discover their nest. We often fed them, and they came to the window for crumbs, but always baffled when I endeavoured to watch them home. At last I felt quite sure I had found the grass tussock containing one nest; but, although this was not above two feet distant, even from my window still, I could discover the entrance, for of course I would not disturb anything, and the little creatures were so artful and cautious, and in such a sad state of fluttering, chirping trepidation when I was near the spot, that they distracted my attention, as they naturally intended to do. At last I accidentally looked directly into the little tube of woven grass and web, that served them as hall and antechamber—several black-and-white spiders, of the long, grinning interval down into the dark little cavity, I espied two or three little gaping mouths, and heard a faint small chirp. The two tiny parents of these tinier babies which could not be very long above, that they were still, for a time right at home. Poor little fluttérers, they need not have feared me. I only confided it more strictly to my husband, and so fearful was he of disturbing them, that I could not induce him to go near enough to examine the nest. In due time we had the pleasure of seeing the whole miniature family launched, and the parents losing the state of importance and flutter, feeding their droll brown little offspring most assiduously.

There are a few political remarks and no work on our troubled colonies is without them from which it appears that the best interests of the colony are sometimes sacrificed, and its resources wasted, to gratify official whims, official caprices, official friendships, and are made for the convenience of favourites, and not completed because they would serve individuals whom the authorities dislike. The treatment of the convicts is defended, and the policy of Van Diemen's Land vindicated from some of the assertions made by the too zealous opponents of the convict system. Mrs. Meredith is less an advocate of that than a defender of the settler and employer of convicts from certain imputations; but it is plain, even from her pages, that the temporary prosperity of forced labour is, in the end, more than compensated by the great disadvantages of the despotic government necessary to give it effect. The employers are debarred from freedom of action as well as their assigned servants; and communications are not made, and harbours are not improved, which private enterprise requires for its success, and which, if unfettered, though unaided, it would speedily accomplish. We are not surprised that the inhabitants of Van Diemen's Land generally, though there are exceptions, protest strongly against the continuance of the convict system. Though there is much in the book relative to the convicts and to the aborigines, without which the nine years' residence would be very incomplete, in the whole it is a pleasant description of natural objects. We can promise Mrs Meredith, we think, even a greater share of popularity for her present than her former work, "Notes and Sketches of New South Wales" This book is the production of an elegant and accomplished woman, and is appropriately dedicated to "our most gracious and beloved Queen."

THE UNIVERSAL LIBRARY OF THE BEST WORKS OF THE BEST AUTHORS OF ALL NATIONS. Ingram, Cooke, and Co.

The certainty that the beneficial results of the diffusion of knowedge must ever be proportionate to the excellence of the works provided is a principle that cannot too closely be kept in view by all who aim at placing such works within the acquisition of the reading masses. Unsuspectingly there has been given to the hour granted now than a few years since; the public taste for literature is of a healthier tone than hitherto; and, although the cravings of the printing machine may have led to the ephemeral nature of many works which were hardly worth reviving, the demand for a higher class of books has largely preponderated. The "march of intellect," at its outset, lay in the direct line of cyclopædian utilitarianism, which was rather the taste of the publishers than of their customers; but this has been succeeded by a desire for elegant and reflective literature, which had too long been shut up in the libraries of the wealthy and luxurious. The printing-machine will, however, eventually spread these treasures through the length and breadth of the land, towards which great object the series of economical reproductions promised in the "Universal Library" will powerfully contribute, both in standard excellence and variety. Starting with the Johnsonian maxim, "that the happiness of the every people arises from its authors," the projectors of the Universal Library propose it shall consist of "the best works of the best authors of all nations, in all departments of literature," with the advantages of beautiful printing and illustration, and style of publication suitable for a collection of household classics. fitted for every educated circle in the empire

SIX parts of the Library are before us. Part I. (Poetry) contains the "Lady of the Lake," and "Lay of the Last Minstrel," two of Scott's finest works. Part II. (Biography) is devoted to Walton's "Lives of Donne, Wotton, Hooker, Herbert, and Sanderson." Part III. (Voyages) contains "Anson's Voyages round the World, written by Benjamin Robins, from materials furnished by Lord Anson, although the name of Mr. Walter, chaplain of the Commodore's ship, the *Centurion*, appears in the title-page. Part IV. (Fiction) comprises Goldsmith's "Vicar of Wakefield," and "Ficciola," from the French of Saintaine.

Part V. (Essays) contains Alison's elegant metaphysical treatise, entitled "Essays on the Nature and Principles of Taste." Part VI. (Miscellaneous) contains Sterne's "Tristram Shandy."

We should add that the "Universal Library," in addition to the best works of the best English authors, will comprise a selection from French, Spanish and Portuguese, Italian, Swedish, German, and American writers. The Library is handsomely printed in large octavo, yet is issued at the rate of the cheapest periodicals; and hereafter, when it is collected into volumes, it will be treasured as a valuable accession to the intellectual delights of a well-regulated home.

A TOUR OF ENQUIRY THROUGH FRANCE AND ITALY. By EDMUND SPENCER, Esq. 2 vols. Hurst and Blackett, London.

France and Italy are now as familiar to the reading and travelling portion of the British public as Margate is to our cockneys, or Boulogne to our pecuniary refugees. It is difficult to make interesting a new "Tour of Enquiry" over any well known ground, for a host of impressions have gleaned all local traditions left unappropriated by the compiler of handbooks; and "special correspondents" have already chronicled every incident connected with the struggle for liberty in the one country, and the social reaction in the other. Mr. Spencer, however, does not hesitate to undertake the arduous task, although ungifted, as it appears to us, with the qualifications requisite to render his work either instructive or amusing. We can neither compliment him on the astuteness of his discernment, nor on the brilliancy of his imagination; for he has discovered nothing new, and invented nothing interesting; his book is merely a collection of historical extracts (suited to his purpose), interlarded with somewhat superficial remarks upon social, and religious impostures long detected. A thorough hatred of Popery seems to be his ruling passion; and, for its gratification, he appears prepared to sacrifice his veracity as a narrator of events, and his principles as a consistent politician.

Mr. Spencer's is one of a class of books which we cannot encourage—books which serve no other purpose than to disquiet the public mind, and excite distrust among our allies for whose continued intercession it is essential. We feel no dread of Popish encroachments on our liberties: for it is absurd to suppose that a power which is only maintained in Rome itself by French bayonets can hope to triumph or make any progress in Protestant England.

It would be waste of time to follow Mr Spencer in his travels through the beaten track which he has pursued. The navigation of the Rhone is pretty nearly as well known to us as that of the Thames; and every subject which he writes on, from the Faubourgs of Paris to the Campagna of Rome, will be found much more interestingly treated in the most common-place handbooks.

BASIL. A STORY OF MODERN LIFE. By W. WILKIE COLLINS

Three vols. Richard Bentley, New Burlington-street, London.

"Basil" is the autobiography of a young man of rank, who, falling in love with Margaret Vane, a linen-draper's daughter, proposes for her at their first interview, and marries her within a week, under the stipulation that he should separate from his bride at the church door, and not claim her as his own until the expiration of a twelvemonth. On the very last evening of the year, and when anticipating the happiness which awaited him on the morrow, a mere accident leads Basil to discover the infidelity of his wife. He assails her paramour (Mannion, first clerk in her father's establishment), and leaves him for dead, after having inflicted such personal injuries as render him an object of horror on his recovery. The guilty woman escapes the consequences of her conduct by being thrown into insensibility, and long confined to his bed in delirious fever. Old Sherwin endeavours to palliate his daughter's conduct by denouncing the baseness of Mannion for his attempt to entrap her, and asserting the innocence of any actual criminality. Finding his letter unanswered, he calls to demand an interview with Basil. The visits of such a person, coupled with his extraordinary behaviour, and the ravings of the invalid, induce his attendant to demand an explanation. All is avowed by the unfortunate son, who is denounced as a disgrace to his family, and driven forth as an outcast. Mannion, meantime, has been taken to an hospital, from whence he writes to Basil, when convalescent, avowing himself to be no longer the timid and dependent clerk of the respectable linen-draper, by his (Basil's) father, with whom he had long lived on terms of the strictest intimacy; detailing all the steps he had taken to deceive and disgrace him; and intimating a vow that the punishment of his life should be devoted to the unceasing persecution of his own rival and the son of his father's murderer. Margaret flies to her seducer, takes fever at the hospital, and dies. Mannion dogs Basil's footsteps, and secretly spreads reports against him, as he abandons every place in which he seeks concealment. At length, while pursuing his victim, the wretch falls over a cliff, and is drowned. We subsequently find the hero of the story enjoying comparative peace of mind, and living tranquilly, with his sister Clara, in a happy retirement.

Were the reviewer's duty confined exclusively to a criticism on the literary merits of the book submitted to his judgment, our task as regards this work would be of unusual pleasure; for it is a powerful and easy of accomplishment; for in "Basil" we cannot fail to recognise a rare combination of pure style, and well-constructed plot of incidents, described with an appalling power, which yet do not outrage belief by their extravagance; and of characters drawn so like to nature, that their very truthfulness startles, while it amuses us.

But, while according our tribute of admiration to the merits of "Basil," as a literary production, we cannot express our approval of the channel through which Mr. Collins conveys his moral, or the agency which he employs to elucidate it. In some medical cases the cure is said to be worse than the disease; and, applying the maxim to morality, we may be permitted to question the efficacy of good advice, when administered through the medium of highly-wrought scenes of criminality, but too well calculated to shock the modest mind. All the characters in Basil (save one) are conceptions calculated to degrade, not to elevate, the minds of its readers. Basil's father is a cold-hearted man of the world, in whose narrow mind family pride swallows up all the kindlier feelings—one who cannot command our respect when in adversity, much less our sympathy when in distress. His brother Ralph is a thoughtless, good-natured *roué*, who talks over his more youthful indiscretions with unbecoming levity, and alludes to an existing connection rather as a proof of prudence, which should be imitated, than as the admission of an error which should be avoided, while the hero himself is nothing better than a silly sensualist, who sacrifices every other consideration to the gratification of mere animal instincts

These strictures will, we trust, be received in the spirit in which they are offered. Not for an instant doubting the purity of Mr. Collins's intentions, we hope to find his next subject more worthy of his pen, for we should be happy to hail the productions of so powerful a writer, not merely as brilliant ornaments to literature, but as solid and efficient props to morality.

THE WHITE ROSE OF THE HURON By GEORGIANA C. MUNRO.

3 vols Saunders and Otley, Conduit-street, London

"The White Rose of the Huron" is a story replete with incidents of the most exciting description, in which the interest is unflaggingly supported, until the final *denouement*. At the commencement the style is somewhat lumbering and confused, but this defect disappears as the tale advances. The descriptions of Canadian Lake Scenery, are truly charming, and there is a power and freshness in the author's style, which render her delineations of character natural and effective. Miss Munro aims throughout her book to exhibit the misfortunes which surely follow the indulgence of vindictive feelings, and the virtue which as certainly attend on patient resignation, and the strict fulfilment of our duties, and this meritorious task she hopefully accomplished, without the utterance of a sentiment which we should wish suppressed or of a word which we should desire to see expunged.

CASTLE AVON. By the Author of "Emilia Wyndham." In three volumes. Colburn and Co, Great Marlborough-street, London.

"Castle Avon" is a book which will in no wise detract from the literary triumphs of its author. The object of the work is moral, the story is interesting, and the characters are drawn with that delicacy and force which render the productions of the writer of "Emilia Wyndham" so pre-eminent amidst the mass of tawdry publications which form the light literature of the day. Although the plot has got nothing to boast of on the score of originality, the wild and lawless life of the gipsies is so graphically and so pleasingly put before us, that we read the description of their camps and the delineation of their fierce passions with as much avidity as if they had now been presented to us for the first time. Lady Aylmer is one of those sweet and natural characters, in which maternal affection crushes all selfish thoughts, and love becomes enduring. The Dean and his titled wife are, we fear, but too true types of the everpaid dignitaries of the Church, and of their fine lady helpmates. The consequences which the first false step entails are vividly depicted in the mental sufferings, and ultimate ruin, of Mr. Gorhambury. And Philip's fate affords a striking illustration of how the most happy prospects may be marred by instability of purpose and want of determination to do right; while rigid adherence to the same high principle is justly rewarded by the elevation and happiness of the charming Hernana. Were it necessary to select passages from a work which abounds in highly-wrought scenes, and in those striking incidents so necessary to sustain the interest in fiction, we should call the attention of our readers to Hester's struggles between love and guilt, before and after the murder of the Gipsy Queen, and to the interview in the summer-house, when Mrs. Gorhambury disolves the baseness of her son to Hernana, and they part in ever

A DAY OF PLEASURE: a Simple Story for Young Children. By Mrs. HARRIET MYRTLE. Addey and Co.

This is a pleasant nursery tale, picturing a day in the life of a child, and that its birth-day. It has eight periods and incidents: morning, trials of temper, change to mend, the visit, home again, a happy evening, peaceful prayer, and night. The style is lively and attractive; and the descriptive portion painted in natural colours, while the incidents are life like: the children ask clever questions, and the larger growth, in reply, illustrate by what is passing before them; and the small quarto has eight clever scenes, by Hablot K. Browne

THE ADVENTURES OF A BEAR, AND A GREAT BEAR TOO. By ALFRED ELWES. Addey and Co

The bear is altogether a very droll fellow, and has afforded infinite mirth to bipeds. His assumption of human actions make him really a comical creature; but, seriously speaking, if the bear imitates his lords, they sometimes imitate him; a "bear of a man" is common parlance for a rude fellow. However, the little quarto shows us the bear in merrier moods. First, we have Mr. and Mrs. Brum "at home;" a family brawl ensues, and young Bruin turns out upon his travels, is coldly received by Wylde Boare, Esq., and has his first rencontre with a pack of terriers, and retreats up a tree in the forest. He strays to Caneville, there makes the friendship of the very learned pig, Herr Schwein, and becomes an adept in street tricks, in one of which, balancing a stick upon his forehead, and spinning on it a pewter platter, he makes a wonderful impression upon the gaping dogs of Caneville, and even the birds twitter admiration; and he becomes a very great Bear, styling himself Count Von Bruin; but is outwitted in an affair with the Hon. Miss Greyhound, by the cunning of Fox; he joins a fast club, and soon falls from his property, by losing the sport at "three throws a penny." His next reverses are "selling the natives," and "cheap harmony," becomes blind, and subsists on the scanty charity of Caneville; and, ere he dies, repents his former life, and warns many a gay dog of the faults which had been his own ruin. The story is told with great humour, and a true perception of the ridiculous, the effect of which is much heightened by the illustrations of the nine plates of Bruin's career. "The last head," Bruin "totally blind," is a piece of true pathos. These illustrations are from the pencil of Harrison Weir, and their individuality is admirable.

LIFE OF FIELD-MARSHAL THE DUKE OF WELLINGTON. By J. H. STOCQUELER, Esq. Vol. II. London: Ingram, Cooke, and Co.

Mr Stocqueler has earned the right, as an elegant and effective lecturer upon the great Soldier's career, to appear before the world with a complete and full length portrait of the illustrious hero, whose exploits he has so deeply studied and can so gracefully narrate The work before us is the second and concluding volume of the best popular Biography of the Duke which has yet appeared. It possesses all the merits which made Mr. Stocqueler's *viva voce* explanations so attractive at the Gallery of Illustration. The style, easy and colloquial, leads the reader rapidly through the record of events which Mr. Stocqueler's pen has known how to invest with dramatic interest. One especial merit of the present biography is that we never lose sight of the Duke Political events and contemporary personages are briefly processed, whenever the recapitulation is necessary to enable the reader to comprehend the Duke's course of action, and to throw a light upon his character. But the author is never led away by subsidiary lights to pursue investigations of collateral importance. He extricates himself by a rare tact from everything and everybody, and the great subject of his memoir. The Great Captain is ever the chief and central figure upon the canvas.

The work before us takes up the Duke's biography at the flight of Napoleon from Elba, and the commencement of those gigantic preparations for war which filled Europe with dread. Often as the story of the glorious field of Waterloo has been told, it will ever possess a material attraction for Englishmen, arising not less from the abundance of materials and incidents than from the immortal valour which shed additional lustre upon the name of Englishmen

The morning of the 18th June broke gloriously upon the allied camp. A knowledge of the Prussian defeat at Ligny, the British retreat from Quatre Bras to Waterloo, and some suspicions regarding the constancy and steadiness of the foreign contingents, were well calculated to cause a feeling of depression in the British camp A more miserable and miserable night never heralded so great and terrible a contest When the storm continued, and the night of the 17th set in, orders were given to the troops to pile arms, but no man was on any account to quit his position. The only provision they had was the remnant of the salt provisions served out on the 16th. Having partaken of their meagre fare, the only question was how to pass the night. To lie down upon the wet ground was not to be thought of, and to stand up all night was a bad preparation for a heavy's day's fighting. The soldiers endeavoured to light fires, but the rain soon put them out. The only plan they could adopt was to gather armfuls of the standing corn, and to roll it together to make a sort of mat, on which they placed their knapsack upon this they sat, each man holding his blanket over his head to keep off the rain. The precaution was almost useless: for every man was thoroughly drenched. The salt provisions, the exertion, and the heat of the weather together caused an intolerable thirst throughout the battle. 'At night-fall on the 18th all the cry of the wounded was for "water," and many of the survivors were almost maddened by thirst.

With the morning came the whole self-reliance and invincible determination to which Soult and Foy bore such impressive testimony. "You are going to see a great battle, my Lord," said Lord Hill, on the morning of Waterloo, to an English Peer who had come from Brussels with the advantage of his race, to witness the deadly struggle, *en amateur*. The first and second in command of the British force never had any misgivings "Was there any part of the day in which your Grace despaired?" asked Sir Walter Scott. "Never!" was the reply. The same question was put by Haydon, the painter, to Lord Hill. "Desponded?" replied Lord Hill, "Never! There never was the least panic; we had gained rather than lost ground by the evening No, there was not a moment when I had the slightest doubt of the result." Such confidence was diffused by the veteran soldiers among the ranks. One of the Duke's aides-de-camp, on passing some English soldiers who were awaiting an attack from French cavalry, said to them, to reserve their fire until the enemy were upon them. "Never mind us, sir," cried an old soldier in the ranks, "we know our duty. How cruelly their patience and endurance were tried, and how nobly the exposed position of the British ground —shall it not be a favourite theme with the poet and historian until the end of time? "When will we get at them?" cried the Irish regiments, as they surveyed the havoc made in their ranks The loss of individual regiments, under circumstances so maddening, was prodigious. One had 400 men mowed down in square, without drawing a trigger; it lost almost all its officers, and a subaltern commanded it for half the day." Another, when nearly annihilated, sent to request support: none could be given, and the commanding officer was told "he must stand or fall where he was." Knowing the tremendous sacrifice of life that was going on, Napoleon calculated on wearying the British into defeat. "Ever and again the masses of the enemy came dashing against the British squares, and were rolled back as from stone walls; but not without making fearful breaches in the living masonry, which were instantly and steadily filled up. "The enemy had gained the orchard of Hougoumont; but the chateau was held by the British Guards, and our right was still unturned. The French had gained La Haye Sainte; but Napoleon's tremendous charge upon our centre failed notwithstanding Hour after hour did the British infantry stand 'rooted to the ground,' heedless of the storm of grape,' the charges of cavalry, and the shock of infantry Well might Foy warn the Emperor, '*Que l'infanterie Anglaise en duel est la diable*' No wonder that more than 600 officers were killed or wounded at Waterloo, or that the Duke's army had 15,000 men placed *hors de combat* at nightfal."

Mr Stocqueler gives an interesting sketch of the proceedings of the Allies upon their occupation of Paris, and triumphantly vindicates the judgment, prudence, and magnanimity displayed by the Duke in the command of the Allied armies

The remaining portion of the volume is taken up by the eminent civic services and political career of the Duke. A Tory of the Castlereagh school, at the end of the war, the Duke, as Prime Minister, lived to feel and to recognise the growing force of the democratic element in the British Constitution, and its absorption of much of the power and privilege which, in his youth, were regarded as the prescriptive possessions of the Crown and the aristocracy. A life spent in the camp, and devoted to military affairs, was not the best school of statesmanship for the future Minister of a free commercial country. But his rare sagacity and his practical spirit, and, still more, his intimate political connection and private friendship with the greatest statesman of his time, enabled him to vanquish most of his early prejudices, and to view calmly, and without misgiving, the increasing influence of the people in the government of the country. Yet there was one of his early antipathies which he never sought to surmount. He disliked the press, and never displayed the smallest personal civility to any of its members. While Sir Robert Peel, on the very day when he resigned office, took up his pen, in the most generous spirit, to thank an independent journalist for his able, valuable, and discriminating support, the Duke of Wellington never seemed to relax in the steady dislike which he bore to journalism and to public writers. Mr. Stocqueler offers the best apology for the Duke's contempt of the fourth estate that can be found:—

The Duke never held the newspaper press in much respect. The information which it conveyed to the public during the Peninsular war, although of the deepest interest to the British community, was offensive to him, because the same information reached the enemy whom it was of importance to keep in ignorance of the operations of the English camp and the disposition of the troops. Moreover, the press libelled him without mercy, giving publication to the grossest falsehoods, and assigning the worst motives to those acts which proved to be the result of the most consummate judgment, the most profound forethought, and the purest patriotism. But he took no steps to procure the punishment of the libellers. He despised, or affected to despise, them. He found a safety-valve for his wrath in calling them "rascally," "licentious," and so forth; and upon one occasion he wrote to Sir Henry Wellesley, "What can be done with such libels and such people, except to despise them and continuing one's road without noticing them?"

The Duke's error was in failing to perceive that the character of the press improved *pari passu* with the character of our public men. If the opposition press libelled the Duke they did but repeat the philippics of opposition leaders in Parliament. Public men did not hesitate to get up in the House of Commons and affirm that the Duke's earlier battles were fought for a peerage. The commander whom posterity will reverence for his incessant care for the lives of his men, was held up to denunciation in the British Parliament for making the blood of his troops subservient to the purposes of a selfish and guilty ambition: for at that time unscrupulous jobbing, and gross Parliamentary corruption, had eaten out the heart of faith from the body corporate. If the press were unjust, Ministers were self-seeking and arbitrary As the Government became more amenable to public opinion, the journalists became more just, candid, moderate, and impartial. But to the last the Duke regarded the newspapers with the old Peninsular feeling of hatred and contempt. No public man in England can afford to despise the press, and what the Duke may have gained in dignity he lost in public influence from this circumstance. It is, perhaps, not too much to say that the unfriendly feelings which the Duke was at no pains to conceal towards the "fourth estate," shortened his lease of power, and rendered him unable to maintain the position of Prime Minister. But the Duke was implacable He would not accept the services of a class of adherents among whom he could establish no principle of order, discipline, subordination, or responsibility. Of his dislike more particularly to see military affairs made the subject of newspaper discussion, a striking instance occurred in the case of the disputed sword of Ciudad Rodrigo, The story is still more interesting on other accounts, and we need make no apology for laying it before our readers in the words of the gentleman to whom we are indebted for the communication.—

It will be recollected that, at Ciudad Rodrigo, Lieutenant W. Mackie led the Forlorn Hope, at the "great breach," and Lieutenant John Gurwood that at the "little breach." After the capture of the fortress, Lord Wellington presented the French Commandant's sword to Lieutenant Gurwood, and chose him as his esquire when knighted by Marshal Beresford as Knight of the Bath. For the victor at Ciudad Rodrigo had been, while in India, only *named* for that eminent military order. Some sixteen years since, the writer of the present notice was on terms of intimacy and confidence with Colonel Gurwood, and also knew personally Major Mackie; and while the latter spoke of the former as "a lucky fellow, who was taken by the right hand by the right sort," Colonel Gurwood always remarked that "a braver fellow never breathed than Major Mackie; but that he had not been fairly used by the Horse-Guards people." Considerable much surprise was excited, on the appearance of Maxwell's "Life of Wellington," to find himself severely handled on the matter of the Forlorn Hope and the sword. On my speaking to him, and naming these notices on the same subject, he was much moved, and remarked that they would drive him mad about it. On my remarking to him, "Why do you not lay the matter before the Duke, and get him to interfere, at the point to which you have replied, "When the work first appeared, I waited on the Duke, and pointed out the obnoxious passage, and begged his Grace's permission to reply to the falsehood: but received a positive refusal, in terms anything but courteous:—'Don't make a fool of yourself. You won the sword; I gave it to you; and you've got it: keep it, and let them write and be ——. Have nothing to do with those writing fellows, for if once you begin controversy, you'll always have your fingers in an inkstand. Curse them! Take no notice of them.' This (said the Colonel) closed my lips, and tied up my hands." I then adverted to Napier's history, in which Gurwood is censured for going "too far to the left." On this, the Colonel said, 'It's very well for Colonel Napier to find fault, but really I had good reasons for what I did. Had I led the 'forlorn hope' to the spot pointed out in the directions, not a soul would have escaped. I therefore took my men to another spot, and getting into a wet ditch with ice in it, and crawling on our hands and knees, we got out of the range of the shot, and so reached the breach. At the foot, we assembled; and I was about the fourth up the crumbling walls. When near the top, I found a French officer (with one foot on the wall and one on a gun turned round longwise) loudly shouting 'Vive la France Vive l'Empereur!' and, thinking he would be better out of the way, I threw my sword well down for a strong up cut at him. At that moment a musket was fired so close to me that I thought my head was blown off; as it was, I was blown down in the opening. I was stunned for two or three minutes, when one of my men asked me if I was wounded, and bound a cotton handkerchief tightly round my head. I stood by myself, and found I was much hurt But the discharge left its mark (and, pushing up the hair on the left side of his forehead, there remained the marks of many small blue grains of gunpowder). After we had passed through the gateway, and some little way into the town, we came to a large stone building, outside of which a French soldier was inquiring if there was any English officer who could speak French? I replied, I could; and he then led me (some of our men following) down a long stone passage to a large room, in which the governor of the town (General Barrié) and some of his staff were. On entering the hall-door of the room, a musket would have levelled me to the ground, but it was stopped by one of my companions. When order was obtained, the General said, as the town was won, he at once surrendered; and I asked him to give up his sword, as a proof of his intentions. He gave it up immediately, and I asked him to take my arm, which he did, and we left the building, followed by some of our soldiers On gaining the street, the first officer I encountered was General Picton, whom I addressed, and asked where I could find his Excellency the Commander-in Chief? He said, 'I am General Picton, can't I do?' I said, 'No, General, I must see his Excellency.' He then directed me to where he had seen him a few minutes previous, near the ramparts. We went forward to the walls, and there I found Lord Wellington with his staff. I introduced the French commander, and gave the sword into his Lordship's hands. He merely remarked, 'Very well, that'll do. Who are you—what name?' I replied 'Lieutenant John Gurwood, 2nd battalion of the 52nd;' and he then said, 'O! I shan't forget—you can go to your regiment.' And I then joined my battalion. A few days after the town was taken, a review took place on the glacis; and, after some short time, my name was called; and on arriving where Lord Wellington stood, his Excellency presented me with the sword, and said it fairly belonged to me, as I had led one of the first forlorn hopes he had directed in that war, and taken the commandant myself. Afterwards I met a little notice, in French and English papers, on the hilt, to this effect—This, the sword of General Barrié, commandant of Ciudad Rodrigo, was presented, on the glacis of that fortress, by General Earl of Wellington, K.C.B., to Lieutenant John Gurwood, January, 1812. And now you know all I can tell you of the history of the storming, and my claim to the sword of General Barrié."

Mr. Stocqueler has made a liberal use of these contemporary tributes to the Duke's fame by which the press of England has so nobly avenged itself for the neglect and dislike of our greatest hero. If it could be permitted to him to revisit the scene of his earthly career, the Duke of Wellington would perhaps admit that the injustice of the journalism of 1809 and 1810 has been amply atoned by the glowing, eloquent, and generous eulogies which the public writers of 1852 have pronounced over the bier of the immortal dead.

THE TOWN OF WELLINGTON, SOMERSET.

WELLINGTON, SOMERSET.

WHEN the Dukedom was conferred upon the late Duke of Wellington, and the choice of the locality was left to himself, he selected "Wellington, in Somerset," partly because he was Lord of the Manor of Wellington, and partly because of its contiguity to "Wesley," the village which originally gave the family its name.

Of the town of Wellington we gave a distant view in the ILLUSTRATED LONDON NEWS for November 20, 1852. We now engrave a view of the interior.

Wellington is an exceedingly neat and cleanly market town, well paved, and lighted by gas. It has a fine old church, which contains the remains of, as well as a very fine monument to, Queen Elizabeth's famous Lord Chief Justice Popham, who was also born in the town. Here also is a chapel of ease, built by the late vicar, the Rev. W. P. Thomas. The building which forms a prominent feature in the Illustration is a very commodious markethouse, built a few years since by the inhabitants on property leased to them by the late Duke of Wellington. Besides the necessary provision for a tolerably large market, the building has a spacious reading and lecture-room. The town derives considerable importance from the large serge manufactures in its immediate neighbourhood, which employ a great number of poor; and the serges are sent to all parts of the world, especially to China

On an elevated ridge of the Blackdown hills, about two miles from the town, stands the monument "To Arthur, Marquis of Wellesley." It was built in 1817, has been since injured very considerably by lightning and neglect; but it is about to be restored and ornamented by public subscription. This monument can be seen from some parts of the Bristol Channel; and, from the town itself, is a very striking object, owing to its great elevation, as well as to the height and romantic grandeur of the hill on which it stands.

On a beautiful and sequestered spot in the vicinity of the town, opposite to that side on which the monument is placed, stood, until within a few years, a magnificent demesne, known by the name of Chipley house. In more troublous times, it gave shelter to John Locke; and there is much reason to believe that in his retirement there, that great man wrote his celebrated work. On the death of its late owner this mansion became the property of E. A. Sanford, Esq., late M.P. for the western division of the county; and by him, owing (it is believed to the irremediable ravages which time had made upon it, was razed to the ground.

On the 13th inst., a meeting was held at Taunton, to raise funds for the repair of the Wellington Monument on Blackdown-hill. A Correspondent of the *Somerset County Herald* of Saturday last, recommends the following plan for the restoration of the obelisk, the mode to be followed, and the materials to be used:—"It appears from Mr. Giles's report (says this Correspondent), that the walls are built of rubble-work, faced with a coarse-grained sandy freestone; that the former is sound the latter decayed, and falling into pieces. I would recommend, under these circumstances, to let the rubble remain, and strip off the ashlar (or facing) from top to bottom, and replace it by new work. I know nothing better, or a more endurable material, than the kind of stone made use of in the building of Trinity Church, in Taunton, which comes, I believe, under the description of a magnesia limestone; and, if I am right in this respect, is of similar quality to that used in the new Houses of Parliament. Stones, at certain intervals, should be bonded into the rubble-work, and the whole held together by copper clamps. But if this material should be considered too expensive, iron must be substituted in its stead, though very inferior. The work should be set in Roman cement, and care taken to wet the rubble with water, as the facing is carried up. The pedestal I would face with granite from the Dartmoor quarries." The writer adds, let the monument be roofed with a stone arch; a statue would be out of place here; perhaps a large copper ball might surmount the summit. A granite slab should bear an inscription, cut in letters about three inches deep; say a few words, as "TO ARTHUR, FIRST DUKE OF WELLINGTON, AND HIS VICTORIES, 1852."

RAILWAY AROUND PARIS.

BY a law of June, 1842, M. Baude, engineer, was instructed to consider the question of the junction of the various railways from the French metropolis, by a railway which should encircle Paris. This scheme at that time encountered considerable opposition from the private interests affected, and from the interference which such a measure threatened to many branches of industry in Paris. The high price of land throughout the line taken by the proposed railway was also a serious obstacle in the way of this great and useful undertaking. When the revolution of February, 1848, occurred, it was necessary to minister to the necessities of many unemployed workmen, and the scheme of a railway around Paris was again revived. The deprecated value of land at this juncture favoured the project, and the Provisional Government, after a favourable opinion had been pronounced by the Conseil des Ponts et Chaussées, ordered the immediate execution of the Chemin de Fer de Ceinture, around Paris.

Two engineers (Messrs Brame and Thoyot) were appointed to advise with M. Baude; and, at a later period, the Council-General of the Seine, and the Central Commission of Railways, devoted several of their sittings to an examination of the different modes of executing the project. At length a decree of the 11th December, 1851, under the Ministry of M. Magne, finally ordered the execution of the railway.

The design of this railway is to join together the various lines of railway in Paris. Passengers also will be conveyed upon it, but its principal object is to enable merchandise to be removed from any one of the railways having their termini in Paris to any other, without the necessity for changing carriages. The quantity of merchandise which will be trans-

RAILWAY AROUND PARIS.

MILIGRAYA INDUSTRIAL SCHOOL AND GARDEN, IN CEYLON.

mitted along the first portion of the railway opened a few days since is estimated at from 400,000 tons to 500,000 tons a year.

At present we believe the traffic takes place in the waggons of the different companies using the line. But the railway will have its own carriages, which will be at the service of the various companies. The cost of the line has been from 9,000,000f. to 10,000,000f. The Railway Companies of Rouen, du Nord, Strasburg, Lyons, and Orleans give to the State each 1,050,000f. The State executes the works by its engineers, and is bound to deliver up the railway in a finished state in two years. The Government contributes from 4,000,000f. to 5,000,000f. towards the construction of the line. The companies each name two directors to form a syndicate, to which the administration of the line is entrusted. The directors and *chefs d'exploitation* form a working and traffic committee, so that the staff of the Chemin de Ceinture, as this railway is called, only consists of an executive manager and a general secretary.

The railway is fifteen kilometres in length (between nine and ten miles). It starts from the Paris and Rouen Railway, at the Batignolles, passes behind Montmartre (*See Sketch*), then under the Northern and Strasburg Railway, crosses the Canal de St. Denis, passes by tunnels under Belleville and Charonne, each tunnel being from 1000 to 1100 metres (the metre is rather more than 39 inches) in length; it then passes over the line of the Lyons Railway, and gains the Seine, which it crosses by a stone bridge; and finally forms a junction at Ivry with the Orleans line. The Chemin de Ceinture is connected by branches of its own with the stations of each of these companies. It is within the fortifications of Paris, at a short distance from the strategetic road, and forms a slope and cutting almost along its whole extent, making, as it were, a second line of fortification.

The railway is carried through the Communes of Batignolles, Montmartre, La Chapelle, La Villette, Belleville, Charonne, Bercy, Ivry, and the united numerous and varied branches of industry. A service of omnibuses is in contemplation on this route, to unite all these suburbs with each other.

The Western Railway Company demands a junction with the other railways by the continuation of the Chemin de Ceinture, and the Government proposes to accede to the request, so as to enclose Paris without any break in the circle.

Another part of the Chemin de Ceinture is at present in course of construction by the separate company of St. Germain, which is making a railway through Asnieul and the Bois de Boulogne. It is estimated that 4,000,000 passengers, pleasure-seekers, &c., will be brought upon the line by the attractions of the villages through which it passes, and the embellishments projected and in course of execution in the Bois de Boulogne.

In one year the first part of the line has been given up by the contractors for the purposes of traffic; eight bridges have been constructed, two of them under the Northern and Strasburg Railways, and this without interrupting or an instant the traffic upon these lines. The bridges are of iron. The line, begun after the *coup d'état*, was in progress before the Empire.

We are indebted for these details to the politeness of M. Brame, engineer of the railway, whose obliging attention we have much pleasure in acknowledging.

OPENING OF A NEW CHURCH IN CEYLON.

THESE picturesque scenes represent the ceremony of opening a Church lately erected in Ceylon, where a building seems to have been taken of the luxuriant vegetation of the country to give a highly festal character to the out-door ceremony.

The Church, which is of Gothic design, has been erected under the direction and through the influence of the Rev. Mr. Thrustan at Miligraya, about three and a half miles from the Fort of Colombo on the Galle-road. There was a large assemblage of respectably dressed natives, and a very considerable number of European ladies and gentlemen, to whom the proceedings must have been not a little interesting. Mr. Thrustan read the evening service alternately in English and Singhalese, and the Bishop addressed the English portion of the congregation direct, and the natives through an interpreter. A well-merited tribute was borne

OPENING OF A NEW CHURCH AT MILIGRAYA, NEAR COLOMBO, IN CEYLON.

to Mr. Thrustan's quiet perseverance, the results of which in a few years had been the establishment of a mission including 400 registered families; twenty-five schools with 500 children; and five places of worship, three of these equal in outward appearance and stability to that in which they were then met. These were erected chiefly by the contributions of natives, assisted by the large-hearted benevolence of friends in England. Reference was made to two industrial schools, in the garden connected with one of which a large number of the most useful fruits and vegetables are successfully cultivated including fine-looking arrow-root; and the boys have been very successful in drying plantains. The church, apart from the sacred purpose to which it is dedicated, is an ornament to the neighbourhood in which it is situated. The walls were painted to represent a quiet grey stone, and even the Tate which filled the pointed windows were in perfect accordance with the Gothic style of the building, the substance of which they are formed (cocoa-nut leaf midrib, if we mistake not) being neatly arranged into lozenge forms. Covered with green paint, it has all the effect of iron wire. The approach to the church was ornamented in the native style with festoons of young cocoa-nut leaves, a triumphal arch of the same material standing immediately in front of the building. The Bishop's address was earnest, with no mixture of objectionable matter. He solemnly impressed on his Christian hearers the propriety of finding incentives to Christian zeal and Christian faith in the example of the Buddhists and demon-worshippers. Altogether, the scene was pleasant and interesting. At the conclusion of the service a collection was made.

Fine Arts.

OBSEQUIES of the LATE ILLUSTRIOUS FIELD-MARSHAL the DUKE of WELLINGTON, K.G., &c. Drawn on Stone by Andrew Maclure. Published by Maclure, Macdonald, and Macgregor.

This is a highly-interesting record of an ever-memorable solemnity. It comprises, besides a well-executed portrait of the departed hero, six artistic and well-executed views of the principal features in his obsequies—viz., the Lying in State; the Departure of the Funeral Procession from the Horse-Guards; the Procession passing Apsley-house; again at Trafalgar-square; its arrival at St. Paul's, and, lastly, the Funeral Ceremony within that sacred edifice. The various points of view are well chosen, and the subjects general y treated with equal judgment and taste, and throughout with remarkable spirit. The prints are of a large folio size, and are adapted either for the portfolio or for framing.

COMPARATIVE ESTIMATE of MURAL DECORATION, as PRACTISED in OUR OWN COUNTRY and on the CONTINENT of EUROPE, &c. (with Illustrations). By THOMAS PURDIE, Esq.

Mural decoration has come in for its full share of the attention of late years beginning to be manifested in regard to the decorative arts generally; and, taken in connexion with design in furniture, it is one of the most interesting departments in which a judicious and suggestive taste may be employed. The little *brochure* before us is in substance a paper read nearly a twelvemonth ago, before the Architectural Institute of Scotland, held at Aberdeen; and it is accompanied by eight lithographic prints, in large folio, of designs for mural decoration, which the author considers worthy of admiration and study. Some of these are copies of wall decorations, displayed by French artists at the Great Exhibition 1851; others are copied from distinguished *salons* in Paris; and two are original compositions.

The author considers the taste of the French in these matters to be pre-eminent, and attributes their superiority to the patronage bestowed upon the Fine Arts in the earlier time after their revival; a patronage which, as he observes, has bequeathed to posterity a distinct style known as *Renaissance*—modified by peculiarities under Francis I., Louis XIV., and Louis XV., respectively. We fully concur in the important influence of patronage and fashion in fostering art; but we cannot allow it to be supposed that, of the Western nations, the French were alone, or even foremost, in encouraging art and artists at the period in question. In Spain handicraft and art had long had a home, before even the time of the revival; of Flanders, the same may be said; and in England art met with liberal encouragement under Henry VII. and VIII.; and more recently from James I and Charles I. And though the domestic troubles which began in the reign of the latter, and the popular prejudices against art, overthrew and destroyed much that had been accomplished, scattering the contents of Royal and other collections over the face of Europe, and obliterating the traditions of a refined accomplishment, it must be forgotten that, after a long period of trouble, England again came forward with eagerness, and with success, to repair the havoc of the past, and to revive the national taste for art. In France it happened that the period of national trouble was longer delayed by more than a century; and the *Renaissance* style, as we have seen, went on flourishing there to the end of the reign of Louis XV., and even received some slight modification in the early part of the reign of Louis XVI., which are called after him; but still, throughout all these two centuries, *Renaissance* was the style—at best an inferior application of high art, and partaking of all the features of its decline—and to this very day, all that survives of art after three-quarters of a century of social anarchy, is *Renaissance*—merely, as it is called—being no other than abject copyism of the *Renaissance* of the days of Louis XIV. and Louis XV. This is a fact which, at any rate, does not say much for the creative powers of our French neighbours, and might warn us against too unreservedly resigning ourselves to an imitation of their practice, much less a copying of their models

Returning, however, to the subject more particularly before us, we must observe that, although mural decoration or wall-painting, in fitting localities, is a great aid to architectural resource; it must, if done justice to, be looked upon as a department of Fine Art, and not of what is commonly known as "Decorative Art;" and that, being necessarily costly, it can only be properly applied to buildings of a stately character. Generally, also, even in the palaces and mansions of the great, picture subjects are out of place except in halls, vestibules, passage-rooms, or in summer houses, &c., being quite irreconcilable with the uses, as well as with the furniture and other various contents of ordinary dwelling apartments. Of the absurdity of which the cavities of cornices are too frequently displayed in attempts at wall painting, when injudiciously resorted to, we will say nothing; neither will we criticise the fanciful subject which Mr. Purdie has chosen to exemplify his theories as insisted upon the principle that wall-painting in domestic architecture is in nine cases out of ten misplaced; and that there is nothing to beat the cleanly and cheerful effect of well-chosen paper-hanging. "What should guide in the choice of paper-hangings involves a variety of considerations, the purpose to which the room is destined, its dimensions, whether well or ill-lighted, &c., points much too numerous to enter upon at present. In general, however, we would remark that the pattern should not be too striking, and, above all, not too natural; that the dimensions of its details will better be too small than too large; that the colours should not be too numerous, nor too widely contrasted: in a word, that it should neither emulate the more striking effects, nor "o'erstep the modesty of nature."

In conclusion, although we do not agree in all matters of opinion with Mr. Purdie, we can consistently recommend his little *brochure* as one entitled to the consideration of all who are interested in this subject.

THE NAPOLEON CIRCUS, PARIS. This new Winter Theatre (engraved in the ILLUSTRATED LONDON NEWS for December the 25th) stands near the Chaussee de Menil-Montant and the street des Filles du Calvaire. The plan of the Circus is a polygon of 20 sides, 138 feet in diameter. At the angles are Corinthian columns, which carry a very rich entablature, adorned with sculptured figures. There are also nine other large reliefs by Duret and Brun, Guillaume and Lequesne, Husse and Pautot, and M. Prad'er was engaged on one of these works when he unhappily met his death. The building is terminated by a polygonal lantern, surmounted by a figure of Victory, bronze-gilt, holding in one hand, branches of laurel and an Imperial banner; and in the other, crowns and a torch. A brilliant flame of gas from the latter serves to announce that the performances have commenced. The interior roof is sumptuously decorated; and the capitals of the colonnade are gilt. The great feature however is a series of paintings, illustrating the history of equestrian exercises and of games of agility and strength, which have been ably executed by Giese and Barrias. Amongst the subjects are the Areopagus re-crified to award the prizes, horse-racing amongst the Greeks, Ben an Claret racing, and other sports and games of the 14th century, a triumph after a tourney, the Carousel, and Louis XIV., the high school of our own time. Above crowning Strength and Address, in the presence of spectators of all times and all countries, &c. The seats, we are told, will accommodate 5000 spectators. The architect of this new Circus, is M. Hittorff, who also designed the Circus in the Champs Elysées.

LITERATURE.

(Continued from page 83.)

GERMAN LITERATURE.

THE most prominent peculiarity in German literature is the rapidity of its growth. Rather more than a hundred years ago such a thing as German literature had scarcely begun to exist; and, as to receiving any acknowledgment beyond the limits of the Fatherland, that was out of the question. The German courts spoke French, the German *literati* wrote Latin. There as, indeed, a third language spoken by a portion of the populace, into which Martin Luther had translated the Bible, and which we called by the name of High Dutch. This, for all we knew to the contrary, answered its purpose very well as a medium through which the members of a barbarian race might interchange their ideas respecting the common necessaries of life; but no one dreamed that it had any literary worth.

The hundred years have slipped away, and we find that during their progress the productiveness of the German *literati* in their own vernacular has been something apparently miraculous. A century ago there was scarcely any German literature at all; and immediately upon the blank comes a series of German poets treading on each other's heels; German critics emulating each other's views; German philosophers building up intellectual edifices to be succeeded by other German philosophers, who knock the edifices down, and raise new buildings in their stead. Nay, not only have these German infants shot rapidly up into maturity themselves, but they have forced the rest of civilized Europe to accompany them in their growth. How many German views have found their way among authors, who have probably never reflected on the origin of the doctrines which they have promulgated. A new influence has been at work, and, as is the case with all influences of general importance, many who have been subject to it have had no notion of its existence. The words (now in common use) "æsthetic," "objective," "subjective," and so on—which, though well sneered at by the old school, cannot be sneered down are all signs of many coins bearing the effigy of a new sovereign in the reign of thought.

The rapidity of growth in German literature is a fact as incontestible as it is striking. It is also incontestible that the German language once established thanks to its great authors—as the language of an educated people, will maintain a prominent place in the speech of civilized Europe for a period which it would be presumptuous, if not impossible, to measure. But will the young plant of yesterday continue to shoot forth its flowers and its fruit with the same fecundity as that whereinto is now receiving a permanent check, when Hegel's career was terminated by the cholera twenty years ago? These are questions which we are rather inclined to answer from a negative point of view; but as we do not set up for prophets, we prefer leaving them unanswered altogether, as mere *stimuli* to reflection.

In the meanwhile, it may not be uninstructive to consider the admitted fact, the rapidity of growth, and the circumstances which attended it. Such consideration may afford a hint towards the solution of the question of duration.

When we trace the progress of our own poetry, we trace a progress from barbarism to refinement; we witness the spectacle of a rude language first hammered roughly into shape, then gradually rendered more manageable, and finally endowed with every capability to express the utmost refinements of thought and sentiment. We see Chaucer toiling with his numbers; we see the luxuriant poetic spirit of the Elizabethan age, fertile in matter, but not completely victorious over form; we see the vanquishers of metrical crudities in the line of versifiers who follow each other in order from Waller to Pope; and when we come down to modern times, we are astonished to find (as, for instance, in Shelley) the new uses to which poetry can be put. And it should be borne in mind that these phases of literature had their antetypes in the phases of English culture. The thought of Elizabethan days, perhaps, was not the thought of the age of Anne; and neither of these was the thought of that great transitive epoch which had its historical representative in the first French revolution. One phase of thought and one form of expression gradually follows another; and for upwards of four centuries the chain may be followed without any serious interruption.

The Germans, too, have their old national literature. They have the Minnesingers and the Epic poets—the Wolframs, Gottfrieds, Hartmanns, and so on, of the Suabian period; they have, moreover, the less ideal, and more practical moralities of those comfortable burghers, who, about the time of the Reformation, instructed their fellow-craftsmen with their homely lays. But these ancient worthies stand in no immediate connection with the modern occupants of the Teutonic Parnassus. The "Thirty Years' War" swept away some half-dozen links in the pedigree that might have connected Heinrich von Ofterdingen with Ferdinand Freiligrath; and, if we have to search for the origin of a patriarch of German literature, now so called, we should look over France, England, ancient Greece—anywhere, in fact, rather than in Germany itself. At a certain stage of progress the gallant minstrels of the middle ages did indeed begin to exert an influence; but then they came in as mere foreigners, with the Spaniards, Arabs, Persians, and other outlandish associates Goethe had never heard of "Reynard the Fox" till Herder informed him of its existence.

Hence the modern German literature stands in a certain isolated position, *quoad* its antecedents; and it is this very circumstance which, in a great measure, causes its growth to appear so rapid. But if we look closely at the matter, we shall find that that gradual development of thought which was required in the progress of other literatures, was not necessary here. The great founders of German literature were men well cultivated in foreign schools, and they found in their possession a flexible language in which nothing of national importance, save the Bible, had as yet been written. Their first task, therefore, was merely that of clothing the intellectual stock which they had derived from the French, the Dutch, or the English, in the words which were current in the church and the market-place. The beginnings of the present literature of Germany show little more than a reproduction, in the vernacular, of the courtly style of Louis XIV. The alexandrine of Racine was the acknowledged metre for German tragedy, and the despots in the realm of the *belles lettres* held up the French as the only models worthy of imitation.

The patronage accorded by Frederick the Great to the philosophers of France of course tended, on the one hand, to extend the veneration for French literature; but, on the other hand, it gave a powerful impulse to the self-liberation of the Germans from literary trammels. The men patronised by Frederick and other reforming Princes were agents in a moral revolution: and in France itself a dislike of received forms had begun to be manifest. Rousseau had asserted the supremacy of nature over convention in the so ial relations of mankind, and Diderot had insisted on an approach to nature in works of literary art, thus striking a heavy blow at a system originally based on courtly etiquette. The importance of these two names can scarcely be over-estimated in a history of German literature, of which, though French writers, they may in some sense be considered patriarchs. That free spirit of dramatic criticism which Lessing introduced may be clearly traced to the influence of Diderot; and as for Rousseau, we can scarcely say what does not belong to him In that revolt against artificial society which is visible in the whole German literature during the latter half of last century, Jean Jacques is the evident as the great, good, wise man to whom all poetic eyes are directed. Schiller, surveying the unhappiness of the Genevese innovator, is reminded of the death of Socrates. Jean Paul Richter, when from his school-house or his little hexastore he would keep up a mockery of heavy satire against the butterfly gallants of the petty German courts, is consoled by thinking that, after all, there have been such men as Rousseau in the world, and who cannot see the Rousseau influence in the "Sorrows of Werter"? Having started as imitators of the "Grand Monarque" school of literature, the next step of the Germans, which we had anticipated while speaking of the influence of Rousseau, was to get rid of their schoolmasters. Thus Klopstock, with a notion of Milton and a veneration for the Greeks, betook himself to the sacred, winning a large party among the grave religious world, and shocking those who had looked upon poetry and rhyme as synonymous, by writing in those modern hexameters, which have ever since maintained a place among the permanent forms of German poetry. Lessing, whose spirit was essentially polemic, set about demolishing the idols which his countrymen had previously worshipped, and devoted a world of acuteness to the dissection of the Classical French models, and a world of energy to the elevation of Shakspeare. English amateurs of German literature are too apt to be completely absorbed in Goethe and Schiller, or perhaps in some of the wonder writers. Let them never overlook Lessing. In him may be discovered the germ of every one of those peculiarities, except superstition, which we now regard as characteristic of the German mind. That freedom in religious matters, to which we now give the names of rationalism, neology, and so forth; that unwillingness to submit to historical authority, is at once to be found in the theological works of Lessing. That veneration for Shakspeare, in which the Germans boast they far outshine the poet's own countrymen, is a faith mainly propagated by the critical writings of Lessing. That universality of appreciation, which would accept the good of every nation (except, perhaps the French, as manifested in the "Classical" school of poetry) and the true in every form, is to be sought in Lessing passim. The very defect which is common to the whole German nation is personified in Lessing. His mind was so large and consequently his energies were so discursive, that he never produced much in any one department of literature And so it is with the Germans generally. They have talked more about the drama and its rules within some sixty years, than all the rest of mankind from the days of Thespis to those of MM. Dumanoir and Dennery, and yet they have brought forth nothing like a Shakspeare, a Molière, or a Sophocles.

The universality of appreciation to which we have alluded above, is one of the most important of all German peculiarities, and the one which has probably had the most wholesome influence on the other Europeans who have, directly or indirectly, slaked their intellectual thirst at the Teutome spring. While the "Classical" French standard prevailed, there was one law of taste by which the productions of every age and climate were to be criticised Either they fitted this Procrustes' bed, or they were voted barbarous without scruple. This law was professedly derived from the Greeks, but even the Greeks themselves were not safe under its application; and when Lessing fought his battle against Voltaire, he had to take up the cudgels for the ancient Athenians against the modern French. The adoption of a general, and perhaps shifting, standard was more elaborately inculcated by Herder, who laid down the great fact that the really beautiful might be felt and expressed by all peoples, and illustrated his doctrine by translating the voices or songs of all nations. Here was a tendency created; here was established a generosity of criticism which the Germans have never dropped. The Virgilian epigram of the Greek, the *rima assonante* of the Spaniard, the *ghazel* of the Persian, the *terza rima* of the Italian, all produce pleasant music in the Teutome ear. And in his matter the German is just as much disposed to be universal as in his form. With his keen sense for the beauty of the thing signified, he is ever ready to adopt all the symbols beneath which it may be arrayed, and feels no hesitation in recognising the Vedas, the Koran, or the Arabian Nights Entertainments of Spain, provided something esthetically good is to be gained by the concession. "Be many sided," said Goethe, at a late period of his life, when he had already gone through his phases of "Titanism," and Classicism (not French)—and goodness knows what besides. The exhortation was superfluous, he brought in his bill when the act was already passed

The universality which to this day prevails as such a conspicuous feature of the German literary mind, had always been accompanied by a corresponding defect. According to saying, the German is at more at home anywhere rather than in Germany He can make himself a Greek or a Hindoo at the shortest bidding, but he cannot get up a nationality for himself at home. The very man who will sing choruses in honour of the "Fatherland," at the table of a democratic banquet, will tell you that there is no centre to which national feeling will direct itself as a focus. When Klopstock threw off the French trammels, he was not to be original, he must be national. Then he was national, and he plunged into the period when the old Teutons of the woods resisted the aggressive spirit of the Romans. Hermann, the Arminius of Tacitus, was the type of German glory; but when was Hermann to the great body of the people? What could the name of Caractacus be as a rallying point for the modern English? Hermann and the bards were unanimously voted "bores," and a rush was made for a hero of the time who could command more sympathies. Frederick the Great was a good figure to put in the vacant niche, and was elevated accordingly. Goethe's youth occurred in the period of Frederick-worship. Frederick-songs were the order of the day, and he who composed them could get a little cheap celebrity. "Minna von Barnhelm," one of the most popular domestic dramas ever produced, was written by its author, Lessing, *apropos* of a particular crisis in the fortunes of the Prussian army; and Bürger's "Lenore," which appeals to us by reason of its virtuous handling of the supernatural, had an additional value in the popular eye by its connection with the squabbles of the "King" and the "Empress." But Frederick, though a Protestant favourite, was no representative of all Germany—was by no means to hang a general nationality. A few years slip away, and the Frederick literature has vanished, together with the spirit that dictated it.

The only time in which the German nationality woke up in good earnest was the time of the Revolutionary wars. Then, if there was not a common idol, there was, at least, a common object of hatred—the French invader; and we question whether any nation could produce a finer collection than that of Tyrtean strains, which warmed the German heart, and exercised the German lungs, at the beginning of the present century. Even at this day, when the occasion which gave rise to their war-breathing lyrics has long ceased, a song of Körner or Arndt sung at one of the German tables, in the most martial forms at the merriest part of the conviviality, will produce as strong an emotion as though the French were still committing depredations on the borders of the Rhine

The same epoch gave rise to another kind of poetry, less patriotic, but far more important from a literary point of view—the poetry of the Romantic school. This school, which was remarkably fortunate in the galaxy of talent which composed it (for, setting aside the august Goethe and Schiller, we do not know where to look for another assemblage of names as those of the two Schlegels, Novalis, Tieck, and their associates), laboured anew to recover a nationality in the past, and they were the more prompted so to do, as, in upholding the institutions of the middle ages, they could rely on the hatred of the people against innovating ideas, now represented by the invading French. Thus, in the brief course of German literature it was the fate of the French to be hit on two opposite sides. At first they were on the side of despotism, as the vassals of Louis XIV., and the great object of the Germans was to get rid of their rule. Then they appeared as the ministers of revolution; and the literary German, still their foes, called up a whole army of mediæval emperors, popes, minnesingers, and knights to oppose them; adding, by way of light troops, a few of those gnomes, witches, and fairies, who had hitherto been slighted by the learned world, and merely existed in the cheap books sold at fairs for the amusement of the humbler orders.

Brilliant as was the apparition of the Romantic school, it could not last long. After the termination of the war, the people became disgusted with their princes, and a poetry which inculcated the old faith and the old loyalty of the middle ages could no longer find favour. But of all the schools of German literature, none other ever made so definite an impression on the rest of Europe as this. Among the other relics of antiquity which the Romantic poets and novelists called into literary existence was that superstition, which, in spite of all religious scepticism, remains a striking characteristic of the German populace. Ask any one of the ordinary public, what is his idea of a German tale, and his answer will at once be, a story with a ghost or a demon in it. If the same person says, with an air of conscious superiority, that such and such a book is *too German* for his fancy, he means that the dose of

daviddom has been a little too strong. Hoffmann, rather an off shoot of the Romantic school than one of its members, was a master in the region of fantastic terror, and brought to perfection an art known to the Germans alone—the art of striking a chord in the bosom of a reader that shall make him feel a shudder of mediæval superstition, even while the actualities of the nineteenth century are most visibly before his eyes. The French, consummate artists in the production of strange human situations, are generally obliged to seek refuge in physical horror when they would awaken an emotion beyond the sphere of possible social combinations. To them Hoffmann, who could twine a serpent round a modern door-post, and trace supernatural potency in the wrinkles of a modern apple-woman, was a perfect wonder, and he has maintained to this day an ascendancy in Paris. You do not often find his name in German literary works: but a French essayist will refer to him, as though he were one of the accepted *magnates* of European literature, and it is not two years since he was made the hero of a fantastic drama at the Odéon.

Though now at least thirty years have elapsed since the Romantic chiefs were in the plenitude of their power, their school is the last, so far as *belles lettres* are concerned, which has exercised an influence on the literature without. Their acquirements in numerous languages enabled them to give a more practical expression than even Herder himself to that spirit of universality which may be traced to Lessing; for it is worth remarking that, although their political tendency was precisely contrary to that of the founders of German literature, they worked in the same way, in opposing the more recent conventions to which poetry had been subject. While the old "storm and pressure" men, as they were called, blundered about with some rude notions of a Republic in their heads, and the Romantic zealots would set up some ancient Emperor or Pope, both would equally oppose such a hero of modern civilisation as Louis XIV. The return to the state of nature, and the return to the old believing spirit of the middle ages, are not so different as at first sight they appear.

Goethe—who had co-operated with Schiller in building a whole literature for his countrymen, in furnishing them with a regular dramatic *répertoire*, a regular stock of poetry and fiction, and abundance of matter for reflection (these two great men carrying into operation the work on which Lessing and other predecessors had meditated)—Goethe survived for some time the Romantic school, for which he had no great sympathy, for he was essentially an anti romanticist: and the war-songsters, whose ranks he never joined, for he was essentially unmartial: but he did not give, in his latter days, any new popular impulse, though he contributed to the spirit of Universalism. No person, in fact, so completely personifies the German universality as Goethe himself, in his busy and active life; but, at the same time, the great bis "Faust," which has been imitated in a long series of reflective dramatic poems, we cannot say that he has, to a remarkable degree, directly influenced the European mind beyond the confines of Germany; and we would say the same of Schiller. Let us not be misunderstood. We do not mean that these giants of intellect have not influenced the especial students of German literature in France and England, for these adopt as it were a new country —but we mean that they have not exercised that unseen authority over the non-students, which is the only real authority that applies to nations, and which we find represented by that love for the supernatural which often makes its appearance in the world of letters, and which received much nutriment from the Romantic poets and their kindred. Generally, it should be borne in mind that the Classical literature of Germany was based upon eclecticism—that it presupposed the existence of other literatures as a condition of its own; and that when we minutely examine its growth, we have rather to inquire to what influence it was subjected, than what influence it exercised. This will account for the rapidity of the growth to which we first called attention, and also for our doubts as to the public duration.

Shortly before Goethe's death the French revolution of 1830 took place, and the German Republicans, who had gradually increased in number since the bad faith of their princes extinguished the fervour of loyalty that alone and brilliantly during the war, found their literary representatives in a school of poets, novelists, and essayists, celebrated as "Young Germany." Unfortunately, "Young Germany" was even less national than any "Old Germany" that had preceded it. Its tone was the reflex of the tone that of the Parisian *feuilletonists*; and its democracy was the democracy not of the masses, but of the lounger in *salons*. In the art of giving striking descriptions of character, and shooting forth prose epigrams, the writers of this school proved no low models of the *maisires*; and Heine, by his combination of French irreverence with the style and tone of the old German popular ballad, has earned for himself a little separate niche from which he may command admiration, if not always respect.

The last school on record is the so-called "Young Austria," which, differing widely from the light-hearted "Young Germany," represented the rude nationality of the various races which were unwillingly under the rule of the Austrian empire. The language was German, but the sentiment was Magyar or Sclavonic; and, though there is a ferocity in the tone of the poems, which borders on the repulsive, they cannot be denied the merit of a vigour and an earnestness rarely to be found in German literature since the youthful period of Schiller. But the stern events of the year 1848 gave such a strong expression to the feelings represented by "Young Austria," that it seems all literary utterances since then have found no vocal form for their office. However this may be, "Young Germany" and "Young Austria" have been the reverse of conspicuous for the last five years; and, in the department of German *belles lettres*, we are still waiting to see what will come next.

ILLUSTRATED EDUCATIONAL WORKS. 1. PRACTICAL GEOMETRY. 2. MECHANICS AND MECHANISM. Ingram, Cooke, and Co.

In the ILLUSTRATED LONDON NEWS for November 16, 1850, we took occasion to point attention to the improved character of the educational works of the present day, compared with those of the previous generation, selecting our examples from the commencement of the present series of Illustrated Educational Works. These examples included the rudimentary works of spelling, reading, and elocution, wherein "the precept upon precept" is sought to be pleasantly strengthened by illustrations, which the revived art of wood engraving has enabled the publishers of the present day to embellish their works with profusion, which the better understanding of the business of education has taught them to regulate with judgment. These attractions and qualifications are pre-eminently shown in the three volumes before us, which are so many advances or *gradus ad scientiam*. Thus, the "Illustrated Practical Geometry," by R. Scott Burn, M.E., M.S.A., in a series of useful geometrical problems, available in the various departments of practical science, aims at the formation of artistic drawing, the result of which knowledge for which can only be obtained by the aid of practical geometry, or a knowledge of the constituent parts of the forms themselves, assisted by a practical adaptation of the mechanical principles which govern the laws of vision; or, in other words, the structure and combinations of the lines which form all objects, and the laws which govern their transmission to the visual organs. The work opens with a chapter of definitions and constructions, with some fifty illustrations. Then follows a series of problems, requiring only the drawing board square, ruler, compasses, pen, and pencil, and fully explaining the various methods of performing useful geometrical constructions, with some 100 illustrations. Next is shown the application of geometry to architectural drawing, in the varieties of mouldings and arches; trefoil, quatrefoil, and cinquefoil ornaments, balusters, vases and other familiar forms, with eighty engravings. The text and illustrations are alike lucid and direct. The second work named above, "Mechanics and Mechanism," also by Mr. Burn, is essentially popular, and practical in plan; giving results and arrangements only, refraining from an exposition of those strictly theoretical rules and mathematical formularies, which often confuse rather than enlighten the pupil; the study of mechanical arrangements, purely practical, and separated from the purely theoretical, being the principle here adopted. Thus, the chapters on the Centre of Gravity, Simple Machines, Mechanical Powers, Parts of Machines, Construction and Arrangement of Essential Parts of Machines, Movements in Machinery, and Processes and Machines as in the Manufacture of Machinery. The illustrations are upwards of two hundred in number, and are occasionally pictorial and novel: thus, the inclined plane and pulley is shown as employed at the excavations of the Southampton and Sunderland Docks; two different modes by the revolution of one wheel or shaft are shown in the patent cask-cleansing machine, &c. In the last chapter is described the machine shop, with its operations by manual labour and mechanical contrivances, from the simple "bit" to the mighty steam-hammer of Nasmyth, which is so nicely controlled as to bring the huge hammer down with its full power, or so gently as merely to drive in a nail. Both the above works are distinguished by excellent arrangement, extraordinary precision, and novel illustration; and will powerfully aid the business of teaching, as well as render the process of learning more attractive than hitherto; the nearest semblance to a "royal road" attainable.

1. THE FIRST SIX BOOKS OF THE ELEMENTS OF EUCLID. With numerous exercises. 2. FIRST LESSONS IN ARITHMETIC. By HUGO REID. Ingram, Cooke, and Co.

The first of these works presents the foundation of plane geometry, and is a companion volume to Mr. Burn's works on practical geometry; one embracing the theory, the other the application. Simson's text of "Euclid" has been adopted; and on each book are given several exercises. Additional distinctness is given to the reference letters by their being in bold Egyptian type. The "First Lessons in Arithmetic" will at once serve as a scientific course well suited for beginners, and a text-book to the teacher, and is well adapted for a pupil at home, and specially for those whose early education in this important branch of knowledge has been neglected. The leading elementary operations of mental arithmetic are explained, and a great number of examples supplied. The transition from the simple to the more complex rules is carefully managed; and the practical questions are judiciously chosen, and the work is not encumbered with superfluous matter, such as too often disfigured the earlier treatises on arithmetic.

SHORT SHORT-HAND. By LAMING WARREN TEAR. Whittaker and Co.

This, a new formation of the author's previous work, "One Step Further in Stenography," is an ingenious method for lessening considerably the process of reporting, &c., by using paper previously ruled with several perpendicular and horizontal faint lines, which, in their intersections, form numerous positions, so that each character of the alphabet not only stands for itself or arbitrary signification, but expresses some different combination of a sentence, or part of a sentence, according to the position in which it is written. Hence the alphabet may be said to be multiplied by the number of positions. Advantage is also taken of these latter to express, by the symbol of the personal pronouns alone, the entire moods and tenses of the auxiliary verbs, negatively or affirmatively, so frequently occurring in discourses, whereby the reporter is enabled to take down many words of a sentence by a single character. Although, from this multiplicity of significations which each character or abbreviation expresses, greater pains and practice are required in the study of this system, yet, when once mastered, the ease and facility with which a speaker can be followed, and the notes deciphered, amply compensate for the additional time and trouble bestowed on its acquisition. The alphabet used by Mr. Tear is the same as that in Gurney's system, with one or two trifling alterations.

Popular Science.

PHOTOGRAPHY AND THE PHOTOGRAPHIC EXHIBITION.

THE increased interest excited by the first exhibition of photographic pictures has led to the continuance of it for a much longer period than was originally intended, and, we learn, that it is contemplated to have another and more complete display of the progress of the art in May or June. The photographs exhibited at the rooms of the Society of Arts possessed various degrees of excellence, and as illustrations of the different modes of manipulation adopted by the respective exhibitors, they were of great interest, and, in many respects, instructive. It is our desire to put our readers in possession of such information as appears important respecting the methods by which these works were produced. Sir John Herschel having communicated to the Athenæum some particulars of a process adopted by Mr. Stewart, resident at Pau, in the Pyrenees, by which he has succeeded in obtaining some very effective landscapes on paper, the productions of Mr. Stewart, in the Exhibition, have been particularly examined. His process, in all its important features, is as follows:—

MR. STEWART'S PROCESS.—The solutions employed are five parts of iodide of potassium to 100 parts of pure water, and fifteen parts of nitrate of silver to twenty of glacial acetic acid to 100 parts of distilled water. The gallic acid and the solution of hyposulphite of soda in no respect differ from those ordinarily employed. Good paper being selected, it is first iodised in the following manner. In a tray containing the solution of iodide of potassium are plunged, one by one, as many sheets as may be desired thirty, fifty, or more. This is done in two or three minutes. They are then rolled up into a loose bundle, placed in a glass vessel deep enough to hold them, and the solution being poured over them, it is placed under the receiver of an air-pump, and the air exhausted. By this operation the air is drawn from the pores of the paper, and the saline solution penetrates thoroughly. Where an air-pump cannot be obtained, we may employ a cap of India-rubber, having an elastic tube attached, and a common exhausting syringe. After the paper is thus soaked *in vacuo*, it is returned to its dish, and the sheets, picked off separately, hung up to dry. The advantages obtained are the perfect equality of absorption by the paper over every part, and the absence of all films of air, which frequently interfere with the results in the ordinary washing and soaking process, and the quickness with which a considerable quantity of paper may be thoroughly iodised. Mr. Stewart divides his process into a wet and a dry one, the former, of course, being the most rapid. The iodised sheet is *floated* on the silver solution for about ten minutes. A plate of glass, which fits the camera, is cleaned, and upon it is placed a sheet of wet bibulous paper. This being done, a layer of water is floated over it, and this sheet drawn from the bath, gently upon this layer of fluid, the sensitive side upwards. The glass plate then being turned up, the water is allowed to drain off from one of its corners, when all has drained off, and the paper is still wet, it is placed in the camera obscura. Mr. Stewart informs us that even in the warm and dry atmosphere in which he operates, the paper will remain damp and sensitive for a couple of hours.

The preparation of paper for the *dry* process differs from this only in soaking each sheet of the iodised paper in the argentiferous solution for five minutes, and then soaking it in distilled water for about twenty minutes to remove all excess of nitrate of silver, and drying it. The gradation of the different positives consists in the aerial perspective and the grudation of tints preserved, as also in the development of the deep shadows. It does not appear to us that this fine effect at all depends upon the preparation of the paper, but on the prolonged exposure allowed in the camera obscura. "In exposing for landscape," says Mr. Stewart, "throw aside all consideration for the bright lights, and *limit the time entirely to the dark and feebly-lighted parts of the view.*" If this plan was generally adopted, we should find far less of that unnatural contrast between the high lights and the deep shadows which now deform even our best photographs

Mr. Peter Fry, who is also an exhibitor of some views in the Pyrenees, states that another mode of obtaining positives is by the agency of sea water, offering many advantages to the traveller. Papers are prepared with very weak solutions, so that they are covered with a pure iodide of silver, to which the slightest addition of nitrate of silver will give sensibility. Papers might be iodised in England previously to a three months' travel. A small quantity of a very strong solution of nitrate of silv r, and the same of gallic acid are the only exciting agents required. In the morning as many pieces of paper are thought to be necessary for the day are rendered sensitive. A few drops of the strong solution of the silver salt are added to some pure water, and they are washed with this on one surface, and placed in their frames. The pictures are obtained, and they are developed on the traveller's return at night very little trouble. Thus a very small addition to the ordinary luggage is required, and at any place all the operations can be very easily performed. Sir William Newton has adopted the practice of copying the *negatives* on a paper similar to that on which they were obtained. His positive paper is prepared with from seven to ten grains of nitrate of silver to one ounce of distilled water—the iodide of potassium being in equivalent proportions. It is excited by the acido-nitrate solution, and exposed to light for from five seconds to half a minute, and developed by gallic acid. By this the process of copying is exceedingly facilitate i, and in almost any state of weather it can be carried on, and even by good artificial light successfully pursued.

Blanquart Everard and Gustave Le Gray have for some time adopted a process not very dissimilar to that of Sir William Newton in its general manipulation. Their positive pictures are of a very uniform tint, and of a fine black or dark violet colour, which adds much to their beauty. This colour is produced by the following method, according to M. Le Gray. The paper for the positives is prepared with muriate of ammonia and nitrate of silver. When a blue-black is desired in the darkest parts, the whites of the picture are allowed to assume a clear violet tint before it is removed from the sunlight. For a pure black a still more decided violet colour should be obtained; and for an olive black the whites should even pass into a sepia tone. The pictures are first washed in ordinary water to remove all the free nitrate of silver or to convert it into a chloride. It is then placed in a bath, prepared in the following manner:—Chloride of gold, 1 grain; distilled water, 1000 grains; hydrochloric acid, 25 grains. This solution clears all the white parts, and the sepia or olive tints pass to black. When the blacks are perfectly clear, and all the details of the negative develope, the picture is well, and quickly washed in several waters, to remove all traces of acid. This is very important, since any adhering acid occasions the decomposition of the hyposulphite of soda, and by precipitating sulphur destroys the picture. A little ammonia, added to the water, effectually neutralises the acid. It is then placed in the bath of hyposulphate of soda, composed of one part of that salt to six of water, and completed in the usual manner. When properly prepared, these photographs have all the air of fine mezzotinto engravings.

THE ILLUSTRATED LONDON NEWS

No. 606.—VOL. XXII.] SATURDAY, FEBRUARY 5, 1853. [TWO NUMBERS, 1s.

CELEBRATION OF THE EMPEROR'S MARRIAGE.

OUR journal this week fully describes and illustrates the ceremonies by which the marriage announced last week between "Napoleon III., Emperor of the French by the grace of God and the national will, and her Excellency Mademoiselle Eugénie de Montijo, Countess de Têba," was on Saturday and Sunday completed. The civil contract, conferring on him all the rights of a husband, and on her all the rights of a wife and an Empress, was solemnly entered into on Saturday evening, at the Tuileries, in presence of all the great Officers of State, Cardinals, Marshals, and Admirals of France, and of all the Foreign Ambassadors; the religious ceremony, to consecrate and bless the civil contract, was performed at the Cathedral of Notre Dame on Sunday, in the presence of almost innumerable dignitaries and deputations from constituted bodies, and as large a concourse of people as could be conveniently collected in the great temple. All that civil wisdom has invented to give solemnity to an act, and all that religion has planned to sanction and hallow it, were united to give importance and sanctity to the marriage of the Emperor.

This was no ordinary proceeding, and it is less as a marriage than as a great political event that it deserves notice. It is an epoch in the life of the Emperor, and will probably mark an epoch in the destiny of France and of Europe. It separates, as was clearly announced by the Emperor in his speech to the Senate, published last week, the present policy of France from its ancient policy, even from the policy of Napoleon I.; and it separates the present Emperor from the narrow circle in which the Continental Sovereigns have enclosed themselves. It cuts off all hopes of family alliances between them and him, and throws him back, more completely than before, on the French people, for support. If that be displeasing to the members of the fashionable circles of Paris, who, perhaps, led Louis Napoleon astray to a hankering after the sanction of the Sovereigns of Europe, it will not be so to the multitude. It unites him more closely with them, and holds out to them, by the prospect of a succession to the throne, a chance that his power, if it be wisely used, may become firmly established, and France be saved from future revolutions. It seems of a nature to preserve and consolidate the profound peace in the midst of which it is celebrated, and its first result, a happy augury for its future effects, is the release—pardoning, it is called—of more than 3000 of those persons whom the Emperor thought it necessary for the success of his policy to incarcerate or to banish in December, 1851. So different from men's anticipations have been, in latter times, the results of measures of high policy, that confidence in any political predictions indicates only forgetfulness of the most recent history. Still hope is in us so predominant—the act is at once so solemn, and so usual a preliminary to settling quietly in life—the engagement virtually taken in the face of the whole world is in its nature so conservative, and so totally the reverse of destructive, that we hail it as the dawn of brighter prospects for France and Europe.

In our estimate of its probable consequences, we cannot forget that, under female influence—to which the marriage avowedly submits Imperial power in France—our own country has been wisely governed, and has increased rapidly in prosperity and morality. Of the antecedents of the lady so suddenly elevated to a throne, we know too little to form a correct opinion of the direction her influence is likely to take; but we know, as the rule, that females are much more compassionate and kindly than men—more impressionable, more affected by the sight of happiness or misery, more under the influence of sympathy and public opinion, and more likely, therefore, to promote gentleness, forbearance, and peace. France has long been conspicuous for deference to females. Her women played a very important, if not always a creditable, part in her first revolutions; and if she may now shudder at the ferocity of her *poissardes*, she may glory in the gentleness and devotedness of a Marie Antoinette; in the energy, if not always wise, of a Madame Roland; and in the heroism, if misdirected, of a Charlotte Corday. The mildness of Josephine tempered and guided to kindness the energy of Bonaparte; and the Queen of Louis Philippe threw a spiritual and religious grace over his mean and sordid rule. Both general principles, therefore, and the peculiarities of the French, strengthen our hope that political benefits for the world will result from the marriage.

Whatever may be the case hereafter, public policy has too generally been distinct from morality; and rules for private life have rarely been thought sufficient for the conduct of States. The acts of Louis Napoleon for gaining and securing power, or, as he probably believed, for giving a strong and necessary Government to France, capable of protecting the property of individuals and of defending the integrity of the nation, must be judged, not by the strict rules of private morality, but by the usual and only test of public policy—Success. His present position is a decided proof that he is a sagacious and skilful man. M. de la Guéronnière says—"He is capable of everything great, and incapable of every thing not grounded on good sense. Audacity with him is the result of deep calculation, nothing more. He is a man of strong sense, because he acts on reflection. Greatness is mingled in his nature with all the force of sound good sense. This duplicate character may be traced not only in all the actions of Louis Napoleon, but also in his writings. In every sentence that falls from his pen may be recognised a mind under the guidance of good sense." These observations are confirmed by his acts, and we may anticipate, therefore, that he will employ as much sagacity and patience to preserve power as he used to attain it. On this principle, we may conclude, if the preservation of peace, the extension of liberty, and the promotion of prosperity be the means of securing his throne, as we cannot doubt they are, that he will now as resolutely adopt them as he adopted very different and very objectionable means to restore the Empire.

He is no longer a young man. He has arrived at that time of life when female influence is, for its moral and soothing effects, peculiarly desired. His passion for empire is gratified—his belief in his fate, which has hitherto governed him in so marvellous a manner, is fully realised—he has acted reasonably and in oppo-

"SEA ELEPHANTS" (ELEPHANT SEALS), FROM THE ISLE OF DESOLATION.—(SEE NEXT PAGE.)

sition to the example of Napoleon in choo-ing his Empress; and if her influence should be, as we hope it will be, beneficent, we may anticipate a still further contrast to his pretecessor. The Empress cannot share the feelings and the prejudices of the Old Guard; and by her influence she may help both countries, for their mutual interest, to bury old animosities in oblivion. From such considerations, let us hope fervently that the marriage is the inauguration of a new political era in France.

Though the future be dark—though the national finances be in a state that is not wholesome—though dangers without number must encompass the path of any man who rules over a people that have made so many Revolutions as the French, and who do not understand the liberty for which they so ardently hunger and thirst—yet much is possible to genius, to courage, to honesty, and to administrative skill. The greatest impediment to good government is a sense of instability. The marriage of Louis Napoleon tends to remove it. Let him wisely take advantage of the great movement he has made. Let him put order into the national finances, let him gradually unloose his grasp over the free expression of opinion, let him decentralise by degrees the enormous Governmental agency of the capital; let him encourage trade and commerce, art, science, and literature; and let him form a strict alliance with Great Britain, so that the two nations may always trade, and never fight, with each other; and it is possible, and greatly to be desired, that the dynasty of the Bonapartes may produce, in the fulness of time, as many Sovereigns as the dynasty of Capet and Bourbon.

"SEA ELEPHANTS." OR ELEPHANT SEALS.

The pair of animals portrayed upon the preceding page were brought by the *Australian* steam-ship, and are believed to be the first specimens which have been received in this country. These were captured on the Island of Desolation, south of the Cape of Good Hope; when caught, they were between four and five weeks old; the are now about thirteen weeks. They weigh nearly three hundred weight each; but the Elephant Seal, when full grown, sometimes weighs five tons, and upwards; hence its name, as well as from the short proboscis with which the full-grown male is provided: "compared with any ordinary seal three or four feet long," says Mr. Lizars, "this enormous animal appears like an elephant when compared to a sheep." When a flock repose on the shore, some of them keep watch, and, if alarmed, down they go to the sea. Their gait is very singular; their motion being a kind of crawling, during which their body trembles, like a great lump of jelly. At the end of the third year they are stated to attain a length of from eighteen to twenty-five feet, and upwards, when they increase principally in fatness

Weddell, in his "Voyage towards the South Pole," says:—"It is curious to remark that the Sea Elephant, when lying on the shore, and threatened with death, will often make no effort to escape into the water, but lie still and shed tears, only raising its head to look at the assailant; and though very timid, will wait with composure the stroke of the lance which takes its life. In close contact, every human effort would be of little avail for the destruction of this animal, unwieldy as it is, were it to rush forward and exert the power of its jaws; for this is so enormous, that in the agonies of death, stones are ground to powder in its teeth."

The Elephant Seals are, however, a harmless race, never attacking man unless in defence of themselves and their young. One of Anson's sailors lost his life by exasperating a bull in whose presence he skinned a dead young one. But their disposition is affectionate and gentle; and a young one petted by an English seaman, became so attached to his master from kind treatment for a few months, that it would come to his call, allow him to mount upon its back, and put his hands into its mouth. The specimens just brought by the *Australian*, during the passage, recognised such persons as were kind to them; they did not eat throughout the voyage.

West India, Pacific, and Mexican Mails.—The Royal mail steam-ship *La Plata*, Capt. C. H. Weller, has arrived at Southampton, with the usual West Indian, Mexican, and Pacific mails, in charge of Lieut. O'Reilly, R.N., Admiralty agent. *La Plata* also brings mails from the west coast of South America, received at Panama by the *Rose*, which vessel had on freight 75,500 dols. for transmission to the Bank of England. *La Plata* brings forty-five passengers, and on freight and specie to the total value of 1,000,000 dols., of which 792,000 dols is in silver, and 208,000 dols. in gold. She has experienced fine weather on the voyage from St. Thomas in fourteen and-a-half days. No cases of yellow fever have occurred. The ship was instantly admitted to pratique. At St. Thomas' the yellow fever had almost ceased. The following items among the company's officers are reported:—Mr. Henry Edey, purser; Mr. Henry Channell, purser of the *Thames*: Mr. Pringle, late purser of the *Parana*; Messrs Woolley and Allen, engineers. Messrs. Irvine and Baker, engineers of the *Bee*; Mr. Hammond was left at Carthagena, but had passed the worst stage. Out of thirteen of the *Parana*'s crew left in hospital, six had died.

The Royal Mail Company's steam-ship *Parana*, Captain F. Woolley, with the West India mails, in charge of Lieut. Barrow, left Southampton on Wednesday. She had a full cargo, and specie to the amount of £50,000. £20,000 of which was in five-pound pieces, and a number of eighty passengers. The General Screw Steam-shipping Company's steam-ship *Queen of the South*, having undergone a thorough refit, made a trial trip on Tuesday, at the measured mile at Stokes Bay, which proved highly satisfactory.

Second Trip of the Caloric Ship "Ericsson."—The distance from Governor's Island to her turning-point and back was about eighteen miles, which was accomplished in two hours and a half. The greatest number of revolutions made on the trip was 101, and the greatest speed attained was at the rate of nine miles an hour. The trip was not made to show her speed, but to convince the public that the parties interested in her have succeeded in their promise of proving the capability of a vessel being propelled by caloric.—*New York Herald*

Herrings from Norway.—A novel and extensive importation of herrings of an extraordinary large size has just [illegible] were consigned to a fishmonger in London. Some of them measure two inches from the tail to the tail, many feet in length, are made in the broadest part, and many of them are from eight to nine inches in girth, and weigh from ten to fourteen ounces. They are principally softened, and are cured in a similar manner to the Yarmouth bloaters, but with rather more salt.

Remuneration to Bankers' Clerks.—A Correspondent, who signs himself "A Banker's Clerk," entreats us to call attention to the trifling rate of remuneration given in the majority of banking houses to the class of *employés*. He says—"The banker's clerk is miserably underpaid. After perhaps working like a slave for twenty years, and devoting his ability and energy to the interests of one employer, he may find himself in the receipt of a salary of £150 a year. If he should be fortunate enough to obtain £80 or £90 additional, he is indebted for this aid to the generosity of the public, in the shape of Christmas perquisites. If the poor clerk, on the strength of having a family to provide for, presumes to ask for an increase of salary, he is told there are plenty of young men who will do the work at less money." Our correspondent declares that this parsimonious payment of their clerks is unworthy of the monied princes of Lombard-street, who spend their thousands per annum, and who make a great figure by their donations to charities, "but who, themselves basking in the sunshine of prosperity, thus meanly take advantage of the necessities of others." And he declares that the public ought not to be surprised when they hear of cases of embezzlement by those who are expected to appear as gentlemen, but who are placed incessantly in the way of temptation, with such slender means of keeping up the position and appearance which they are expected to maintain. We publish our correspondent's complaint, and assure him of our sympathy, without being able altogether to endorse the severity of his strictures. It may be that all the banking establishments of the metropolis could afford out of their profits to raise their clerks' salaries to the level of the exceptional [illegible] numerative payment cited by our correspondent. But when employers [illegible] higher rate of remuneration than the market value of the services they receive in effect bestow a gift upon the employed. Banking and other commercial establishments cannot well be expected to do, and which, if they did, would exercise an unfavourable tendency in diminishing the self-reliance of the class receiving the gratuitous bounty. We would rather look forward with hopeful anticipation to a period, not, perhaps, far distant, when the wants of our colonies will fully absorb the more clever and energetic portion of our young men, and when bankers' clerks and other sedentary wielders of the pen will command higher salaries, the natural and legitimate operation of a limitation of the supply of this kind of labour. Our correspondent tells us that "after ten years of slavery and unrequited toil he is *en route* for the diggings." We admire his enterprise, and wish him every success. Should fortune attend him and his friends in Australia, they will probably hear in less than five years that their example and their prosperity have contributed to bring about a vast change in the remuneration of those whom they have left behind.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

Paris, Feb 3

The French newspapers give a most brilliant account of the ceremonies of Saturday and Sunday; and, according to them, the splendour of the preparations was equalled by the enthusiasm of the people. We, however, as true chroniclers, influenced by neither fear nor favour, beg leave to give a faithful and impartial statement on this subject, from our own impressions and from those of persons who made it a point to study the tone of public feeling on the occasion.

Great magnificence was displayed in all the arrangements. The decorations of Notre Dame and all the ceremony were marked with the utmost splendour that the pomp of Roman Catholic worship could devise. The cortège was extremely imposing, and the equipages struck us as inferior to our own Royal State carriages in but one respect—the horses; for, though some of them were very handsome, they were the ordinary bays employed in the every-day service of the Imperial household, and wanted the classic dignity suited to the style of the carriages and the occasion; the colour also contrasted ill with the crimson and gold of the harness. Gold and silver, and jewels, and costly stuffs were not wanting to make up the sum total of the affair; and the grace, graciousness, and beauty of the bride could not fail to waken some few sparks of chivalrous admiration and enthusiasm, as, pale from deep emotion, she passed, bowing, with a mixture of timidity and dignity, to the assembled multitudes; yet all failed signally to waken any demonstration of heartfelt welcome or applause.

A trifling circumstance is observed, which, to the superstitious, was certainly an event of evil augury. The entrance of the temporary porch erected to shelter the personages of the procession while entering the carriages was, by some miscalculation, not made sufficiently high for the purpose, and as that which was to pass the Imperial couple drove up, it caught the crown fixed on the top, and broke it.

At the civil contract the emotion of the bride was, we were informed by a person who was close by her, so great as to require the exercise of the utmost self-control. Her dress and demeanour were marked by extreme simplicity; not a single jewel appearing on the pink silk gown, which, with a small clematis wreath, formed her toilet on the last day of her position as a private individual. After the ceremony, Madame de Montijo returned to her former residence at the Place Vendôme, where, we believe, it is her intention to remain, declining to resign her privacy and independence in consequence of the change in her daughter's situation

Every night of this week has been marked by *fêtes* at the different Ministries, all more or less magnificent, and all in *grande toilette*, and many in Court dress. One of the "signs of the times" is visible in this particular by the display in all the hosiers' windows, of every possible contrivance of art to supply the deficiencies of nature in the development of "calves;" certainly the present generation seems to be woefully poor in this respect, if we are to judge by all the excitement and all the ingenuity called forth to meet the exigencies of the occasion. The ball of the Senate is to be the crown of all these official splendours, from the magnificence it is to display; and, more than all, from its being the first appearance of the Empress.

As we predicted, the success of "l'Oncle Tom" at the Gaîté becomes every day more decided. At the Théâtre Lyrique appears a ballet which is really a *tour de force*, the whole being composed, and the principal parts of both music and dancing executed by St. Léon. "Le Lutin de la Vallée," which is the name of this singular production, is no less remarkable for its merit than for the circumstances of its composition. The legend may be related in half a dozen lines—which is, to our thinking, in itself an advantage: it being difficult to unwind the mazes of a complicated plot by *pirouettes, entrechats, pas de zephyr*. A certain *Count Ulric*, whose filial devotion is, as our readers will agree, of a most remarkable extent, has lost a miniature of his mother, and such is his desire to recover it, that he declares his readiness to bestow his hand on the finder. *Katti*, a dumb orphan, brought up from charity by *Dame Brygitta*, is the fortunate discoverer of the lost treasure, whereupon the worthy dame, wishing to win her daughter to obtain the promised recompense, steals the portrait from *Katti* during a most ill-timed fit of somnolence. This mischief our friend the *Lutin*, a spirit of the most virtuous and praiseworthy description, repairs, by restoring the picture by the same means to the wife of the owner. So much for the legend: far more may be said for the dancing of St. Léon and—if, for that of Madame Guy Stephan, and for one of the most extraordinary performances by the former, on the violin, which, commencing by a simple and popular air, introduces therein all the sounds of the farmyard with a fidelity really inconceivable while with such means. There is a moonlight dance, in which the *Lutin*, bounding amid the spray of a cascade, traces, with a wand, the most graceful figures, and produces a number of magic circles round his *protégée*, which has an effect of poetry and mystery, and of vapoury lightness, beyond all description. Nor is Madame Guy Stephan behind in sustaining her *rôle*. To extreme elasticity and remarkable finish and correctness, she unites the purity and [illegible] requisite for such a part; and, in order to display the versatility of her talent, she performed a madrilena, which called down thunders of applause.

The first volume of a book (which is to be concluded in three) entitled "La Jeunesse de Madame de Longueville," is exciting considerable interest in the literary world. It is the work of M. Victor Cousin, an historian of established reputation, which cannot fail to be increased by the present production. M. Cousin, however, writes rather too much on *amant*, captivated by the personal charms of the object of his admiration, and hardly enough on *historien*, judging impartially of facts. The question on which he expends volumes of energy and argument, is that of the result of the small-pox on the beauty of his departed *inamorata*. He vehemently denies that the malady in any way affected her charms, and triumphantly cites various passages from contemporary correspondents in support of his opinion—none of which, we regret to say, seem to us in any way conclusive of the fact. The book is, however, one of remarkable merit and interest, take it all in all, and those who have read the first volume will gladly hail the appearance of the succeeding ones.

A report, the truth of which we have little reason to doubt, announces an approaching change of Ministry, in which M. Morny is to take a conspicuous place.

The Emperor and Empress returned to Paris on Wednesday from Saint Cloud. They were received with respect by the crowd, but without the slightest display of enthusiasm. Without attaching too much importance to this absence of enthusiasm, the fact is deserving of notice On his arrival the Emperor went to the Tuileries, to preside at the Council of Ministers. It is now believed that the Ministerial modifications consequent upon the opposition expressed by the Cabinet to the Emperor's marriage, will involve the resignation of all the present Ministers except two—M. Fould, the Minister of State; and M. Ducos, Minister of Marine. M. de Morny takes the Interior; M. Walewski, Foreign Affairs; General Canrobert, or General Randon, War. M. Bineau succeeds the Count d'Argout as Governor of the Bank of France; and the son of the Count d'Argout is to be appointed a Receiver-General. M. Magne, who at first began spoken of as likely to be the new Minister of Finance, M. Carlier, former Prefect of Police, will probably take office with M. de Morny.

The Bourse has been much agitated since the Emperor's marriage. On Tuesday, the Three per Cents fell to 73f. 10c. on *liquidation*, but rose to 75f 80c., on an announcement of the change of Ministers. On Wednesday, the Bourse was more firm than for some days past, and the price of public securities rose slightly

Addresses of felicitation on the Emperor's marriage continue to be received from the principal towns of France. The *Moniteur* of Wednesday contains addresses from Amiens, Clermont, Bar-le-Duc, Dijon, Nantes, Strasburg, Metz, Montbrison, Bordeaux, Melun, St. Etienne, Arras, and Nanterre.

Nothing has yet appeared in any of the Ministerial journals to confirm the rumour of an intention to grant an indemnity to the Orleans family. A declaration has been made in a public *salon* by one of the persons in the confidence of the family, that neither the ex-Queen nor her children would accept anything from the hands of the Emperor in the way of favour

The Baron Brenier is going to Constantinople to fulfil an extraordinary mission during the *congé* of the Marquis de Lavalette. No doubt need be entertained that the mission has reference to the war in Montenegro, and that the Baron Brenier will be instructed carefully to watch the intrigues of Russian and Austrian agents at Constantinople. It is thought that the French envoy will be directed to counsel the Sultan to respect the independence of Montenegro.

The Emperor has ordered the *pomes* of diamonds offered by the Ville de Paris to be bought on his own account, and the price (500,000 f.) charged on the civil list. The bouquet presented by the Emperor to the Empress on her marriage, and which contained a portrait of his Majesty, painted by M. Paul de Pommayrac, cost 30,000 f. A magnificent present of lace has been forwarded to the Empress from the manufacturers of Alençon. The Emperor and Empress went on Tuesday to visit the manufactory of Sèvres. His Majesty left 1000f. for the widow of a recently deceased artist on the establishment.

A great improvement in certain branches of trade connected with the fashionable world of Paris is observable. The etiquette introduced for official balls, by which gentlemen are only admitted in embroidered coats, has compelled the ladies to be more expensive than heretofore in their toilette; and, consequently, an enormous consumption is being made of sumptuous and expensive dresses. Some shopkeepers who enjoy the exclusive privilege of supplying the fashionable world cannot supply the orders they receive from all quarters for diamond ornaments and jewellery, buttons and embroidery.

M. Sobrier, who recently received his pardon from the Emperor, has just quitted the citadel of Doullens, where he had been confined.

The approaching carnival in Paris has called forth some very stringent regulations from the Prefect of Police. No person will this year be allowed to carry any insignia tending to ridicule any character exercising public functions, or to wear any ecclesiastical costume, or any other religious dress legalised by the state; and no masks of any kind whatsoever will be allowed in the streets between the hours of six at night and ten in the morning.

A letter, purporting to proceed from General Changarnier, is going the round of certain Legitimist circles in Paris. In this letter the General expresses a decided opinion that war is inevitable, in consequence of the armaments going forward throughout Europe. He adds, that the friends of the Bourbons ought to lose no time in concerting measures for the restoration of Henry V. But that, in his opinion, the French people are not suited to a Constitutional Government, and that they must be governed by an absolute Monarch.

A pamphlet has made its appearance in Paris within the last few days, equal, in violence of tone, to any of the English nation, to any of the numerous *brochures* that filled the booksellers' shops during the momentous period of 1840. It is the work of an ardent Legitimist, a provincial advocate, named Frenerick Bailot. It is entitled "Lettres Françaises," and consists of a series of letters addressed "To Napoleon III., Emperor of the French." "Yes!" this fiery partisan of the elder branch cries—

I repeat it, we are proud of our affection for the House of Bourbon, because it is detested by the English. In no clause, we must, in truth, confess, is the evil disappointment to the English more palpable. It is not India or any other foreign point we must invade; people would not permit us: we could not do it. It is to the very heart of Great Britain we must advance—it is the English spirit we must destroy in its own home. Then indeed the decline of England will be a truth. To say and to do any other thing is to talk nonsense. The time for declarations is past; the word must no longer be other than action, and action the most grave and the most decisive.

I do not hesitate to say, and all France will say it with me, the treaties of 1815 have been in Europe and the peace which followed them thrice shameful. The treaties of 1815 have been imposed by force, by hatred, by jealousy, by brutality, by vengeance! The treaties of 1815 were not accepted by the elder Bourbons, who submitted to them as the victim submits to the will of the brigand who despoils him: They form a page of ruin: there is not sufficient blood in the veins of 10,000,000 of men to wash out that disgrace. The question to be settled is not, even Napoleonism, but nationality and completely French; and it is, therefore, that I maintain it against all comers. I would say to Henry V. himself, if we filled the throne of his fathers, and if he submitted to those treaties (the stain of which, thank God! his race has as much as possible washed out), "You are not worthy to remain a Frenchmen."

If I have told the truth, must not the bronze announce in our [illegible] communes that a crusade without truce and without pity be opened against England? Must not the Legitimist and the Orleanist, the Frenchman is found to hear it and ought not the cry of "*aux armes*" be repeated until millions of men, with the torch and the sword in hand, shall have liberated under its own ruins that people (the English) condemned by the universe!

When your victorious flag waves over the tower of London, you will summon the Powers to a general congress. The Christian alliance shall be formed which may indeed be called holy. France will resume her limits, and all the maritime post one to which she is entitled. Her colonies will be restored to her, and the Rhine will no longer be under her sway. Poland will have her limits with her independence. Russia will be supreme in the East. Constantinople will once more be Christian. Austria will have her part in Europe; and the Germanic confederation be independent. Prussia will absorb the associated States. Italy will be free from a foreign yoke. Spain and Portugal will form one; and the Methuen treaty, like so many others, will be pulverised *sub eo pilon*. The seas will be free for all the same access, the same rights, the same tariffs, the same advantages. There will be no preponderance. No superiority of one will or be the result of its greater intelligence and activity; it will be man and not, as Proudhon means, but according to the sentiment of his interests related to his dignity; and the fraternity of peoples will be henceforth a truth.

The postscript to the work is the reason of the entire pamphlet It is as follows:—

Prince, I re-open this letter to recal the most ardent of my thoughts. Distrust the English within quite as much, and perhaps more, than the English without

We have not in France anything which resembles England—let us incessantly repeat it. The English are Protestants, the French are Catholic; they are aristocrats, we are partisans of equality—they are the fathers of privilege and of monopoly—in all, we are the initiators and propagators of communal rights. The English are for all restrictions, the French are for all liberties—in England the land forms a privileged domain, in France it may belong to all. England is the country of castes, in France they are forever abolished; the English only dream of trouble and anarchy to entice themselves with the spoils of the vanquished—the French only dream of the civilisation, the emancipation, and the rapprochement of nations. The English only communicate freedom; the French carry life throughout all the countries where they penetrate. We are not, and we cannot be English in any manner. To be English is this day in France to be more than ever a traitor.

Louis Philippe was English to the very nails—that is evident. His Government, his Ministers, were English that is also understood. All those who were enriched under Louis Philippe, all to them we owe the right of search, the Pritchard indemnity, the continual degradation, and the policy of humiliation—*la politique de chercher bas*. In an illustrious writer, if one of the leaders of modern politics, has said, "The Revolution is Orleanism," it is because Orleanism is French, because Orleanism was sold to the foreigner—sold to the [illegible] because it costs nothing to Frenchmen: and we have had time to see it during eighteen years), provided it traffics basely with the interests, the honour, and the dignity of France. Anathema, then, on the English *within!* Death to the English *without!* All from real France, and by France! France will never have any other cry. From the north to the south, from the east to the west, the sentiment is the same. All Frenchmen are united in this thought of honour and dignity. And it is with truth that the poet has said—

Et la Vendée aiguisera ses glaive
Sur la pierre de Waterloo.

ITALY.

Dr. Mazzinghi, who was recently condemned to three years' imprisonment, and fine, for having distributed, in conjunction with Captain Pakenham, an authorised translation of St. Paul's Epistle to the Colossians, and of the Decalogue, has received a free pardon from the King. The case was speedily taken up by the Liberal party in the Parliament of Turin, and the Minister of Justice, Count Rossi, and Cabinet, immediately recognised the necessity of rescuing Dr. Mazzinghi from a sentence which, whether it be justified or not by the civil code of the kingdom, is entirely inconsistent with the principles of the constitution.

The Piedmontese newspapers have affirmed a bill for the suppression of the Slave trade. The new Civil Marriage Bill, preparing by the Ministry, is said to be a transcript of the French law, which was in force in Piedmont from 1800 to 1814. It will be submitted to the chambers in next session. Nice is first affected by the annexation of the Sardinian King and Cabinet, as compared with that of the Grand Duke of Tuscany in the similar case of the Madiai, must strike every observer. The Piedmontese are exhibiting a noble example to Italy, in emancipating themselves from the yoke of the ultra-montane priestly party, and in combatting the short-sighted and mischievous policy of Absolutism.

A Secret Consistory of Cardinals has been held in Rome, at which it was determined, by a small majority, to cede the enclay of Benevento to the King of Naples for 3,000,000 piastres. It is added, that the opinion of the Cardinals was taken as to the propriety of the Pope consenting to proceed to Paris to crown the Emperor Napoleon. Of 21 Cardinals present, 18 are said to have given a decided negative to the proposition. The Council of State has at last prepared a rather confused decree for the withdrawal from circulation of the paper-

money. It has not as yet been approved of by the Pope, and does not meet with any great favour.

SPAIN.

The marriage of the Emperor of the French with a noble and beautiful Spaniard has been the subject of every conversation at Madrid, and appears to give universal satisfaction. All the journals contain articles in praise of the Empress, and proclaim her elevation to the throne of France as the triumph of virtue and beauty. The Spanish Government have announced to their Ambassador at Paris that they saw with pleasure the matrimonial choice made by the Emperor of the French. Queen Isabella intends to present the French Empress with an Imperial crown, set in diamonds and precious stones. The Duchess of Alba, on her side, is to send her sister a team of eight splendid Andalusian horses. Twenty or thirty Senators were to be created to neutralise the influence of the Opposition in that body.

The Minister of Finance has opened a negotiation with the capitalists to obtain an advance of 80,000,000 reals mortgaged on the property of the Church. The Government is to pay interest at the rate of 7½ per cent. The house of Oshea, acting in the name of Messrs. Baring Brothers, of London, has undertaken to advance the greatest part of the sum. The Government has also produced resources to enable it to provide for the public wants until the close of March.

GERMANY.

The First Chamber of Prussia are engaged in discussing the construction of the Future First Chamber, or House of Peers. The Government proposes that "the future House of Peers shall be composed of members nominated to this dignity by the king, either for life or with remainder to their heirs male." The great object of the landed aristocracy in connection with this question is to obtain for certain noble families a right of absolute election, or, at least, of presentation to the King for selection, with the hopes of retaining, for the benefit of the squirearchy, a remnant of the old representation by means of the states of the realm.

A new Prussian railway loan of £5,000,000 sterling is announced.

The sale of M. Gervinus's "History of the 19th Century" has been prohibited in the Electorate of Hesse. It is said that the learned advocate for placing better institutions in the place of worn-out monarchies, and better men on the thrones of "no longer respected" Monarchs, is occupied in revising his last historical production.

The Austrian *Lloyd* states that the arrangement of the difference between Austria and the United States has been confirmed by despatches from Washington brought by a special courier. The best disposition is said to prevail in the States towards the Austrian Government.

As we stated last week, the word *brigner*, employed by the French Emperor in his address on his marriage, has given much dissatisfaction in the higher circles at Vienna. In our Supplement will be found a quotation from Mr. O'Meara's work on St. Helena, which will enable our readers to judge whether Louis Napoleon was not justified in using the phrase. But the Austrians assert that nothing but stern necessity induced the late Emperor Francis to consent to a union between an Austrian Archduchess and the Usurper of Wagram. The pride of the Emperor was deeply wounded when it was necessary to give his consent; and he passed the greater part of the night walking to and fro in his room in great agitation, now and then exclaiming to his attendants, "Is it then my duty to make such a sacrifice for my people?

The war department at Vienna is preparing for further military action. On the 24th ult., two covered batteries were sent from Vienna to the frontier, and two days after the regiment Constantine was ordered to Cattaro, with all its equipments and field batteries.

TURKEY AND MONTENEGRO.

The accounts from the seat of war come to us through doubtful sources, but, so far as they go, they are favourable to the Montenegrins. A Trieste paper says that Osman Pasha of Scutari, (who entered Montenegro by Zabljak), retired into the open country, and took up a position at the foot of a hill. The Montenegrins, taking advantage of a stormy night, stole into the Turkish camp, where disorder and confusion soon reigned. The Turks at last took to their heels. A number of trophies fell into the hands of the victors. They carried off 17 flags, 80 horse-loads of powder, 40 horses, many weapons, silver mounted yataghans, &c., and 317 Turks' heads. It is the custom of both parties to cut off the heads of their prisoners. In Turmanska 2,000 Montenegrins have repulsed a force of 5,000 Turks. Reis Pasha is said to have been driven from his position near Ostrega by Prince Daniel (the Vladika). We prepared our readers to expect that the war between the Turks and Montenegrins would be marked by the most horrible barbarities and cruelties on both sides. We now hear that in Podgoritza, where Omer Pasha is said to command in person, a Greek priest has been beheaded; in the Nahia Taremaitska nine Christian children have been killed.

Count Leiningen has been despatched from Austria on a special mission to Constantinople to induce the Porte to recognise the state of semi-independence in which the Montenegrins have lived for so many years, to stop the effusion of blood, and to protest against the persecution of the *respaia* on the part of the Turks. Reis Pasha is said to have threatened even from his position near Ostrega by Prince Daniel (the Vladika). We prepared our readers to expect that the war between the Turks and Montenegrins would be marked by the most horrible barbarities and cruelties on both sides. We now hear that in Podgoritza, where Omer Pasha is said to command in person, a Greek priest has been beheaded; in the Nahia Taremaitska nine Christian children have been killed.

Reis Pasha is said to have threatened even from his position near Ostrega by Prince Daniel (the Vladika).

THE CHATEAU OF CHANTILLY.

CHANTILLY.

The princely estate of Chantilly, which in 1830 descended to the Duke d'Aumale, fourth son of Louis Philippe, has recently been sold in execution of the decree of January 22, by which the property of the Orleans family became confiscated for state purposes by the Government of Louis Napoleon. The sale was effected on the 30th of December last; and the purchasers were Mr. E. Majoribanks and Sir E. Antrobus, bankers, in London. The purchase, which, in addition to Chantilly, properly so called, comprises the forest of Hez, near Clermont, amounts to 11,072,812 f. 55 c; out of which, 3,072,812 f. 55 c. were paid in cash, and the remaining eight millions are to be paid by instalments at different periods. The Duke d'Aumale leaves in the hands of the purchasers a sufficient sum to produce an annual revenue of 170,000 f. for the benefit of the old servants of the house of Condé. The Prince has kept for himself the altar and the ornaments of the chapel of the château, the statue of the Duke of Bourbon, and the monument of the Great Condé. It has been also agreed that M. Soccard should retain space enough in the stables for the accommodation of the Arabian horse, Baba Ali, which served as the Duke's charger in his campaigns in Africa, and particularly at the capture of the Smala, and which is too old to bear the removal to England. The total extent of the demesne of Chantilly is 10,297 hectares, 3 ares, 70 centiares (about 25,500 acres), of which 200 hectares are occupied by the gardens and parks of Chantilly, Sylvie, and Aviliy; 50 hectares by the pelouse, 1000 by the park of Apremont, 1000 in arable land, and 8000 in forests. The forest of Hez and its dependencies contain 17,153 hectares, 48 ares.

Chantilly existed as a village, with its château, as early as the year 900. It belonged to the families of Orgemont and Montmorency; but owes its prosperity chiefly to the illustrious family of Condé, to which it belonged from the time of Louis XIII. The old château was taken down, and a new one erected, by the Duke of Bourbon, in 1718. This stately edifice was destroyed in the Revolution, when the Menagerie and Museum, which had been collected by Buffon, were sent to Paris. Some of the buildings were spared, as the smaller château, the palace of Enghien, the kennels and stables, which latter are built in palatial style. Here were lodged

CHATEAU DE LA REINE BLANCHE, IN THE FOREST OF CHANTILLY

180 horses; and on the first floor is a suit of 80 Royal apartments. On the Restoration, in 1814, the remaining buildings were restored to the house of Condé, and many improvements were made by the Duke of Bourbon, who made it his principal hunting seat. On his melancholy death, in 1830, Chantilly descended to the Duke d'Aumale, fourth son of Louis Philippe. The *petit* château, built by the Montmorencys is situated in the midst of a lake, is handsome, and contains a chapel, a Chinese cabinet, and a suite of vast and superb apartments. The grounds are laid out in the English and French styles in gardens, lawns, parterres, islands, grottoes, and charming walks. Of the noble terrace, the lower illustration presents a specimen The smaller Engraving, a pretty little Gothic building in the midst of the forest of Chantilly, on the dam of the margin of the Etangs de Comelle. It has four towers at the angles, and is said to have been built by Queen Blanche of Castile, mother of St. Louis. Its sculptured ornaments of snakes, frogs, lizards, and snails, intermixed with the foliage of water-plants, are appropriate to the aquatic site. The style is Gothic of the fifteenth century: it was carefully restored in 1838.

The grounds of the stables are extensive, the south front opens to a lawn of about two miles in extent; on the north are shrubberies; on the west pleasure-grounds and a grove of elms; and on the east the *orangerie* and other buildings

Such is Chantilly, in which residence Charles IX., Henri IV. Louis XIV., Louis XV., Joseph II., Christian VII., the Grand Duke of Russia (subs. Paul I.), Gustavus III., and the Duke of Brunswick had enjoyed the hospitality of the Montmorencys and Princes of Condé

It was to Chantilly that the Great Condé retired when the gout had incapacitated him for the fatigues of warfare; and where Molière, Racine, Boileau, Santeuil, La Rochefoucauld, Bourdaloue, Abbé de Polignac, La Bruyère came to amuse his leisure hours. Here, in the state rooms and gallery, are the battles of the Great Condé, painted by Van der Meulen. Lord Mahon, in his "Life of Condé," has touchingly described its vast natural forest, its limpid streams, its green Arbele poplars, which have taken root in the ruins of the grand château, and now quite overshadow them; its green turf drives, and hedges of hawthorn.

The forest of Chantilly, which joins the park, contains 7600 acres in the midst of it is the *Table Ronde*, from which twelve roads branch in different directions, and this is the ordinary rendezvous of sporting parties. Several racing studs are kept up at Chantilly, on account of the facilities for training.

TERRACE IN THE GARDENS AT CHANTILLY.

FUNCHAL, MADEIRA, FROM THE EAST CLIFF.—FROM AN ORIGINAL SKETCH.

IMPENDING FAMINE IN MADEIRA.

THE failure of the vine crops, and the famine with which the inhabitants of the island of Madeira are threatened, have awakened the sympathy of English merchants and others commercially connected with the island, who have organised a subscription for the relief of the prevailing distress. The faithful administration of the funds collected has been entrusted to a committee, appointed by the Governor of the island, three out of the five members of which are our own countrymen. The committee will, so far as the funds enable them, direct their efforts to the accomplishment of three objects. They will, in the first place, seek to relieve those who, ere long, will be in a state of starvation; secondly, they are endeavouring to use the present opportunity for permanently improving the wretched condition of the peasantry; and, lastly, they are trying to encourage emigration to our own West India colonies, where labour is much required. For the accomplishment of these ends the benevolent contributions of the numerous class in this country who have resorted to Madeira for the sake of their health, are sought; nor can it be denied that an island, which is the last refuge of those suffering from the disease most prevalent and most fatal to England, has peculiar claims upon our sympathy and assistance. Handsome contributions in aid of the relief fund have already been made, not only from this country, but also from Hamburg and Russia.

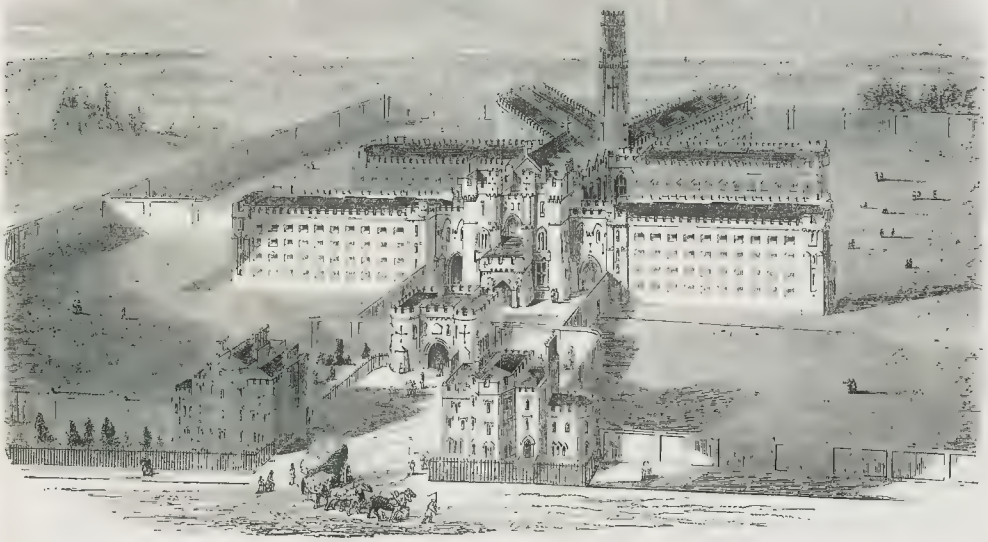
Funchal (of which we give an Engraving), the capital and the only town of the island, contains upwards of 2000 houses and more than 20,000 inhabitants. It has only an open roadstead, with a rocky and very uneven anchorage. Funchal is frequently visited by ships bound to South America, the Cape of Good Hope, or the East Indies, as a place of refreshment, and from it all the produce of the island is exported. The town is defended by four forts, and has eight churches and several convents. In the midst of the town is an open square planted with exotic trees, among which are Dracæna Draco, Jasminum azoricum, and Datura arborea. The exports are considerable, amounting to £500,000, of which about £400,000 in value come to England. The principal article of export is wine, so that disease in the vines such as has just occurred, strikes at the means of subsistence of all classes of the people.

The population of the island is estimated at 80,000. The climate is, as every one knows, so mild and healthy, that many persons from England, who are suffering from, or in danger of consumption, pass the winter months in Madeira. The inhabitants, who are descendants of the Portuguese, with a considerable admixture of African blood, are industrious and enterprising. The island is one mass of basaltic rock, about the size of Huntingdonshire. In the months of December and January the thermometer rarely sinks below sixty degrees, the mean temperature of that season being sixty-three degrees. It is no wonder, then, that the island should be so favourite a resort of our countrymen and countrywomen, whose sufferings are diminished, or whose lives are prolonged by such mild and balmy breezes, and by so equable a temperature as is enjoyed by this favoured island of the Atlantic.

THE NEW CITY PRISON, HOLLOWAY.

THIS new prison, which was opened in October last, was, on Saturday week, visited by the Prisons Committee of the Common Council, together with several members of the Gaol Committee of the Court of Aldermen; and who, accompanied by Mr. Wright, the Governor *pro tem.*, inspected the several apartments. Both committees were highly gratified with the order and discipline, and more especially with the various employments in which the prisoners of both sexes are usefully engaged. The following is from the first Report made by Mr. Wright:—

Since the opening of the prison on the 6th of October, 1852, 371 male



THE NEW CITY PRISON, AT HOLLOWAY.

and 63 female prisoners have been received, and 132 male and 50 female prisoners discharged; giving a daily average of above 200: and up to the present time, with a few exceptions among the females, their general conduct has been very satisfactory. With respect to employment—The carpenters have fitted up several work rooms, made and completed the furniture of thirty cells, beside a variety of useful work in other departments of the prison; 7 tailors have made up 68 suits of new clothing, and repaired upwards of 100 suits of worn clothing; 1 bookbinder has repaired a great many old books for the chapel and library, besides much other useful work for the several offices; 2 smiths' forges have been engaged in sharpening and repairing 110 hammocks, making 52 fire-irons, and 12 pillows; 3 prisoners are employed in the kitchen to assist the cook; in the engineer's department, attending to fires in the boiler-room, assisting in the smith's shop and forge, and to the general ventilation; 3 painters, on various parts of the prison; 3 shoemakers have made up 42 pairs of new shoes, and repaired 80 pairs of old shoes. The majority of the prisoners, with the exception of the sick and those excused by age and infirmity, have been constantly kept at the pump, and the general cleaning throughout the prison. The average pump-labour has been seven hours per day. The juveniles are usually employed in the requisite cleaning during the morning; after the chapel, at school and exercise; lessons and roller exercise in the afternoon. In the female department the following articles have been made up, namely:—shirts, 115; caps, 24; petticoats, 33; aprons, 109; sheets, 55; towels, 220. Thus, with the making and repairing of the whole of the prison clothing, the requisite cleaning of the prison, the attendance on the sick, has fully occupied the time of these prisoners. Every prisoner has daily exercise in the grounds whenever the weather will admit. The average number of prisoners in the infirmary has been about nine: these have been generally old chronic diseases and weakly women. One death occurred shortly after the opening of the prison, in the case of Thomas Taylor, who died of disease of heart.

It may be interesting to explain the plan of the building within which these results have been obtained.

The new prison is situated in the north side of the Camden road, Holloway, and erected on land belonging to the Corporation of London, to the extent of 10½ acres within the boundary wall. It is in the pentagonal form of architecture, and contains 406 separate cells. The main front is about 240 feet in length, and is faced with Kentish rag and Bath stone. The prison is constructed on the radiating principle, having four wings diverging from one centre, with two other wings in front of the former; one of these wings is for juvenile offenders, with school rooms attached; the other for females, with work-rooms and laundry: the other four radiating wings constitute the male adult prison. These have large work-rooms attached, and an apparatus for lifting water. The wings are twelve cells in length, and about 100 feet, each of three stories high. The corridors are 15 feet wide, and are open up to the arched ceiling, with galleries leading to the upper cells. The cells are 13 feet by 7 feet, fitted up with water-closets, warm and cold water laid on, and each cell is thus are warmed by means of hot-water pipes laid under the corridor floor, the air passing over them and through the flues, provided in the thickness of the wall and entering the cell over the door. The whole of the cells, galleries, staircases, and roofs of the several wings are built fire-proof, and the roofs are covered with asphalte. Each cell and the whole of the building is thoroughly warmed and ventilated: the ventilation being effected by means of the large tower, which forms a conspicuous object in the built ing, and is 146 feet in height. In the centre of the building is the chapel, beneath which are the guard room, the various office, magistrates' rooms, visiting rooms, &c.

The arrangements for taking the prisoners from the various cells to the chapel have been well considered. The females and juveniles enter by separate doors near the altar, while the male prisoners enter by four different passages at the opposite end. There are also numerous reception rooms, bath rooms. The supply of water is from a well 39 feet deep; and is to contain 14,000 gallons are placed over the front towers, at a great elevation, whence the water is conveyed to the cells and other parts. The building is considerably set back from the public road; and in the front of it are two handsome dwelling houses in the Elizabethan style, as residences for the governor and chaplain, on either side of the avenue leading up to the prison, with gardens attached to them. In the centre of the avenue, in the same style as the remainder of the building, is the principal entrance, or porter's lodge.

The Commissioners of Sewers have constructed a new sewer, for the purpose of securing good drainage for the prison. The building has been erected from the design and under the able superintendence of Mr. Bunning, the City architect. Mr. Jay was the contractor employed. The expense has been under £100,600. The discipline of the prison is on the separate system, but the middle course—for the most part carrying the various system in separate cells; and a sufficient number of exceptions for classified association.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have been made since our last:—The Rev. T. H. Birkett, to Gravesend (St. James's) Rectory, Kent.—The Rev. —— Derry; the Rev. J. Smith, to Alton, Middlesex; the Rev. I. Wilson, to Thorley, Herts, the Rev. W. W. James, M.A., to Bilton, Warwickshire.—*Incumbency*: The Rev. T. Mills, LL.B., to Bulford, Wilts.

The Bishop of London has appointed the following gentlemen to be Honorary Canons of St. Paul's Cathedral for the present month:—The Rev. Thomas Robinson, D.D. (archdeacon of Middlesex), the Rev. W. Sinclair, M.A., and the Rev. H. Melvill, B.D.—Sunday, Feb. 20, the Rev. H. Melvill, B.D.; Sunday, Feb. 27, the Rev. J. Smith, B.D.

LAMBETH.—The Archbishop of Canterbury has been appointed for the purpose of celebrating the re-opening of the parochial church of St. Mary, Lambeth, and also of raising funds to liquidate the balance (£2250) due for the expenses of the restoration. On Sunday morning the first sermon was preached by the Lord Bishop of Sydney, when was opened a new stained glass window, a memorial to the late Archbishop Howley. In the afternoon, the Rev. C. B. Dalton (the rector), and in the evening, the Rev. R. W. Jelf, respectively preached. The day's collection amounted to about £50. The Memorial Window is a tribute of respect to the memory of the departed Primate, by whom and his friends about £500, has been raised by subscription among the parishioners of the late Archbishop and the clergy of the province of Canterbury. It has been executed by M. and J. Osmond, of Beulah-road, Norwood, a beautiful specimen of glass staining. The entire window (the eastern) is filled, and divided into fifteen principal compartments representing as many parts connected with the life of Christ. Beneath appears the following inscription:—

I honour De
et in memoriâ HUGH HOWLEY
XXV annos Archiepiscopi
Cantuarensis
Mortalis Occasum, A.D. MDCCCLII

Sermons also in aid of the church funds were preached on Monday and Thursday by the Bishop of London, the Bishop of Oxford, and the Bishop of Moray and Ross.

TESTIMONIALS.—The congregation of St. James's, Hatcham, Surrey, recently presented to the Rev. Augustus K. B. Granville, M.A., a handsomely-carved bird and foliage silver dinner fork, with a silver spoon, as a slight testimonial of their esteem and regard for his conduct for the good of the district. The manufacturers of the plate have been entrusted by Mr. Granville to execute the heads of the fork and bowl of the spoon, from models furnished by himself. A Gothic-shaped and beautiful service. The venerable gentleman, who is upwards of four score years of age, officiated at the Episcopal Jews' Chapel for a period of nearly thirty years.

THE SWINDLERS OF AUSTRALIA.—Some surprise was, on Wednesday week, felt in the cheque department of the Bank of England at the presentment for payment of an old patched-up cancelled cheque, which had been issued by a customer in the year 1834, and purported to be for £6.6s.6d. The piece of dirty paper had been passed to the cashier, and presented an appearance likely to excite the suspicion of that functionary. It was ordered at the counter to be scrutinized, and the cheque had been to the Old Jewry, accompanied by the clerk, who had served for several years, and there had sold the cheque, as he could not recognise them as the party labouring in the gold field; that they had accordingly gone to work, and in seven weeks acquired a certain quantity of gold dust; and that at Melbourne the two applicants, being anxious to get home to their families, sold their share of the valuable article to one of the gold dealers, named Stevenson, for the cheque in question, amounting to £317 7s. 9d., which they were desirous would be paid to them at the Bank of England the moment they should arrive in the country. In answer to questions put to them by one of the officers in attendance at the Bank, the seamen said that they had sold the cheque on the day before to Mr. Stevenson, who had paid them in dollars with a readiness which prevented them from suspecting his intention to rob them; and that they had left their register tickets, and could produce, by admission of the captain that there had been no desertion or irregularity of any kind upon their part. Upon being asked whether they intended to return to Australia, they said they had already paid for their passage back, and they declared that they would follow the advice of the Bank, and look out for Mr. Stevenson, and compel him to make restitution.

THE LOST FOUND.—Much rejoicing took place on the Tyne during the past week on the return of some more of the crews of vessels blown from on Christmas-day.

CALENDAR FOR THE WEEK.

SUNDAY, February 6.—Quinquagesima, or Shrove Sunday.
MONDAY, 7.—Mary, Queen of Scots, beheaded, 1587.
TUESDAY, 8.—Shrove Tuesday. Half Quarter day.
WEDNESDAY, 9.—Ash Wednesday. Lent begins.
THURSDAY, 10.—Sir Walter Raleigh beheaded, 1618.
FRIDAY, 11.—Alexander Pope born, 1723. Sir Robert Peel died, 1761.
SATURDAY, 12.—Lady Jane Grey and her husband beheaded, 1554.

THE WELLINGTON VOLUME of the ILLUSTRATED LONDON NEWS is now ready. Price One Guinea. From July 3rd to December 25th, 1852. Containing all the SPLENDID ILLUSTRATIONS of the CAREER and FUNERAL of the late DUKE of WELLINGTON.

COVERS for BINDING the VOLUMES, 2s. 6d. each.
Office, 198 Strand.

TO CORRESPONDENTS.

NAUTICUS.—The ball at Greenwich is dropped every day precisely at one o'clock.

JOHN THOMAS, Glasgow.—A gold coin of James I. of Scotland, called a St Andrew; the reverse legend is, "IACOBVS · DEI · GRA · SCO · VIROR · REX."

NORTH SHIELDS.—1. A Roman Consular denarius of the Titia family. 2. A copper coin of Probus, A.D. 276 to 282. 3. A modern Roman jetton in brass. All valueless as coins.

LIVERPOOL.—The Birmingham organ is considered the most powerful; but the York instrument has special qualities to recommend it.

CIVIS suggests, that as blue was the favourite colour of the Duke of Wellington, "it would be rather a striking way to show our respect for him, to be clothed in that colour in the forthcoming season. This attired (he adds), Englishmen will become living epistles of their respect for the Great Duke in their rambles on the Continent, not to speak of the effect produced on the minds of foreigners visiting this country." An entire population clad in blue would, doubtless, be an extraordinary spectacle! Has Civis been operating in indigo? or has he received an excessive consignment of blue goods, which he is exercising his ingenuity to "work off?"

EXETER.—A gentleman who saw the Duke's funeral tells our correspondent that there was no such body of men in the procession as figured in the programme under the title of "one soldier from every regiment in her Majesty's service." He is wrong. Their place in the procession was just after the Chelsea pensioners, and they were admitted into St. Paul's as the representatives of the entire army, to view the solemn ceremony of interment.

With every wish to give AN OLD SUBSCRIBER news of the sailing of emigrant ships, we fear that this class of news would encroach too much upon the space at our disposal. He must remember that the size of our sheet is limited by the absurd news-agent-stamp law.

GAMMA. The best and most recent manual on photography is the "Manual of Photography," by Professor Robert Hunt.

A CONSTANT READER.—The Royal Pedigree of the Duke of Wellington, which we published some weeks since, is strictly authentic and critically accurate. Our correspondent is in error, and confounds two persons. Lady Eleanor de Bohun, wife of Thomas of Woodstock, was elder daughter and co-heir of Humphrey de Bohun, last Earl of Hereford who was nephew of the Lady Eleanor de Bohun, who married James Butler, Earl of Ormonde.

A CONSTANT SUBSCRIBER. Arms of Fenn.—"Arg. in a fesse az. three escallops of the first, within a bordure engr. of the second. *Crest*: A demi-lion issuant gu. charged as the arms."

AN HERALDIC AMATEUR. The *Bendlet* is a diminutive of the *Bend*, of which it is half the size in breadth. The *Bend* is formed by two lines drawn diagonally from the dexter chief to the sinister base, and comprises the third part of the shield. It represents a shoulder-belt, or scarf.

LONDONIENSIS. The son of parents who were illegitimate, must, to entitle himself to arms, procure a grant from the Heralds' College, unless his father had already obtained one.

AN INQUIRER, Edinburgh.—It is an invariable rule for a married man to impale the arms of his wife; or, in case she is an heiress, to bear them on an escutcheon of pretence. Unless the lady is an heiress, the matrimonial arms do not descend to the children of the Quintin Dicksons, Dicksons are "Or a chev. gu. a chief vair. *Crest*: Out of a ducal coronet gu. a pea rise ppr. on the top of a fusil colm. between two horns, or." There is a pedigree of the St. Quintins in Burke's Extinct Baronetage.

W. W. wishes to know the address of the party who makes inquiry about the EARL OF MAR.

C. The *post-mortem* inquisitions, commencing with the third year of the reign of Henry III., and terminating 20 Charles I., are preserved in the Tower, the Chapter-house, and the Rolls Chapel. The Registrar's books in the Registrar-General's Office.

D. A. Oswestry. The assumption of the Papal coronet would be altogether incorrect, and quite inconsistent with the law of Heraldry.

INVESTIGATOR.—The great Lord Nelson was 12th in direct descent from King EDWARD I.; Wellington, 16th from the same Monarch. The Duke's Royal pedigree we gave some weeks since. Nelson thus derived his Dukedom of Bronte. Earl of Norfolk, eldest son of King Edward I. by his second Queen, Margaret of France, was father of a daughter and heiress, Margaret Plantagenet, Duchess of Norfolk, who married John, Lord Segrave, and had a daughter, Lady Elizabeth Segrave, wife of John, 4th Lord Mowbray, and grandmother of the Lady Margaret Mowbray, who wedded Sir Robert Howard. The son of this illustrious alliance was John Howard, first Duke of Norfolk, whose granddaughter, Lady Elizabeth Howard, married Thomas Boleyne, Earl of Wiltshire, K.G., and had two daughters, Queen Anne Boleyn and Mary Boleyn, who was wife of William Carey, Esq., and grandmother of John Cary, Lord Hunsdon, whose daughter, the Hon. Blanche Cary, married Sir Thomas Wodehouse, Bart., of Kimberley. Their third daughter, Anne Wodehouse, became the wife of Robert Suckling, Esq., of Wootton; and their grandson, Robert Suckling, married Dorothy, only child of the Rev. Edmund Nelson, M.A., was mother of the immortal seaman, Horatio Lord Nelson, who was thus seventeenth in a direct descent from king Edward I.

EXPLANATOR.—The question as to whether the Duke of Wellington was ever wounded could have been easily answered, by a reference to "Napier's Peninsular War." It is there stated that the Duke was hit at Salamanca without being wounded, and at Orthes received a wound in the thick of the thigh.

W. G.—ANNUITY, to be legally recoverable, must be that of a person who has attained majority.

G. P. R. P.—Lord Frederick, &c. a fret arg. on a chief or, three crescents sa. *Crest*: A demi-talbot, ppr. supporting the device of the shield.

C. H. H.—The portraits of Sir [illegible], library, as in Manchester Exhibition.

WITH THE PRESENT NUMBER,
THE IMPERIAL MARRIAGE SUPPLEMENT:
Containing SIX WHOLE-PAGE ENGRAVINGS of the MARRIAGE of the EMPEROR of the FRENCH. PORTRAITS of the EMPEROR and EMPRESS, and other Illustrations. With a copious Account of the Ceremonies.

Price of the Two Sheets, ONE SHILLING.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, FEBRUARY 7, 1852.

THE Parliament met on Thursday, after the adjournment. The new Ministry will have to frame their measures under auspicious circumstances. Commerce is daily extending, the revenue is increasing, the people are prosperous and contented, and peace prevails. The national defences and the finances of the country are the two objects which will, probably, most immediately engage the attention of the Legislature. For the continuance or the abolition of the Income-tax it must provide; and with that subject, there is no doubt, the minds of the Chancellor of the Exchequer and his assistants at the Treasury are occupied. That the tax will be renewed there is no doubt; but we can hardly believe it will be renewed without modifications. What these modifications are likely to be we cannot conjecture, from the imperfect acquaintance we have of the opinions of the Chancellor of the Exchequer; but the information he is avowedly seeking, and the great abilities of the right honourable gentleman lead us to expect a comprehensive and equitable measure. The opportunities which he may have of reducing taxation will depend on the extent of the new armaments to be prepared for the national defence, and on the other increased expenses of the Government. Something more will probably be done for education, and something more for the public health, and for various administrative improvements. But supposing the Income-tax to be continued, and to yield, however modified, a sum about equal to its present amount, all these sources of increased expenditure will not equal the surplus revenue; and the public will expect the reduction or the removal of some of the most obnoxious of the old taxes. Of those which should first be modified, or repealed, we shall not now say a word, having frequently expressed our opinion on this subject; but we must notice that the time is extremely favourable for the Ministers to bring our financial system into something like order. The people, being prosperous, make no urgent claims on them; and, only requiring them to be just and economical, leave them at liberty, calmly, and with all the wisdom they possess, to adapt their measures to the circumstances of the times. Not only is there now a surplus revenue, but the rapid increase of the national wealth assures them that the revenue will continue to increase, and will enable them to carry out the system of Free-trade, and deal boldly with several of the least productive and most onerous of the taxes on industry. They will be sure, too, with common discretion, to command the support of a very considerable majority in Parliament. Assured of this support—strong in new resources and parliamentary ability—neither tempted by popular clamour nor driven by any danger from abroad from the course which they think the best—they will commence their career under auspices as favourable as any Ministry within the century.

THE quarterly return of the Registrar-General states, that the "number of emigrants who sailed during the last year from the ports of the United Kingdom, at which there are emigration agents, amounted to 350,647; or certainly not less," he adds, "taking the year through, and other ports into account, than 1000 a day."

This is calculated to excite astonishment and, in some persons, alarm; but it is well known that the total number of emigrants includes thirty-one thousand Germans, who preferred coming hither and proceeding from Liverpool to the United States to going thither direct from Hamburgh, Bremen, and the ports of Holland. The total does not, therefore, inform us of the exact number of natives who emigrate. If that were, as for ought we know it may be, fully equal to the total, there is another part of the Registrar-General's return calculated to dispel all alarm at the large amount. He informs us that in the quarter of 1852 there were 52,066 births registered, which was 2911 more than in the corresponding quarter of 1851—itself a prolific period. At the same time he informs us that the number of marriages in the summer quarter of 1852, of which only the returns are yet complete, was 1136 more than in the corresponding quarters of the three years 1850-52, in each of which it was large in comparison to the number of marriages in previous quarters. From such a fact, combined with the facts that employment is abundant and increasing, and that provisions are plentiful, and not likely, with Free-trade, to rise much in price, whatever may be our seasons, we may infer, in future quarters a still greater number of births than in the quarter just expired. Nothing, according to the Registrar-General, indicates more clearly than the number of marriages in different years, the condition of the people, and the view they take of their prospects in life. The great number of marriages in 1852—quite in accordance with what is well known of their condition—is an unerring testimony to their conviction that they are prosperous, and hope to continue so. We may reasonably expect, therefore, that the national increase of population in the present year will be greater than in the last year. But the Registrar-General, after comparing the number of births with the number of deaths, comes to the conclusion that "at present it is probable, taking all circumstances into account, that the emigration from England is not equal to the natural increase of population." At once, therefore, all the gloomy views of human which some persons have expressed, and the attractions of the gold-fields and of new countries should depopulate old England, is both for the present and for the future at an end. The national increase is now more than equal to the drain, and there is every prospect of its becoming greater. It is consolatory to know that with the great emigration of 1852 there has been great prosperity; and equally consolatory to be justified in inferring that the continued emigration in 1853 will be accompanied by a like prosperity. At present there is every probability that such will be the case.

THE COURT.

WINDSOR CASTLE.—The hospitalities of the Court have been enjoyed during the past week by a very numerous and distinguished circle of guests. The Duke and Duchess de Nemours, with the youthful princes of their family, arrived at the Castle on Saturday last, and remained on a visit to her Majesty until Tuesday.

The Duke and Duchess of Leinster, the Earl of Carlisle, Viscount and Viscountess Canning, the Lord in Waiting (the Earl of Malmesbury), and the Hon. Mrs. Harris have been among her Majesty's guests during the week.

On Monday the Queen, accompanied by the Duchess de Nemours, and the Household, and the Prince Consort, with the Duke de Nemours, enjoyed the sport of shooting in the Royal preserves.

On Tuesday the Prince Consort was accompanied on his shooting excursion by the Duchess de Nemours, Prince Edward of Saxe Weimar, Mr. Hugh Seymour, Mr. Challoner, and Captain Tottenham. The Duke and Duchess de Nemours left the Castle for Claremont in the afternoon.

Her Royal Highness the Duchess of Kent, and Her Serene Highness the Princess Adelaide of Hohenlohe, have dined with her Majesty and the Prince Consort almost daily during the week.

The Duchess of Norfolk has succeeded the Viscountess Canning as Lady in Waiting to the Queen. Earl Somers has arrived as Lord in Waiting, in place of Earl Elphinstone; and the Captain the Hon. M. West has relieved Colonel the Hon. R. Lood as Groom in Waiting to her Majesty. Lord Alfred Paget has succeeded Lord Charles Fitzroy, and Lieutenant-Colonel the Hon. A. Gordon Lieutenant-Colonel F. Seymour, as Equerries in Waiting to the Queen and the Prince.

The Queen will hold a Privy Council at Windsor Castle on Monday, and the Court will return to town on the following day.

The Duke of Rutland's baronial residence, Belvoir Castle, has been the scene of high festivity during the week just closed, in honour of the visit of the Duke and Duchess of Cambridge and the Princess Mary. Extensive representations have formed part of the entertainments, in which Lord John Manners, Mr. Baillie Cochrane, and Mr. Augustus Stafford, particularly distinguished themselves.

His Excellency the Lord-Lieutenant of Ireland and the Countess of St. Germans left town on Wednesday, for Dublin. The noble Earl and her Ladyship passed Wednesday night at Hibbert's Royal Hotel, at Holyhead, and crossed to Kingston on Thursday morning, in a special steamer.

The Marquis of Ailesbury is still an invalid at his Lordship's residence, Tottenham-park, Wilts.

Lord Wodehouse has arrived in town, with Lady Wodehouse and his youthful family, from Kimberley-park, Norfolk.

Lord Brougham leaves his château in the south of France, early in the ensuing week, for Paris, *en route* to London, to attend his Parliamentary duties.

We understand that Mr. Augustus Lane Fox, of the Grenadier Guards, son of Lady Caroline and the late Mr. W. L. Fox, is about to form a matrimonial alliance with the Hon. Alice Catherine, daughter of Lord Stanley, of Alderley, and sister of the Countess of Airlie.

LATEST INTELLIGENCE.

FRIDAY EVENING.

WINDSOR CASTLE.—The Lord Chancellor and Lady Cranworth, the Earl of Aberdeen, Earl and Countess of Ellesmere, Lord and Lady Ashburton, Right Hon. Sidney and Mrs. Herbert, and Sir William and Lady Molesworth, had the honour of invitation from her Majesty for Friday, to the Castle.

DUBLIN.—On Thursday the Lord-Lieutenant of Ireland, the Earl of St. Germans, made his public entry at three o'clock. The day was fine, and his Excellency rode on horseback to the Castle. His reception was extremely cordial. The Lord Mayor and Corporation preceded the procession. The Countess and the Ladies Eliot were in a close carriage, and were most warmly greeted.

PLYMOUTH. Major-General Sir Harry G. W. Smith, G.C.B., has this day (Thursday) taken the command of the Western Districts, vice Sir John Rolt, K.C.B., who retires from ill health.

LIEUT.-GEN. BROTHERTON, MR. COBDEN, AND THE PEACE CHALLENGE.—At the late Peace Conference at Manchester, Mr. Cobden offered to take a bet of 1s. per week (to be given to the Manchester Infirmary) to £1,000, against the event of an invasion of England. Hereupon Lieut.-General Brotherton writes to Mr Cobden a letter, concluding thus:—"Being one of those who differ from you totally in opinion upon this subject, I accept your proposal, and am prepared to perform my part of the engagement when I receive your reply." Mr. Cobden, in answer, states, that his challenge was offered to a gentleman individually, not publicly; but that he has "very great satisfaction and pride in transferring to a General in her Majesty's service the insurance against the risk of an invasion which I had intended for the relief of the terrors of a respectable conductor of an influential provincial newspaper." One trifling alteration in the terms is suggested; "I will, upon the condition that you subscribe a shilling a week to the Manchester Infirmary, enter into a legal engagement to pay you the above sum of money (£10,000) when French invasion is *attempted*." Mr. Cobden then gives the name of his solicitor for a bond, &c., and instructs the treasurer of the Infirmary to receive 5*s*. per annum during the General's life "or until the French attempt an invasion of these islands." And here, for the present, ends this singular voyage and its singular correspondence.

SOUTHAMPTON.—The Peninsular and Oriental steam-ship *Madrid*, arrived here on Thursday, having left Gibraltar on the 25th ult. H. M. S. *Sanspareil* and *Inflexible* were in the Tagus. The *Madrid* brings 100 tons of specie, and 104 passengers.

HOLMFIRTH MECHANICS' INSTITUTE.—The annual meeting of this institute was held on Wednesday; and, after the statement of the secretary as to the injury sustained by the bursting of Bilberry reservoir last year, and the gradual recovery from that accident, Mr. Cobden addressed the meeting at great length, dwelling principally on the absurdity of anticipating war or invasion, and also promising to use his best endeavours to obtain cheaply for them the printed Parliamentary papers.

COIN-TRADE FORGERIES.—Robert Ferdinand Price, aged 31, whose extensive forgeries have recently created so much notoriety, was tried to-day at the Central Criminal Court, and found guilty. Sentence, Transportation for life.

FOREIGN.

FRANCE.—The Emperor has at length taken an important step in the direction of Free-trade. A committee of inquiry has been appointed, by Imperial decree, to take into consideration the agricultural and commercial relations of the country, with the view of modifying the Customs-duties, and relieving the fiscal burdens upon land and trade. M. Billault, the President of the Committee, is looked upon as disposed to free trade, as are three other members selected to be on the committee, namely, the Duc de Mouchy, M. de Morny, and Count d'Argout; and, as the commercial classes are favourable to restriction, the Bourse has been much agitated by the speculations which the decree has excited. The name of the new body is the Commission Supérieure d'Agriculture, and Manufacture.

Among the wedding presents made by the Emperor to the Empress was the sum of 250,000 f., inclosed in a casket of gold, and presented by the Empress to the Municipality of Paris, for the benefit of poor girls about to be married. The Empress was particularly anxious that the whole amount should be given to charitable objects, which was readily acceded to by the Emperor.

The several Maternal Societies receiving grants from the State are henceforth to be placed under the immediate patronage of the Empress Eugenie.

The Salle states that the coronation of the Emperor and Empress will probably take place earlier than May next, the period originally fixed.

The *Moniteur* contains addresses of felicitation to the Emperor on his marriage, from Angers, Lyons, and several other places.

The Four-and-a-Half per Cents left off on Thursday at 102f. 60c., and the Three per Cents, at 78f. 65c.—the former 40c. and the latter 1f lower than on Wednesday.

PORTUGAL.—The Peninsular steamer *Madrid* has brought letters from Lisbon of the 29th. The police had discovered an infernal machine, *à la Fieschi*, in an untenanted house in Rua Morte, in Lisbon. It is alleged that, besides the machine, which was composed of about a dozen gun or pistol barrels, there were found several *bonnets rouges*, or republican red caps, and some placards with the words "Death to the tyrant" in large letters. The effect which this pretended discovery has had upon the Lisbon public has been to excite ridicule and laughter, and the opinion gained ground that it was nothing but a clumsy *ruse* of the Government to obtain public sympathy. The suspect for the arbitrary exercise of power of the interest of the public debt continued to engage a good deal of attention; but it was generally believed that the present English Ministry would not seriously interfere in the matter.

AMERICA. By the steam-ship *Pacific*, we have advices from New York to the 22nd ult. General Cass, on the 18th ult., in a long speech, in the Senate, advocated the acquisition of Cuba, by purchase or by action. Mr. Mason, Chairman of Committee, followed, and advocated exactly opposite views. The discussion was then adjourned over to the 25th.

Mexico we learn that the revolution was extending to all the provinces, and all had revolted but three. It was believed that Santa Anna would come to power. General Arista's message had been published, but it contains nothing but glowing despondences for Mexico.

From Havannah we learn that a large cargo of 800 slaves had been landed at Cadanes, whilst the British ships *Vestal* and *Gypsey* were taking a cargo of slaves from Havannah. Governor Canedo, and Pareja, Queen Christina's agent, are largely interested in the activity of the Slave trade. Canedo, though appealed to by the British Consul, refused to give explanation or redress in Boylen's case.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, FEBRUARY 3

Month and Day.	Corrected Readings of Barometer at 9 A.M.	Thermometer. Highest in the Day.	Thermometer. Lowest in the Day.	Mean Temperature Average.	Departure from Mean Temperature.	Degree of Humidity	Direction of Wind.	Rain in Inches.

The mean reading of the barometer for the week at the level of feet above the sea was inches. The temperature during the five days has been low, on the first both nearly 9 degrees below the average, and fell to the depth of 0·2 inch (two-tenths of an inch). Dense fog was prevalent on Feb. 1 and

JAMES GLAISHER.

HEALTH OF LONDON.—During the week, 1713 children were born; of these 902 were boys, and 810 were girls. The average number of births in the corresponding week of eight years was 1440. The number of deaths was 1011, showing a small increase upon the number of the three previous weeks. The estimated number of deaths was 1172; therefore, the number returned is less than the estimated amount by 161. There has been an increase of deaths from 174 to 198 in diseases of the lungs and respiratory organs; but the number is still below the estimated amount by 48. Epidemic diseases are somewhat below their averages generally. There were 12 deaths from measles, the average is 27·45 from scarlatina, 29; 40 from hooping-cough, its average is 7. There were 4 deaths only from small pox, its average is 26. The deaths attributed to violence were 18; to fractures, 1; to hanging, 3; to burns and scalds, 5; and to poison, 1.

HOOD MEMORIAL COMMITTEE.—On Thursday evening a meeting was held at Exeter-hall for the benefit of the fund projected for the purpose of raising a monument to the memory of Mr Thomas Hood, in Kensal-green, when an exposition of his genius and writings was given by Mr. William Parsons. Dr. Mackay was announced to preside on the occasion, but was prevented by sudden and serious illness from attending; the chair, accordingly, was taken by Mr. Frances Bennoch, who expressed his regret that Dr. Mackay, himself a living poet of the people, was not present to advocate the claim of the great poet of the poor, and to manifest his regard for the genius of the departed bard. Mr. Parsons then commenced his task, stating that his object was to show Mr. Hood in a higher character than that of a humorist; who, however well he might have assumed the character of Momus, had filled others, better. His punctilious integrity continually kept him out of their proper places, and as improperly estimated by popular opinion. When Hood first courted the influence of this fickle goddess, she was in the zenith of her power. Hood unfortunately fell in with her immediate humour, but deserves, nevertheless, to be ranked amongst the truest of our poets. At first the public countenance, his Muse always gladly responded to better spirit, and aimed frequently at the empyrean of thought and feeling. But, alas, he was arrested by death at the moment when his genius was rising to purer themes. Under the ephemeral tide of humour, a profound spirit was concealed. A poet is a man who reads nature more closely and clearly than other men, until her forms become to him a passion. Such was Hood. His poems ranged to three periods—"Eugene Aram's Dream" and "The Plea of the Midsummer Fairies" occupying the first, the second, including his occasional and more popular vagaries; and the third, his social poems, intended for the reform of manners. Mr. Parsons then proceeded to read passages from his poems suggested by recollections of his early life; and added, that, in 1822, Mr. Hood became sub-editor of the *London Magazine*, and formed the acquaintance of such men as Charles Lamb, Wordsworth, and Coleridge. From them his inspirations in the "Plea of the Midsummer Fairies" were stimulated. This poem sparkles throughout with a pleasant quaintness. Mr. Parsons justly complained that, by the bad advice of injudicious friends, Mr. Hood diverted his attention from arguments like this to those of the Comic Annuals—writing not what he fondly hoped would live, but what would sell. Hence the lecturer expressed but little sympathy for Hood's humorous poems; however, he appreciated that in the midst of ill health he was the greatest humourist of all. He was not a man of mere puns and quibbles. Hood made both indeed, but they made not him. Such verses, like the "Miss Kilmansegge," were humour and pathos. In his "Song of the Shirt," by the power of sympathy, Hood placed himself in the situation of the sempstress; as also, in the "Bridge of Sighs," in that of the victim of sexual oppression. While he lived he worked—to the last moment animated by enthusiasm and devoted to the social reform of his age. In the course of his highly eloquent discourse Mr Parsons recited several passages from Hood's more serious poems; not omitting, however, many stanzas of such lighter pieces as "Old Ben Battle" and "Lady Bird," the humour of which greatly impressed the audience. The lecture was numerously and respectably attended.

ROYAL INSTITUTION OF GREAT BRITAIN. On Thursday last, Mr. J. Phillips, F.R.S., delivered in the theatre of the above-named institution, his first lecture upon the general principles of geology. He examined into the nature of the earth's crust, and the movements to which it has been subjected by the changes of pressure. He also illustrated the contortions and upheavings of the different strata—some left horizontal, some sloping, and others completely vertical, by the physical action of earthquakes.

PESTALOZZIAN SYSTEM OF EDUCATION.—A *soirée* was given on Wednesday evening, by the pupils of the Pestalozzian School, Jewin-crescent, Aldersgate street, for the purpose of presenting to the Rev. Mr. Barker, the principal of the school, a testimonial of their affectionate regard and their appreciation of the completeness of the system of instruction under which they had received their education.

ST. MARYLEBONE BANK FOR SAVINGS.—The twenty-third annual general meeting of this institution, was held on Thursday—the Rev. John. Hume Spry, D.D., in the chair. It appeared from the several reports read to the meeting, that the progress of the bank during the past year had been of a satisfactory description; as in less than 2084 new deposits having been made in the last year, 22,774 deposit accounts remained open on the 20th November last, of which 1,284 had balances exceeding £1 less than £2 18*s*. 7*d*. each. The sum in the hands of the Government, on the 20th November, was £364,526 12*s*.

COLONIAL PENNY POSTAGE.—On February 8th, an extraordinary meeting will be held at the Society of Arts, when a paper will be read, and a discussion invited, upon the propositions of the Postage Association. A local committee, consisting of merchants of the City of London, is now in course of formation, to assist the council of the association in their labours.

ENTERTAINMENT AT THE MANSION-HOUSE.—The Lord Mayor on Tuesday entertained the aldermen, their ladies, and a numerous party at dinner, at the Mansion-house. In the evening the Lady Mayoress received a large assembly, and dancing was kept up with great spirit to a late hour. The fog, however, which was exceedingly dense at the west end of the town, prevented many of the intended guests from being present.

ST. GEORGE'S HOSPITAL.—Mr. Keate, the senior surgeon, has, on account of ill health, resigned the office he has so long filled. Mr. Johnson has also resigned the office of senior assistant surgeon, and is a candidate for the vacancy caused by the resignation of Mr. Keate. Mr. Pollock is a candidate for the assistant-surgeoncy.

ENLARGEMENT OF BETHLEHEM HOSPITAL.—Two new and extensive wings have just been completed, at the rear of this immense establishment in Lambeth, overlooking Brook street, Lower Kennington-road one at the southern and the other at the northern end of the building—and will accommodate near five hundred more inmates.

GERMAN HOSPITAL, DALSTON.—The annual general meeting was held on Monday at the London Tavern; his Excellency Chevalier Bunsen (in the unavoidable absence of the Duke of Cambridge) presided. The Rev. Adolphus Walbaum, secretary and chaplain, read the report, of the committee, which set forth that during the past year 796 inmates had been admitted into the establishment, and the out-patients for the same period numbered—at the hospital, 4083; at the City Dispensary, 1932; the Western Dispensary, 518; making a total of 6500; and the number since its opening, in 1845, to be in-patients, 4313; and out-patients, 20,935. The financial position of the charity showed the income of the past year to have been £2,482 9*s*. 10*d*., and the expenditure £2,201 9*s*. 10*d*. The expenditure exceeded the receipts by £281.

ROYAL ORTHOPEDIC HOSPITAL FOR THE CURE OF CLUB FOOT, &c.—A meeting of the supporters of the Royal Orthopedic Hospital, for the cure of deformities, took place on Thursday. From the report of the secretary, it appears that, during the year 1852, about 600 patients, suffering under different kinds of bodily deformities, were received, partly as in-door and partly as out-door recipients; making the total number of patients since the commencement, in 1838, nearly 4,000. The income of the charity during the same year, with the assistance of £500 legacy, had exceeded that of the previous twelve months, although the total was far from adequate to the yearly and increasing claims on the institution. A building fund was stated to be in progress, to increase the number of beds; several hundred names being on the books awaiting their turn of admission; and some routine business having been passed, the meeting separated.

SAILORS' SAVINGS BANKS.—The large sum of £43,000 has been paid into the saving-bank connected with the sailors' home, in Well-street, in the last year. This is one among the many proofs of the great benefit that these establishments have conferred upon seamen. In consequence of the benefits of the system, the Government resolved to establish savings banks at the shipping offices throughout the country.

ROYAL MATERNITY CHARITY.—On Thursday, the annual meeting of this charity was held at the London Tavern, C. Rowcroft, Esq., in the chair—when a report was read, which stated that, during the past year, there had been 2073 deliveries, and very few casualties. The deductions of expenses had reduced the financial position of the charity, but an earnest appeal for increased assistance was made, as the charity was shortly lose £180 per annum by the expiry of the Long Annuities. The report was adopted, and some formal business transacted.

MIDDLESEX HOSPITAL.—On Thursday, the quarterly court of the governors of this hospital was held; Sir Robert Harry Inglis in the chair. The Marquis of Salisbury and the Rev Dean Morell having been elected vice-presidents, in the room of the late Earl Fitzwilliam and the late Lord Cottenham, a statement was read, from which it appeared that the ordinary income of the past year was £6531 6*s*., and the expenditure £6245 1*s*. 7*d*. The money bequeathed in legacies during the year amounted to £4350. The number of patients were about 19,000, of whom 5,800 were in-patients.

THE ROYAL GENERAL ANNUITY SOCIETY.—A general meeting of this society was held at the London Tavern, on Monday, when it appeared that during the year the receipts had amounted to £2140 17*s*. 10*d*., and the expenditure for the same period had been £2102 7*s*. 6*d*., thus leaving a balance of £61 10*s*. 6*d*. in the hands of the treasurer. The officers having been re-elected for the ensuing year, the election of four annuitants was proceeded with.

BLINDHEIM DISPENSARY.—The seventeenth anniversary ball on behalf of this useful charity was held at Willis's-rooms, and was very fully and fashionably attended. This charity is one of the very few in London open freely to all persons, without distinction of class, creed, country, or parish, and that 1,500 individuals received medical and surgical advice and medicine there during the past year.

M.P.'S FOR LONDON UNIVERSITY.—A numerous meeting was held in the theatre of University College, Gower-street, on Monday, for the purpose of taking into consideration the claim of that institution to be represented in the Legislature, and to petition Parliament thereon. Mr C. Liston (son of the late eminent surgeon) in the chair. The meeting was addressed by several gentlemen, and resolutions in favour of the project were proposed and carried.

NATIONAL CLUB.—The noblemen and members of Parliament belonging to the National Club intend to have a parliamentary dinner on the re-assembling of Parliament. The Earl of Ciancarty will preside on the occasion, and Mr Perceval the late candidate for the University of Oxford, will be of the party. The majority of the dinner list has already been filled up with the names of leading members of the club.

KING'S COLLEGE.—The following twelve gentlemen, formerly students of this college, appear in the list of wranglers at the Cambridge examination for 1853, viz.:—Wilsone, Gibsone, Elsey, Gardiner, Taylor, Ware, Morgan, Drey, Heppel, Walker, Fortey, Green. There are nine in the list of senior optimæ: Homan, De Quetteville, Wells, Reece, Hopkins, Paul, O'Brien, Bradley, Hubbard. There are also two amongst the junior optimæ—Ayerst and Biddle.

HONOURABLE ARTILLERY COMPANY.—The annual grand ball given by the officers of this corps took place at the Court house of the Artillery Ground, on Tuesday evening. The assemblage was more than usually great; the tickets having been extended to some 500 guests. A quadrille band, together with that of the corps, lent their effective aid, and the dancing was kept up until nearly five in the morning. Lieut.-Colonel Lord Frederick William Pawlett, and several officers, represented the Coldstream Guards quartered in the Tower, and several officers of various regiments were present. Colonel Thompson and the officers of the Royal London Militia, Sir James Duke, M.P., and many other civic dignitaries and their families were likewise sharers in the gaieties of the evening. Captain Jay presided, in the absence of Lieut.-Colonel Fitzroy, whose ministerial duties prevented his attendance. The supper was an extremely handsome one, and a frank joyous hospitality marked the whole proceedings.

THE SLAVE-TRADE.—The attention of Lord John Russell has not, it would seem, been directed in vain to the revival of the African slave-trade at Cuba. The Admiralty understand, have, on his Lordship's instructions as Foreign Secretary, issued orders for the despatch of some swift steamers to the coasts of that island, to see whether it be not possible to check in the commencement the renewal of the infamous traffic in human cargo, and, at all events, to show the Court of Madrid, the sense which England entertains of the scandalous manner in which the Spanish colonial authorities disregard the dictates of humanity and the obligations of treaties.—*Daily News.*

THE NEW CRYSTAL PALACE.—A meeting, termed in the circulars convening it "a Representative Meeting of the United Working Classes," was held at St. Martin's-hall, Long-acre, the use of Exeter-hall having been refused. The Rev. Mr. Harry Mayhew took the chair; and was accompanied by the usual body of persons who have favoured this movement. Several resolutions were proposed and carried. The Rev. Mr. Bailey, secretary of the Lord's day Observance society, rose to address the meeting; and, after some remarks from the chairman, was allowed to say a few words in the midst of much uproar. Thanks were given to the chairman, and the meeting adjourned till Wednesday next.

BATTERSEA PARK.—Her Majesty's Commissioners of Works have issued orders for the resumption of the works for the formation of Battersea-park, which has been discontinued for some time past; and on Tuesday a great sale of old building materials cleared off the ground took place at the Albert Tavern. Great progress has been made in the embankment on both sides of the river, and the works at the Suspension-bridge are considerably advanced.

NEW APPOINTMENTS AT THE MINT.—It is understood that the Treasury has determined to increase the number of *employés* at the Mint, with the view of qualifying the newly-appointed clerks, &c., for employment in a new Mint establishment which the Government contemplates forming in Australia. The proposal is to remove certain clerks from the various offices to the Mint, in order that they may be qualified for the new duties. Selections have already been made from the Census and Registrar General's Office, whose term of service will expire with the close of the current year.

EMIGRATION.—On Wednesday a meeting of the compositors of London, attended by upwards of 1000 members of the trade, was held in the Normanton-hall, Holborn, for the purpose of considering the propriety of establishing an Emigration Aid Society—namely, for the purpose of advancing small loans to those connected with the business who might wish to emigrate to the colonies or other lands. Mr Lawson occupied the chair. Mr. Whitwell, read a very able report, which was unanimously adopted. A vote of thanks to the committee who drew up the report and framed the rules, and to the chairman, having been passed, the meeting separated.

LONDON AND COUNTY JOINT-STOCK BANK.—The annual meeting of the shareholders in this bank was held at the London Tavern, on Thursday; John Sadlier, Esq., presiding. The report stated, that in June last it was decided to increase the paid-up capital of the company from £300,000 to £400,000, by the issue of new 250 shares amongst the proprietary, at a premium of £3 10*s*. per share. The whole of the shares had been taken up, and the firm having netted £17,500, the directors had been enabled to write off the dead weight of £5,000, arising from preliminary expenses, and the establishment of branches. The improvement in the prospects of the bank had enabled the directors to declare a dividend of two and a half per cent on the amount of their salary. The net profits of the last half year (after reserving an amount sufficient to meet all doubtful debts) was £14,230 7*s*. 5*d*. Out of this sum, and the balance of £7246 14*s* 7*d*., from the last account, the directors recommended the payment of a dividend of 3 per cent, and a bonus of 1 per cent, making 8 per cent for the year; which left £4472 1*s*. 6*d*. to be carried to the guarantee fund, which would be thus increased to £44,223 7*s*. The directors had great gratification in stating that their chairman had munificently laid the foundation of a provident fund for the relief in sickness, or superannuation, of their officers; and the directors, after mature consideration, had determined to combine with it a guarantee fund, which they believed in a few years would give efficient aid to the extended and benevolent views of the chairman. The report having been adopted, and the dividend declared, a special vote of thanks was given to the chairman and directors; it being stated that Mr Sadlier had endowed the Provident Fund with no less a sum than £4500, from his own private funds. The retiring directors and auditors were re-elected, and votes of thanks given to Mr. Lizard and the other officers of the bank for their valuable services, and again to the chairman for his conduct in presiding over the meeting.

THE PRESERVATION OF LIFE FROM SHIPWRECK.—On Thursday a meeting of the general committee of the Society for the Preservation of Life from Shipwreck was held, at the Adelphi; Captain Stevenson (brother to the chair) in the chair. Rewards were ordered to be granted, for gallant acts—the silver medal of the institution to Mr. Arthur Brooks [illegible] Sims, of the Dangerous Coast Guard station; the thanks of the [illegible] vellum, to Mr. Thomas Foster, of Rye; and £5 10*s*. to [illegible]ardies, for their services on the occasion of the wreck of the German barque, *Louise Emelie*, near the above place, during the late hurricane. Also, through four persons having been rescued—forty-five others having unhappily perished. The thanks of the committee, on vellum, were also presented to Mr Hugh Williams, branch pilot, on the coast of Carnarvon, and a reward of £4 10*s*. to his boat's [illegible] for rescuing thirteen persons from the barque *Juno*, of Russia, on [illegible]th December, when she went to pieces, in Aberdovey. The silver medal of the society was voted to Mr William Bridle, who was [illegible]aved from a boat which had upset in putting off to the assistance of the crew and passengers of the emigrant barque *Heroine*, wrecked off Lyme Regis, during the heavy gale on the 27th December.—It will be remembered that four of his crew perished on the occasion. The thanks of the committee on vellum, were presented to Mr. W. Stevenson, master of the schooner, *Sherwell*, for his humane services to the crew of the *John White*, on Whitby Bar, on the 26th December. The silver medal of the institution was voted to John Craddock, coast guardman at Scarnbaven, in appreciation of his gallant conduct on the occasion of the wreck of the schooner *Christiana*, on the 28th November. A reward of £3 was granted to [illegible]'s crew, for saving nine persons from the brig *Du Krems*, which was wrecked in Carnarvon Bay, on the 26th December; and £1 10*s*. to two coast-guardmen of Carnick Hill station, county Dublin, for attempting to rescue with their gun the crew of the wreck *Adams*, on the 6th ult. The shipwrecked men were subsequently saved by Dennett's rockets. The thanks of the committee, on vellum, were presented to Lieutenant Kennedy, R.N., chief officer of Dunleary coast guard station; and a reward of £3 to his boat's crew, in consideration of their courageous and persevering services in rescuing the crew of the schooner *Suspense*, wrecked near the above place, on the 16th ult. It was stated, that very favourable accounts continued to be received of the new life-boats on Mr. Peake's design; that at North Sunderland had saved the lives of some thirty persons on a recent occasion; and it appeared that the institution had several of these boats now lying for various points on the coast. It was added that the past year had been most disastrous for shipwrecks, and that hundreds of poor fellows had met with a watery grave.

EMIGRATION.—The local government of New South Wales have made a grant of £10,000 to be remitted in aid of Mrs Chisholm's Family Colonization Loan Society. It may be applied either for the purpose of making fresh advances, or to constitute a guarantee fund, according to the discretion of the Secretary of State for the Colonies and the London committee of the society.

NEANTF. OBEER SEYOLO. NOMICEE.

KAFFIR PRISONERS AT CAPE TOWN.

KAFFIR PRISONERS AT THE CAPE.

This interesting group of captives was sketched in the prison at Cape Town; whither they were brought by Her Majesty's steamer *Styx*, on the 2nd of December, from the frontier. The prisoners are four in number, namely—the Kaffir chieftain, Seyolo; Nomicée, one of his wives; Obeek, his counsellor; and his wife, Neánte. Seyolo gave himself up to our army in compliance with a proclamation, issued by General Cathcart; and Obeek and the women volunteered to share captivity with their chief. They were sketched in the prison by an obliging Correspondent (Mr. J. Glen Wilson), the day after their arrival. Seyolo is a tall fine looking young fellow, above six feet high, and has a very intelligent countenance. Obeek is much older, and has also pleasing features. Both were dressed in sailors' shirts and trousers, and wore Marines' caps, with the name of the *Styx* in front. The women are rather pretty, especially Neánte, who is quite a girl, being only sixteen. Nomicée wore an armlet of gold on her left arm, and a heavy gold ring on her great toe. The other woman wore similar ornaments, in silver. They all sat quietly smoking and chatting while our Correspondent sketched them; and they were greatly amused with the portraits when shown to them: they, however, intimated to the sketcher that he had made Seyolo's nose too broad, but seemed satisfied when the mistake was corrected. Their deportment was easy and unconstrained, and they seemed to place considerable confidence in their European captors, although they were firm in refusing to give any information calculated to injure the cause of their country.

An officer from the *Styx* came in while our Correspondent was with the prisoners: the moment they saw him they started up, and shook hands with him, evidently delighted to see him; for he, and indeed all the officers of the steamer, had been kind to the captives on the passage.

STEAM TO AUSTRALIA.—THE "ANTELOPE" AND THE "MARCO POLO."—SCREW *v.* SAIL

Considerable disappointment has been experienced by the result hitherto of the experiments in steam navigation to the Antipodes. On both sides of the world a similar feeling has been expressed; and the extraordinarily rapid voyage out and home of the sailing vessel *Marco Polo*, has created among many nautical authorities a strong conviction that the latter class of craft may bid defiance to steam rivalry, at least of the kind hitherto attempted. The precise point involved in this question of rivalry is about to be tested in a race round the world, between the famous sailer we have just named and the scarcely less famous screw steamer, which forms the subject of our Illustration. The *Antelope* now competes for the belt with the great victor of the sailing ring, the *Marco Polo*, under circumstances that will render the test (at least, presumptively) determinative of the principle at stake. The *Antelope* is the property of the firm of Millers and Thompson, of Liverpool, with whom, like the Gresmes, Wigrams, Lindsays, and other great metropolitan houses, the character of their ships is the predominant consideration; so that it is quite superfluous to say that whatever capital could furnish, or skill suggest, has been applied with no less liberality than discrimination in rendering her perfect in every respect. Why she has been selected for this purpose by these gentlemen, in connection with their well-known "golden line" of sailing vessels between Liverpool and Australia, seems to be her possession of every quality of excellence as a sea boat, as demonstrated by her first voyage to Rio Janeiro, under sail, in twenty-seven days—the quickest on record at the time. On her return from California, whither she proceeded from Rio, it was resolved to lengthen her, so as to enhance her capacity for accommodation to the extent required for her new destination. For this purpose she was placed in the hands of Mr. John Laird, of Birkenhead, who may be supposed to have had a special ambition to excel himself on this occasion, from the fact of a small steamer of his construction having been just sold in Australia at the enormous profit of some £13,000, after defraying every expense of conveyance to Sydney. Indeed, we believe, some calculation of the kind enters into the motive for the despatch of the *Antelope*, probably because of the apprehended difficulty of obtaining hands to navigate her home; and that, if duly reimbursed for their lavish, though judicious, expenditure, Messrs. Millers and Thompson will dispose of her for the purpose of plying between Melbourne, Adelaide, and other ports. Be this as it may, however, it may reasonably be presumed that, all other considerations apart, Mr. Laird having so fine and well-proved a hull to work upon, has put forth his utmost ingenuity in the *Antelope* to secure victory for the screw, which, in this instance, has three blades; and one consequence of the unusual space left for its working will be to obviate the disagreeable vibratory motion which generally accompanies the action of this instrument; so that in her progress through the water the *Antelope* will communicate to the passenger only such sensation as if she were in reality the clipper she looks.

In reference to the pictorial and other adornments of the *Antelope*, they are of a comparatively subdued character; and, though exceedingly elegant wherever elegance is permissible, there is a total absence of meretricious glitter, a disciplined taste pervading everything, and substantiality and comfort superseding ostentatious frippery. Had Mrs Chisholm herself presided over the distribution of the dormitory arrangements, she could not have secured more perfect classification and ventilation. The captain, H. C. Keen, has frequently navigated the southern seas; and his first officer, Mr. A. French, is thoroughly familiar with screw steamers. The printed dietary table is not only on the most abundant scale in items therein enumerated, but it is expressly stated that these are altogether exclusive of a liberal allowance of live stock, for which admirable accommodation is made; and their replenishment is secured by the vessel calling at Queenstown (Cork), Madeira, and the Verds (as already stated), the Cape of Good Hope, Adelaide, Port Phillip, and finally, Sydney. Besides the fire-annihilator machines, the *Antelope* is fitted with an adjustment of the hydraulic pump, that admits of being brought into instant play on any part of the vessel, above or below deck; while, in the lighting arrangements for night, the precedent of the new Admiralty boats is followed, in the employment of the reflectors of patent glass silver, which yield the maximum of radiance to the minimum of flame.

Divided into six compartments, by seven water-tight bulk-heads, propelled by Forrester's engines of the very last make (of 250-horse power to a burden of 1200 tons, and length of keel 214 feet, with a depth of hold 18 feet), it must be admitted that the *Antelope*, being, moreover, well armed to guard her bullion-safe, is apparently deficient in nothing whatever that should render her a thoroughly well-matched screw antagonist against the renowned sailor *Marco Polo*.

"THE ANTELOPE" AUSTRALIAN SCREW STEAM-SHIP.

MELFI, AFTER THE LATE EARTHQUAKE.

(From our own Correspondent.)

NAPLES, January 13

Leaving the city of Naples, and threading the Apennines towards the Adriatic, about eighty miles from Vesuvius, you come upon a mountain of singular form and imposing appearance, it is *Monte Vulture*. This mountain has long attracted the attention of physical philosophers* as an exhausted volcano, whose labours are traceable for many miles around its base. If Mount Vulture has long ceased to vomit fire and smoke, it has possessed for centuries the power of convulsing the earth. In 1348, 1456, and 1694 it was the centre of earthquakes; and, lastly, on the 14th of August, 1851, Vulture gave a terrible proof of its subterranean vitality, in generating one of the most fatal earthquakes of modern times

About twenty minutes past two P.M. on the memorable 14th of August, 1851, for many miles round Vulture, the earth upheaved, and was then subject to an undulating movement. In five seconds the towns of Melfi, Barile, Rassello, and Rionero were masses of ruins; whilst many other small villages remain more or less devastated. Probably, not less than 3000 persons were crushed to death in that insignificant period of time. The official returns state that Melfi lost 700 souls; Barile, 320; Rassello, 70; Rionero, 50; to which must be added the victims of other adjacent villages not reported. To this actual loss of life must be added an equal number of wounded, altogether horrible to contemplate

The phenomena which preceded the disaster, were an unusually sultry sky, a death-like stillness, and the drying up of springs. Those who witnessed the falling of buildings from the hills, state that immediately before the shock they felt a hot gust of wind, whilst others declare that a vapour was seen to rise, as if from the earth, near Melfi, where the earthquake was most severely felt. Others again testify to the howling of animals.

A traveller, living at Melfi at the time, gave me the following account of what he witnessed on the fatal day. "After dinner, I threw myself on the bed to take my usual siesta, and fell asleep. I woke ere long, alarmed by most terrible noises—I thought it was thundering. Then followed a cloud of dust, and I could see nothing for about three minutes. When the dust had cleared away, I discovered that the front of the house had fallen into the street. I rose from the bed stunned and stupified. I sought the staircase, which, fortunately, was not injured, so I descended over fallen masonry into the *rico*. I could scarcely get along, the streets were so much blocked up with rubbish; and every instant a loud crash warned me of the danger I was in. I saw more than one building gradually topple over. A feeling seemed to possess me that I should get out of the town, although to move about the street was imminently dangerous. The same idea appeared to possess every one I saw; we were all scrambling out of the place, some screaming and some dumb with fright. I found hundreds of people outside Melfi; some exclaiming—'Holy Virgin, help us! The Earthquake! the Earthquake!'

"After a few minutes most of the crowd appeared to recover their reason, and then came the terrible thought—who are the victims? Again we all rushed into the town, each person making for their own house or that of a friend. The absorbing feeling of self-preservation had given way to the more generous sentiments of humanity. What an awful scene now presented itself! A mother, with bleeding hands, tearing away the rubbish of a roofless house to find her child! A father calling for aid to remove a mass of brickwork, under which he knew his family was buried. 'Help! help! they may yet live!' was often heard in the crowd. Their relatives meeting, they embrace, and hurry off to assist at some excavation. Every passion was called forth—self-preservation, fear, hope, joy, strangely mingled: it was, so to speak, an earthquake of human hearts that followed the physical disaster."

Such is no exaggerated account of this awful event. Not a house in the whole town of Melfi was left habitable. Seventeen churches had crumbled to the earth; probably not less than 3000 people were without homes, having lost everything they possessed, as well as their dearest relatives and friends. The Government sent assistance from Naples, but many persons perished under the ruins for want of aid. Some wretched men visited the town for plunder. The wounded were too many to receive proper attention. A few became idiots, and several have not yet recovered from nervous affections caused by alarm; and the medical world is much interested by some singular cases still under treatment.

A few days after the disaster, Signor Palizzi, the well-known land scape painter, visited the ruins of Melfi, and from his sketches the accompanying Illustrations have been copied.† The general view of the town of Melfi shows the great mass of shattered buildings, with the Norman built castle in the distance. The interior of the church called the Carmine, represents the picturesque ruins of one of the most important Christian temples of the city. When Signor Palizzi sketched the building, the priests had already returned to the roofless church, put up a bell, and were calling the people to mass. The third drawing gives an idea of the general appearance of the houses, showing the furniture and pictures of a particular dwelling, the front wall of which had fallen into the street.

His Sicilian Majesty visited Melfi some time since, and offered relief to the sufferers; and subsequently a subscription was got up for the same purpose. Unfortunately, the disaster was too extensive to be relieved.

REMAINS OF HOUSE, AT MELFI.

REMAINS OF THE CHURCH OF CARMINE.

REMAINS OF THE TOWN OF MELFI.—GENERAL VIEW.

* Daubney's "Examen in Assulia" (Oxford); Abich's "Middle Italy" (Brunswick); Fonseca's "Observations on Vulture" (Naples.)

† Signor Palizzi's picture of the "Ruins of Melfi" is now in the possession of his Sicilian Majesty.

paired by such aid, unless an appeal had been made beyond the kingdom of Naples. The town of Melfi, however, is very gradually being rebuilt.

What took place at Melfi occurred to the adjacent towns and villages; some of which are now nearly deserted. Barile, in particular, is little more than a heap of ruins. In Naples the shock was distinctly felt, but it did no damage.

It should be observed that after the fatal 14th of August, 1851, the whole district of Vulture was visited with slight shocks of earthquake for many months after! And it is worthy of remark that since that period many intestine phenomena have occurred throughout Europe, as well as the late eruption of Mount Etna, which is worth reflection. The Scientific Society of Naples has published a report, entitled "Monte Vulture ed il Tremuto del 14 Augusto, 1851," highly interesting to physical philosophers.

NAVAL AND MILITARY INTELLIGENCE.

SECOND AMERICAN EXPEDITION IN SEARCH OF SIR JOHN FRANKLIN.

Dr Kane has been appointed to the command of the new Grinnell Arctic Expedition, which is soon to sail, in search of Sir John Franklin. In consequence of this publication Dr. Kane stands especially pre eminent; that quiet reliance in faith. He firmly believes that Sir John Franklin is still living, and that he can be rescued from his could ament by human means.

Unsuccessful as the previous expedition have been, there are yet strong grounds for continued efforts. The discoveries which have been thus far made have rendered it absolutely certain that Sir John Franklin wintered in 1845-6 on Beechey's Island, at the mouth of Wellington Channel. It is doubtful whether he proceeded in the spring westward, or eastward up the channel. His instructions expressly enjoined the former course, if possible; but the extensive search already made proves no indication that such was the course actually pursued. The opinion entertained by the officers of the English and American expeditions is, that Sir John Franklin prosecuted his search in the open sea, northward of the Wellington and Victoria Channels, and is shut up in the almost boundless region of water, ice, and land that extends between Victoria Channel and the high and extensive lands north of West Georgia. That there is a great Polar basin, with a higher temperature than that of the Arctic Ocean, abounding with animal life, was plainly set forth by Captain Penny, as his deliberate conviction, two years ago. This opinion is substantiated by Captain Englefield, who lately returned from a short cruise in the Arctic Ocean; and the latter is of opinion that Baffin's Bay is misnamed, and that it is, in fact, an arm of communication between the Atlantic and the Arctic Oceans.

The probabilities of the safety of Sir John Franklin's expedition are rather strengthened by the last expedition sent out. It were improbable at the outset that the two ships should have simultaneously perished, it is still more improbable that they could have been so utterly lost as not to leave some remnant of the wreck behind. No such remnant has been discovered. The disappearance of the *Erebus* and *Terror* cannot be satisfactorily accounted for, either by storm or starvation. The liberality of Henry Grinnell and George Peabody in fitting out this second American expedition reflects honour upon the American name, and we trust the enterprise may be successful.

COAST DEFENCES.

Dover.—When all the companies have joined, there will be about 500 of the Royal Artillery in this garrison. Besides the batteries, breast-works, defences, &c., will be shortly placed in that state as of old, when Dover was one of the first ports and strongest garrisons in England. A company of the Royal Sappers and Miners is also expected there, their services being now important in the construction of fortifications and military works of every kind.

Folkestone.—The surveyors of the Ordnance have been making surveys during the week around the battery, down the face, and along the foot of the cliff.

Rye.—An ordnance survey is being made of the gun-garden of Rye, with a view, we understand, of erecting a battery there.

Pevensey.—The battery at the west end of the dockyard is undergoing alterations. The 24-pounder guns have been mounted, and the embrasures are being adapted for 32-pounders, with 8 inch and 10-inch guns at the ends. When completed the battery will be most formidable, and with the additional works will rank as one of the strongest on this coast.

Portsmouth.—Magazines are ordered to be constructed on the Gosport lines, as also on the Hilsea lines, and a strong guard is being formed on the latter, on one of the old sites. Some earth-works will be speedily thrown up at Gomer-pond, Browndown, preparatory to the erection of a permanent fort.

The Martello towers on the Sussex coast are to receive an armament forthwith.

West of England.—There is not a single soldier between Exeter and Plymouth. There is only a 32-pounder gun at Exmouth for the use of the Coast Guard, the only one mounted between Bristol and Plymouth, a distance of 130 miles.

The Navy.—The Sea-Service Squadron.—All the ships at Spithead, namely, *Prince Regent*, 90, Captain Hutton, flag-ship of Rear-Admiral Corry; *Leander*, 50, Captain Lyons; *Devonshire*, 80, screw; *Arrogant*, 46; *Immortalité*, screw, Captain Luring; *Pembroke*, 50-gun-ship, Commander Hunt; *Rifleman*, 6; and *Medea*, 6, steam-sloop, Commander Hallen—may be said to be fully manned and ready for any service. Most of the squadron at Devonport are also fully manned and ready for immediate service. The three-decker *Queen*, 116, screw, Captain Stanley, and the 60-gun frigate *Arrogant* ship now that has merely an advanced complement. She has 400 men, instead of 960.

At Portsmouth, the *Duke of Wellington*, 130, screw line-of-battle-ship, Captain H. B. Martin, C.B., has stepped her mast and is en-masts. This noble ship we may expect, by the end of March, to be ready for active service. Her complement will be 1000 men.

The ill-fated *Dauntless*, 23, screw-frigate, Captain Halsted, is at Barbadoes. The numbers that have fallen victims to the yellow fever are 15 officers and 73 men, more than one fourth of the entire ship's company.

Devonport.—The shipwrights of this dockyard number between 800 and 900. Of these about 250 assembled, on Tuesday, in the Temperance hall, and resolved to memorialise the Admiralty to have their wages increased to the rate now paid at the private yards. Failing success here, the men propose to lay their memorial before Parliament. The meeting was well-conducted and orderly.

The Army.—The following changes have taken place during the past month:—The 1st batt. of the 1st Foot, from Portsmouth to Newport; the 19th, from Winchester to Portsmouth; the 38th, from Gosport to Portsmouth; the 88th, from the Isle of Wight to Gosport; the 48th, from Newport to Winchester; the 81st, from Dublin to Kilkenny; the 1st Battalion of the 71st, from Kilkenny to Cork; the 89th, from Templemore to Buttevant; and the 95th of the 85th from Portsmouth to the Isle of Wight. The 81st Regiment of Foot, moved from Fermoy; the service companies embarked at Cork for Corfu on the 22nd of January. The 85th Foot embarked at Portsmouth on January 26, for service in the Mauritius. Intelligence has been received of the safe arrival of the 40th Regiment of Foot, in the *Vulcan* steam-frigate, at New South Wales, and of the embarkation of the 3rd Light Dragoons at Kurrachee, in the *Hydaspes*, on their return to England, after fifteen years' service in India.

It is intended to make two addit onal companies to each regiment of infantry of the Queen's troops in the East Indies.

Royal College of Physicians.—The President and Fellows of the Royal College of Physicians have made the following arrangements for their annual lectures: The Gulstonian Lectures, by Dr Jenner, in February; the Croonian Lectures, by Dr. Mayo, in February and March; the Lumleian Lectures, by Dr. Alderson, in May. The lectures on Materia Medica, by Dr. John [illegible]. The lectures on [illegible]. The Harveian Oration, by [illegible]. A new [illegible] gave an interesting account of [illegible] to an engine [illegible] covered, being the practical result of over ten years' labour, study, and experiment on this subject. A model engine has also been placed in the theatre for stationary or locomotive purposes, upon land or water, which can be constructed and applied in connection with the new motive power, at one-half the present cost, and half the weight of any engine of the same power of equal service on any other known plan, thereby causing a great advantage by light machinery, a point of great importance in vessels upon the water. The propeller or new mode of applying the force of steam or engines to the water in vessels on the ocean or rivers, has also been perfected in the past six months, which will act through the bottom of the vessel, where the water is denser, and the whole power of the engine will be expended in driving the vessel rapidly forward. The gain by these important and valuable improvements, in lightness of machinery, directness and efficiency of the power, and small expense for fuel necessary, together with the advantage of greatly diminished resistance in moving rapidly through the water, obtainable by the new model, when combined in one vessel, especially in so large a vessel as the projected iron ocean steamer *Leviathan*, 700 feet long, will render her an unapproachable economical, regular, safe, profitable, and rapid, as to distance all competition."

MUSIC.

NOTES OF THE WEEK.

The second performance of Mendelssohn's "Elijah," by the Sacred Harmonic Society, took place at Exeter-hall, under Costa's direction, on the 26th ult. Madame Fiorentini having been attacked with influenza, was unable to sing the principal soprano part, which was, therefore, undertaken by Miss Birch; and Mrs Dolby, Miss Deakin, Miss Huddart; Messrs. Lockey, N. Novello, and Weiss, were the other chief singers. The anxiously-expected production of Mozart's "Requiem," in fixed for Ash Wednesday, February 9th, and Mendelssohn's "Lobgesang," will be given in the same programme; Miss Louisa Pyne, Miss Williams, Lockey, and Lawler, are the leading vocalists engaged for this attractive evening. The London Sacred Harmonic Society performed Handel's "Solomon," last Monday night, under Mr. Surman's guidance; Miss Birch, Mrs. Temple, Miss C. Felton, Lockey, and Lawler being the solo artistes. As a tribute of respect to the memory of the late Mr. Harper, the orchestra was preceded by the Dead March in "Saul," which token of regard had been paid also by the Harmonic Union.—Madame Pleyel, the enchantress of the pianoforte, the unrivalled executant of the day, was heard at the Hanover-square Rooms, at an evening concert, last Monday, by an immense audience, including the great artistic celebrities of every nation now in town. Madame Pleyel is a greater force, whether in the "seven Models (why seven?) of Beethoven and Mendelssohn, or in the fanciful and eccentric effusions of Liszt and Thalberg. Associated with Sainton in the sonata in F of Beethoven, and with the same able violinist, Mr Clementi, a clever violinist, and Platti, the incomparable violoncellist, in Mendelssohn's first pianoforte quartet in B minor, Madame Pleyel was an exponent as original in her reading as she was daring in her execution. Thinking for herself, following out the dictates of her own genius, disdaining the trammels of conventional interpretation, and trusting to her own impulsive sentiment and fancy, she afforded fresh notions of the texts of the two master minds: she suggested novel points of interest, she excited even to an admiration of the extravagance of intellectual as well as physical power, which enabled her thus to strike out a new path. The pace at which she took the scherzo and finale, in the quartet, distanced all modern players, and therefore disturbed their nervous system; but, those who knew and recollected Mendelssohn, must be conscious that he would have indeed been delighted with a player whose ardent style so closely resembled his own. Of Sainton's solo-like playing it is needless to add, that the enthusiasm at Madame Pleyel's matchless display was unbounded. The vocalists were Miss Fitzwilliam, Miss Allegre, Madame Doria, and Mr. Weiss. Madame Fiorentini's cold prevented her appearance, and Madame Doria kindly walked from her seat in the body of the room to the orchestra, to sing the cavatina, "Modi," from Donizetti's "Lucrezia Borgia." She has a fine voice, but her style, at present, lacks refinement.—The debut of Miss Fitzwilliam, who devotes herself for the future to the concert room, was a marked success. Her delivery of Kücken's air, "Oh, that we two were maying," delicious, and she won an encore for Mr. F. Mori's pretty ballad, "Twas on a Sunday morning." It is quite a treat to listen to Miss K. Fitzwilliam's exquisite enunciation of the poetry of her songs. Mr. F. Mori was the able accompanyist at this *soirée*.—On Tuesday night, the accomplished pianist and gifted composer, Sterndale Bennett, met his friends at the first of his annual series of interesting pianoforte performances at the Hanover-square Rooms. He was assisted by Sainton and Piatti and the selection of concerted pieces worthy of the high reputation of Mr W. S. Bennett. Mrs. Endersohn was the vocalist on this occasion. This is the season of chamber music. On Saturday Mr. Ella commences his Musical Winter Evenings. Mr. Hausdorffer, violinist, is already in the field at Crosby-hall, with his quartet party.—Mr. Lucas, the violoncellist, has announced his nights.—Herr Pauer, the pianist, will open shortly a new campaign.—Mr. Lucas, the pianist, renews his digital doings, and Mr. C. Salaman is organising his pianoforte *soirees*; so that the Broadwoods, the Erards, the Collards, will be in requisition until the season begins to warble out its dainty melodies, as soon as the wintry days disappear.—Beethoven's Mass in C and Mendelssohn's "Lobresang" (Hymn of Praise) were performed at Mr. Salaman's Amateur on Wednesday evening.—The Sacred Harmonic Society, on Thursday, gave at the Albion hall, London Wall, Haydn's "Seasons," conducted by Mr. Shrubsole: with Mr. Beardmore, organist; and Mrs. John Rowe, Miss A. Cox, Miss Champion, Messrs. Gidsby and Taylor, as vocalists.—Mr. Costa's name appears as conductor in the announcements for the forthcoming Philharmonic concerts.—For the New Philharmonic Concerts, the names of Spohr, Lindpaintner, and Dr. Wylde, are published. Spohr is also engaged at the Royal Italian Opera, to produce his opera "Jessonda," in the ensuing season, which is not likely to begin before Easter Tuesday (March 29th), owing to the principal singers not being able to arrive in London before the Epiphany. Mr. Lumley has secured the services of his singing in "La regia Boreale," having for a colleague the celebrated Madame Rosa Csillag. Madame Stoltz had quitted Rio Janeiro, owing to the revolution which had occurred in that city, which Madame Castellan was about to leave, for London, to sing at the Royal Italian Opera.—Madame Clara Novello has been the star of the Italian Opera this week.—The following extract from a letter from St. Petersburg will interest our readers:—"Balfe's concert cannot take place until the 22nd of February (O.S.), as the Court mourning is only over on the 21st, and it was d be useless to give the concert sooner, as none of the Imperial family or the nobility could attend it. Balfe has engaged for his last concert of the season Mdlle. Helène, that the Emperor has given him an order to conduct an entertainment at the Hermitage, and his Imperial Majesty particularly wishes that some of his music should be given. Mdlle. Lablache is to be the prima donna; the rest of the artists are to be Lablache, Mario, Reconi, &c. On the 7th Balfe has the direction of a concert at the Grand Duke Constantine's, the Emperor's second son, where Mario will sing the air of the 'Bohemian Girl.' Then you'll remember me,' to words which he himself has rendered into Italian; also the duetto from 'Bevelaathe' ('Lisl, dearest Lisl'), with Mdlle. Lablache, to which he also has put words: and the duet of the 'Puits d'Amour,' by Mdlle. Lablache and Mr. Balfe. Another concert on the 11th, at the Grand Duchess Helène's, at which he is sole conductor. Pieces of music of his own composition, illustrated by *tableaux vivans*, and selections from 'Mose in Egitto,' sung by all the Italians. You will see by this how well he is going on. The Grand Duke has sent him a superb pair of sapphire and diamond for the concert of last Sunday."

THE THEATRES.

ST. JAMES'S.

On Monday the season of French plays commenced, and introduced to us Mdlle. Emma Fleury, a young, pretty, and pleasing actress, with a charming *minois* of the genuine Parisian order, and a clever performer, in conjunction with an old favourite, M. Ravel. Three pieces were acted; "Faute de s'entendre," "Un Monsieur qui suit les Femmes," and "A York." The second piece is the English public, in a version entitled "Kensington Gardens;" but we had yet to learn the very superior style of M. Ravel's acting in the part of *Hector Duchemin*, from whom it received a variety and interplay that could be imparted to its different phases by the most mobile of stage artistes. The first piece was a slight affair, the love of a lady for a bashful and awkward clerk being a theme decisively interpreted by Mdlle Fleury. The last product on is a farce by MM. Octave Feuillet and Paul Bocage. It turns on a mistake of the father for the daughter in one *Hector Dubreuil*, who solicits her hand in marriage from her father, and is made the victim of a fatal error. Having been just instrumental in saving a dog from drowning, his temper is construed into impudence, and his part as are in the greatest consternation. The state of embarrassment in which M. Ravel finds himself is expressed with wonderful *entraînement*, and the rest of the performance acted well up to the situation. The audience were convulsed with laughter; and thus the season may be said to have been successfully inaugurated.

Royal Windsor Theatricals.—On Friday week (the 28th), the pieces of "Paul Pry" and the "Lucky Friday," were performed, as [illegible] in the Rubens's Room; Mr Wright and Mr Wigan supporting the respective heroes of the occasion. The evening following (Saturday) Charles Kean had the honour of appearing before her Majesty in the characters of Mr. Smith and his *Locke*. With this sub-ject to-night, the entertainment at Windsor Castle is understood to end. A costly revival of this drama is in preparation at the Princess's Theatre, and intended for immediate production.

METEOR.—A Correspondent writes from Stewkley, near Leighton Buzzard, February 2. "I last evening had the gratification of seeing a beautiful and magnificent meteor. It appeared about eight o'clock, about midway between the Hyades and Orion, or perhaps a little nearer to the latter constellation, and sailed majestically across Orion's sword, which was wholly lost in its brightness, and finally became extinct a little to the east of Sirius, and somewhat nearer the horizon. Its apparent diameter was two or three times as large as that of Sirius, and its brightness added very sensibly to the light of the evening. It preserved a globular form, and a bright white colour, until it had traversed about half its course; when it became somewhat elongated in form, and its sides were beautifully tinted by an admixture of purple and green. It left no trace behind."

VARIETIES.

Promotion.—Stack, formerly of Walshe's regiment, was among among the officers of the Irish Brigade who went on half pay at its dissolution. He had remained on half-pay so long that he became the oldest Colonel of the army. He obtained his promotion to the rank of Major-General after a somewhat curious interview with the Duke of York. Having solicited the honour of an audience of his Royal Highness, he received an intimation that the Duke would receive him at the House Guards next day. He was punctual in his attendance; and being introduced to the Commander-in-Chief, was honoured with the customary question, "Well Colonel, what can I do for you?" "I perceive, sir, replied Stack, "that there is a brevet coming out, in which I hope to be included. I am the senior Colonel in h s Majesty's service." "True, Colonel Stack; but give me leave to ask you of what religion are you?" "I am of the religion of a Major-General." The Duke bowed, and Stack was gazetted.—*Reminiscences of an Emigrant Milesian.*

Shark Catching.—We were puzzled at one time to make out the use of a curiously-formed piece of wood, about four feet long, and in shape very like a whale-boat, but solid: from a hole in the centre descended a strong cord of twisted rattan, forming a running noose, like a lamprum's knot. The mystery was solved on seeing a shark caught and hauled out of the cabin windows, I observed a shark swimming leisurely along some twenty fathoms below the surface. The natives from their canoes observed the monster about the same time. In a few minutes several of these oddly-shaped buoys were dropped into the water. Some of our people fancy they saw them sprinkle a powder in a sort of magic circle round the buoys, I did not observe them use any bait: what charm they used, if any, we did not ascertain; but certain it is that the shark shortly after rose, and was fool enough to shove his head into the fatal noose, when he was so completely tangled in his own element as ever rogue was from the gallows-tree. The buoyancy of the float prevented his diving with it. Having flourished his tail about for twenty minutes, he was drawn up by his head on a level with the water, and there laboured with the heavy ends of their paddles until he seemed satisfied that further resistance was useless; they then tumbled him bodily into the canoe, and hurried on shore amidst the yelling of the whole flotilla; where, no doubt, he underwent the further process of dissection.—*Keppel's Visit to the Indian Archipelago.*

Earthquakes.—Hitherto, there has been no means of telling the unfortunate approach of an earthquake; but M. Rath-Menton, a gentleman connected with the French diplomatic corps in the Argentine Republic, has recently communicated, by letter, to the Minister of Foreign Affairs, a simple means of learning the approach of an earthquake: the "earthquake-indicator" is nothing more than a magnet, to which is suspended, by magnetic attraction, a little fragment of iron. When an earthquake is about to take place, the magnet loses its power, and the iron falls. The accuracy of the sign has been thoroughly tested by Colonel Espinosa, during a long residence at Ariquipa, a region where earthquakes are of frequent occurrence.

The Water-Buffalo.—The water-buffalo is an animal much in use at Singapore for purposes of draught. It is a dull, heavy-looking animal—slow at work, and I think disgusting in appearance; but reconciled for sagacity and attachment to its native keepers. It has, however, a particular antipathy to a European, and will immediately detect him in a crowd. Its dislike, too, and its courage in attacking the tiger, is well known all over India. Not long ago, as a Malayan boy, who was employed by his parents in herding some water-buffaloes, was driving his charge home by the borders of the jungle, a tiger made a sudden spring, and seizing the lad by the thigh, was dragging him off, when two old bull buffaloes, hearing the shriek of distress from the well-known voice of their little attendant, turned round and charged with their usual rapidity. The tiger, thus circumstanced, was obliged to drop his prey to defend himself. While one buffalo fought and successfully drove the tiger away, the other kept guard over the wounded boy, and after the evening, when the anxious father, alarmed, came out with attendants to seek his child, he found that the whole herd, with the exception of the two old buffaloes, had dispersed in consternation to their village; while these were still there—one standing over the bleeding body of their little friend, while the other kept watch on the edge of the jungle for the return of the tiger.—*Keppel's Visit.*

Graphology.—The leading character in the hand of our great modern commander (Wellington) is firmness and business-like simplicity. There is not an ornamental or unnecessary line in his whole correspondence. His letters offer a singular contrast to the curt stereotyped style of his despatches, as we have given a specimen of them; they interest largely and with the greatest minuteness into details which a man so occupied would have been supposed entirely to overlook. Here to the discussion of others. The spirit which gave a guard of honour is to be drawn up is stated to a yard; and even the disposition of a mangle or a plate-chest is not beneath the attention of the great. In the dressing Address, the unanimous consideration for others, and the extensive and never-inked and entire of his character—rapid, impetuous, unscrupulous: the intense intellectual power contrasting with the passions of the jaded hand, is spurred beyond its natural paces, and urged into a swift, aggressive scramble, beyond all conventional or recognised observances. Lord Byron's paragraphs of the same character, and the Kaughton's hand in a remarkable degree betrays, more than any else I am acquainted with, an unconquerable restlessness of impulse and heedless dash.—*Dr Blenkinsop's Memoirs.*

The Budget.—In a recent work on political economy, M. Chevalier says that the word "budget," in its present signification, has passed into France from England; the latter country having first borrowed it from the old French word *bougette*, a leather purse (*bougette* is, in fact, an old Norman), a leather purse. It was the custom in England to put into a leather bag the estimates of receipts and expenditure presented to Parliament. In France the word was first used in an official manner in the *arrêté* of the Consuls 4th Thermidor, year X, and 17th Germinal, year XI.—*Notes and Queries*

Late Hours.—Conversation at breakfast about late hours. The porter of the late Lord Jersey came to some one and complained he could not stay with the dressers, because "my lady was the very latest woman in London." "Well, but what then?" All women of fashion are late; you can sleep afterwards." "Yes, that's not all, for early Lord late; you can sleep afterwards." "Yes, that's not all, for early Lord late; you can sleep afterwards." "Yes, that's not all, for early Lord

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The *Patriote* is being fitted up at Cherbourg as an Imperial yacht; to take the name of the *Reine Hortense*, and to be commanded by Captain Excelmans, son of the late Marshal Excelmans.

The equestrian statue of the Queen, to be erected in Glasgow, is approaching completion, and the west end of St. Vincent-place has been selected as its site.

Before the selection of the site for the Crystal Palace, at Sydenham, the land in the neighbourhood was valued at £40 per acre; the price has now been raised to £500 per acre.

The area of Babylon was 225 square miles, that of Nineveh 216 square miles, while that of London and its environs is about 114 square miles.

A letter from Warsaw announces the death of Count Francis Potocki, one of the most influential men in Poland.

The direct electric wires to connect Liverpool, Manchester, and Birmingham, with Continental Europe, via France and Belgium, was commenced laying down in Tuesday, by the Submarine and European Telegraph Company.

Nine petitions for the sale of estates have been placed in the Encumbered Court, including one for the estates of the late Earl of Blessington in the counties of Tyrone and Dublin.

In a case before the Justice of Peace Court, held in Banff, out of six persons concerned, only one individual, a woman, could sign her name.

It is not generally known that the bride of the Emperor Napoleon III. received her education in England. When a girl, Mdlle. Montijo, with her sister the present Duchess of Alba, were pupils at a highly respectable establishment at Bristol.

A former named Nicholas Dill, at Ballyvolane, Cork, has recently died at the age of 102 years. His brother, Jeremiah Dill, aged 105, still lives on the same farm. Their father lived to be 80, and their mother to 112 years of age.

While Mr. Hay, of Letham-grange House, Edinburgh, was writing in his library, two panes of the window were simultaneously broken, and the glass scattered about the room. On examination, Mr Hay discovered that a blackbird, pursued by a sparrow-hawk, had dashed through the window, and taken shelter between two spaniels, which were lying before the fire. Both birds were secured.

Mrs. Chisholm has delivered a lecture on female emigration at the Sussex Hall, Piccadilly-street, to a great number of members of the Jewish persuasion, for whom the lecture was especially intended.

Mr. Charles M'Kenzie, late of Laggan, Glencairn, who left some time ago, without the knowledge of his engagements, has recently remitted from Australia funds sufficient to cover all his liabilities.

By the deaths of Viscount Melbourne, the Earl of Tyrconnel, and the Earl of Oxford, three peerages have become extinct within the last fortnight.

The Prussian Minister of Commerce is about to introduce a bill into the Senate for taxing all railway companies not under the control of the Government, to the extent of about 15,000 thalers per annum.

George Stone, the Bristol poet, has been robbed of his hard-earned savings, amounting to £35. He had refused to put the money in the bank, being fearful it would break.

Captain Henry O'Brien, D.A., has arrived from Malta, and has entered upon his duties as private secretary to Sir James Graham at the Admiralty.

Edward Mann, an engine-driver on the Great Northern Railway, has been sentenced to two months' imprisonment for intoxication and neglect of duty, and thereby letting a train run into a lime pit.

So great has been the loss of shipping property on the east coast of Scotland during the past three months, that some of the Marine Insurance Clubs have lost a quarter of their capital.

A writer to the newspapers complains of our retaining the French names for English-built ships—such as *Impératrice* for Imperious, *Mangeticune* for Magician, &c.—and wishes the French name to be retained only in captured ships.

The Committee of the Privy Council sat on Tuesday, and there is a very general rumour that the Government intend to issue a Commission to inquire into the state of education in the country.

The Government of Saxe-Gotha has ordered an Exhibition of German and Foreign Industry, which is to take place in August next, in the Palace of Freidenstein.

Twenty persons—two merchants, and the others mechanics and artists—have been arrested at Milan for being connected with Socialist clubs.

The members of all the literary and scientific societies in Liverpool have had meetings at the Royal Institution, for the purpose of making a suitable demonstration on the 8th of March, in commemoration of the centenary of Roscoe's birthday.

The Minister of Commerce of Prussia proposes for the consideration of the Zollverein Congress, that the rate of postage throughout the kingdom be at one groz.

The Earl of Zetland (whose Countess is a teetotaller) has engaged a teetotal lecturer to labour amongst the men employed in his iron and stone works at Marske, near Redcar. The Earl has built a schoolroom and library and reading-room for their use.

The King of Denmark has given his approval to a project for establishing railroads throughout Jutland.

Mr. Bransby Cooper will deliver the oration this year in celebration of John Hunter, before the President and Fellows of the Royal College of Surgeons.

There was a very high tide in the Thames on Monday, which did much damage below Bridge. Many of the wharfs and watersde premises were overflowed, and the cellars and basement floors of lowlying houses were inundated to some depth.

The emigration from Liverpool in 1852 surpassed that of any previous year, having amounted to 325,000 souls. No less than 58,...3 emigrants sailed for Australia alone, the great majority of whom were English or Scotch.

Lord Londesborough and W. Wells, Esq., M.P., killed on his Lordship's estate at Willoughby, near Scarborough, in one day, 134 pheasants, 351 hares, 9 rabbits, 2 partridges, and 1 snipe. Total, 497 head.

Lord Aberdeen has conferred the Green Ribund of the Thistle, vacant by the death of the Earl of Stair, upon the Earl of Eglinton.

Mr. Charles Palgrave has been appointed Consul at Dublin, and Mr George Moss Vice-Consul at St. Helena for his Majesty the King of the Belgians.

Two sharp shocks of earth, like have taken place at Ardara and Under-York, in Yorkshire, by which houses were slightly injured, and some thick walls cracked. An earthquake in Sweden, and at this season, is considered extraordinary.

Henry Norris, valet to Lord Ravensworth, who has been twice examined relative to the late robbery at Ravensworth Castle, has been discharged, the magistrates thinking the evidence not strong enough for a conviction.

The Archbishop of Paris has ordered that a collection shall be made in all the churches of the diocese, for the maintenance of the orphans whose parents have been carried off by cholera.

Mrs. Sloane, whose case has excited so much public interest, and whose husband (who was imprisoned with her) died some time back, has been discharged from Newgate. She was in a bad state of health, and looked very weakly.

A most valuable coal-field has been discovered near Douai, in France. Four new veins of the very finest quality of coals have just been commenced, and from one of them alone ... produce has been 1100 hectolitres a day.

The directors of the Royal West India Mail Steam-packet Company have determined upon erecting, in the shape of the Southampton Cemetery, a monument to the memory of the unfortunate passengers and crew who lost their lives in the *Amazon* steam-ship.

Salmon-fishing commenced last week in the rivers and estuaries north of the Tweed, and with every prospect of success.

The King of Prussia has sent to the Emperor of Austria, as a souvenir of His visit to Berlin, a magnificent dinner-service.

The Queen of Greece intends taking a journey to Germany this year, and will visit Vienna.

The South Hants Militia met for the first time on Tuesday, at Southampton, for the purpose of drill. They numbered about 500, and appeared to be a stout healthy class of men.

On Wednesday evening, a very numerous assemblage congregated in Exeter hall to hear Father Gavazzi deliver his farewell lecture previous to his departure for America.

Letters from Odessa state that the exports for the past year were large—quarters, against 17,000 quarters of wheat in 1851.

Arrangements are in progress for an amalgamation between the Royal Australian Mail Company and the General Screw Steam Shipping Company.

The committee of the proposed Roman Catholic University in Dublin have purchased, for the sum of £3500, the splendid house in Stephen's-green, the residence of the Whitley family.

The remains of the late Earl Beauchamp were consigned to their last resting place, in the vaults of Marylebone Church, on Saturday last.

CELEBRATION OF LORD PEVENSEY'S TWENTY-FIRST BIRTHDAY, AT THE SHEFFIELD ARMS, FLETCHING. (SEE PRECEDING PAGE.)

discovered that he was in earnest, had to encounter some opposition from the Allopathic practitioners in the town, who, perhaps not unnaturally, felt that the new institution might conduce to propagate principles which they did not approve of. However this may be, the commencement of Dr. Dunn's Hospital had the effect of reviving the old infirmary project, and another vigorous effort was made to realise it. Several meetings were held, and a diligent canvass was made, but the result was, as before, a decided failure. In the meantime, that is to say, on the 26th of May last, the first stone of St. James's Hospital was laid in due form by its benevolent founder; and, notwithstanding all opposition, it received the support of the leading gentlemen in the district, including Earl Fitzwilliam, Viscount Melton, Sir J. Copley, Bart.; Mr Edward Denison, M.P.; Mr. Wrightson, M.P.; Mr. T. Walker, Warmsworth, F. D. Cooke, Esq., Owston; Captain Rameden, Hexthorpe; Mr. Y. Parker, Shuthorpe; Mr. Brown, of Shooter's-hill; Mrs Wood and family, of Campsall-hall, &c.

The building was to have been completed in October last; but, owing to unavoidable delays, it was not finished until the beginning of January. It occupies a point of land on the west side of the town of Doncaster, at the junction of Cleveland-street and St. Sepulchre-gate, and very near to the new railway plant. It is triangular in plan, with the apex pointing towards the turnpike-road to Sheffield, and the base abutting upon a reserved area of land, which may be applied to the future extension of the hospital, if necessary. The building is divided into two sections; one of which is for the accommodation of patients, and the other principally for the officers and conveniences of the institution. The section on the left-hand in the Engraving contains the two principal wards, which are spacious, lofty, well-ventilated apartments, with every facility for surgical operations and medical treatment. It is believed that these two wards will suffice for some time to come, but arrangements have been made for additional accommodation for patients in the other part of the building: the total number which the institution is calculated to hold being twenty-one beds. There is a bath-room for hot, cold, vapour, and shower baths, and a well-appointed kitchen, laundry, and other offices. The institution is warmed and ventilated on the most improved principles, and is, in every respect, a model hospital. Dr. Dunn is the consulting physician; Mr. Denham, house-surgeon.

The institution, the origin of which we have thus briefly related, was formally opened on Wednesday, the 26th ult. Divine service was held at the parish church in the morning, at which Dr. Dunn, the founder of the institution, and a number of gentlemen, together with the officers and servants of the institution, attended. A very appropriate sermon was preached by the Vicar, Dr. Sharpe, who selected his text from Matthew xxv., 36: "I was sick, and ye visited me."

At one o'clock a numerous party of guests assembled at the new Hospital to partake of an elegant cold collation provided by the Doctor. The entertainment was given in the principal ward of the building, which was gaily decorated on the occasion. Dr. Dunn occupied the chair, supported by the Mayor and Vicar.

After the removal of the cloth, and the usual preliminary toasts, the "health of Dr. Dunn" was proposed, in highly flattering terms, by the Mayor.

ST. JAMES'S HOSPITAL, JUST OPENED, AT DONCASTER.

Dr. Dunn then rose, amidst much applause; and, having made a few preliminary remarks, took a rapid review of the rise and progress of St. James's Hospital; mentioning, as foremost among those who supported him in his project, his friend Mr Fisher, of Westfield, who generously presented him with the title deed of the land, and who had been throughout his most energetic friend. Next were Sir Joseph Copley, Mr. Battie Wrightson, Lord Fitzwilliam, and Viscount Milton, Mr Thomas Walker, of Warmsworth; Mr Brown, of Shooter's-hill; Mrs Wood, of Campsall-hall; Mrs White, and a great number, whose names should be placed in the most conspicuous part of the building, not forgetting Dr. Sharpe, who, at great personal inconvenience, had readily consented to preach a sermon. The Doctor concluded by stating that the Hospital contained 21 or 22 beds.

Some other toasts followed, and the party separated at about four o'clock.

In the evening the new institution was illuminated. The locomotive band was stationed in front of the building, and played several popular airs to the gratification of a very numerous concourse of spectators. At eight o'clock a most excellent supper was provided in the lower ward for the workmen, railway *employés*, and others. The health of Dr. Dunn was proposed, and received with vociferous cheering. That gentleman having responded in suitable terms, several other toasts, interspersed with songs, were proposed, and the company remained together until a late hour.

Next day (Thursday) the hospital was opened for the reception of patients.

THE CLIPPER SCHOONER "MARIAN ZAGURY."

This finely-modelled clipper schooner was launched on the 12th ult., from the building-yard of Messrs. Hessel and Holmes, of Rye. Her dimensions are: 104 feet in length; breadth, 18 feet 3 inches; depth of hold, 10 feet 10 inches; register 140 tons old and 98 tons new measurement; she is regarded as the handsomest vessel ever constructed in the port of Rye; and it is expected by competent judges that she will sail exceedingly fast. Notwithstanding the unpropitious state of the weather, a gale of wind from the S.W. blowing at the time, there was a large assemblage of persons at the launch. At half-past twelve the dog-shores were removed, and, as she glided onward towards the Channel, received the name of *Marian Zagury* from Mr. S. F. L. Pereira. Mr. Samuel Zagury (her owner), Mr. G. Phillips, and Mr. H. Terry, of London, visited Rye to witness the launch. Captain Matthews has the command of the vessel, which is intended for the African trade.

A dinner was provided at the Red Lion Hotel, under the superintendence of Mr. Smith, the landlord, for the shipwrights and others engaged at the yard of Messrs. Hessel and Holmes, the builders of the vessel.

THE CLIPPER SCHOONER, "MARIAN ZAGURY."

TESTIMONIAL TO MR. R. N. PHILIPPS.

Among the candidates who sought, at the late election, to represent the borough of Stafford in Parliament, was Mr. Richard N. Philipps, of Christ College, Cambridge, and the Northern Circuit. His canvass promised him a prominent position on the poll, on the eve of the day of which the Reformers in the borough being of opinion that if Mr. Philipps persevered in the contest the second seat would be lost to their party he retired in favour of Mr. A. Otway, one of the members returned, whose opinions were somewhat identical with his own. Shortly after the election, the friends of Mr. Philipps entered into a subscription for the purpose of presenting a public testimonial to him, "as an expression of the high estimation in which his principles, personal character, and public conduct" were held. With the proceeds of the subscriptions, principally raised in small sums, given by the humbler class of electors, a piece of plate, and a copy of "Mill's Principles of Political Economy" (2 vols.), were purchased and presented to Mr. Philipps on the 17th ult., at the Lyceum, in Stafford, in the presence of a large number of electors and other inhabitants of Stafford, among whom were 300 ladies, who had previously partaken of tea in the theatre. Altogether the company numbered 800 persons.

The chair was taken by George Sydney, Esq., and among those on the platform were R. N. Philipps, Esq., G. Hadfield, Esq., M.P., George Thompson, Esq., and Tindal Atkinson, Esq. Upon the table in front of the chairman, the presentation plate formed a conspicuous object. It consists of a silver salver, about seventeen inches in diameter, most chastely executed. The outside is a running vine, with its rich clustering grapes, in frosted silver; round the surface of the plate is a wreath of evergreens, and ears of corn, through and round which runs a ribbon or band, on which are inscribed, in bold characters, "Free-trade," "Reform," "Retrenchment." At the bottom of the wreath is quartered Mr. Philipps crest—a lion rampant, with the motto, "Ducis amor patriæ" (the love of my country leads me on). From the top, and within the chaplet, a banner is suspended, on which are engraved the old borough arms of Stafford, and the corporation arms. In the centre of the salver is the following inscription:—

TESTIMONIAL PRESENTED TO MR. R. N. PHILIPPS.

Presented to R. N. Philipps, Esq., LL.B., by the Reformers of Stafford, as a testimonial of their warm approbation of the zeal and ability with which he advocated the great principles of Progress, Free-trade Reform, and Retrenchment, and as a mark of esteem for his private worth and courtesy of demeanour whilst a candidate for the representation in Parliament of the ancient borough of Stafford, at the general election, A.D. 1852.

The testimonial was presented by the chairman, in due form, and several speeches appropriate to the occasion were made.

TESTIMONIAL TO MAJOR MAUGHAM.

THIS characteristic group bears upon its central shaft—part of an elephant's tusk—the following inscription:—

The tusk of Gullala, employed, in the siege of Mooltan, in placing the guns in position on the Mundee Ava mound. This memento of the Punjaub Campaign, and three years' honorary membership in field and garrison, is presented by the Mess of the 1st Battalion 60th Royal Rifles, to Major Thomas Maugham.

The figures, trees, animals, and ornaments are silver. The front of

TESTIMONIAL PRESENTED TO MAJOR MAUGHAM.

the shaft is engraved with a view, showing the Ava mound in the foreground. The inscription occupies the reverse. On the base, which is triangular, are Indian animals—the camel, Brahmin bull, and rhinoceros. The overhanging trees are the plantain, fig, and palm. The group has been superbly executed by Messrs. Hunt and Roskell.

VISITATION OF TRINITY COLLEGE, OXFORD.

ON Tuesday week, being the Feast of the Conversion of St. Paul, the Bishop of Winchester commenced a visitation of this society, in accordance with the unanimous request of the whole body of Fellows, made soon after the issuing of the report of the University Commission. The Right Rev. Prelate arrived on the evening of the 24th ult., and the following morning, attended by his Chancellor and Chaplains, was conducted in procession to the College Chapel; the scholars and Fellows wearing their surplices, with the hoods of their different degrees. Morning prayers being ended, the Visitation was formally opened in the Hall

VISITATION PROCESSION IN THE QUADRANGLE OF TRINITY COLLEGE, OXFORD.

(which we have represented in our Engraving), and the members of the foundation were severally cited by name

Trinity College has produced many men of eminence, and is spoken highly of in the Report of the Commissioners. It was founded in the year 1556, by Sir Thomas Pope, Knight, who placed it under the perpetual superintendence of the Bishops of Winchester. There is a foundation for a President, twelve Fellows, and twelve scholars. The Bishop held a similar visitation of New College in November last.

The Hall, which is shown in our Illustration, is on the western side of the Quadrangle, opposite the Library. It was rebuilt on the site of the Refectory of Durham College in 1618-20, with rooms over it. The roof was reconstructed about 1816, when the original open pediments were exchanged for a regular line of battlements. The interior was refitted about 1772. Among the portraits is one of the founder of the college, painted by Francis Potter, an ingenious mechanic, and a member of the College about 1637.

From the Hall, the visitor passes the foot of the Bell-staircase into the court of the new buildings. The old yew-tree, and a view of the President's lodgings from the gardens (nearly four acres in 1748) are interesting memorials of *Oxonia Antiqua*.

We have likewise engraved the Tomb of the founder, Sir Thomas Pope, and his wife, on the north side of the altar-table in the College Chapel. It is a fine altar-tomb, with the recumbent effigies at full length in alabaster. Sir Thomas is represented in complete armour, at his feet a griffin, and at his head a helmet, with his crest. Sir Thomas Pope was interred in great state on the north side of the old parish church of St. Stephen, Walbrook (where his second wife, Margaret, had been before buried) with his daughter Alice, but in 1567, eight years after his death, his remains, with those of Dame Margaret, his second wife, were removed to the chapel of this College; where also the Lady Elizabeth Powlet, his widow, who had been his third wife, and had survived her third husband, was buried in great pomp in 1593.

TOMB OF THE FOUNDER OF TRINITY COLLEGE, OXFORD.

LORD RAGLAN.

YIELDING to none of our contemporary British heroes in bravery, or in the higher qualities which go to constitute the character of a good soldier, Lord Fitzroy Somerset, during a prolonged career, has superadded to his purely military services others of a less brilliant and distinguished, but more directly useful, order, which have procured for him an amount of respect and confidence from successive Governments of this country more than commensurate with his actual achievements in the field, although they were of no common order. Early in his military life, while in the Peninsula, the Duke of Wellington detected in him qualities not too often found in men whose bravery has been their original passport to eminence, which induced that discerning chieftain to attach the young officer more directly to himself, and entrust to him functions requiring a union of judgment, coolness, indomitable perseverance, and minute military knowledge, with those more common qualities of the soldiers which are necessary in order to ensure respect and obedience. From that date until the present hour this distinguished officer has been employed, almost without intermission, in the discharge of duties of a similar character to those for which he was thus early selected; and, if the excellent organisation and discipline of the British army be fairly a subject of national congratulation, it would be unfair to Lord Raglan to withhold the praise for the large proportion of its merits that is due to the incessant and watchful services of the Military Secretary to the Commander-in-Chief.

LORD RAGLAN, MASTER-GENERAL OF THE ORDNANCE.

Fitzroy James Henry Somerset, Lord Raglan—better known as Lord Fitzroy Somerset—is the youngest son of the fifth Duke of Beaufort. He was born on the 30th of September, 1788. He was gazetted to a cornetcy in the 4th Light Dragoons on the 9th of June, 1804, when he was but sixteen years old; on the 30th of May following he received his commission as Lieutenant; and, in three years after—that is to say, on the 5th of May, 1808—he obtained the command of a company. There can be no doubt that, like so many other young scions of the aristocracy, Lord Fitzroy Somerset thus obtained his promotion with undue rapidity, inasmuch as he was barely twenty years of age at the date of his captain's commission; but fortunately, he was of the stuff whereof good soldiers were made, and he was to serve under a general who well knew how to discover latent talent, and turn it to the best uses.

The history of the military career of Lord Raglan is almost identical with that of the British army under Wellington in the war which commenced in Portugal and ended at Waterloo. He took part in the battles of Rolica, Vimiera, Talavera and Busaco (where he was seriously wounded); the attack on Oporto and its capture; the operations against Soult; the retreat to the lines of Torres Vedras and their occupation, the pursuit of Massena; the battle of Fuentes d'Onor; the first siege of Badajos; the affair of El Bodon; the siege of Ciudad Rodrigo; the capture of Badajos, the battle of Salamanca; the capture of Madrid and the Retiro, the driving of the French from Valladolid to Burgos; the siege of Burgos; the affairs contingent upon it; and in the retreat to the frontiers of Portugal; the final advance in 1813; the battle of Vittoria; the battle of the Pyrenees, the affair at Irun; the passage of the Bidassoa, of the Nivelle, of the Nive; the advance in 1814; the battle of Orthez; the battle of Toulouse, and in the other affairs which took place before the surrender of Napoleon. During the whole of these campaigns, Lord Fitzroy Somerset was superadding to his ordinary duties as an officer the discharge of functions of the most difficult and responsible kind. As early as 1809, Wellington had distinguished his merits so far as to appoint him one of his aides-de-camp, and in the following year he was made Military Secretary to the General. The duties of that office he continued to discharge throughout the career of the army in the Peninsula; and the opinion of the Duke of Wellington is on record, that the successes of the British troops were, in no slight degree, due to the admirable services of the Military Secretary. Indeed, if the character of Wellington himself be considered—how much of his own success depended on the moral influence created by discipline—it is obvious that, unless he had been seconded by a man of the same views and character as himself, he would have fallen short of the full attainment of his glorious ends. In this spirit it is that we must interpret the encomium passed by the Duke

RAGLAN CASTLE, ON THE ABERGAVENNY ROAD INTO WALES.

of Wellington on Lord Fitzroy Somerset; and, if we reflect, that there can be no greater honour to a man than to say that he has fully discharged appointed duties, that although others may have performed more brilliant and world-known services, no place will be found in the records of fame for the less obtrusive, but not less valued ones, by which regulates the machinery by which all the triumphs are won. It would be an error, however, to suppose that Lord Fitzroy Somerset's duties as Military Secretary precluded him from an active a share as others in the perils of the battle-field. There was enough in the annals of the campaigns in Portugal, Spain, France, and Flanders, to place him on a level with the most intrepid of the heroes of that age of military glory. On the 9th of June, 1811, Captain Somerset had been promoted to the rank of Major; on the 27th of April, 1812, he received his Lieutenant-Colonelcy

When the return of Napoleon from Elba once more called the British army into active service, Lieut. Colonel Lord Fitzroy Somerset was at his post. He was still attached to the Duke of Wellington in his old post of Military Secretary. He was at the battle of Quatre Bras; in the retreat of the 17th of June; and at the final battle of Waterloo, where he was so severely wounded that he was obliged to submit to amputation of his right arm.

With the battle of Waterloo ended the active military service of Lord Fitzroy Somerset. On the 29th of August, 1815, he was promoted to the rank of full Colonel in the army, and was nominated an extra aide-de-camp of the Prince Regent. He also received the Cross of a Knight Commander of the Bath.

Lord Fitzroy Somerset now commenced a civil career. In 1818 he was returned to the House of Commons for the borough of Truro. In the following year, on the death of Sir F. Harvey, he was appointed Secretary to the Master-General of the Ordnance, a post which he continued to hold till he resigned it in 1827, on the appointment of Mr. Canning to the Premiership. When the resignation of Mr. Canning's successor, Lord Goderich, led to the appointment of the Duke of Wellington as Prime Minister, Lord Fitzroy Somerset was nominated Military Secretary to the Commander-in-Chief; thus faithful at home and during a long peace, the duties which he had discharged in the Peninsula with so much satisfaction to his old commander. In 1826, on the 27th of May, Lord Fitzroy Somerset was promoted to the rank of Major-General, and in 1838, on the 28th of June, to that of Lieut.-General. On the 19th of November, 1830, he was appointed to the Colonelcy of the 43rd Foot.

His Lordship received the "gold cross and five clasps," for the following battles Fuentes d'Onor, Badajoz, Salamanca, Vittoria, the Pyrenees, Nivelle, Nive, Orthes, and Toulouse; and the "silver war medal and five clasps," for Roleia, Vimiera, Talavera, Busaco, and Ciudad Rodrigo.

Lord Raglan has taken but little part in politics. He was a stanch supporter of the Tory party, but seldom or never addressed the House of Commons.

On the death of the Duke of Wellington—Lord Hardinge having been appointed Commander-in-Chief Lord Fitzroy Somerset was promoted to be Master General of the Ordnance, and at the same time was called to the Upper House, by the title of Baron Raglan

The noble Lord married, on the 6th of August, 1814, Lady Emily Harriet Wellesley Pole, the second daughter of the third Earl of Mornington. His eldest son died in December, 1843, of wounds received at the battle of Ferozeshah. Besides two daughters, Lord Raglan has a son, the Hon. Richard Henry Fitzroy Somerset, who was born on the 24th May, 1817.

RAGLAN CASTLE.

The title of Raglan is derived from the village of Raglan, in Monmouthshire, long celebrated for its noble fortress of decorated architecture:—

> A famous castle that,
> Their Raglan keep, that stands moated still and stout,
> Meaning of moat and mote, upright as stands a fact
> With sure embrasured rampart, and flanking bastion round,
> The carven animals, wrought all with rugged look
> The men at arms, that look'd as if they might walk out from
> The fountain trim that runs beneath it, and sight
> Both pitch in above [illegible]

"This peerless ruin (says Cliffe, in his 'Book of South Wales') stands on a gentle elevation, partly hidden with foliage, a short distance from the village and church of Raglan, on the right of the Abergavenny or great road into Wales. No portion of the structure can be assigned to an earlier period than that of Edward IV. A castle was founded here by one of the Clares in the thirteenth century, from which period its history, for more than two hundred years, is obscure. It successively belonged to the Herbelots and the Berkeleys, and in 1461, on the death of the Earl of Huntingdon, better known as the Earl of Pembroke, the castle and manor passed into the hands of his son-in-law, Sir Edmund Beaufort, a distinguished soldier and statesman of Royal lineage, in the reign of Henry VII., who, in right of his wife, the heiress of the House of Herbert, bore the title of Baron Herbert of Raglan, Chepstow, and Gower. This eminent person died in 1836, 'full of honours'; and the castle progressively rose in dignity, especially during the time of Henry, 5th Earl and 1st Marquis of Worcester, who was born in 1669. The records of the Civil War present few events so touching of their kind as the struggle made here by this gallant and good old man in favour of the King. When created a Marquis, in 1642, he raised an army of 1500 foot and 300 horse, which he placed under the command of his son, the celebrated author of the 'Century of Inventions,' and the discoverer of the steam-engine Charles seventh Peer here in 1646, during the civil dissensions, but left Raglan, and remained until the 15th of September, when he took an affecting leave of the venerable Marquis

"Raglan was the last castle through-out this broad realm which defied the power of Cromwell. Fairfax's Lieutenant, when he summoned the garrison to surrender, in June, 1646, wrote thus: 'His Excellency, Sir Thomas Fairfax, having now finished his work over the kingdom, except *this castle*, has been pleased to spare his forces for this work.' The Marquis, then eighty-five, in reply, stoutly said, that he 'made choice to use pleasant (cold) rather than dry nobly than to live with infamy.' The siege lasted from the 3rd of June until the 19th of August.

"The castle was literally 'spoiled' after the siege; the farmers in the vicinity emulated the Parliamentary Commissioners, and no effort seems to have been made by the Somerset family to preserve their ancestral house until rather late in the last century, save which, like all the Duke of Beaufort's other castles, it has been carefully preserved. Twenty three stone staircases were taken away during the interval; and the great hall, the chapel, and other grand features of the sumptuous building, grievously injured Enough, however, is left to convey a vivid idea of its olden grandeur; and much of the masonry is as fresh as when first exposed to the elements. You muse on the time-worn arms as you do so, and frequently of the past.—*Mirdare vel timere sperno.*' I scorn to change or to fear. The machicolated gateway tower on the right contains a few fragments of armour, and a vaulted room which possesses very fine properties of sound."

The great hall is the principal feature of the Stone Court; beyond are the remains of the chapel. The Pheasantry, or Grand Terrace, is very fine; and cellars are of great extent. The Citadel, or Yellow Tower of Gwent, has walls ten feet thick, and five stories, rising 120 feet. Altogether, it is the most perfect decorated stronghold of which this country can boast—a romance in stone and lime.

SINGULAR FRAUD.—Some sharp customers have been lodging sealed bags of lead with the gold commissioner at Mount Alexander, and then selling the commissioner's receipts. Messrs. Stephens and Bowyer, of Ballast, have been defrauded of £200 in this manner. They purchased two receipts for a hundred ounces of gold; when they presented the receipts they obtained the two bags marked and numbered as they described, which they found to contain lead only. The Government say they delivered what they received, and have nothing to do with the matter. The men that sold the receipts cannot be found, and there at present the matter rests.

THE STEAM NAVIGATION AND PASSENGER ACTS.—The Commissioners of the Customs have directed the collectors and controllers of the several ports in the kingdom to transmit a return of expenses incurred in their respective ports under the Steam Navigation Acts, 7 and 10 Vic., cap. 100, and 11 and 12 Vic., cap. 81, and the Passenger Acts, 12 and 13 Vic., cap. 33, and 14 Vic., cap. 1, from the commencement of those acts to the 5th January, 1853, distinguishing each year respectively, observing that the amount of salary to the officers concerned is not to be included in the expenses.

CENTRAL AFRICA.—We are informed that, upon the application of Mr. Petermann, strongly supported by the Chevalier Bunsen, another German gentleman, M. Vogel, is directed by the Foreign Office to proceed to join the expedition of Drs. Barth and Overweg, in Central Africa as astronomer and is hence accompanied by two appointed by her. It is to be hoped that the addition to the expedition may be productive of results of a more practical nature than those hitherto arrived at by the undertaking. *Morning Chronicle.*

ROYAL MAIL STEAM-PACKET COMPANY.—Captain Richard Barton, R.N., the Marine Superintendent of the company, is about to retire, after many years' services, from the superintendence of the Company's ships at Southampton, and he is to be succeeded by Captain Vincent.

SCIENTIFIC MEETINGS.

SOCIETY OF ARTS.—At the meeting of this society on Wednesday evening (Sir Charles Pasley in the chair), a short paper by Mr. Smith was read, on the application of photography to the process of dyeing. Mr. H. Wilkinson then proceeded to lecture on some recent improvements in fire-arms, commencing with a brief description of the alterations which have been introduced at various times in their historical order, first calling the attention of the meeting to the fact that in the early part of the sixteenth century, a single discharge of what was said to require no fewer than thirty seven words of command addressed to the soldier! From the time of Henry VIII. down to the close of the reign of Charles II. the wheel-lock gun was employed, in which explosion was produced by an iron wheel revolving rapidly against a piece of pyrites. Next came the flint-lock musket, which was introduced in the reign of William III., and has lasted until, it is not likely to survive our own generation. The effect of this musket was found to differ on the field of battle, compared with the range of shot made from it; according to Euclid's calculations, the whole of its maximum effect in all the engagements of the last war did not exceed one man killed or wounded out of 200 shots; while its maximum effect, according to the same authority, was one man killed or wounded in 10 000 shots. A clergyman, the Rev. Mr. Forsyth, invented the copper cap musket at present in use. But the discovery of the Rev. Mr. Forsyth, a rotatory motion is imparted to the ball as it passes along a grooved barrel, has effected the most important of all the changes that have been made in modern gunnery. The great object which it is desired to attain in connection with the rifle is that the ball should fit tightly in the groove, and that at the same time the operation of loading should not be too tedious or difficult. In the Minie rifle this object is sought to be gained by the insertion of an iron cup, with a tapering cavity at the base of the bullet. The cup is driven home by the explosion, and the bullet is thus swelled to the full size of the groove. But it has been found that the force of the explosion is frequently so great as to drive the iron cup through the bullet, leaving a leaden shoulder, and to burst the barrel. Various remedies for this defect have been suggested, but none of them have been found to answer. The improvement which the lecturer has succeeded in effecting, consists in substituting carved grooves round the base of the bullet for the cavity within it. In the explosion compresses these carved grooves together, and swells the ball to the full size of the bore; while the danger attending the use of the Minie bullet is avoided. It was stated that this invention has proved successful on trial before military authorities. The lecturer concluded his remarks by a lucid description of Mr. Wheatstone's electro-magnetic method of measuring the velocity of cannon balls. A vote of thanks was unanimously voted to Mr. Wilkinson for his entertaining lecture

INSTITUTION OF CIVIL ENGINEERS.—At the meeting of this society Mr. James Simpson, Vice President, in the chair—the paper read was "On the Ventilation of Mines," by Mr. Joshua Richardson, M. Inst. C.E. The author, after showing and launching the discrepancy existing in the various systems of ventilation, which might be traced to the want of good formulæ for the necessary calculations, strengthened his position by the evidence given in the reports of the Parliamentary Committees, and of that of the South Yorkshire in 1852. He then explained the usual modes of calculation, and demonstrated that many more points required to be considered than were ordinarily admitted to bear on the question, and that no sound basis of calculation could be formed on any one of the various elements, but that the whole must be carefully considered, after having examined each element in detail. The chemical constitution and proportional number of air must then be considered, as uses in the animal economy, its adulteration by deleterious gases, and the compensating action provided by nature, for restoring it to its primitive purity. A clear description was then given of the "Eudiometer," and of the method of using it, to discover the quantity of oxygen, and the per-centage of carbonated hydrogen, or other gases contained in the air in any part of a mine. The nature of those gases, and determining the quantity of hydro-carbonate, or fire-damp was next, that of green sulphate of iron, impregnated with nitrous gas the relative quantity of oxygen, and that of fine water (or better, caustic potassa, or baryta), the relative admixture of carbonic acid. The diagram of Dr Clanny's clever analysis of fire-damp was then given and reasoned on; and the precautions to be observed on entering a mine, after an explosion, were detailed at length. The calculations were then given for determining, from the previous data, the quantity of air actually required in a mine, taking into consideration the number of men, horses, and lights, the presence of deleterious gases, the increased temperature, the difference of barometric pressure, and the length of the galleries through which the air circulated The results were shown in tabular forms, and simple rules were declared for determining the quantities required, under all circumstances of the existence of deleterious gases, &c. The amount given by these rules might appear larger, but, when compared with the tabular statement of the quantity of air actually passing through twenty-four of the principal mines in Great Britain, it was shown to be below that allowed for the best, and even that had not been entirely free from accidental explosions. The results of the investigations of the author, as to the best mode of ascertaining the quantity of air required in mines, under all circumstances, basing the calculations on the premises demonstrated in the introduction, and the simple rules deduced therefrom, were brought forward in a remarkable degree, with the best practical observations, and a hope was expressed that the great simplicity and applicability of the rules would recommend them to mine agents and viewers, as well as by establishing their trustworthiness, should induce their general adoption. The discussion was adjourned, until February 8th, when the whole evening would be devoted to the subject.

LONDON INSTITUTION.—On Monday Dr. Lyon Playfair, C.B., F.R.S., Professor of Chemistry in the Government School of Mines, delivered at the London Institution the first of a course of six lectures, "On the Development of Industrial Resources." It was announced by the elucidation of the following subjects and principles.—The factors involved in production; the relations to production of masculine and nervous labour; that labour is the characteristic of the preceding civilization; man only uses natural powers in the production of utilities; he does not *create* properties, but only *applies* them. In illustration of the influence of the latent power of coal in the raw material upon the earlier stages of manufactures and commerce, Dr. Playfair noticed, in succession, the cotton and muslins of India; the white clays devoid of iron of China; and Japan, the porcelain produced from which was imported by European nations for centuries before they sought for such clays at home; the sand, stone and cement which afforded the ancient Egyptians materials for their architecture and sculpture; and the coal, iron, and lime on which the manufacturing industry of Great Britain so mainly depends. But production involves, as its factors, the raw material, the labour, and capital. It was shown that, as means of transport and communication improve, the local advantages of the country to which the raw material is indigenous become of less importance as elements of production; and that industrial competition depends more upon labour, the second factor, than upon the first. If this were not so, raw cotton could not be imported from Asia over the face of the globe to Lancashire, and wheat, flour, and wool come from Australia to go back as copper, glass, and bro leloth; or horsehair and fat from Buenos Ayres and Odessa, to be returned as brushes and soap. Upon this further consideration of labour it was evidenced that the raw material was of little positive value when the competition of labour was in an advanced state; and that the condition of industry in the British Isles, in the wages of mask lled, but much to do, on the contrary, with those of skilled labour, which involved the required, and eventually the perpetual knowledge of natural powers, industrial combination, and the mental labour essential to it. were stated to be directed to the obtaining of the maximum of effect from a minimum of power, resulting in a progressive simplification of the processes adopted, as exemplified in the present method of making the salt called stannate of soda for the dyers, to the economy of time, and to the imitation of worthless products—for the attainment of all which objects definite knowledge is required, and that important applications in science arise in reality, it was maintained, from the pursuit of truth for its own sake, the zealous cultivation of science in the abstract.

LINNEAN SOCIETY.—A meeting of this society was held on Tuesday; Mr. Robert Brown, president, in the chair. Mr. Daniel Oliver, jun., and Mr. William Thompson were elected fellows. A paper was read, "On Ventation, as a generic character in the Ferns;" with observations on the genus Hewardia, J. Smith, and Cionidium, Moore; by Mr. Thomas Moore, F.L.S., curator of the Botanic Gardens, Chelsea." The object of this paper was to inquire into the general importance of modifications of the vascular structures in distinguishing the genera of ferns, and also to show their relative value in the case of a genus of which had been referred to the genera Adiantum and Doparia. The paper detailed at length the author's views on the subject, and concluded by stating that he had come to the conclusion (in opposition to the view taken by Sir William Hooker) that the genus Hewardia of J. Smith, which had been retained with Adiantum, ought to be kept distinct. It is to be distinguished by its dimorphous pedicels and reticulated venation. Adiantum, combined with its reticulated venation. For the second genus Hewardia (of Hooker in Ic. Plant.), which, according to this view, must be set aside as having no relative value in the case of ferns, owing to the unusual circumstance (among Melanthaceæ, the order to which it belongs) of the stamens being equal in number to the stigmata. On similar grounds he does away with the genus Cionidium, a synonym of Hewardia, the author contends for the separation, as a new genus, of a fern with reticulated veins from New Caledonia, which had been recently referred to Doparia, a genus in which the normal species have free veins. This the author proposed to name Cionidium, defining it as follows:—Veins reticulated. Sori semiglobose, extra-marginal, seated on pedicels, formed of the excurrent apices of the veinlets; spore-cases pedicellate. Fronds bipinnate. Sori excurrent from both margins of pinnilfd pinnules." The only known species is *I. Moorii*. Doparia Moorii, Hooker. There was also read the commencement of a paper "On the Islands and Flora of Hong-Kong," by Dr. H. F. Hance, communicated by Mr. Berthold Seeman, F.L.S.

PROVINCIAL INTELLIGENCE.

THE QUEEN AND IRISH MANUFACTURE.—An order has been received at the Carrickmacross Industrial National School, to execute for Her Majesty's use a large and handsome piece of lace in the Limerick style, to be worked in the pattern of the work executed last year by the pupils of this school.

A GENEROUS CONSTITUENT.—Mr. [illegible] of Wolverhampton (Mr. J. Wynn) has intimated to the Hon. C. P. Villiers that the expenses attending his recent re-election have been entirely and voluntarily discharged by the honourable gentleman's constituent.

THE AMERICAN MINISTER AT LIVERPOOL.—The following letter from Mr. Inger-oll has been received by the Mayor of Liverpool:—"45, Portman-place, London, Jan. 18, 1853. Sir,—If I have delayed too long [illegible] that you will not impute to me any want of [illegible] to me the honour to extend to me during my late visit to Liverpool. It has involved recollection, and I beg that you will receive for it my warmest thanks. The principal officers of the town are worthy of the noble feelings of the inhabitants. Enterprise and liberality are conspicuous in the [illegible] ments for business and the fruits of charity. The accommodation for shipping and all the details and wants of commerce [illegible] of the widest extent, and most liberal and generous conception. No expense appears to have been spared, and no effort of taste or skill is wanting. The hospitable ease of your host [illegible] equalled only by the grace with which it is administered. The kindness of the Mayor [illegible] of taste and refinement. Believe me to be, my dear sir, most faithfully yours. J. R. INGERSOLL."

THE EPIDEMIC AT CROYDON.—The fatal fever at Croydon appears to be rather on the decrease. The number of deaths reported during the week is 20, of which 10 are from fatal cases of fever. The medical gentlemen of the town have held a meeting, and, in order to allay the excitement that prevails among the inhabitants, they passed some resolutions, to the effect that the nature of the disease had been a good deal exaggerated in some quarters, and that they were unanimously of opinion that the disorder was not contagious. Dr. Harrison has died from the fatal malady.

SCOTTISH CENTRAL RAILWAY NOTICES have been going on with a view of stopping the action of damages for breach of contract at the instance of the company against the London and North-Western, Caledonian, Edinburgh and Northern, and Caledonian Companies. These have been amicably settled, and a sum of £5,000 has been agreed to be paid. The number of votes required from the lending library on each day during the week were—on Monday, [illegible]; Tuesday, 274; Wednesday, [illegible]; Thursday, [illegible]; Friday, 272; total, 1742. The number of volumes taken from the shelves of the reference library during the previous week was 1234; the number issued from the lending library, 1742. There has, therefore, during the past week been an increase of 80 in the number of volumes taken from the shelves of the reference library, and a decrease of 12 in the number issued from the lending library.

ANTI-SLAVERY BREAKFAST.—The recent Peace Congress at Manchester appears to have been taken advantage of for calling a meeting of the friends of the Anti-Slavery cause, and a breakfast held last week at the Friends' School-room, Jackson-street, Deansgate. On this occasion the Manchester Friends very liberally provided breakfast, of which about 70 persons partook.

FUGITIVE SLAVE IN LEICESTER.—On Tuesday evening a meeting was held in Charles-street Chapel, to hear an address from a fugitive slave named Kelley, who formerly sustained in the United States the rather anomalous position of a slave and—a minister of the Gospel. Upwards of £18 were raised towards the purchase of the liberty of the fugitive, and it was understood that the sum would be increased to £30

SOUTHAMPTON.—THE SEWER QUESTION.—The existence of the fatal epidemic at Croydon, termed "the sewer fever," has given rise to considerable disturbance in Southampton. A complete network of sewerage is being constructed on a principle similar plan to that in operation at Croydon. The subject was introduced at a meeting of the Town Council on Tuesday, when a memorial was brought forward to delay the works now in progress, until the cause of the epidemic at Croydon was clearly and positively ascertained. Mr. Lemon, [illegible] on the part of the memorialists, urged that the progress of the [illegible]. A discussion of considerable length terminated with a resolution to continue with as much expedition as possible the construction of the sewers under the plan.

A MINIATURE CRYSTAL PALACE.—The Mayor, Town-council, and other gentlemen of Banbury, in Oxfordshire, have [illegible] to build a miniature crystal palace, at comparatively [illegible].

ELECTORAL VACANCIES.—The death of Earl Beauchamp has caused a vacancy in Worcestershire. The eldest son and heir-apparent of General Lygon, whose eldest son, Viscount Elmley, will be put forward as a candidate.—The Hon. Colonel L. Maule, brother to Lord Panmure, having been appointed Governor of Barbadoes, has thereby vacated his seat for the county of Forfar. He will [illegible] other Liberal.

STEAM FOR AGRICULTURE.—As an instance of the [illegible] ment in agriculture now in progress, it may be mentioned that steam-engines for agricultural purposes in England have, in some cases, increased eight-fold within the last three years. One house made, in 1848, only 8 engines; but, in 1851, finished no less than 84. The same results [illegible] good with respect to other improved agricultural implements. One mak r turns out 5 thrashing-machines a week; another, who only made 40 machines in 1849 and 1850, turned out 30 in the first 3 months. The same important activity exists in all the other branches of the business.

CRUELTY IN THE GREENWICH UNION.—Mr. C. J. Carter, the Coroner for Kent, held an inquiry at the board-room of the Greenwich union, relative to the death of the child John Gaywood, five years old, whose parents resided in Greenwich, and who, on Sunday, January 16th, has excited so much public attention. The jury found a verdict of "Manslaughter," and the prisoner was sent to Newgate for trial.

A LEAGUE OF LABOUR.—One of the most singular agitation is at present being made out in the state of health enjoyed by those engaged in wool-spinning mills, with the view of ascertaining the effect of dust, a preventive or cure of disease, particularly of a pulmonary kind. Offa has recently issued in the spinning of woollen yarns, and we believe that these employed in this occupation, notwithstanding their hardships, are generally a healthy class

A SUCCESSFUL EXCURSION OFF THE ISLE OF MAN.—[illegible] and Prince Albert have been pleased to contribute £50 towards the Fund for the relief of the poor sufferers at Port St. Mary. Several [illegible] of the bodies lately lying at stones at Kirkeland were picked up and [illegible] at Kirkeland. All that is now found of the ship and cargo consists of very small fragments of wood, iron, and gun-barrels, broken and twisted in an extraordinary manner.

AGRICULTURAL LABOURERS' STRIKE IN SOUTH WILTSHIRE.—The effect of the tide of emigration has already been felt in Wiltshire and the adjoining counties. The labourers at Bayford, Codford, and Sherrant, have left work, and waited on the farmers by deputation, demanding an advance from 7s. to 8s. per week. On Monday a body of labourers, numbering from 150 to 200, assembled in the farm yard of Mr. Sweetman, a large farmer in Barford, stating their determination to get the advance they asked, and to obtain a Friday instead of a Saturday night's settlement. Ultimately, the rector of the parish, the Hon. and Rev. S. Waldegrave, endeavoured to compromise the matter. The reverse gentleman recommended a uniform rate of wages of 8s. per week; but this was rejected.

FIRES DURING THE WEEK.—A serious fire broke out near Dudley, in Worcestershire, on Thursday morning, partly composed of timber, became ignited, but the fire was put out with trifling loss.—The corn-mills of Mr. Rothwell, at Foxholes, near Lancaster, and an adjoining barn, have been totally destroyed. The loss will be £2000 or £3000, and not insured.

IMPROVEMENTS IN SOUTHWARK.—A deputation to present a memorial to the Government in reference to public improvements in the borough of Southwark had an interview with Sir William Molesworth, on Monday, at the Office of Works and Public Buildings, in Whitehall-place.

LAW AND POLICE INTELLIGENCE.

SPRING CIRCUITS OF THE JUDGES FOR 1853.

HOME CIRCUIT.—Judges Alderson and Coleridge. Hertfordshire, Feb. 24, at Hertford; Essex, Feb. 28, at Chelmsford; Kent, March 7, at Maidstone; Sussex, March 14, at Lewes; Surrey, March 17, at Kingston-on-Thames

OXFORD CIRCUIT.—Judges Talfourd and Williams. Berkshire, Feb. 28, at Reading; Oxfordshire, March 3, at Oxford; Worcestershire, March 8, at Worcester; City of Worcester, same day, at the Guildhall of the city; Staffordshire, March 12, at the Castle of Stafford; Shropshire, March 21, at Shrewsbury; Herefordshire, March 24, at Hereford; Monmouthshire, March 29, at Monmouth; Gloucestershire, April 2, at Gloucester; City of Gloucester, same day, at same place

NORFOLK CIRCUIT.—Judges Lord Campbell, Pollock Buckinghamshire March 1, at Aylesbury; Bedfordshire, March 3, at Bedford; Huntingdonshire, March 7, at Huntingdon; Cambridgeshire, March 9, at Cambridge County Court, Norfolk, March 14, at the Castle of Norwich; City of Norwich, same day, at the Guildhall of the city; Suffolk, March 19, at Bury St Edmunds

WESTERN CIRCUIT.—Judges Erle and Crompton. Town and County of Southampton, Feb. 26, at the Castle of Winchester; Wilts, March 5, at New Sarum; Dorset, March 10, at Dorchester; Devonshire, March 19, at the Castle of Exeter, City of Exeter, the same day, at the Guildhall, Exeter; Cornwall, March 29, at Bodmin; Somersetshire, March 26, at the Castle of Taunton.

NORTHERN CIRCUIT.—Judges Cresswell and Martin. Lancashire, Feb. 17, at the Castle of Lancaster; Cumberland, Feb. 23, at Carlisle; Northumberland, Feb. 28, at Newcastle; Town of Newcastle, the same day; Durham, March 2, at Durham; Yorkshire, March 8, at the Castle of York; City of York, the same day, at the Guildhall of the city of York; Lancashire (Liverpool), March 22, at New Courts, Liverpool.

The dates for holding the Assize on the Midland, North, and South Wa es Circuits have not been finally determined on.

Mr. Baron Platt will remain in town as the vacation judge

ACHILLI *v.* NEWMAN.—The Court of Queen's Bench was crowded on Monday, to learn the sentence in this case of libel. Various affidavits in mitigation were read, and the Court was addressed by the Attorney General, Mr. Serjeant Wilkins, Mr. Bramwell, &c., for the defendant; and by Sir Frederick Thesiger, &c., on the other side. Mr Justice Coleridge, as senior puisne Judge, pronounced sentence, of which he we give the chief points. Addressing the defendant, he said that it now became his duty to pronounce the sentence of the Court for the misdemeanour of which the defendant had been convicted - that of having published a defamatory paper reflecting severe on the character of the prosecutor, Dr. Achilli. After a hading to the proceedings at the trial, his Lordship proceeded to say that his brethren and himself had thought it their bounden duty to consider whether the defendant ought not to undergo some punishment by his plea, and the evidence which had been adduced to prove and disprove it. He spoke the sentiments of every member of the Court when he said, in the first place, that he was satisfied that Dr. Newman believed in the truth of the allegations which he made against Dr. Achilli, and that he was a man who was incapable of uttering or publishing that which he believed to be untrue, a manner of applause from a part of the court), and, in the next, that he composed and published the libel, not with any personal malice towards Dr. Achilli, but because Dr. Achilli had used the religion which is the basis of the Church of Rome as others else in life. . . . There was an improbability in the story, that it had represented to be so notoriously wicked, should have been dignified with high honours and entrusted by the Roman Catholic Church with the most delicate and responsible employments. Dr. Achilli having left that Church, the Court, of course, felt inured to consider the motives which might have actuated the witnesses who came forward to support that story; and it would be recollected that one of the witnesses said she had been directed to come for the honour and glory of the Church and Holy Mother of God. . . . The Court were not fully and entirely satisfied with the finding of the Jury. . . . In reading over the libel, he (Mr. Justice Coleridge) regretted to say that, passing from the libel to the letter, he was compelled to observe on the manner in which it had been composed. He confessed that, as had been observed by counsel in the course of the arguments, he felt touched with feelings of shame and disgust. It totally departed from the usual style of the defendant's productions, and left him open to the very strong observations made against him The sentence he should pass upon the defendant was a light one, considered by virtue of his office, and sentenced to fifteen years' transportation. — John Parrett was indicted for the wilful murder of his wife. The jury returned a verdict of Manslaughter, and he was sentenced to be transported for life.

NEW COURT.—"Captain" Johnson was placed at the bar charged with stealing £600 in valuable securities, the property of Sarah Stewart. Mr. Balmaine, for the prosecution, applied for a further remand to till next session, the poverty of Mrs Stewart preventing her completing the necessary arrangements. After some discussion, the postponement was agreed to; and Mr. Balmaine applied to allow the prisoner, as it was only a misdemeanour, to put in bail. The Recorder, after consulting the counsel, con ented; the "Captain" in £600, two sureties in £200 each, with forty-eight hours' notice.

ALLEGED MURDER.—A middle-aged woman, named Elizabeth Vickers, was charged at the police-court, Lambeth, with having committed the death of Mr. William Jones, a gentleman of eighty three years of age, and possessed of considerable property, with whom she had lived for some thirteen years as housekeeper. The death of Mr Jones occurred about the 19th inst., and its causes were investigated by a jury, who returned a verdict of "Accidental death, caused by a fall. Some facts recently discovered, led to her apprehension; and it now appears that the old gentleman had long been subjected to many violent blows and much cruel treatment. It appears that Mr. Jones was prevented by Vickers from seeing his nephews or any relation; that in November, 1851, he invested £1000 in Spanish bonds; that she was in the habit of drinking, and had outdrunk complete ascendancy over the deceased. Some neighbours deposed to their hearing repeated dreadful cries of "Murder!" "Don't hurt me," &c.; followed by groans such as would be caused by intense agony. The surgeon proved that the deceased had been violently struck about the head, face, and body, and also on the knees. Indeed that Mr Jones was covered with bruises. Other evidence was given, showing the prisoner had unfriendly treated him harshly and badly. In the end, the Jury returned a verdict that the witnesses should be bound over to give their evidence before the magistrates to prosecute, so that they might not be put to the trouble of attending on a future day. The prisoner, who seemed to treat the matter with a nonchalance amounting to levity was then removed from the bar.

NATIONAL SPORTS.

There appears only one steeple-chase for the ensuing week, viz. Bath, on Thursday, where some good sport may be anticipated. The Country fixtures, however, are numerous, no less than nine having been arranged, chiefly for the amusement of the lieges in the north. They stand thus — Monday: Newmarket, Newcastle (Eldon Stakes), and Workington. Tuesday: Malton, and Thirsk. Wednesday: Newcastle (Highlander). Thursday: Knipe, Sear, and Sundorne. Friday: Brough.

TATTERSALL'S

MONDAY.—The "working men" mustered in force this afternoon, and, backers being t'the vein, a good deal of business was transacted, the great gun being Contentment, who it will be observed was backed for the three Handicaps and the Derby! The quotations, which ranged over half-a-dozen engagements, averaged at the close as follows —

METROPOLITAN HANDICAP

4 to 1 agst Contentment (t)	20 to 1 agst Tarpischole (t)	30 to 1 agst Tavistock (t)
25 to 1 — Snowdon Dunhill (taken)	30 to 1 — Tarpischore (t)	33 to 1 — Wednesday-day filly (taken)

LIVERPOOL STEEPLECHASE

9 to 1 agst Miss Mowbray (t)	11 to 1 agst Oscar (t)	12 to 1 agst Half-and-half
	15 to 1 agst Sir Peter Laurie	

DERBY

20 to 1 agst Lady Evelyn	40 to 1 agst Richard Trimmer	66 to 1 agst Babette (t)
25 to 1 — Scarecrow (t)	50 to 1 — Little Jack (t)	66 to 1 — Tricksie (t)
28 to 1 — Constantine (t)	50 to 1 — Frisby (t)	100 to 1 — Longsdi (t)
30 to 1 — Trifle (t)	50 to 1 — Goldfinder (t)	100 to 1 — Rosaline (t)
30 to 1 — Mountain Deer (t)	50 to 1 — Truth (t)	100 to 1 — Maria (t)
40 to 1 — Contentment

PURSUIT OF AN EMIGRANT SHIP, AND CAPTURE OF A THIEF ON BOARD.—A man named Stewart, president of an odd Fellows' Lodge, associated from Manchester, last week, with a considerable sum of money belonging to the club. It was suspected that he had sailed in the *Niagara* packet, about half an hour previously to the arriva. of the constable. A boat was engaged, and after an exciting chase they arrived alongside, when, on making known the nature of their visit, the vessel was brought to, and all the passengers summoned on deck. Among them Stewart was identified, and handed over to the others, and the ship resumed its course. Stewart has been committed for trial.

DIAMONDS IN AUSTRALIA.—(From a Correspondent).—From time to time there has been a report heard of the discovery of diamonds in the Gold diggings; and on some occasions gems have been brought to the country supposed to be diamonds, which, however, to the disappointment of the possessor, have proved to be merely white topazes. Sir Thomas Mitchell has, however, now proved the fact of the existence of diamonds in the Gold-diggings of New South Wales The Surveyor-General has brought to this country a diamond and other gems found in the Gold-diggings of Ophir. This gem has been placed in the Museum of Practica Geology and since in that establishment it has been examined by some of the most practical judges of diamonds in the metropolis, all of whom declare it to be a jewel of the finest water.

THE WEATHER IN RUSSIA.—A gentleman from Russia states that the atmospheric revolution, influencing the weather at th s season of the year, has also manifested itself in a most extraordinary manner. He says that a universal thaw prevails throughout Russia; all the ice is broken up —the weather mild and close and a deluge of rain falling. In consequence of the sledges in common use at this season are abandoned for carriages, where boats are not required.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Although a moderate amount of money stock has been purchased on private account, the Lombard Street has been in an unusually state during the whole of the week. The fluctuations have been numerous, and prices have tended downwards The leading causes of the decline in the quotations are—the diversion of large quantities of gold known to be on passage from Australia—the rumour s afloat to the effect that the Russian Government is about to contract a new loan of £5,500,000, at 4 or 4½ per cent, for railway purposes—and the continuous shipments of the precious metals to St. Peters burgh, Sydney, and Port Phillip. The demand for money out of doors has continued very active; yet we understand that most of the brokers are opposed to the opinion that it will become dearer Looking to the great activity in our manufacturing district, the rapid extension of our Australian trade, and the advance in the value of most articles of consumption, we anticipate a low range in the rates of discount for some considerable period.

The exchanges show an adverse state of things, as regards this country. gold being at the rent ers of Paris than in London; it is 35 per cent dearer at Hamburg than here; whilst at New York, gold is 0 per cent dearer than in London. Under these circumstances, it is idle to presume that any large shipments of the precious metals will yet be made to this side. The last steamer from New York brought no specie; but we have had an arrival of rather over £200,000 dollars from Mexico, the Pacific, and the W st Indies, and amongst which are 25,000 dollars on account of the Mexican dividends. The accounts from Mexico are of a character calculated seriously to affect the interests of the bondholders in this country.

The following statement shows the position of the note circulation of the United Kingdom, when compared with the same period last year:—

	1853.	1852.	Increase.	Decrease.
Bank of England	£18,784,976	.. ..	£222,456,172	
Private Banks	3,571,661	.. ..	3,643,714	
Joint-stock Banks	2,677,537	.. ..	2,624,771	
Total in England	24,934,174	.. ..	28,997,658	
Scotland	3,057,474	.. ..	3,740,004	
Ire and	4,422,567	.. ..	6,060,441	
United Kingdom	£32,414,215	.. ..	£38,798,098	

The above shows an increase of £4,383,883 in the circulation of notes in England, and an increase of £5,383,883 in the circulation of the United Kingdom, as compared with the same period last year

The average stock of bullion in the bank of England during the month ending on the 24th of December, was £21,398,226, being an increase of £1,005,303 as compared with the same period in the previous year. The Irish and Scotch banks have increased the supply by £209,878

On Monday Consols were heavy, and drooping, both for money and the account. Very few of the leading jobbers even appeared disposed to operate. Bank Stock was done at 215½ to 220; the Three per Cents Reduced were 99¾ ⅞; the Three per Cents Reduced, 99⅝ to 99½; the Three-and-a-Quarter per Cents, New, 103¾; and Consols for Account, 99¾ ⅞. India Bonds sold at 4s. to 6s. pm.; and Exchequer Bills, 6s. pm. The quotations fluctuated to some extent both on Tuesday and Wednesday. On Thursday Bank Stock was marked 220¾. The Three per Cents Reduced were 99¾ 99½; the Three per Cent Consols, 99¾ ⅞; Ditto, for the Account, 99¾ ⅞; the New Three and-a-Quarters per Cents, 103¼ ⅜. India Bonds were done at 6s. to 7s.; and Exchequer Bills, 8s. to 6s. pm. Long Annuities marked 6 7-16 ⅜. In the latter securities very few investments have been made

All Foreign Bonds have met an unusually heavy market. Prices, almost generally have given way to some extent A loan of £370,00 has been contracted for at Madrid, upon the security of the customs' dues. On Thursday Brazilian Five per Cents were quoted at 102¾; Ditto, Four-and-a-Half per Cents New, 97¾ Ditto, Five per Cents, New Bonds, 100¾; Equador, 2½; Mexican Three per Cents, 22¾; Ditto, for the account, 22¾; Portuguese Four per Cents, 37¾ ex. div.; Spanish Five per Cents, 46¾; Ditto, New, Deferred, 22¾ ⅜; Ditto, Passive, 5¼; Austrian Five per Cents, 94¾; Dutch Two-and-a-Half per Cents, 60¾; and Dutch Four per Cents, 97¾.

Miscellaneous shares have been in very moderate request, Australian Agricultural have sold at 22½ to 23; Peel River Land and Mineral, 3 to 3¼ prem.; South Australian Land, 4¾ to 5¼; Van Diemen's Land, 14 to 16; North British Australian, 11 to 12 prem.; Union Bank of Australia, 72 to 74; Bank of Australasia, 81 to 82; London Chartered Bank of Australia, 3⅜ to 3½ prem.; English, Scottish, and Australian Chartered Bank, 1 to 1¼ prem.; Bank of India, China, and Australia, 5 to 5½ prem.; Great Nugget Vein, 2¾ to 3 prem.; London and Westminster Bank, 23¾; Oriental, 45 to 46¾; General Steam Navigation, 30; General Screw Steam, 12 to 13; Peninsular and Oriental Steam, 86 to 88; and Royal Mail Steam, 82 to 83.

The shares of the Golden Mountain Company have been expunged from the official list by the committee of the Stock Exchange.

There has been a very dull market for all railway shares, both English and foreign, at depressed rates. The total "calls" for the present month are £343,340, of which £258,340 by foreign companies, through the proportion due from English proprietors is not known. The following are the official closing money prices on Thursday:—

ORDINARY STOCKS AND SHARES.—Aberdeen, 27¾; Ambergate, Nottingham, and Boston Junction, 6¾; Caledonian, 62¾; Chester and Holyhead, 22¾; Dublin and Belfast Junction, 44¾; East Anglian, 3¾; Eastern Counties, 13¾; East Lancashire, 74¾; Edinburgh, Perth, and Dundee, 63¾; Great Northern Stock, 75¾; Great Southern and Western (Ireland), 104¾; Great Western, 89¾; Lancashire and Yorkshire, 76¾; Ditto, Fifths, 19¾; Leeds Northern, 19¾; London and Blackwall, 8¾; London, Tilbury, and Southend, 6¾; London and Brighton, 106; London and North-Western, 118¾; Ditto, Fifths, 14¾; London and South-Western, 89¾; Manchester, Sheffield, and Lincolnshire, 39; Midland, 76¾; Newry and Enniskillen, 2⅜; Norfolk, 55; Northern Counties Union, 3¾; North British, 24¾; North Staffordshire, 13¾; Scottish Central, 97; Scottish Midland, 64; South-Eastern, 75¾; South Wales, 37¾; Waterford and Kilkenny, 2¾; York, Newcastle, and Berwick, 85¾; Ditto, 1 Mid-Class, 1 ⅜; Ditto, G. N. E. Purchase, 3; York and North Midland, 7.

LINES LEASED AT FIXED RENTALS.—London and Greenwich, 19¾; Lowestoft, 15¾; Wear Valley, 4.

PREFERENCE SHARES.—Chester and Holyhead, 10¼; East Anglian, 3⅜; Great Northern, 127; Ditto, Five per Cent, 112; Great Western (Four-and-a-Half per Cents), 108; Manchester, Sheffield, and Lincolnshire, 11; Consolidated Bristol and Birmingham, Six per Cent, 102; Oxford, Worcester, and Wolverhampton, 107½; York, Newcastle, and Berwick, 160¾

FOREIGN.—Luxembourg, 6¾ ex int.; Ditto, Railway, 4⅛; Ditto, Cuns], 1⅛; Madras, 6⅜; Northern of France, 30¾; Paris and Rouen, 37⅜; Quebec and Richmond, 5⅛; Sambre and Meuse, 5¼

Mining Shares have sold heavily. On Thursday, Agua Fria were 2 to 1⅝; Liberty, 1⅛; Nouveau Monde, 2⅜ to 2; Port Phillip, 2¼, United Mexican, 6⅝; West Granada, 1⅜; and West Mariposa, 1.

FRIDAY EVENING.—The Market for Consols has been in a very inactive state to-day. The Three per Cents Money and the Account have been done at 99⅛ ⅜; the Three per Cents Reduced, 99⅛ ⅜; and the New Three-and-a-Quarter per Cents, 103¾ to ⅞. Bank Stock has sold at 220½ to 220¾; India Stock, 272 India Bonds are 6?s. ; and Exchequer Bills, 5?s. premium. In Foreign Bonds and Railway Shares very little doing

THE MARKETS.

CORN-EXCHANGE (Friday).—Since last week the arrivals of English wheat into market moderate have been to a large extent and now moderate. The supply to this morning's market being fresh 1, the show of samples of both old and new was quality was fully equal to the demand for all. It was not very brisk for state of Mark during the day, and prices were fully as high as on Monday last. The imports of foreign wheat have amounted to 9190 quarters, chiefly from the north of Europe. Since last week's arrivals of barley, oats, beans, and peas have been moderate. The trade was slightly depressed and the following barley, at prices ranging as at Monday's quotations

ENGLISH.—Wheat, 5?s to 6?s; barley, 31?s; malt, 50?s; oats, 21?; beans, 30?; peas, 30?. Flour, 39?s. Linseed, 5?s to 5?s; cakes, 6?s to 7?s; rapeseed, 38?s to 40?s; cakes, 6?s to 7?s; coriander, 20?s to 22?s; canary, 50?s to 52?s; rye, 29?s to 32?s; grinding barley, 22?s to 24?s; distilling ditto, 30?s to 32?s; tick beans, 30?s to 32?s; ditto, old, 32?s to 34?s; grey peas, 31?s to 33?s; maple, 34?s to 36?; white, 36?s to 40?; boilers, 40?s to 42?; pigeon ditto, 42?s to 44?; tares, 40?s to 42?; Dutch clover, 90?s to 100?s; red ditto, 80?s to 90?s. *Foreign:* American flour, 22?s to 23?s; per barrel; French, 5?s. to 43?s. per 240 lbs.

Seed Market.—Linseed, as well as cakes, must be considered steady, at very full prices. In other descriptions of seed a limited business is going on.

Linseed, Baltic, sowing, 5?s to 5?s; Baltic, crushing, 5?s to 5?s; Mediterranean and Odessa, 5?s to 5?s; Bombay, 5?s to 5?s per quarter; Cevian barley, 3?s to 3?s per cwt. Brown mustard-seed, 7?s to 7?s; white, ditto, 7?s to 8?s., and tares, 3?s to 3?s. per bushel. Englishrapeseed, from 22?s to 24?s per last of 10 quarters. Linseed cakes, English, £5 5s to £5 10s; ditto, foreign, £5 10s to £5 15s per ton. Rape cakes, £3 5s to £3 5s per ton. Canary, 36s to 40s per quarter

Bread.—The prices of wheaten bread in the metropolis are from 7d. to 8d.; of household ditto, 6d. to 7d. per 8lb. loaf.

Imperial Weekly Average. Wheat, 47s. 0d.; barley, 31s. 2d.; oats, 18s. 7d.; rye, 32s. 3d.; beans, 33s. 8d.; peas, 31s. 10d

The Six Weeks' Average. Wheat, 46s. 0d.; barley, 30s. 1d.; oats, 18s. 7d.; rye, 30s. 7d.; beans, 34s. 8d.; peas, 31d.

Butter. Wheat, is.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s

Flour. The sales of samples in the pulverie contract market during the last week have been rather limited, and at a sixpence extra, and prices are unchanged.

*Potatoes

PARIS FASHIONS FOR FEBRUARY.

The ball season has arrived. The Tuileries has already thrown open its *salons* for a grand Court-ball. The aristocracy and the Ministers

TALMA MANTELET.

will soon follow suit. The Senate are preparing a grand *fête*, and the example will be pretty generally followed. The nuptial *fêtes* of the Emperor and Empress will yield us an ample harvest of toilettes, which will fix the fashions for the ensuing London season. At present we merely give the general ideas of their taste. Next month we hope to give them in detail. The gentlemen's costume, richly embroidered with gold and silver, ordered for the state balls, have induced the ladies to abandon the simplicity of the preceding year's dress, and even the young ladies' dresses are all richly dight with the precious metals. Thus, flounces are embroidered with a rich gold wreath, hitherto of flowers.

For young ladies, dresses are made of organdi, net, crape, sprinkled with gold and silver, or slight flowers sprinkled over a plain ground, generally white. The flounces are still in fashion; but the tunic is again appearing. It does not become everybody; but slender persons can wear it to advantage. It is made in various ways: some are opened at the side and tied up with bows or flowers; others are raised at the side; a third have several skirts: indeed, they are varied as much as possible, according to the taste and stature of the person. The edges of the tunic are embroidered or trimmed with gold and silver rings alternated, and the two flounces of the petticoat are trimmed to match.

For young persons we have also seen dresses made of silk gauze, with three or four flounces, which have each three dull satin stripes. The body, berthe Lavallière, is trimmed with satin stripes; in front, long falling ribbons are added. These dresses, whatever be their make or stuff, either with flounces or tunics, are worn immoderately full, and puffing out. This does not much agree with the rage which exists of packing in drawing-rooms three times more people than they can accommodate.

The head-dresses are of diamonds; but these are exceptions. Flowers are often interspersed with gold and silver, particularly in foliage. This mingling should be made with taste, and the flowers should always predominate. Other head-dresses are made with coloured ribbons, interwoven with gold. There are also some made of ribbons and flowers, variegated with gold beads of different sizes. Head-dresses of gold lace are also very *recherché*.

To descend from these drawing-room toilettes to those worn for going out. Bonnets have not undergone much alteration, and the mildness of the season is the cause of the non-appearance of bonnets made completely of stuff; but they are all made of velvet, satin, taffetas, alternated with lace; and the violet shade is the most worn. Dresses are still made in the same way as heretofore, and, with mantelets, are waiting for cold weather, to change their fashion.

Another *coiffure* is composed of a coronet of roses without leaves, very small over the forehead, enlarging at the ears, and again decreasing behind the head. Small diamond butterflies, of different sizes, are placed at irregular distances among the roses. The plait of hair forms a coronet with a mass of frized ringlets inside, fastened by a half-wreath of very small roses imitating a comb.

A bonnet of pink terry velvet and satin is worn. A blonde edge; the front is of drawn satin, with two biases of scolloped terry velvet, the point edged with a wide white blonde, reaching the open edge. The crown is round, and covered with a *fanchon* of terry velvet, scolloped at the edge, and cut on the bias. Two pink feathers are placed at each

GARLAND AND COIFFURES.

ear, very near the edge of the bonnet, so as to turn inside and mix with the trimmings of the cap, which is of moss-rosebuds and long black velvet ends.

A more simple bonnet is of black velvet, trimmed with *coques* of very broad *groseille* satin ribbon, mixed with *coques* of black velvet. A black ostrich feather, knotted with *groseille* silk on the left side, and a bunch of velvet rings floating at the right ear.

THE ILLUSTRATIONS

Velvet and Lace Bonnet, with black crown, trimmed with jet, and bunches of flowers on the sides.

Talma Mantelet, with velvet hood, and plain black taffeta dress.

Ball-dress, of white cashmere, lined with white wadded silk, tied over the bosom by a frog trimmed with two tassels. Round the garment is a trimming of a silk ribbon, of various shades, with gold.

Garland of Flowers, interspersed with gold beads, and leaves partly concealing a metal comb.

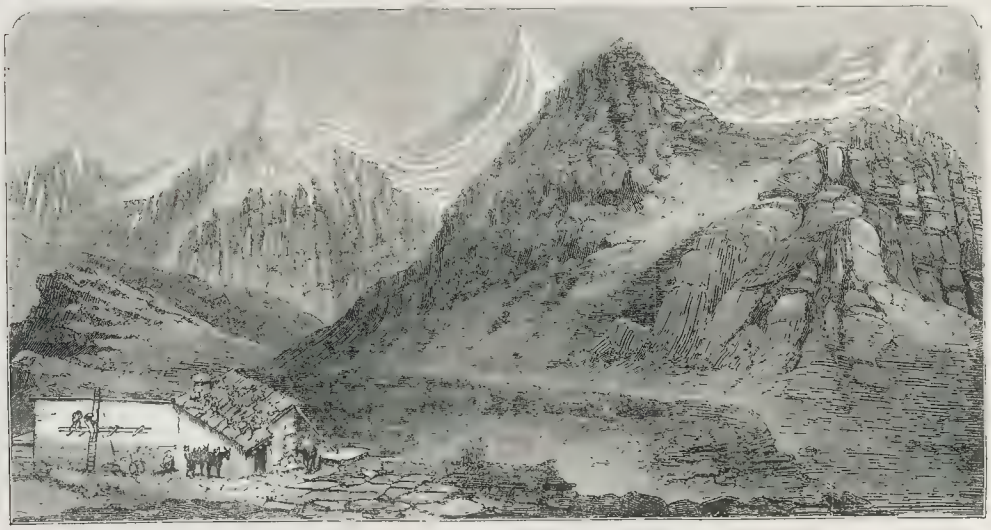
Coiffure of Flowers, with a garland of velvet ribbon.
Coiffure of Ribbon, with a bunch of roses.

PROMENADE DRESS.

Coiffure for a Young Lady.—Silk ribbons of various colours, interwoven with gold.

BURFORD'S PANORAMA OF THE BERNESE ALPS.

The panorama of these portions of the mighty range of the Switzerland Alps, in all their variety of form and picturesque beauty, is among the most interesting of holiday exhibitions. The view is taken from the top of the Faulhorn; and the section we have engraved represents the Wirbhans, or Inn, with the summits of the Wetterhorn, the Schreckhorn, and the Finsteraarhorn in the background, and the Simelihorn in the front of the picture—bulwarks of nature, conceived in her grandest moods, and executed on the boldest scale. The whole of the scene is exhibited under the magic influence of a fine sunset, at which time the slanting rays are reflected from the Alpine snows in hues of glowing pink. When it is remembered that the scene of Byron's "Manfred" is laid among these Alps, the mind possessed of any literary associations, in contemplating the "beauty" here "sleeping in the lap of horror," cannot fail to rise to a poetical elevation, and partake, in a degree, of the enthusiasm that inspired the creations of the "Noble Childe." We envy the sojourner at the Wirbnhans, who, reposing in one of its twenty four sleeping apartments, may waken early enough to view the magnificent sunrise over the valley of Grindelwald and the lake of Brienz. Here are the heights, wearing their "brilliant crowns of everlasting snow," the glaciers, and the craggy peaks, among which is conspicuous in our illustration the cold and restless mass of the Ober Grindelwald Glacier, the most remarkable of all in this sublime region, familiar as it is with such "motionless torrents, silent cataracts," that "put on the aspect of a tumbling ocean's foam, frozen in a moment." Such a scene carries with it its own warrant; and our readers will do well to pay Mr. Burford's Panorama a visit, and thus interpret by the eye the descriptions of our best modern poets, who have revelled in the kind of scenery here portrayed.



VIEW FROM THE TOP OF THE FAULHORN, FROM BURFORD'S PANORAMA OF THE BERNESE ALPS.

IMPERIAL MARRIAGE SUPPLEMENT
ILLUSTRATED LONDON NEWS

NAPOLEON EUGENIE

No. 607.—VOL. XXII.] SATURDAY, FEBRUARY 5, 1853. [TWO NUMBERS, 1s.

MARRIAGE OF THE EMPEROR OF THE FRENCH.

(From our Own Correspondent.)

PARIS, February 1, 1853.

THE desire to witness the Emperor's marriage ceremony, or at any rate, the procession to and from the church, grew hourly fiercer in the breasts of the sight-loving Parisians, after the publication of the order of the pageant, and after it became known that the carriage which was to bear Napoleon III. to his bridal, was the same that had conveyed Napoleon I. to his coronation. Many persons, whose curiosity centred chiefly in the Empress herself—whom few, up to Saturday last, had had opportunities of seeing—who feared the crowd, and disliked the expense of retaining seats that would save them from its pressure, thought to obtain a glimpse of the lady on her passage from the Elysée to the Tuileries, for the civil marriage, on the eve of the religious ceremony. The calculation was a bad one, for the crowd on Saturday evening was very great, and the night very dark, and little could be seen of the Countess as she went, or the Empress as she returned.

As soon as it was known to what quarter they should be addressed, applications for seats in the cathedral of Notre Dame poured in so rapidly, that notice had quickly to be given, that every place was filled. As the day approached, seats on the line of progress became greatly in demand, and for windows in good situations prices were obtained not much inferior to those paid for the like accommodation at the Duke of Wellington's funeral. I knew instances of a hundred francs being given for three front seats at a first-floor window, and five-and-twenty francs was the common demand for a scanty place for one person. These prices may be considered to represent double the money in England, considering that the French are not accustomed to pay so dearly for their amusements as we are. Like a Wellington's interment, however, an Emperor's marriage is not a thing that one can reckon on seeing a second time, and no doubt many strained a point to witness it conveniently. At any rate, on the Saturday the trade in tickets seemed excessively brisk all along the line of the procession, especially in the vicinity of Notre Dame, and in the Rue d'Arcole, through which street it was to pass, both going and returning.

THE EMPRESS OF THE FRENCH, IN HER BRIDAL COSTUME.

As usual in such cases, the fever of curiosity proved contagious; and, at the eleventh hour, persons who had previously professed a magnanimous indifference, and declared their intention to stay away, were seen freely disbursing their Napoleons for nooks whence to see the sight. From the vast deal of Anglified French I heard upon the Saturday evening, and the number of persons of unmistakeably British cut whom I observed driving bargains the seat-sellers and their agents, I have no doubt that our countrymen contributed not a little to swell the throng at the windows, and that many probably came over for the purpose. The shops were fitted up with benches (the windows being removed), as in November last in London. Indeed, allowance made for the difference of scene and race, and for the opposite nature of the ceremony, there was not a little in the general arrangements and preparations for the sight to remind one of the Wellington Funeral. One important difference was that, instead of the passive barrier of posts and rails that contained the populace in London, a living barrier of troops of the line and National Guards extended itself, bristling with bayonets, along both sides of the long line of streets to be traversed.

Paris was early a-foot on Sunday morning. The buzz and bustle were prodigious, the rattle of drums and clang of trumpets incessant. Troops were marching in every direction—staff-officers galloping to and fro—processions of the different trades and communes parading with their banners—a multitude in carriages and on foot flocking to occupy places. Long before noon arrived circulation was impossible between the line of troops and the houses. The narrow space was crammed with the people, those in the rear perched upon stools, chairs, and benches, let out by the owners for considerably more than the original purchase-money of the furniture. Not a little confusion and screaming of women arose in one or two places, from the troops having formed up in a too forward position. The space behind was of course densely filled; then up would gallop some imperative general, or positive aide-de-camp, and order the military to recede. This could rarely be

erected until the soldiers faced about and pushed the mob before them: then down went rush-bottomed chairs and ricketty benches, and down of course went their occupants. The treading upon toes was something frightful; the amount of cursing equally so; and the maledictions heaped upon the commanding officer must, if a tithe of them were realised, have ensured him much discomfort. Flesh and blood, however, are but moderately compressible; and, in at least one instance that I witnessed, after the failure of desperate efforts to drive the superabundant crowd through the walls of the houses, or into each other's pockets, the soldiers were obliged to give in, and accept the succour of the police, who summarily settled the matter by dragging a number of unfortunates from their advantageous places, and consigning them to some remote corner, where they probably saw little or nothing. Upon the whole, the temper of the military, both officers and soldiers, was very good; they were patient and considerate, and I observed but few instances of needless harshness.

At eleven o'clock the Empress (the civil ceremony gave her the title) left her residence at the Elysée with her mother and suite, and repaired to the Tuileries, where she was received at the foot of the grand staircase by Prince Napoleon and the Princess Mathilde, who conducted her to the Salon de l'Empereur. She was met by the Emperor, who took her right hand. On their way through the apartments the retinue fell off, according to the rank of the persons, and the pair were accompanied into the Emperor's saloon only by the Princes of the blood, members of the Imperial family, the Ministers and grand dignitaries of the crown. At noon the guns began firing in three different places, at the Invalides, the Barrière du Trône, and the Place de l'Observatoire, and the procession left the Tuileries.

The picturesque effect of a procession is naturally heightened if its passage be through spacious squares and handsome streets. This was an advantage which that of Sunday certainly had not during the early part of its progress. After emerging from the Louvre, its route was through the dingy narrow street of Les Fossés de St. Germain L'Auxerrois, and then along the new portion of the Rue de Rivoli, consisting chiefly of half-built houses, ruins, and scaffoldings, and having the rugged desolate appearance which invariably attends the process of demolition and reconstruction. The mass of spectators, however, and the hedges of uniforms, masked a good deal of this ugliness. The shells of houses were invaded by the adventurous *gamins de Paris*, who clambered into all sorts of breakneck places that might afford them a sight of the show. Red posts had been planted along the entire line of the procession, on either side of the road. Cords connected the tops of these, and to the cords were suspended lanterns, composed of coloured linen stretched over wire (Venetian lanterns they call them here). Thus arranged, in festoons of various colours, they had from the distance the effect of garlands of flowers. Escutcheons bearing the initials "N." "E." (Napoleon and Eugénie), and strewn with the Imperial bees, were suspended on the walls of the Louvre. Bees and eagles, of course, abounded everywhere upon that auspicious day; but the critical remarked that some of the persons whose loyalty led them to display the industrious insects, had given them only four legs, a proceeding which entomologists denounce as unnatural. In the centre of the interior court of the Louvre a circular space had been raised and turfed, and in it were planted laurels, whose large white blossoms, I am bound to remark, although of very floral aspect, were composed of satin ribbon. Around these, however, was a broad band of camellias and other beautiful plants.

The whole of the procession, I need hardly say, consisted of cavalry; the infantry formed the lines—the horsemen rode between. After a few squadrons of regular cavalry, the whole of the mounted National Guard, a vast number of staff officers, military intendants and functionaries, and two bands of music, had passed, there came the carriages of the Ministers, of the Grand Officers of the Imperial Household, and of a number of other high dignitaries, many of whom were very small people indeed this time two years ago. The Empress's ladies, and those of the Princess Mathilde, were also there. There was great elegance and good taste in many of these private carriages, as regards build, colour and liveries, and some of the horses were remarkably fine animals. In striking contrast to them was a hired carriage, with a liveried servant on the box with the coachman, which appeared in the line: I have not heard whom it contained, or how it got there. When all these carriages had passed, a state carriage and six made its appearance, the horses very richly caparisoned; and in several places where it suddenly came in sight, when those which succeeded it were still invisible, the multitude took it for the equipage containing the Emperor and Empress. Its inmates, however, were only the Grand Chamberlain, Grand Master of the Palace, the Emperor's Almoner, and Master of the Ceremonies. A second state carriage contained the Princess Mathilde and the Countess of Montijo; and then came the ex-King Jerome, looking, as usual, smiling, and rather silly, and his fat son, Napoleon, whose short-neck and corpulent body did not seem much at ease in a tight-fitting uniform, and whose look, I thought, was sulky, and as if he wished himself elsewhere. There was here and there a feeble attempt to cheer the heir presumptive, but it proceeded entirely from civil or military functionaries, and was utterly ineffective. Then came the carriage—rich, and in good taste, and without that antiquated look which would be anticipated in a vehicle built at the beginning of the century. State carriages, however, preserve their youth and good looks longer than humbler vehicles. On the top of this one is a gilt Imperial crown. The horses—eight in number—bore superb white plumes, which nodded as they advanced. On the right sat the Emperor, looking well in health, but, as it seemed to me (and I am far from being the only person who received the same impression) by no means satisfied with his reception. This was unquestionably cold. The French papers, of course, represent it as enthusiastic; some of the English journals may possibly do the same. A calm and unprejudiced observer, I assert the contrary. There was, of course, a certain amount of that enthusiasm which is made to order; the hosts of the police, the innumerable officials, ensured that; but of hearty, popular feeling there was little or none. There was immense avidity for the pageant; great curiosity to see the young Spanish Countess, of whose attractions fame had so loudly spoken, and for whom fate had reserved so strange a lot; but warmth of feeling there was none. The same sort of excitement might, I sincerely believe, have been created, as great a concourse might have been brought together, by the announcement of anything as rare and striking as an Emperor's marriage with a person previously unknown. The people flocked to a raree-show; they evidently did not go to applaud a union they approved, and sympathise with a man they loved. And this the Emperor is too shrewd and observant not to have felt. His air was that of a man who is vexed beneath a smiling aspect. More than once—notably when he drove into the spacious square of the Hôtel de Ville—he seemed to pause for applause. It came very faintly when at all.

Napoleon III., in the full-dress uniform of a General of Division, round his neck the collar of the Legion of Honour which his uncle wore at his Coronation, sat bareheaded in his carriage. His air and deportment were characterised by affability rather than by any great assumption of dignity. He looked the electioneering candidate quite as much as the powerful Emperor. He frequently spoke to the Empress, and gaily pointed out different objects to her attention. But his gaiety seemed rather forced, and as if chilled by the coldness of the crowd. Not on him, however, was the public attention fixed, but on his fair companion. Whilst denying enthusiasm, I admit the most intense curiosity on the part of the people of Paris; and certain warm imaginations may perhaps have mistaken this for the more generous and flattering feeling. Not even a portrait had been published, to damp popular eagerness to become acquainted with the lineaments of the Empress. On the Saturday evening, a plaster bust was selling in the streets; but, as far as resemblance went, it might as well have been intended for the Queen of Sheba as for the Countess of Téba. So when the bride at last appeared, in her gilt and gorgeous vehicle, whose abundant glass and moderate pace gave every opportunity for a good view, she was the cynosure of all eyes. I am assured, by competent judges in such matters, that her dress, of white uncut velvet and lace, was perfection. I can answer for her having very gracefully borne her diadem of diamonds and sapphires, wreathed with orange-blossom. Her cast of features is decidedly Spanish; but the delicate fairness of her skin tells of her British descent. Her mien and bearing were either the perfection of acting, or they were far more those of a modest young woman, embarrassed and agitated by the novelty of her position, than of the artful *intriguante* and experienced woman of the world, which her enemies and calumniators have represented her. She was exceedingly pale, and continued so until after the marriage ceremony. When she left the cathedral there was a slight flush upon her cheek.

The general character of the whole day's proceedings was, as is almost invariably the case in France, entirely military, and, with the exception of the interest attaching to Napoleon's carriage, and to its Imperial occupants, the chief attention of the people, outside the cathedral, appeared to fix itself upon the fine body of horsemen which made up the procession. After the carriage had passed, with Marshals St. Arnaud and Magnan riding on either side, and a host of generals, sides-de-camp, and orderly officers, escorting it, there came a squadron of the new and brilliant corps of the Guides, a hussar regiment of picked men. Then came the Cuirassier band, playing admirably at a trot; then the general in command of the cavalry, and then two regiments of Cuirassiers and two of Carabiniers; a fine squadron of Gendarmerie, and another of what is called the Cavalry Guard of Paris (formerly the Garde Republicaine, if I rightly remember) closed the long line of the procession. The regiments of Carabiniers, which differ but little from the Cuirassiers, except that their cuirasses are of brass instead of steel, excited great admiration by their martial aspect. Horses and men are alike fine. When the procession emerged from the narrow Rue des Fossés St. Germain l'Auxerrois into the broader Rue de Rivoli, all the horsemen that came after the Emperor's carriage had to keep at a sharp pace in order not to be distanced. Each successive squadron increased its speed, until at last the appearance of the well-sanded street was that of a race-course, the squadrons dashing by in any sort of order, or rather in none at all, and the pace becoming at last exceedingly severe. The narrow street had disordered the column, by compelling it to change its formation. The scamper afforded great amusement to the ladies who filled the windows, and to the crowd (amongst whom were a vast number of well-dressed men and women, such as would hardly venture into such a crush in London), that thronged the street. As the cavalry rejoined the procession, the head of which proceeded at a very gentle pace, it re-formed, and the long line again acquired a certain degree of compactness.

On the summit of the venerable towers of Notre Dame sixteen enormous gilt eagles spread their wings. The front of the edifice was covered with wreaths of flowers, banners, tapestry, and escutcheons; the apertures of the belfry were draped with green hangings, embroidered with golden bees. Along the whole line of the procession extended the red posts and the garlands of Venetian lanterns. In short, everything that the authorities could do to give splendour and effect had been carefully done, regardless of expense. But, on the part of private persons, there were but few demonstrations of the kind. Here and there were houses adorned with flags and drapery; but there was far less of this than the French official accounts would have you to believe. Deduct the salaried enthusiasm of a few public functionaries, and it will be found that not many persons put themselves to trouble or expense to give additional lustre to their Sovereign's wedding-day. The same remark applies to the illuminations at night, which were by no means particularly striking or brilliant, with the exception of theatres, public buildings, and the like.

The interior of Notre Dame, whither crowds are now thronging—as it remains in the same state as on the marriage-day during the whole of this week—is exceedingly richly fitted up. Ranges of benches are covered with red velvet, fringed and laced with gold. The walls disappear beneath the number of paintings, the quantity of sculpture, the draperies, and garlands. Thousands of flags, banners, and standards hang from the galleries and vaulted roof. The pillars are covered with red velvet laced with gold. Above the arm-chairs used by the Emperor and Empress, which stand upon an ermined carpet, is a vast canopy, also of crimson velvet, and bee-besprinkled. In the centre of the canopy is an Imperial crown, surmounted by a gigantic eagle.

As I am not very skilful in describing upholstery-work, I refer you for further details to the French papers, which are eloquent and long-winded in this respect, and content myself with telling you that the general effect of the whole is extremely magnificent. It was much more so when the benches and chairs were all occupied by persons wearing every variety of French and foreign uniform, and official costume. Nothing could be more brilliant and imposing than the *coup d'œil*. The Emperor himself did not look to great advantage. He is by no means a tall man, as you know, but in the church he looked insignificant, and seemed overtopped by his wife, who is not *petite* as she has sometimes been represented, and whose height was increased by her diadem. Notwithstanding that there had been such an immense competition for places in the cathedral, there were not a few vacant; but this may doubtless be attributed to defalcations at the last moment, in consequence of the *grippe* and other maladies just now prevalent. I cannot say much for the general gravity of the congregation. There was an extraordinary amount of very loud talking, and of almost unrestrained laughing and tittering. I do not, of course, mean that this was the case during the ceremony, which was admirably performed (the orchestra was particularly fine), and reverentially followed by all present.

The morning over, the procession resumed its march by the quays on the left bank of the Seine, across the Pont au Change; then by the quays on the right bank, and across the gorgeous Place de la Concorde, into the Tuileries gardens. Into these gardens a large portion of the multitude that had witnessed the procession on its way to the church, had ever since been pouring. Down the broad central avenue, which forms a part of the straight open line, terminated at one end by the Palace, and at the other by the triumphal arch of the Barrière de l'Etoile, the deputations had ranged themselves with their banners. These deputations were from communes or parishes, guilds of workmen, clubs and societies of all kinds, and a number of very important ones were from different bodies of the market people. One flag I noticed bore the inscription of "Wrecks of the Imperial Guard;" another, very rich in green and gold, belonged to a body of oyster-dealers; and there were many other banners whose inscriptions must have been equally surprised to find themselves in each other's vicinity. The trees in the gardens being completely bare of leaves, there was no difficulty in obtaining, from the raised terraces, a general view of their whole area, and this was certainly very striking, especially just at the moment that the Emperor and Empress drove in. Down the broad walk in the centre extended the inevitable double line of troops; behind these, the deputations; and then, on either side, a dense mass of spectators, which continually deepened up to the time that the newly-married pair re-entered their palace. The great extent of the gardens and the good temper of the mob prevented anything like unpleasant crowding; and ladies walked about unescorted without the slightest risk of inconvenience, even adventuring into the thick of the throng for a view of the bride. The high terraces at the extremity of the gardens overlooking the Place de la Concorde were very much crowded; boys and men sat perched upon the branches of trees, unmolested by the police, who seemed disposed to wink at small transgressions on so great an occasion; and the wretched *café* under the Terrace de Feuillants had such a run upon its ill-supplied cellar and insufficient coffee-pots as it probably never had before nor ever again may have.

The procession returned from Notre Dame in the reverse order to that in which it had gone thither, so that the Gendarmes, Carabiniers, and Cuirassiers were the first to enter the gardens. On reaching the end of the avenue next the Palace, they wheeled right and left, and countermarched up the broad lateral alleys intervening between the terraces and the masses of trees. The effect of this was very good, as they thus filled up, with their brilliant and admirably-accoutred masses, the only part of the gardens that previously had looked somewhat empty. In the centre was the great multitude, extending, by this time, far away under the leafless trees, and receiving continual accessions of panting pedestrians, who had evidently come at a sharp pace from a distant point, to get a second and final view of the showy spectacle. The terraces were lined with those persons who preferred a certainty at a distance to an uncertain tiptoe view on the shoulders of the crowd—a view which was, in fact, unobtainable, except by those who managed to get places on benches or chairs. Between these two divisions the troops formed up, with the music upon the right of the line. The formation had been but just completed when the state carriages made their appearance within the garden.

I perceive that *Le Pays* (*Journal de l'Empire*), informs its readers, with that slight exaggeration produced by excess of zeal, that the weather was "magnificent, and seemed to share in and protect the festival." The phrase may be pretty, but it is simply untrue. Sunday morning, without being exactly dark, was decidedly dull, and the sky was overspread with clouds of so watery a complexion that I heard apprehensions of rain expressed by many. This state of things continued till afternoon, when the day got a little brighter. And, just as the Emperor's carriage reached the Place de la Concorde, the sun, forcing its way through a rent in the clouds, shot a gleam—faint, it is true, but nevertheless a decided gleam—upon the whole scene, casting a sort of autumnal glow upon the bare black branches, gilding the steel of the cuirasses, and imparting a redder tinge to the brazen breastplates of the Carabiniers. I heard many persons remarking it. Superstitious as he undoubtedly is—unquestionably a fatalist and a believer in omens—it is more than probable the Emperor noticed this struggling radiance that seemed thus to welcome him home. It could hardly have occurred on a more favourable spot than the Place of Concord, to the man who so recently proclaimed the Empire to mean Peace.

It was about a quarter to three when the Imperial equipage, with its beplumed and beautiful team, passed down the centre avenue of the Tuileries. As far as my own opportunities of observation went, there was more show of sympathy and enthusiasm here than in any other part of the progress; and this is not surprising, the crowd in the gardens containing a very large proportion of women and young girls, who had repaired thither as to the place where there was the best chance of seeing without being too

much squeezed; and the deputations were of course vociferous. The Emperor and Empress then drove into the court-yard of the Tuileries, where a large body of troops was formed up, and where they were duly cheered. They wound up the fatigue, pomp, and excitement of the day by appearing on the balcony looking towards the Place du Carrousel, and then upon that known as the Clock-balcony, which commands the gardens of the Tuileries. Between four and five o'clock they were met driving through the Bois de Boulogne on their way to St. Cloud, to spend a brief honey-moon.

Nothing can equal the rapidity with which the most singular and important events are dismissed from the public mind in this frivolous and versatile capital of France. Before the week is out, the marriage will be as little thought of as last summer's flowers. Already it seems getting a stale topic, and people change the subject when you talk to them of it. This may partly arise from an unwillingness to express the true opinion, which I do not believe to be at all favourable to the alliance. With a fickle and impressionable people like the French, it is in the power of the Empress, if she possess the tact, grace, and natural ability universally attributed to her, to ingratiate herself rapidly; and finally and completely to heal the little wound the nation's vanity may have sustained, at beholding the man, at whose footstool it has literally crouched, condescend to wed into other than a Royal house.

THE IMPERIAL MARRIAGE.—CIVIL CEREMONY.

(*See the Illustration at page* 120)

ALTHOUGH the religious and public ceremony of the Emperor's marriage with Mademoiselle de Montijo did not take place till Sunday, the real and legal civil marriage was celebrated on Saturday evening.

The Duke de Cambacérès, Grand Master of the Ceremonies, proceeded to the Palace of the Elysée at half-past eight o'clock, with two of the Court carriages, to take the Imperial *fiancée* to the Tuileries. The Rue Faubourg St. Honoré was crowded with people, who had assembled there as early as seven o'clock, to catch a glimpse of the bride. At the Elysée a battalion of cuirassiers was drawn up in the court of the palace, and, notwithstanding the inconvenient hour, a considerable crowd assembled to see the cortège.

The Grand Master of the Ceremonies and his party remained but a few minutes in the palace. At half-past eight, the beating of the drums *au champ*, and the salute of the troops, announced the arrival of the bridal party, and in a few minutes the Duke de Cambacérès issued from the principal entrance with the Imperial bride on his arm; the Marquis de Valdegamas, Envoy Extraordinary and Minister Plenipotentiary of the Queen of Spain, following, with the Countess de Montijo, Duchess de Penaranda, the bride's mother. The ladies having taken their seats in the principal carriage, with the Duke de Cambacérès and the Marquis de Valdegamas on the front seat, the procession then started for the Tuileries, guarded as before by cavalry. It passed along the Rue du Faubourg St. Honoré, the Place de la Concorde, the Quay of the Tuileries, and entered the palace by the Place du Carrousel and the gate of the Pavillon de Flore

At the foot of the grand staircase of the Pavillon de Flore, the Imperial bride was received by the Grand Chamberlain (the Duke de Bassano), and the Grand Equerry, the two chamberlains on duty, and the Emperor's orderly officers, who conducted her to the Salon de Famille, where the Emperor was waiting for her

At the entry to the first saloon, the Imperial bride was received by their Imperial Highnesses Prince Napoleon and the Princess Mathilde, when the party formed a procession, and proceeded to the Emperor's saloon in the following order.

The Orderly Officers.
A Chamberlain.
The Master of the Ceremonies (Count Bacciochi).
The First Equerry
The Grand Equerry.
Their Imperial Highnesses Prince Napoleon and the Princess Mathilde
The Imperial bride and her Excellency the Countess de Montijo, taking the right, and walking abreast.

On their right, and a little in advance, the Grand Chamberlain; on their left, and also in advance, the Grand Master of the Ceremonies.

Then followed the Grand Mistress of the Household of the future Empress, and her Lady of Honour; and the procession was closed by a Chamberlain

On approaching the drawing-room, the Chamberlain placed at the head advanced to apprise the First Chamberlain of the arrival of the cortège, and the Chamberlain announced the fact to the Emperor. Prince Jerome Napoleon and some other members of the family were with the Emperor. His Majesty, attired in the uniform of a General Officer, wore the collar of the Legion of Honour, which, it is said, belonged to his uncle, the Emperor Napoleon, and the collar of the Golden Fleece, which tradition assigns to the Emperor Charles V. The Cardinals, Marshals and Admirals, Ministers, Secretaries of State, the great officers and officers of the civil and military household of the Emperor, the Ambassadors and Ministers Plenipotentiaries of the Emperor present in Paris, stood round the Emperor. His Majesty advanced to meet his bride. The Grand Master of the Ceremonies took the Emperor's last orders, and the cortège sat out for the Salle des Maréchaux, where the ceremony of the civil marriage was to be performed. The following order was observed in their progress:—The Gentleman Ushers, the Assistant Masters of the Ceremonies, the orderly officers on service, the Emperor's Equerries not on service, the Chamberlains not on service, the Masters of the Ceremonies, the Aides-de-Camp not on service, the Equeries on service, the Chamberlains on service, the Aides-de-Camp on service, the Grand Master of the Ceremonies, the Grand Huntsman, the First Equerry, the Grand Chamberlain, the Marshals and Admirals, the Ministers, Secretaries of State, the Cardinals, the Imperial Princes, the Emperor and Empress. Then followéd the Grand Marshal of the Palace, the First Almoner of the Emperor, the First Prefect of the Palace, the First Equerry, the First Huntsman, the Lady of Honour, the Princesses of the Imperial family, the Ladies of the Princesses, and an officer of service of each of the households of the Princes and Princesses. A Master of the Ceremonies, with two assistants, placed the persons invited to the ceremonial according to their rank. Two arm-chairs of equal size were placed on a dais raised in front of the window looking into the garden, at the bottom of the hall; the one at the right for the Emperor, the other at the left for the future Empress A table was placed a little on the left, with the book containing the *état civil* of the Emperor's family. The book belonging to the Imperial house was preserved in the archives of the Secretary of State. The first entry in it is dated the 2nd of March, 1806, and notes the adoption of Prince Eugene as son of the Emperor Napoleon I., and Viceroy of Italy. The last act, which immediately precedes the act of the marriage of the Emperor Napoleon III. and the Empress Eugénie, is that of the birth of the King of Rome, bearing date March 20, 1811.

Nothing could exceed the splendour of this magnificent hall, blazing as it was with painting and gilding, reflected by ten thousand lights, and filled with ladies, all in full dress, and most of them displaying a profusion of diamonds; and gentlemen in all the variety of costume, from the *habit brodé* of the senator to the *habit habillé* of the simple rentier, and the magnificent uniform of the marshals of France to that of the colonel of infantry.

The moment the doors of the Salle de l'Empereur were thrown open, the Master of the Ceremonies called out in a loud voice, "*L'Empereur!*" and the procession immediately moved on, proceeding slowly to the Salle des Maréchaux, where the persons forming it took up the places allotted to them. The officers and grand officers, and the ladies of honour placed themselves behind the chairs of the Emperor and his bride according to their rank, the Ministers on the right of the Emperor's throne. His Majesty, having seated himself on his throne, invited the future Empress to be seated. The Imperial Princes were on the right of the throne; the Princess Mathilde on the left, near the Empress. Behind them were placed, the Countess de Montijo to the right, the Spanish Ambassador, and the members of the Imperial family. The Minister of State, attended by his Secretary-General, and by the President of the Council of State, stood near the table. The first bench was reserved for the wives of the Ministers and of the great officers of the Crown, for the widows of the great dignitaries of the Empire, and for the Marshals and Admirals of France. The ladies invited occupied the remaining benches. The Grand Master of the Ceremonies, the masters and their assistants, were placed right and left, in front of the throne. All the ladies rose at the entrance of the Emperor and the Empress, and remained standing, together with the rest of the company, during the ceremony.

The Emperor and the bride having taken their seats, the Master of the Ceremonies advanced to M. Fould, the Minister of State, who on this occasion exercised the functions of "officer de l'état civil" of the Imperial family, in virtue of the senatus consultum of the 25th December last, and to M. Baroche, the President of the Council of State, who was specially designated by the Emperor to assist the Minister of State during the ceremony, and invited them to approach the throne of the Emperor. The Minister of State and of the Emperor's household then advanced, and said in a loud tone—

"In the name of the Emperor."

At these words the Emperor and the future Empress both rose.

M. Fould then continued:—

"Sire—Does your Majesty declare that you take in marriage her Excellency Mademoiselle Eugénie de Montijo, Countess de Teba, here present?"

The Emperor replied —

"I declare that I take in marriage her Excellency Mademoiselle Eugénie de Montijo, Countess de Teba, here present."

The Minister of State then, turning to the bride, said:—

"Mademoiselle Eugénie de Montijo, Countess de Teba, does your Excellency declare that you take in marriage his Majesty the Emperor Napoleon III., here present?"

Her Excellency replied:—

"I declare that I take in marriage his Majesty the Emperor Napoleon III., here present."

The Minister of State then pronounced the following words —

"In the name of the Emperor, of the Constitution, and of the law, I declare that his Majesty Napoleon III., Emperor of the French, by the grace of God and the national will, and her Excellency Mademoiselle Eugénie de Montijo, Countess de Teba, are united in marriage."

After these words the Masters of the Ceremonies and their assistant placed the table on which the registry of the marriage was laid, in front of the thrones of the Emperor and Empress.

The President of the Council of State having, on the invitation of the Grand Master of the Ceremonies, handed a pen to the Emperor, his Majesty, without rising from his seat, signed the book. The President of the Council of State then handed the pen to the Empress, who also signed.

The witnesses of the marriage were then called to sign the register. On behalf of Louis Napoleon were, first, the members of the Imperial family, then the Cardinals, the Marshals, the Presidents of the Senate, of the Legislative Corps, of the Council of State; and on behalf of the Empress, the Countess de Montijo, her mother, her uncle, General Alvarez de Toledo (who had come to Paris expressly for the purpose), the Count de Calves, brother of the Duke of Alba; Berwick, and Linares, who is the husband of her elder sister, the Duchess of Penaranda; and, in the name of the Grandees of Spain, the Duke of Ossuna and the Marquis of Bedmar, the Spanish Ambassador, the Marquis of Valdegamas, better known to the literary world as Juan Donoso Cortes. The act being completed, the Grand Master of the Ceremonies announced to their Majesties in a loud voice that the ceremony was concluded. In a few minutes the Emperor and Empress, who received the congratulations of her friends, and was embraced by her mother, rose, and followed by the members of the Imperial family, withdrew for a short time to the private apartments of the Palace. In about half an hour they returned, the Emperor leading the Empress by the hand, from their apartments, and proceeded to the theatre. They were followed by the Ladies of Honour, the Ministers, the Marshals, the Cardinals, the great functionaries of State. The Emperor wore his usual dress on such occasions, the full costume of a Lieut.-General, with the star and cross of the Legion of Honour, and the collar of the Golden Fleece. The Empress wore a rose-coloured satin dress, with a rich garniture of lace, and a circlet of gold and diamonds. The Duke of Ossuna wore the collar of the Golden Fleece over his uniform as a Major-General in the Spanish army. There could not have been more than from 800 to 600 persons present, as the invitations were necessarily limited. The grand galleries and saloons were still more brilliantly lighted and furnished than on any previous occasion; and the comparatively small number present, and the absence of music, imparted to the whole matter a solemn character. The Diplomatic Corps were very nearly *en complet*; and, notwithstanding the previous rumours with reference to Austria and France, the representative of the former Power, M. de Hubner, was present. Lord Cowley, owing to indisposition, was absent, but Lady Cowley was present at the ceremony. There were not more than half-a-dozen persons out of uniform; and some Spaniards who had no military or official character wore the uniform appertaining to the orders of Spanish knighthood. One in particular—that of the Knights of Malta—was much remarked. Court dresses were also numerous.

After the ceremony refreshments were handed round. The whole of the company then adjourned to the theatre, where a cantata was performed in honour of the occasion, the poetry of which is from the pen of the Court poet, M. Méry, and the music the composition of M. Robert. The following is the cantata which was sung after the overture of "William Tell," by M. Roger and Madame Tedesco:—

RECITATIF.

Avec les lyres d'or, avec les voix de l'âme,
France, Espagne, deux sœurs! célébrez ce grand jour!
Peuples unis, chantez l'auguste épithalame,
Car l'hymne de la paix, c'est l'hymne de l'amour!
Notre sœur par la Foi, l'Espagne fortunée
Donne sa noble fille à Napoléon Trois;
Quand l'aigle impérial consacre un hyménée,
Ce qu'il élève à lui devient le sang des rois!

CHANT.

Sous le chaume et sous la couronne,
Celui qui porte un noble cœur
Ne veut confier à personne
Le droit de choisir son bonheur
L'Empereur à nous se révèle
Libre des lois d'un monde ancien;
Elu par la France nouvelle,
Le cœur du peuple, c'est le sien!

Aux jours des dernières batailles,
Venu de l'île de Léon,
Un Espagnol, sous nos murailles,
Combattit pour Napoleon.
Généreux Français de Castille,
Du haut des cieux rejouis-toi:
L'Empereur épouse ta fille!
Ton heroïsme t'a fait roi!

Oh! qu'elle soit notre espérance
Sur le trône où nous l'attendons!
Le ciel la crea pour la France
Quand il la combla de ses dons!
Ceux qui souffrent la vie amère,
Tous les orphelins du malheur
Demain retrouvent une mère:
C'est la femme de l'Empereur!

RECITATIF.

Pour notre Impératrice, aux doux climats choisis,
Chantez, avez des voix qui savent nous ravir,
Les airs que redira l'écho d'Andalousie
Aux collines du Tage et du Guadalquivir!

QUATUOR.

Espagne bien aimée
Où le ciel est vermeil,
C'est toi qui l'as formée
D'un rayon de soleil!
Nous bénissons l'aurore
Et ses riantes pleurs
Qui la firent éclore
Dans tes jardins de fleurs!
Etoile qui scintille
Et se lève sur nous,
Ses reyons de Castille
Font notre ciel plus doux!
Le pauvre à ses souffrances
Promet un meilleur temps;
Il a deux providences,
L'amnee a deux printemps.

CHANT.

Dieu qui veille sur les trônes,
Dieu qui prend pitié de nous,
Bénira les deux couronnes
Des deux augustes époux.
Lorsque la France l'implore,
Dieu sur elle ouvre les yeux;
Notre pays est encore
Le pays aimé des cieux!
(Grand chœur final.)

Immediately after the cantata, their Majesties retired, amidst loud cries of "*Vive l'Empereur!*" "*Vive l'Impératrice!*"

After the concert, which was over about half-past eleven o'clock, the Empress, her mother, and her attendants returned to the Elysée, with the same escort and ceremonial as before.

Shortly before twelve o'clock the young Empress was conducted by the Grand Master of the Household, and in the Court carriages, to the Palace of the Elysée, the carriages being escorted by a detachment of cavalry, as at the arrival of the cortège. The company then dispersed, and by one o'clock the last of the guests had taken their departure.

Such were the circumstances attendant on the civil marriage of the Emperor; but, as they were of a comparatively private nature, not more than 1000 persons being present, they naturally excited less interest among the people than the religious marriage, which was of an infinitely more public character.

The Princess Marie of Baden (Duchess of Hamilton), though specially invited, had no special place marked out for her in the ceremony; she therefore left the palace, in no very good humour, before the signing of the act of marriage. A good deal of surprise was felt by those present when the Comte de Morny was called upon to sign the act: he is the only one who did so, not being an official.

THE RELIGIOUS CEREMONY. — PREPARATIONS IN THE STREETS OF PARIS.

At an early hour on Sunday morning all Paris was astir, for the marriage celebration. Shortly after nine o'clock large bodies of cavalry and infantry were seen directing their way from the different barracks in and around Paris towards the points allotted to them on the route between the palace of the Elysée and the palace of the Tuileries, and between the latter and the cathedral of Notre Dame. At the same time, the whole of the National Guards of Paris were called out for the purpose of doing honour to the day, by forming the line on one side of the streets through which the procession was to pass, while the infantry of the line formed the other. A vast number of deputations of the trades and workpeople, with flags and banners, directed their steps towards the garden of the Tuileries, which was the spot specially set aside for that purpose. Many of the deputations were very picturesque, consisting of young women dressed in white, adorned with wreaths of flowers, and carrying bouquets in their hands. The deputation from the Halles et Marchés was by far the largest. Butchers, bakers, fishmongers, market-gardeners, &c., each had a huge flag at their head denoting their different trades, and most of them bearing some inscription or legend in compliment to the Emperor. The whole, or at all events the greater number, of those banners were the same as those seen on the occasion of Louis Napoleon's entry into Paris after his trip to the southern departments. A deputation of the old veterans from the Hôtel des Invalides attracted great notice. They consisted of about 200, and showed their enthusiasm by each carrying a tricoloured flag. As they hobbled along, they were received everywhere with hearty cheers, which were undoubtedly the most enthusiastic given in the course of the proceedings of the day. It is hardly necessary to say that the crowd of spectators was immense. Not only was every corner of the streets and quays through which the procession passed filled to excess, but all the windows, and even the roofs of the houses, where standing-room could be found, were fully occupied, and some of the proprietors must have made a handsome harvest of it, as large prices were given for windows in favourable situations. The preparations in the streets principally consisted of flags and banners. All along the new part of the Rue de Rivoli, the persons employed by the city of Paris, in the Government works going on there, had erected Venetian masts, from which flags, pennons, banderolles, and oriflammes were profusely displayed. Each of the masts had the Imperial arms displayed, surrounded with tricoloured flags. On each side of the street Chinese lamps were festooned for the illuminations in the evening. The Hôtel de Ville was magnificently ornamented with flags, gracefully festooned, precisely as it was on the occasion of the proclamation of the Empire. In each window was a trophy of tricoloured flags, with escocheons bearing the initials "N." and "E." connected with each other by garlands of flowers. The very chimneys were ornamented with Imperial emblems, and united by festoons of ever-

THE MARRIAGE CEREMONY IN NOTRE DAME—THE ALTAR.

greens and flags. Velvet crimson curtains, studded with bees, covered the two principal gates, and in front of the edifice a gallery had been erected, which was filled with the families of the municipal functionaries. On the steps leading to the Hôtel Dieu two large estrades were erected for the medical men, and other *employés* connected with all the hospitals of Paris. At each corner of the two great towers of the cathedral of Notre Dame large gilt eagles were placed, where, as the programme says, "they seemed to be preparing to take their flight for the four cardinal points."

A few minutes before twelve o'clock the Emperor appeared at the central window of the Tuileries, looking towards the Carrousel, and was recognised by many in the crowd, although the distance was too great for his appearance to be the signal of anything like a demonstration.

The Emperor and Empress appeared a second time on the balcony of the Tuileries, when they were extremely well received by the people. His Majesty on this occasion wore a citizen's dress, with his decorations, and the Empress was attired in crimson velvet, with a white bonnet.

PREPARATIONS AT NOTRE DAME.

It is difficult to give an idea of the immense crowds that filled the streets in every direction leading to the Cathedral. Many persons who had left their homes at half-past nine, or even eight o'clock, only succeeded, if they happened to be in carriages, in arriving at a few minutes before twelve. The head of the painter, the mason, and the carpenter, had been very busily employed for some days past; and the changes wrought in the exterior and interior of Notre Dame did credit to the activity and execution of the architects to whom they had been in trusted. It was, indeed, not merely the damages that the slow hand of time effects which were concealed or repaired for the moment, but the marks of the devastations perpetrated during the revolution of 1793 have almost ceased to be visible. The niches, so long deprived of the statues of the early Kings of France, and which, being mistaken by the populace for those of Saints, were destroyed, have been restored, at least in appearance; and the rich crimson tint, imitating velvet, the variety of the tapestries, of escocheons, of crowns and garlands, of streamers and oriflammes, which adorn the interior and exterior of the building, presented a *coup-d'œil* of the most striking kind. An immense portico at the façade of the building had three separate entrances. It was painted in the fashion of the medieval ages, to match the character of the edifice. Green predominated in the decorations, that being the colour of the Emperor; and the letters "N. E." were to be seen in various places in honour of the Imperial couple. Above the wooden erection long draperies of green velvet floated to the wind; and higher up, along the façade of the building, was to be seen a line of flags of various colours; higher still, the old towers themselves were covered over with gold brocade. The effect was unusually rich; and, as the weather was dry, though cold, the pleasure of regarding these precious materials, thus exposed to the open air, was not marred by any apprehension of injury from rain. The lower part of the decoration near the various entrances was hung with crimson velvet edged with gold lace. On the Parvis Notre Dame were erected lofty flag-staffs, from which floated huge tricoloured streamers, embroidered with gold, and harmonising with the decoration over the portal.

INTERIOR OF NOTRE DAME.

The spectators had full time to examine every detail of this decoration whilst waiting for admittance; but at last, a little before ten o'clock, the impatient crowd were allowed to rush forward, and take their places inside. As you passed through the portico, four or five series of draperies, of various colours, drawn up in the form of curtains, and depending from a great height, led to the interior. The first feeling of the spectator on entering was one of unmixed admiration. Along the whole of the nave was suspended from the arched roof an absolute forest of chandeliers, containing thousands of wax lights. The illumination was at the first view absolutely dazzling; but as soon as the eye got accustomed to the brilliancy, it became evident that the building had been transformed, with great taste and skill, from its naturally severe appearance, and been made to assume as gay an air as the architecture of the sacred edifice would warrant. The pillars were enveloped, from plinth to capital, with crimson velvet. At the top of each capital was affixed a richly-gilt shield, bearing a gilt eagle. Between the pillars, springing from the arches, higher up, was to be seen a drapery of crimson velvet, edged down the sides with an imitation of ermine, and fringed at the bottom with deep gold lace; this drapery served to mask the woodwork of a long line of galleries, erected from pillar to pillar, and filled with elegantly-dressed ladies. Again, higher up, a pallium of green velvet, studded with golden stars, was seen between every two pillars, and bearing in its centre a gigantic "N." Garlands of flowers were festooned amongst these draperies, and other shields were placed on the flat wall of the building, under the lofty windows, each having on it a figure of Our Lady, to whom the cathedral is dedicated. The crimson velvet on the pillars next to the nave had no other ornament than an edging of gold lace under the capital of each; but those of the side aisles were studded with golden stars, and bore the letter "N" in front. Three chandeliers, one large one, and two smaller, gave light to each tribune above; and three ranges of immense lustres, of beautifully cut glass, ran down the centre of the nave. Both the sides were ornamented in precisely the same style. The portal inside was hung with green velvet and gold, three large gilt eagles being placed over the apex of each of the three doors. The space above the entrance up to the organ-loft, where was placed the orchestra, was hung with crimson velvet and gold, and intertwined, as on the sides of the nave, with festoons of flowers. At the eastern end of the building the chancel had been cut off from the ceremony by the erection of a temporary altar just where the transepts leave the choir. Above the altar rose a lofty canopy of crimson velvet, lined, to all appearance, with ermine, and surmounted with a gilt eagle of immense size. Between this canopy and the altar was to be seen a sort of tabernacle in the Byzantine style, which extended at each side to the transepts, and thus formed a screen shutting out the chancel and its side aisles. But though the building was thus cut into two unequal parts, the portion not occupied for the ceremony was by no means lost, as immense chandeliers hung from the roof in that part of the church, just the same as in that appropriated to the spectators. The consequence of this illumination was, that, as the temporary screen broke the distance, and rendered the view uncertain, the lines of lights appeared absolutely interminable, and the general effect was infinitely enhanced.

Another account states:—The looms of Lyons, Beauvais, and Amiens were put into requisition for the occasion; and as pieces of velvet, silk, and other articles were turned out, they were despatched to the *entrepreneur* in Paris. The ermine alone used for lining the draperies was more than 1300 yards in length, by three yards in width. The canopy of the altar and the drapery which surrounded it were of blue velvet; the curtains were of crimson, lined with ermine, and fringed with gold. The two Imperial *prie-dieu* were covered with ermine, and the steps of the altar with crimson velvet. The choir was hung with gold brocade, as high as the second gallery. Between the columns of the nave were placed draperies of crimson velvet, lined with ermine, and bordered with gold, representing laurel and olive leaves intertwined. On this drapery were placed escutcheons with the Imperial arms, richly painted on them. The pillars which support the gallery were surrounded with garlands of flowers. Over the first gallery were suspended draperies of the Imperial colour, covered with gold bees, and lined with ermine; and on these draperies were crowns, bearing the initials of their Majesties, and the arms of the principal towns and cities of France, surrounded by garlands of flowers and foliage

The transepts were fitted up to receive the great bodies of the State, and the lines of seats rose gradually up until they reached the wall under the beautiful stained-glass windows. The right side was appropriated to the members of the Senate, the Council of State, and the judges, and on a level with the floor, the *corps diplomatique* and the Ministers; the left, to the legislative corps, the Generals, and Admirals; and below, to the Marshals of France, and other high dignitaries.

Immediately in front of the altar, and in the centre of the aisle, was erected an estrade, on which were placed two chairs of state, of crimson velvet and gold, for the Emperor and Empress. These chairs, without meriting the appellation of thrones, were scarcely more than a degree removed from it, so massive were they in form, and so rich in appearance. Just in front of the chairs, and still on the estrade, were two *prie-Dieu* for the Imperial pair. The part of the nave next the portal was covered with plain green carpeting, which extended to about two-thirds of the way towards the altar, where a handsome carpet of Gobelins manufacture was to be seen. The estrade on which the chairs of state stood was covered with white skin spotted with black, to imitate ermine

The cathedral filled very rapidly, and by eleven o'clock every place, except those appropriated to the great official personages, was occupied. By this time the cold of the building began to be sharply felt, although large braziers were kept burning in the passages outside the side aisles

The persons who first attracted attention were M. Feuillet de Conches, deputy master of the ceremonies, and M. Nieuerkc, conservator of the musicians, who were busy in regulating for the ceremony. General Lebreton entered early, as did Cardinal Donnet. The clergy, headed by Mgr. Sibour, Archbishop of Paris, entered about 11 o'clock; and at half-past eleven the diplomatic corps, headed by Mgr. Garibaldi, the Pope's Nuncio, made their appearance. They had all met at his residence, and proceeded in state, with an escort, to the cathedral. The Duke d'Osuna and the Marquis de Bedman, who had been two of the witnesses at the civil marriage the evening before at the Tuileries, walked up the aisle about the same time. Mr. Rives, the American Minister, came a little later, with his *attachés*. M. Boulay de la Meurthe, formerly Vice-President of the Republic, and M. Dumas, formerly Minister of Commerce, entered together.

Some ladies also entered at this period, and walked up to the seats near the Imperial estrade; one of them was the Princess Camerata. About a score of Municipal Guards, who had been hitherto on duty along the aisle at each side, were here withdrawn to the extremity of the nave, just close to the grand portal. M. Carlier, M. Romieu, M. de Morny, and General Schramm then entered successively. But the person who caused the greatest sensation was the Duke of Brunswick, who wore a hussar uniform, the pelisse of which was resplendent with diamonds. In one of the tribunes on the right of the nave was to be seen Bou Maza, in his Arab dress.

THE IMPERIAL PROCESSION TO NOTRE DAME.

Instead of starting from the palace of the Elysée precisely at eleven o'clock, as had been announced, Mdlle. de Montijo and her cortège did not start till half-past eleven. At that hour, two carriages and pair, escorted by a battalion of Carabiniers, started from the palace. A great crowd was assembled at the gates to see the departure, all anxious to see the far-famed beauty who had captivated an Emperor; but great was the disappointment when it was discovered that the carriages were empty. It turned out (at least such was the explanation given) that the bride had started in a private carriage, and had passed through the crowd without being discovered. At all events, neither she nor her mother, nor any of the ladies of her household, were in the carriages which left the palace of the Elysée for the Tuileries.

At an early hour, the Place du Carrousel had been taken possession of by the cavalry intended to form the escort of the Imperial procession. The Carabiniers and mounted Gendarmes were placed on the left, the Cuirassiers were stationed on the right, and the Guides, dressed in their new splendid uniform, were drawn up in the inner court, opposite the palace. The National Guard and the two battalions of Gendarmerie Mobile lined the passage left open in the centre, and the courtyard of the Louvre, the fountain of which had been converted into a beautiful *corbeille* of flowers.

At twelve o'clock the cavalry began to move in the direction of the Church of Notre Dame. The ex-Republican Guard and the Gendarmerie of the Seine led the way, and were followed by the Carabiniers and Cuirassiers. At a quarter past twelve o'clock, a salute of 101 guns, fired from the esplanade of the Invalides, announced that the Emperor and Empress had started; and the Imperial carriage issued from under the triumphal arch, preceded by a numerous staff of general officers, Marshal Magnan, the Commander-in-Chief of the Army of Paris, riding at the right door, and the Guides forming the escort of honour.

The Imperial cortège consisted of six carriages, with six horses each, and the Emperor's carriage, drawn by eight horses. The carriages were richly gilt, and their state and construction denoted them to be not of the present day. They were, in fact, the same carriages which had figured on all public occasions in which Royal or Imperial personages had taken part, since the beginning of the century, or perhaps longer. To those who have visited Versailles and Trianon, where they have been kept for many years, they must be familiar, as they have long been exhibited there as curiosities. The only change was, that the arms of the Bourbons had given way to the Imperial crown, which was placed over the letters "N." and "E." freshly painted, on a blue ground.

In the first carriage were General Tascher de la Pagerie, together with the Princess of Essling, the Duchess de Bassano, and one of the *dames du palais* of the Empress. In the next three carriages were the chief officers of the Emperor's household. In the fifth carriage were the Princess Mathilde, the Countess de Montijo, and two other ladies. The sixth was occupied by Prince Jerome and his son Prince Napoleon; the one dressed in a Marshal's uniform, the other in that of his newly-acquired rank of a General of Division. The Imperial carriage followed, and was occupied by the Emperor and his bride only. The carriage was drawn by eight superb English horses, with postilions. The harness was of silk and gold, and on the head of each of the horses was an immense plume of white ostrich feathers. Behind the carriage was a cluster of five footmen in state liveries, besides which a considerable number of runners in similar livery followed on foot. The whole procession was very gorgeous and splendid.

The cortège was followed by another battalion of Guides, who looked remarkably well in their new dresses; two regiments of Heavy Dragoons, the first and second regiment of Carabiniers, a regiment of Municipal Guards, a regiment of Gendarmerie, and another regiment of Dragoons.

The Emperor and Empress were cheered as they passed. On quitting the Louvre, the cortège passed through the new Rue Rivoli, amidst double rows of National Guards and troops of the Line and a dense mass of people. The cortège next passed the Hôtel de Ville, then ascended the Quai Pelletier, crossed the river by the bridge of Notre Dame, and proceeded by the Quay of Napoleon and the Rue d'Arcole to the cathedral.

ARRIVAL AT NOTRE DAME.

At about half-past twelve, some of the deputy-chamberlains of the palace appeared in their scarlet uniforms, and immediately the drums beat a salute and the trumpets sounded a flourish. Marshal Vaillant entered the moment after, and then came a number of ladies in dresses of the brightest colours and the richest materials, the Princess Mathilde leading the way, wearing a pink velvet robe, with train behind, and basque according to the present mode. Madame de Montijo followed immediately behind, in a dress of blue velvet; and then the several ladies of honour, all in morning dresses of different colours, and all wearing white ostrich feathers in their bonnets. The eye had scarcely time to take in a few details, so rapidly the bright vision swept by. The moment after the Ministers entered, M. de Persigny coming last, as if kept back by some little delay.

By this time the clergy had taken their places near the altar, and presented a most unusual number of high church dignitaries. The Cardinals present were not less than five in number, namely Cardinals Gousset, Archbishop of Rheims; Donnet, Archbishop of Bordeaux; de Bonald, Archbishop of Lyons; Mathieu, Archbishop of Besançon; and Du Pont, Archbishop of Bourges. These high dignitaries were dressed in the Roman purple. Behind them were seated Mgrs. Morlet, Archbishop of Tours; de Bonnechose, Bishop of Carcassonne; Blanquart de Bailleul, Archbishop of Rouen; Dufetre, Bishop of Nevers; Casanelli d'Istria, Bishop of Ajaccio; Cœur, Bishop of Troyes; de Salinis, Bishop of Amiens; Parisis, Bishop of Arras; Gros, Bishop of Versailles; and the Bishops of Grenoble and Coutances. Other rows of chairs on each side the altar were occupied by the Canons and others of the clergy of Notre-Dame, the Curés of Paris and the Banlieue, the Canons of St. Denis, and the Chapelains of Sainte Geneviève.

The Archbishop of Paris, on being warned by the sound of the drums beating the salute, and by the ringing of the great bell of the cathedral, that their Majesties were on the point of arriving, advanced in procession along the aisle, preceded and followed by his clergy. He bore the crozier in his hand, and wore his mitre, and, with the cross borne before him, proceeded to the grand portal to receive their Majesties.

At five minutes to one the Emperor and Empress arrived, and having been offered by the Archbishop the morsel of the True Cross to kiss, as well as the holy water and the incense, four ecclesiastics held a rich dais over the Imperial pair, and the procession advanced up the church. Marshal Magnan and the Duke de Bassano led the way, followed by Marshal de St. Arnaud and the Duke de Cambacérès. Then came the Emperor leading the Empress by the hand, he advancing on the right. The Empress was pale, but quite composed; she looked neither to the right nor the left, but advanced up the aisle with perfect grace. She wore a dress of white *crinoline* velvet, with rather large basque and demi-train. A veil of *point d'Angleterre* flowed from underneath a rich diadem sparkling with diamonds. The front of her dress and the basque behind also shone with quantities of brilliants; and the spectators were evidently struck with the beauty and grace of the Empress. The Emperor was dressed in the uniform of a general officer, with high boots and white doeskins. His Majesty looked uncommonly well both in high spirits and in excellent health. Every one stood up as their Majesties passed, and the Emperor returned most graciously the salutes made from both sides.

They were followed by the Countess de Montijo, the Ladies of Honour, the Ministers, the Marshals of France, and other great dignitaries. The cortège advanced towards the thrones, which were placed in the centre of the transept on a raised floor, covered with an ermine carpet. The Emperor and Empress took their places on their thrones, on the right of the altar the five Cardinals were seated, and further down the Marshals of France in full costume, and holding their bâtons of command. The church was crowded in every part, and from the remotest corner of the nave and high galleries, hundreds in vain tried to catch even a passing glimpse of the ceremony. As soon as their Majesties placed themselves on their thrones, the Archbishop officiating saluted them, and the ceremony of marriage then commenced.

THE RELIGIOUS CEREMONY.

The Grand Master then intimated by a double salute, first to the Emperor, and next to the Empress, that the religious ceremony had commenced. Their Majesties then proceeded to the foot of the altar, giving to each other the right hand, after the Emperor had drawn off his gloves and handed them to the Grand Chamberlain, and the Empress had handed hers to her Lady of Honour.

The Archbishop, who officiated, then addressing the Emperor and the Empress, said to them:—

"You appear here for the purpose of contracting marriage in the face of the Holy Church?"

The Emperor and the Empress replied:—

"Yes, Sir."

After these words, the First Almoner to the Emperor, the Bishop of Nantes, left his place, preceded by a Master of the Ceremonies, and went and laid on the silver gilt salver placed for the purpose on the altar the pieces of gold and the ring, and presented them to the Archbishop to give them his benediction. The Vicar General, acting as Master of the Ceremonies to the clergy, came forward, and received the salver from the hands of the First Almoner. He then replaced the salver on the altar, and conducted the Prelate back to his place.

The officiating Archbishop then addressed their Majesties and said, beginning with the Emperor.

"Sire, you declare, affirm, and swear before God, and in face of his Holy Church, that you take for your lawful wife Madame Eugénie de Montijo, Countess of Teba, here present?"

The Emperor replied:—

"Yes, Sir."

The Archbishop, continuing:

"You promise and swear to observe fidelity to her in every respect, as a faithful husband is bound to do, according to the commandment of God?"

The Emperor replied:

"Yes, Sir."

The Archbishop, then addressing the Empress, said:—

"Madame, you declare, affirm, and swear, before God and in the face of his Holy Church, that you take for your lawful husband the Emperor Napoleon III., here present?"

The Empress replied:—

"Yes, Sir."

The Archbishop, continuing —

"You promise and swear to observe fidelity to him in every respect, as a faithful wife is bound to do, according to the commandment of God?"

The Empress replied:—

"Yes, Sir."

The Archbishop then handed to the Emperor in succession the pieces of gold and the ring. His Majesty, in his turn, presented the pieces of gold to the Empress, saying:

"Receive the marks of the matrimonial conventions agreed to between you and me."

The Empress, after having received the pieces of gold from the Emperor, handed them to her Lady of Honour, who stood close behind her. An assistant of the ceremonies in his turn received them from the Lady of Honour.

The Emperor then placed the ring on the fourth finger of the Empress's left hand, saying:—

"I give you this ring as a symbol of the marriage which we are contracting."

The Archbishop, then making the sign of the cross on the hand of the Empress, said, "In nomine Patris et Filii et Spiritus Sancti."

The Emperor and the Empress then knelt down on crimson hassocks prepared for them, and the Archbishop, stretching forth his hands over them as they bent before him, still holding each other by the right hand, pronounced the sacramental formula, "Deus Abraham, Deus Isaac," &c.

The Emperor and the Empress then returned to their chairs of state. After the Gospel, the First Almoner of the Emperor, preceded by a Master and Assistant-Master of the Ceremonies of the Emperor, proceeded to the altar, and received from the hands of the Vicar-General, acting as Master of the Ceremonies to the Clergy, the book of the Holy Scriptures, and carried it to their Majesties to kiss.

After the anthem (offertoire), the officiating Archbishop seated himself in the chair prepared for him, having at each side of him his assistants. At the same moment, an Assistant-Master of the Ceremonies came forward, and, after having successively bowed to the altar, to the Emperor, and to Prince Napoleon, designated to bear the honours of his Majesty (something equivalent to bridesman in England), took the wax taper destined for the Offering, and knelt down with it at the foot of the altar. The Grand Master of the Ceremonies then bowed to the Emperor, to intimate that his Majesty should proceed to the Offering.

Then his Majesty, preceded by the Grand Master of the Ceremonies, the Grand Chamberlain, the Grand Equerry, and the Prince bearing the honours of the Emperor, advanced to the altar, followed by the Grand Marshal of the Palace. The Assistant-Master of the Ceremonies then handed the wax taper to the Grand Master, who, in his turn, presented it to the Prince charged to bear the honours of his Majesty. The Emperor received it from the Prince, and, kneeling down, offered it to the Archbishop officiating.

The Emperor then having risen and returned to his throne, an Assistant-Master of the Ceremonies bowed to the altar, to the Empress, and to the Princess Mathilde, charged to bear the honours of the Empress, and took the second wax taper and knelt down with it at the foot of the altar. A Master of the Ceremonies then bowed to the Empress to intimate to her to proceed to the offering.

Then her Majesty, accompanied by her Imperial Highness the Princess Mathilde, and the Grand Mistress of the Empress, went to the altar, and, kneeling down, received the wax taper and handed it to the Archbishop with similar ceremonies as those just before observed in the case of the Emperor. The Empress then rose and returned to her throne.

The Pater was then said, and their Majesties, being informed by the Grand Master of the Ceremonies, proceeded together to the foot of the altar, and knelt down on hassocks placed for them. The First Almoner and the Bishop of Versailles held over their Majesties' heads a cloth of silver brocade, and continued to keep in the same position whilst the clergy chanted the "Propitiare." This being finished, the Archbishop officiating, sprinkled the holy water on the Emperor and Empress, and proceeded with the mass, their Majesties returning to their seats

When the "Ite missa est" commenced, the Emperor and the Empress again knelt down, and the Archbishop turning towards their Majesties, recited the "Deus Abraham, Deus Isaac, Deus Jacob," &c., the prayer which terminated the marriage ceremony.

The Archbishop then recited the Gospel and gave the Pontifical Benediction, during which time the choir chanted the "Domine Salvum."

The "Te Deum" being executed, the Archbishop went and presented the corporale to their Majesties to kiss. Likewise, during the execution of the "Te Deum," the Archbishop, accompanied by the Curé of St. Germain l'Auxerrois, the parish which the Palace of the Tuileries is situated, came up to their Majesties and presented to them for signature the register in which the act of the religious marriage is to be inscribed.

After their Majesties had signed their names, the witnesses and other personages appointed by his Majesty affixed their names to the book.

As the "Te Deum" was now approaching its termination, the Masters of the Ceremonies and Assistant-masters went to the different persons composing the part of the cortège which was to precede their Majesties, and intimated to them to hold themselves in readiness to depart.

The Archbishop of Paris, in officiating, was assisted by his two Vicars-General, Baquet and Lequey. The mass and anthem were performed by 600 performers, under the direction of M. Girard. The anthem was, in particular, executed with great effect. The first part of the music executed consisted of the "Credo" and "O Salutaris" of Cherubini, and then came the "Sanctus" of Adolphe Adam. The "Te Deum," which closed the musical part of the ceremony, had been arranged for the orchestra by M. Auber.

After the "Te Deum," the Grand Master of the Ceremonies came forward, and, bowing to their Majesties, intimated to them that the ceremony was over. At the same moment, the Grand Officers of the Crown, the Princes, the Ministers, and the other persons who had formed part of the cortège, took up their places as before.

The demeanour of the Emperor and of the Empress during the ceremony was dignified. The Empress did not shed tears, as is sometimes seen on such occasions; but her mother, the Countess de Montijo, was much affected, and wept abundantly. The ceremony in the cathedral lasted a few minutes less than an hour.

When the cortège was ready to move, their Majesties descended from their chairs of State, and proceeded down the aisle, preceded by the Archbishop and his Chapter, to the grand entrance. Their Majesties, as before, walked together, and both of them returned most graciously the salutes made on all sides. It was remarked, as they walked down the nave, that the newly-married pair are almost exactly of the same height

The moment their Majesties left the cathedral, a rush was made by a number of the persons who had witnessed the ceremony, to obtain a nearer view of the chairs and other articles which had been used at the marriage. The book, in which their Majesties had signed their names, was in particular an object of great attraction, but it was removed almost immediately. We were able, however, to see the signatures. They consisted of the names of their Majesties, of those of the witnesses, and of those of several of the high ecclesiastics present. The handwriting of both of them is exceedingly neat and distinct. The name "Napoleon" is at the head, a little to the right, and that of "Eugénie" slightly below it to the left. The writing of the Empress struck us as particularly firm. The witnesses to the Imperial marriage were: for the Emperor, the ex-King Jerome Napoleon, and Prince Napoleon his son; and for the Empress, the Marquis de Valdegamas, Envoy Extraordinary and Minister Plenipotentiary of the Queen of Spain; the Duke d'Ossuna and the Marquis de Bedmar, Grandees of Spain; Count de Galve, and General Alvarez Toledo. The crowd remained for half an hour in the sacred edifice, and then dispersed. It is supposed that about 6000 persons were present.

RETURN OF THE PROCESSION.

The cortège returned in the same order as before, by the Rue d'Arcole, the Quai Napoleon, the flower market, the quays of the Louvre and Tuileries, to the Place de la Concorde, where it entered the garden of the Tuileries, by the gate of the Pont-Tournant. The garden presented the most picturesque aspect. The terrace adjoining the river was occupied by deputations from all the corporations of the city, each distinguished by a banner bearing appropriate mottoes. The operatives of the Canal St. Martin had a live eagle standing on the top of their banner, to which it was attached by the feet. This exhibition afforded the soldiers much amusement as they filed by. The bird also attracted the notice of the Emperor, who laughed very heartily and showed it to the Empress. All the villagers of the Banlieue were represented by young girls, attired in white, and distinguished by silk scarfs of different colours. Each, moreover, carried a banner, ornamented with devices, and *vivats* for the Emperor and Empress. At about half-past two o'clock the cortège entered the garden of the Tuileries, and the cavalry, after riding up to the Palace, turned to the left and drew up in the alley adjoining the Rue de Rivoli. The moment the Imperial carriage made its appearance, all the young girls rushed forward and actually filled it with bouquets. The shower was so great at one moment, that the guards were obliged to interfere. The Emperor and Empress re-entered the palace at about a quarter to three, and then proceeded in their carriage to the Place du Carrousel, which they drove round before the troops, who received them most warmly. Their Majesties then ascended to their apartments with the same ceremonial that had marked the arrival of the Empress before the ceremony. Shortly after their Majesties appeared successively at the window looking into the court and at that looking into the garden. The Emperor took the Empress's hand, and saluting the people, presented her to them, amidst the acclamations of the people

At four o'clock the newly-married pair entered a travelling chariot, and, escorted by a picked squadron of Carabiniers, and attended by several other carriages, occupied by members of their suite, set out for St. Cloud, by way of the Place de la Concorde and the Champs Elysées; their appearance, as throughout the day, exciting rather curiosity than enthusiasm. The troops and the immense multitude soon dispersed.

Nothing could be more respectful than the demeanour of the spectators of all classes on the whole line of the procession in going to and returning from the cathedral. The most extraordinary curiosity was manifested to see the bride, owing to the reports of her striking beauty

In the evening, all the public buildings and the theatres were illuminated. Those which attracted most attention were the Hôtel de Ville and the Palais de l'Elysée. The Rue de Rivoli, and its rows of tricoloured flags, was also very brilliant. A great number of private houses, in different parts of the town, were also lighted up.

Another account states of the general reception of the Emperor and Empress: The feeling displayed by the people was favourable to this extent, that, although there was nothing that could, by any stretch of imagination, be construed into enthusiasm, there was certainly nothing of a hostile character. At no period was there anything that in England would be called a hearty shout; or, indeed, anything beyond that murmur of curiosity which all crowds give forth when about to be gratified with a splendid show All the people, however, took off their hats as the cortège approached, and seemed delighted with the carriages, the horses, and the cocked hats of the running footmen spectacles of which the Republican *regime* had for some time deprived them. The white plumes which decorated the heads of the Imperial horses were particularly successful.

The great *fête* happily passed off without any public accident, or even serious incident, considering the immense assemblage that had been drawn together Monday's *Moniteur* concludes a long official account of the religious ceremonies by saying that the very heavens favoured this Imperial *fête*; for seldom does winter give a "sky so clear, or a temperature so mild" Thanks were also due to those who had charge of the solemnities; for, by the perfect execution of their commands, nothing occurred to mar the gratification of the Parisian population

On Monday, the people crowded to see the Cathedral of Notre Dame decorations; and they have remained to this day (Saturday) for the inspection of the public. A small charge was made for admission, which the Archbishop of Paris has officially notified will be appropriated to the relief of the poor.

The *Moniteur* of Monday announces that, on the occasion of his marriage, the Emperor has pardoned more than 3000 persons who were implicated in the events of December, 1851. With these pardons, and the submissions already received, there do not remain more than 1200 persons subjected to expulsion. Public opinion, it is added, is not alarmed at these numerous acts of clemency; for the decree of March, 1852, which gave to the Government the right of having recourse to these measures of precaution, gave also the power of pardon. The names of the individuals who have received the Imperial clemency will be published hereafter

The Empress is a remarkably fine-looking woman, tall and perfectly well made. Her face could hardly be judged of on Sunday, for she was, to use a simile generally employed, as white as snow; at the same time her nervousness was so natural under the circumstances, as to have served her in the opinion of the watchful multitude. All appeared pleased with their Empress, and looked amiably disposed to accord the fair stranger the protection she seemed by her manner to implore.

The Imperial bride has inaugurated her greatness with an act which is likely to tell well for her popularity. We have already mentioned that the municipality of the city of Paris had voted the future Empress a diamond necklace, of the value of 600,000f., as a marriage present. A deputation from the municipal body next waited upon Mdlle Montijo, at the Elysée, to announce the resolution In answer, she said that she felt greatly gratified by this mark of favour, coming from the city of Paris, but that the jewels provided for her by the Crown were more than sufficient for all that she could possibly require for her personal use She then said that she would be glad if the money could be put to some better use, and she would, therefore, with the consent of the Emperor, suggest that the municipal authorities should dedicate the whole amount proposed to be invested in the diamond necklace to the relief of the distressed poor of the city of Paris She added that she hoped that the municipal council would not object to this, as it would give her delight to have the opportunity of inaugurating her elevation to the unmerited rank to which she was called, by an act of charity. No doubt this graceful act will be accomplished.

THE PALACE OF THE TUILERIES.

The new Empress of the French cannot hold her Court in the Tuileries without being profoundly impressed by the historical associations connected with this palace. Founded by Catherine de Medicis, it became the residence of Charles IX. and of Louis XIII. The *Grand Monarque* dwelt here until the building of Versailles. The Regent Duke of Orleans, during the minority of Louis XV., held his Court here During the French Revolution, it was attacked by the mob, and bravely defended by the Swiss Guards. The Tuileries became the official residence of the First Consul, and, subsequently, the Imperial residence of the man who made Europe tremble at his decrees. After the restoration it became the chief abode, first of Charles X., and afterwards of Louis Philippe. Here was signed the ill fated ordinance of July, which led to the revolution of 1830; and here, at the revolution of 1848, the populace of Paris forced an ingress. A Spanish demoiselle, hitherto a stranger to many of its historical traditions, will shortly occupy the apartments of Marie Antoinette, and the world will regard with renewed interest, an edifice which has seen such startling mutations of ownership: let us, therefore, take a retrospective glance around the palace itself, and review some of the principal personages who, at different periods, resided in this celebrated building

Who does not know the Palace of the Tuileries, with its spacious and beautiful courtyard, its noble Arc de Triomphe, by Roland, its gardens, the *chef-d'œuvre* of Le Nôtre; its terrace by the side of the river Seine: its fountains in the Place de la Concorde, and its obelisk, which, according to Pliny, had been erected by Psammetichus, at Thebes in the city of Luxor, and thence brought to Paris by order of Louis Philippe, who placed it in the Place de la Concorde, where it stands since 1834; its richly decorated chapel, its twelve great halls, its *grand escalier*, its thirty-two staircases, and thousand chambers?

Towards the close of the thirteenth century the Tuileries (Tile-kilns) at Paris was far from presenting the imposing sight which now bursts upon those who approach it by the Champs Elysées. The Place de la Concorde, the gardens, the terraces, and the arcades of the Rue Rivoli, were then neither erected nor thought of. The ancient lodge, which had long withstood the slow decay occasioned by a period of two hundred years, had, towards 1564, fallen into so ruinous a state, that Catherine de Medicis, the widow of Henry II., having purchased the edifice and forty acres around it for a trifling sum, had it pulled down, as well as several adjacent barns, and laid in the space they had occupied the foundations of a new Royal palace, to be erected by the celebrated architect Philibert de Lorme. But, upon the death of Catherine de Medicis, who never resided in the Tuileries, Henry III. being unable to advance more than a few hundred crowns towards the continuance of Catherine's design, the construction of the building, then scarcely raised above the first floor, was stopped.

Under the reigns of Louis XIV. and Louis XV. the building erected by Philibert de Lorme was yet but a vast and comfortable hotel, in which the grand officers of the King's Household, ministers of state, councillors, &c., enjoyed a sumptuous and liberal hospitality; for it is well known that at this time the Court resided at Versailles, in the splendid château, upon which, for more than half a century, all the celebrated architects of both the French and Italian school had, by order of Louis XIV., exercised their genius.

Louis XIV., as well as Louis XV., on very few occasions visited, when young, the Tuileries. The consequence was, that when the French revolved, in 1790, to compel the king, Louis XVI., to reside in Paris, the Château des Tuileries seemed rather unfit for a Royal residence. Some indispensable alterations were made within and without the building of Philibert; but the mean and shabby repairs were soon destroyed by the fury of the factions. The noble building had fallen, indeed, into such a wretched state that General Bonaparte, First Consul, and Le Brun, Third Consul, who had both taken up their residence in the Tuileries, found it necessary to make some immediate alterations. Accordingly, several houses which obstructed the admirable façade were pulled down. The courtyard was encircled by a rich iron gate, with a triumphal arch at its principal entrance. The Place de la Carrousel, largely increased, became an area upon which numerous bodies of cavalry, infantry, and artillery could display their brilliant manœuvres. In the interior, the pictures and the gilding of the ceilings in the Pavillon de Flore were renovated, without altering either the form or the subjects represented.

Among the most extraordinary marvels to be remembered in the Palace of the Tuileries is the celebrated Salle de Spectacle. At the time this spacious and Royal hall was constructed, it was considered as the largest in Europe, the theatre in Parma alone excepted. It must be added that the pit alone covered all the ground-plan of the so well-known Pavillon de Marsan

In 1793 the Royal playhouse underwent a strange metamorphosis It became the hall of the French National Convention. All emblems, names, and inscriptions recalling the *ancien régime*, were effaced and changed into Republican devices. So, the Pavillon de Marsan was to be called the Pavillon de l'Egalité; the Pavillon du Centre, the Pavillon de l'Unité; and the Pavillon de Flore was the Pavillon de la Liberté. The adjoining apartments were fitted up for several boards of the Assembly. The formidable Public Safety Committee was lodged in the Pavillon of Liberty, as well as the Boards of Treasury, Assignats and Money, Navy, and Colonies. The Board of War held its meetings in the Pavilion of Unity. The Boards of Legislation, Agriculture, and Trade occupied the Pavilion of Equality.

An outer staircase led from the Terrasse des Feuillants to the Hall of the Convention. The hall itself, according to the descriptions of the time, was an odd mixture of grandeur and faulty architectural outlines. It was arranged in the shape of an amphitheatre, to which the public had a free and daily admittance during three years. It has been a matter of great surprise, that such a curious platform, which was supported by only one column of nine cubic yards, did not give way when both the *sections* and the *tricoteuses* applauded Robespierre, Danton, and Marat, not only with their hands, but also with their feet when it was the regular battle-field where fighting, murders, and assassinations were unfortunately the *ultima ratio*

From the opening of the National Convention to the Thermidorian reaction, we may calculate that two millions of people entered the hall of the National Convention. It must be added, that all the battalions of the *levée en masse* that is to say, fourteen armies, with arms and baggage—made their celebrated defile in the front of the Assembly, and passed over the wonderful amphitheatre.

In Germinal (April), 1797, as well as in Prairial (May of the same year), so dense was the multitude urging all ranks towards the Convention, that it filled the adjacent streets, and, radiating from one common centre, the vast masses were seen ascending the Tuileries, grouping themselves among the pieces of timber in the courtyard, clinging around the columns and the roof, winding along the outline of the walls, and appearing at the windows of the Royal Pavilions, in such a manner, that each casement seemed walled up with heads. It was the populace which, led by the *Montagne*, loudly demanded an energetic repression against the Royalist counter-revolution. In its fury, the sanguinary mob had already stabbed the representative Ferrand, who had in vain done his best in order to protect the national representation. Suddenly the *sections* sprang up in the hall. A general battle took place, the result of which was a sentence of death passed upon five representatives who had joined the populace; besides which, several other members of the Assembly were transported.

In Vendemaire the *sections* in arms, led by the Royalists, after having possessed themselves of the avenues leading to the Convention, were in their turn dispersed by General Bonaparte. On that day the French Republic narrowly escaped the greatest dangers to which it had hitherto been exposed. Finally, on the 4th of the following month of Brumaire, amidst a silence incomprehensible to those who had witnessed the preceding outbursts, the National Convention announced solemnly that their mission was at an end. Accordingly the representatives left the Tuileries, where they had held their sittings for a little more than three years.

The *Conseil des Anciens*, who had taken the place of the Convention, were soon turned out from the hall by Napoleon and his grenadiers, on the 18th of Brumaire (Nov. 9), 1799.

On the 19th of February, 1800, the First Consul left the Palace of the Luxembourg, and took up his residence in the Tuileries. The Third Consul, Le Brun, was lodged in the Pavilion of Flora, in the *petit appartement* which the Queen Marie Antoinette had fitted up for her own temporary accommodation, in her private visits to Paris. The Consul gave up to the Pope his Royal residence when the Holy Father went to Paris to crown the Emperor.

With regard to the Consul Cambacérès, he refused to enter the Tuileries, preferring to accept for himself the splendid Hôtel d'Elbeuf, in which he resided until the end of the Empire.

The First Consul came to the Tuileries in state, preceded and followed by an imposing [illegible]. On that occasion a dense crowd had collected As the gate of the Carrousel the Consuls alighted from their carriages,

NAPOLEON III, EMPEROR OF THE FRENCH.

THE EMPRESS OF THE FRENCH.

THE BORDER DESIGNED BY T. R. MACQUOID.

and were received by the Consular Guard, arrayed in the courtyard. The ground was enclosed with poles and boards, which presented a rather gloomy appearance. On their arrival the Consuls could read the following inscription, posted up on the principal entrance:—"On the 10th of August, monarchy in France has been for ever abolished: it will never be restored." On the second day of Ventose the inscription had already disappeared. Orders were given to cut down the two trees of liberty which had been planted in the courtyard four years before. On the 10th of August a large number of cannon-balls had been lodged in the walls of the façade. Around them were written these words:—"10th of August." The cannon-balls disappeared as well as the inscriptions when the Arch of Triumph was erected on the Carrousel.

The alteration gave great satisfaction. It was, in fact, important that the power of the state should be confided to an energetic mind; and it was still more important for the tranquility of France that the new Government should inherit rather the sword of Charlemagne than the guillotine of Marat.

Historians, chroniclers, and painters, all agree upon the intense expression of the eyes of the Emperor Napoleon, describing them as emitting an incessant lustre, and investing him with the character of something unearthly. Such was the man who had succeeded in the Château of the Tuileries to Royalty and anarchy.

The Imperial Court soon displayed its splendour and magnificence in the Château des Tuileries. Let us stay for a moment in the gorgeous and imposing Salle du Trône. It was in the deep casement of the centre window that you could see standing up, with their hats off, the group of the *corps diplomatique*, the members of which, loaded with decorations, insignia, diamonds, *trembloet* in the presence of *the little man*. On the other side were the host of the Princes of the Rhine Confederation—all the personages that Germany, Russia, Poland, Italy, Denmark, Spain—all Europe, in one word, England excepted—had sent to Paris.

But, above all, the most attractive marvel in the Château des Tuileries was the remarkable beauty of the ladies of the Court. That not one of the Courts on the Continent could offer at this time such a phenomenon is easy to be explained, the generals of the French army and the high officers of the Imperial Guard having, most of them, married out of love, either in France, or in foreign countries. On the evening of the grand concert, the Salle des Maréchaux presented the *coup d'œil* of three sets of young and handsome ladies, adorned with flowers, diamonds, and floating feathers, all sitting and occupying both sides of the immense and gorgeous hall. Behind them, and standing, an imposing line formed by the officers of the Emperor's and Princess' household—generals, with their military uniforms and decorations; senators, councillors of state, ministers, prefects, all richly attired in the most splendid costumes.

The wedding of Napoleon and Marie Louise was celebrated in the Palace of the Tuileries with an unusual magnificence. Another event excited to the highest degree both the feelings and enthusiasm of the French. On the 20th of March, 1811, at seven o'clock in the morning, the first salute of cannon announced that the Empress had given birth to a child. As the event was expected, the quays, the streets, the Champs Elysées, presented the appearance of a holiday. Paris seemed in feverish excitement, all ranks flocking towards the Tuileries. The eyes of all, from every quarter, were instantly fixed upon that part of the palace where the Empress was confined. Slowly the cannon announced the tidings; no intelligence from the Court, no courier came to destroy or excite hope; every salute falling on the hearts of the people. The cannon fire twenty-one discharges for a girl, and 101 for a son and heir to the Imperial throne. The twenty-second sounded, its vibrations faintly faded on the ear, and a loud shout echoing from one million of voices, succeed to the stillness which had prevailed. "*C'est un garçon!*" (It is a boy!) that is to say, we have a Napoleon II. Madame Blanchard ascended in a balloon unregarded, so great was the excitement of the Parisians. Three years after, on the 20th of March, 1814, at ten o'clock in the morning, another event took place in the Imperial building.—Marie Louise and Napoleon's son, the young King of Rome, left for ever the Château des Tuileries.

The Empire gone and Royalty restored, Louis XVIII. made his entrance in Paris on the 3rd of May, 1814, and took up his residence in the Palace of the Tuileries, wherein he signed the treaties of the 30th of May.

We should occupy as many columns as we can afford lines, were we to narrate, even briefly, the principal events which took place in the celebrated building under the reign of the Bourbons and Louis Philippe. The interior of the building was much embellished by Louis Philippe, but under the present Emperor it will probably assume a style of splendour which it never before exhibited.

ROYAL AND IMPERIAL MARRIAGES IN FRANCE.

The annals of Royal and Imperial marriages in France form one of the darkest and most disastrous chapters in modern history. Bitter tears and blood deface the page. The most tragical events in woman's life rapidly succeed to the enjoyment of dazzling visions of power. The victim, crowned with roses, and seated upon a giddy pinnacle of splendour, loves to wear a chaplet of cypress, and to drink to the dregs the cup of death, of exile, of separation, or of abandonment.

The moment when France has gained a young, accomplished, and high-spirited Empress may seem ill-chosen for recounting the misfortunes and reverses of her immediate predecessors upon the Royal and Imperial throne of France. But there may be more wisdom, as well as boldness, in question ing the gloomy and portentous shapes which hover around the Imperial couch, and mock the possessor of the Imperial throne.

The lives of Marie Antoinette, of Josephine, of Marie Louise, of the Duchess of Orleans, must have a terrible and fascinating interest for the Empress Eugénie. France is still a seething cauldron of political ideas and popular passions; and no one can venture to predict the permanent stability of the dynasty re-inaugurated by Louis Napoleon. It may not be given to a woman to fulfil the glorious mission of healing the wounds of civil strife, and giving peace and liberty to France; but, by imitating the virtues, and avoiding the errors of her predecessors, the young Empress will at least secure the respect of her adopted country and of Europe.

If what good sense, and personal charms could have averted ill fortune from their possessor, the tragic story of the daughter of the illustrious Maria Theresa would never have been written. There is something idolatrous in the language which the contemporaries of Marie Antoinette employed in describing the captivating qualities of the youthful Princess at the period of her nuptials with the young Dauphin, the grandson of Louis XV. Although only fifteen years of age, she charmed all hearts by her beauty, grace, modesty, and beneficence. On the road from Strasburg the country-people flew to pay their homage, and to strew the road with flowers. The young girls, dressed in white, presented her with bouquets; and her beauty, her enchanting smile, and her sweet countenance, were the theme of all observers. The young Princess directed her route to Compiègne, where Louis XV. and a brilliant Court awaited her arrival. It was there she first saw the young Dauphin. The King went out with a great retinue to meet the Princess in the forest. As soon as she saw the King, she alighted from her carriage, and ran and threw herself at his feet. Louis raised and embraced her affectionately, and presented the young Princess to her affianced husband. The Dauphin, advancing with a lively air, seized one of her hands, and kissed it with rapture. His admiration, indeed, was so ardently expressed by his looks, that the young Princess cast down her eyes, while a lovely blush overspread her cheeks. The day after her arrival at Compiègne, the bride and bridegroom, with the whole Court, set out for Versailles, where, in the Palace Chapel, on the 16th May, 1770, Marie Antoinette, superbly arrayed in her bridal dress, received the nuptial benediction at the foot of the altar, and was united to the young Prince, afterwards Louis XVI. Louis XV. gave the Dauphine many rich presents, and, among others, the necklace of large pearls, which Anne of Austria bequeathed to the Queens of France. On the day of her public entry into the capital, the people seemed intoxicated with joy, and the multitude never seemed sufficiently satisfied with seeing and admiring her. Blessings were showered upon her at every step of her route to Notre Dame, where she and the Dauphin publicly and solemnly offered up their devotions, and besought the divine blessing upon their nuptials. From the cathedral the youthful couple proceeded to the Hôtel de Ville, where the Marshal de Brissac, with not more gallantry than truth, said to her—"Madame, you have before your eyes 200,000 lovers of your person." The compliment flew from mouth to mouth through the multitude, and excited rapturous applause. Popular delight in its excess exhibited something of the jealousy of the lover. From the Hôtel de Ville the Dauphin and the Dauphiness proceeded to the Tuileries, in the gardens of which they walked for a considerable time, in order to satisfy the curiosity of the public. Seeing the stream of spectators overflow the terrace, the youthful couple showed themselves at a gallery which overlooked it. "There now took place between this august pair and the people (says a contemporary historian) a kind of affectionate diversified dialogue, carried on by smiles, benevolent looks, and tutelary affection, on the one part, and on the other by tumultuous exclamations, shouts of joy, and mingled vows of popular love. Every time that the fascinating object appeared inclined to withdraw, a general groan, which they had not power to resist, detained them; and this affecting scene could only be terminated by the coming on of night." No wonder that the Royal pair pronounced the day in which this memorable scene took place as the sweetest in their lives. The same writer, who knew the Princess intimately, has drawn a captivating portrait of her graces. "Nature, (as was said by Madame Poligna), had formed Marie Antoinette for a throne. A majestic stature, a noble beauty, and a manner of holding her head, difficult to describe, inspired respect. Her features, without being regular, possessed infinite grace. The clearness of her complexion set them off, and gave a dazzling lustre to her countenance. The most engaging manners still heightened all these charms; and in the bloom of youth, the elegance and vivacity of her motions, with the frank and lively expression of a good heart and native wit were particularly calculated to delight the French of those days. She charmed the King and all his family, the Court and the town, the high and the low, each sex, all ranks and all ages." Englishmen partook of the universal enthusiasm. Burke's recollections were vividly preserved. "It is now sixteen or seventeen years since I saw the Queen of France (then Dauphine) at Versailles. A more celestial apparition never shone on this orbit, which she scarcely appeared to touch. She glittered like the morning star, full of life, brilliancy, and happiness."

Six years afterwards she was still the idol of the French nation. Sir W. Wraxall said,—"In the summer of 1776, when I left France, Marie Antoinette had attained the highest degree of her beauty and prosperity. Her eulogium was in every mouth, from the courtier to the shopkeeper, and La Harpe did but echo the public voice when he composed her portrait in the following verses:—

> Le ciel mit dans ses traits cet éclat qu'on admire.
> France, il la couronna pour ta félicité;
> Un sceptre est inutile avec tant de beauté,
> Mais a tant de vertus il faliait un empire.

A few years were to see this fair face woe-begone and humbled by indignities and menaces. In 1782 a violent insurrection broke out. The gates of the Tuileries were forced by a crowd of demons. Louis XVI. and his family were imprisoned in the palace until April, when they were transferred to the tower of the Temple, the last residence of the King. After the execution of her husband, Marie Antoinette was forcibly torn from her son, and conducted to the Conciergerie, where she awaited her judgment in a damp dungeon. She was doomed to death on the 16th October, by an unanimous vote, Marie Antoinette, dressed in white, with her hands bound, was placed in a cart with a priest and her executioner, and exposed to the insults of the populace on her way to the Place Louis XV. Her dying words were:—"Lord, enlighten and soften the hearts of my executioners. Adieu for ever, my children: I go to rejoin your father." The next moment her head rolled upon the scaffold. Thus, at the age of thirty-eight, perished Marie Antoinette. Perhaps among crowned heads history has no such example to show of any woman once so beloved, so amiable, and so happy, living through such bitter days of misery and wretchedness.

The "good and modest wife of General Bonaparte" is the model proposed for the imitation of the Empress Eugénie by her husband. Josephine became the wife of Napoleon in 1796. The civil marriage was alone performed; for those were the days of Tallien, Robespierre, and Barras, and religious ceremonies were not in favour. The religious rite was not performed until 1804, the night before the Emperor's coronation, for the Pope refused to crown Josephine unless they consented to receive the nuptial benediction at the hands of the church. Napoleon was excessively angry with Josephine for revealing to the Pope that she had only been civilly married, and consented with a very ill grace. The ceremony was performed by Cardinal Fesch, with only Talleyrand and Berthier for witnesses, all of whom were pledged to the most profound secrecy. Josephine was delighted with her success; but it is related that next morning her reddened eyes bore testimony to the tears which these inward agitations had cost her.

The morning following was Sunday the 2nd December. The weather was cold but clear. All Paris was astir. The Cathedral of Notre Dame was decorated with a magnificence unsurpassed, even by the ceremonial of last Saturday. Hangings of velvet, sprinkled with gold bees, descended from the roof to the pavement. At a richly-decorated portico in the Place Notre Dame, the Sovereigns and princes who had been invited to be present, descended from their carriages. The Pope had quitted the capital of Roman Catholic Christendom expressly to perform the ceremony. Escorted by detachments of the old Imperial Guard, and accompanied by a most numerous body of the clergy, Pope Pius saw before him no less than sixty Bishops of the French church, who presented themselves in succession to salute him. When the Pope, preceded by the cross and the ensigns which always accompany him, entered, the immense audience rose from their seats, and 600 voices pealed forth the sublime strain, "Tu es Petrus." Within the cathedral were assembled the deputies of the towns, the representatives of the magistracy and army, the Senate and Legislative Body, the Council of State, the Princes of Nassau, Hesse, and Baden, the Arch-Chancellor of the Germanic Empire, and the diplomatic representatives of Foreign Courts. Napoleon entered the cathedral, "wearing, at this first stage of the ceremony, only the crown of the Cæsars, namely, a simple golden laurel. All admired that noble head noble beneath that golden laurel, as some antique medallion." The Pope anointed the Emperor, girded him with the sword, placed the sceptre in his hand, and approached the grand crown (modelled after that of Charlemagne), to take it up. But Napoleon, who had watched his movements, and had determined how to proceed, unexpectedly, but firmly, and without violence, seized the crown, and placed it upon his own head. "This action, which was perfectly appreciated by all present, produced an indescribable effect. Napoleon then taking the crown of the Empress, and approaching Josephine, as she knelt before him, placed it with a visible tenderness upon the head of the partner of his fortunes, who, at that moment, burst into tears." This done, the Emperor and Empress proceeded to an immense throne, opposite to the altar, followed by his brothers, bearing the train of his robes. The Pope advanced to the foot of the throne, to bless the new Sovereign. Shouts of "*Vive l'Empereur!*" resounded through the edifice, and the thunder of the cannon proclaimed that the consecration had been accomplished.

Five years afterwards, the Empress was drawn aside into the recess of a window, at Malmaison, by Fouché, who had the impudence to propose to her, as the most sublime of sacrifices, her separation from the Emperor. Josephine instantly ordered him out of the room, and ran to tell the Emperor of the consummate audacity of his Minister. Napoleon disavowed all knowledge of the proceeding; but when Josephine demanded his instant dismissal, the Emperor refused. A chill struck to her heart. Her fate was decided; and, a few months afterwards, she yielded her place in Napoleon's heart to a stranger. Josephine was not beautiful, but her manners were extremely graceful, and her gentleness and goodness have endeared her memory to the French nation. She was the only woman Napoleon ever truly loved, as he frequently declared.

On the 15th December, 1809, only ten days after Josephine had been officially informed of her fate, Napoleon and Josephine appeared in the presence of the Arch-Chancellor and the full Imperial Council. Napoleon having recapitulated the reasons of State which led him to desire, for the benefit of France, a dissolution of the marriage tie, dwelt upon the truth and tenderness of his beloved spouse, his partner during ten years of happy union. "Crowned as she had been by his own hand, he desired she should retain the rank of Empress for her life." Josephine then arose, and with a faltering voice, and eyes suffused with tears, expressed her concurrence. The Senate authorised the separation, and the union of Napoleon and Josephine being thus abrogated by the civil powers, the Emperor retired to St. Cloud, where he lived for some days in retirement. Josephine repaired to Malmaison, near St. Germains, a favourite residence of Louis Napoleon. She was, however, obliged to be present at Notre Dame, when the "Te Deum" was chanted for that treaty of peace, the consequences of which had been so disastrous to her.

A young Austrian Archduchess again made her public marriage entry into Paris. Marie Louise was little more than eighteen. Her complexion was fresh and blooming, her hair flaxen, her stature sufficiently majestic, her eyes blue, and her countenance indicating health, innocence, and goodness of disposition. The Imperial pair were married by proxy, at Vienna, and Napoleon's favourite, Marshal Berthier, had the honour of receiving her hand in the name of Napoleon, in a magnificent tent which was erected for the purpose, near Braunau, a town situated on the frontiers of Austria and Bavaria. A brilliant retinue accompanied the French Marshal, who augured well from the modesty of demeanour and amiable deportment of the young Archduchess. Marie Louise wore a robe of gold tissue, adorned with red flowers, and carried round her neck a miniature picture of Napoleon, encircled with diamonds of immense value. She was surrounded by the highest persons of the Austrian Court, ranged on her right and left according to their rank, and by the officers of the Hungarian Guard in their rich and picturesque uniform. Berthier, having made three reverences, addressed a complimentary speech to her Majesty, explaining the object of his mission. Marie Louise made a suitable reply; and then the Prince of Neufchâtel introduced the young Empress to the Queen of Naples (Caroline Bonaparte), who took her by her hand and led her to her carriage. The Count Beauharnais, son of the divorced and injured Josephine, was her Chevalier of Honour! At Munich, Augsburg, Stuttgardt, Carlsruhe, and Strasburg, she found magnificent fêtes prepared for her entertainment, and a page awaiting her arrival with an ardent *billet doux* from the Emperor, to which she sent immediate replies. Napoleon during this period of expectancy became as amorous and as love-stricken as a lad in his teens, and had not patience to wait until the ceremonials he had himself regulated had been performed. Putting on his grey great-coat, and seating out of the park-gate at Compiègne, Napoleon hastened to meet his betrothed. When he met the carriage, he flew to the coach-door, opened it himself, and rushed rather than stepped into it. "It is the Emperor!" said the Queen of Naples; and the next instant he had thrown himself upon the Empress's neck, who was somewhat astonished at this unexpected greeting. A moment of silence succeeded as the newly-married pair gazed upon each other. The pause was broken by the bride, who, with more tact than might have been anticipated, said, "Your Majesty's picture has not done you justice." Instead of the cavalcade stopping at Soissons for the night, according to the Emperor's formula, they proceeded at all speed to Compiègne, following the precedent of Henry IV. on his marriage with Mary de Medicis.

The public entry of the Empress into Paris took place on the 1st of April, 1810. The weather was unusually magnificent, and nothing could exceed the respect and enthusiasm evinced by the populace. The marriage of Marie Antoinette with Louis XVI., though never advertised to, was in many respects, the model of the solemnity. The young Empress, radiant with youth, and every feature beaming with delight, entered the capital in the triumphant car of her illustrious consort, accompanied by a superb retinue. The rejoicings and congratulations were universal. The city of Paris made costly presents to the Emperor and Empress, who set off immediately to St. Cloud. Here the civil ceremony was gone through. Next day the Emperor and Empress went in public procession from St. Cloud to the Tuileries, where the religious ceremony of the marriage was performed by the Cardinal Fesch. The great gallery of the Louvre, which was the scene of this great event, was lined on each side with a triple row of all that was most distinguished in France, or even in Europe. The cardinals alone absented themselves from the ceremony, and affected to throw a slur on the marriage, on which account they were ordered to leave Paris. The most splendid illuminations, concerts, and festivals, followed the celebration; but one melancholy catastrophe exhibited so portentous a resemblance to a tragic circumstance which occurred at the marriage of Marie Antoinette, that not even the Emperor and Empress could shake off the superstitious influence of the omen. A *fête* was given by Prince Schwartzenburg in the name of the Emperor of Austria in celebration of the marriage. Napoleon and the Empress were present, and all the fashion and aristocracy of the capital thronged to the brilliant scene. A temporary ball-room, constructed of wood, which had been erected by the Prince in the garden of the Hôtel de Montesson, in the Chaussée d'Antin, took fire. In a moment the ceiling, the ornaments upon the walls, and the curtains were in a blaze, and all was confusion and alarm. The chandelier of the ball-room soon fell with a tremendous crash. The crowd rushed to the entrance to make their escape, when the floor gave way under their collected weight, and numerous victims were either consumed by the flames, which burst out on all sides, or crushed to death. "In a short time this temple of gaiety and enchantment was no more; nothing was left but blazing fragments and a melancholy stupor, when suddenly a young woman, handsome, elegantly dressed, and covered with diamonds, rushed forward from the smoking rafters, calling out for her children. The apparition vanished as soon as it was seen. It was the Princess of Schwartzenburg who perished thus miserably, while her young family were assembled in the garden, and out of the reach of danger." Napoleon and the Empress made their escape without injury. Prince Schwartzenburg never recovered from the effects of his melancholy bereavement.

Louis Napoleon, it announcing his intended marriage with the Empress Eugenie, declared that Austria had manœuvred *secretly* to bring about the marriage of Marie Louise to his uncle. Whatever may be thought of the good taste of this reminiscence there is no doubt of its historical accuracy. Napoleon gave a precise account of the Austrian marriage at St. Helena, which will be found in Mr. O'Meara's work —

"No sooner was it known," said Napoleon, "that the interests of France had induced me to dissolve the ties of my marriage, than the greatest sovereigns of Europe *intrigued for an alliance with me*. As soon as the Emperor of Austria heard that a new marriage was in agitation, he sent for Count Narbonne, and *expressed his surprise that his family had not been thought of*. At this time a union with a Princess of Russia or of Saxony was contemplated. The cabinet of Vienna sent instructions on the subject to Prince Schwartzenburg, who was Ambassador at Paris. Dispatches were also received from the French Ambassador in Russia, stating *the willingness of the Emperor Alexander to offer his sister the Grand Duchess Anne*. Some difficulties, however, presented themselves relative to the demand that a chapel for the Greek ritual should be established at the Tuileries. A privy council was held on the subject, and the votes of the majority were for an Austrian princess. I consequently authorised Prince Eugene to make an overture to Prince Schwartzenburg; and articles of marriage, similar to those between Louis XVI. and Marie-Antoinette, were drawn up. The Emperor Alexander *was not pleased that his overtures were slighted*, and thought he had been deceived, and that two negotiations had been carrying on at the same time, in which he was mistaken. It has been said," added Napoleon, "that the marriage with Marie-Louise is one of the secret articles of the treaty of Vienna, which had taken place some months before. this is entirely false. There was no thought whatever of an alliance with Austria, previous to the despatch from Narbonne, relating to *hints which had been thrown out by the Emperor Francis and by Metternich*. In fact, the marriage with Marie-Louise was proposed in council, discussed, decided, and signed within twenty-four hours, which can be proved by many members of the council who are now in existence. Several were of opinion that I ought to have espoused a French woman; and the arguments in favour of this were so strong, as to incline me to balance for a moment. It was hinted, however, by the Court of Austria, that *declaring to choose a Princess out of one of the reigning houses of Europe would be a tacit declaration of an intention to overturn them*, whenever the opportunity should present itself."

It is said that the Emperor Alexander judged so accurately of the consequences of the Austrian match, that he remarked, on hearing the news, "Then the next task will be to drive me back to my forests." The attempt was made, and the climate of Russia and the obstinate bravery of the Russian army shook the throne of the conqueror.

The formal manners and cold deportment of Marie Louise contrasted unfavourably with the suave grace, the sweetness of temper, and benignity of Josephine. The enthusiasm which had greeted her arrival had abated. The Empress was far from affable in public; and her precipitate abandonment of the capital upon the approach of the allies in 1814, increased the dissatisfaction of her subjects. The distress of Josephine on hearing of Napoleon's reverses and abdication in 1814, was unspeakable, and his misfortunes hastened her death. Marie Louise on the contrary, without much reluctance, laid aside her Imperial titles and accepted the treaty of Fontainebleau, which created her Grand Duchess of Parma, Placenza, and Guastalla, on condition that she formally renounced for herself and her son for ever all right to the Crown of France. She was sent to Austria by her father, Francis II., and travelled under an Austrian escort through the country in which, four years before, the roads were strewed with flowers, and where she had passed under triumphal arches erected to her honour. She appears to have loved the country of her birth better than that of her adoption, and her personal ease more than the interests of her children When Bonaparte escaped from Elba, she made a weak attempt to join him with her son, but the police officers stopped the carriage; and it did not appear that Marie Louise was much surprised or disconcerted at the failure of her attempt. After Napoleon's death she formed a private marriage with Count de Niepperg, by whom she had two children.

The nuptials of the father and mother of the present Emperor, although not strictly a Royal marriage, must not be passed over without mention. It was a favourite object with Josephine to effect a match between Hortense, her daughter by her first husband, and Louis, the third brother of Napoleon. The First Consul at first gave a decided negative to the project, "not," he said, "from any unfavourable opinion entertained of the character or morals of the young lady, who was the subject of general praise, but because he was afraid their characters were not suited to each other." Napoleon was right; but Josephine had set her heart on the match, and, after the return of young Louis from Portugal, in October, 1801, she renewed her solicitations. One evening, when there was a ball at Malmaison, Josephine drew Louis aside, and directed his attention to Hortense Napoleon joined the conference, and, after a long conversation, Louis says "they *made* him give his consent." The day of the nuptials was immediately fixed by Josephine, and, on the 4th of January, 1802, the contracts, the civil marriage, and the religious ceremony, took place at the First Consul's private residence in the Rue de la Victoire. "Never," afterwards exclaimed the bridegroom, in a tone of anguish, "was there a more gloomy ceremony! Never had husband and wife a stronger presentiment of the horrors of a reluctant and ill assorted union!" From this moment the unhappy Louis dated the commencement of his unhappiness, his bodily and mental sufferings. "It stamped on his whole existence a profound melancholy, a dejection, a drying of the heart, which he said nothing ever could, or ever would, remedy." Hortense, who had only left the celebrated Madame de Campan's boarding-school a few weeks before the wedding, appears to have felt the same remarkable repugnance to the marriage. In France young couples seldom make a long and strenuous resistance, on the ground of fancied incompatibility of temper, to a marriage which meets the approval of their parents and friends. But, in this case, it is difficult to decide whether the bride or bridegroom exhibited the greatest dislike for the alliance. A lady who was present at a ball given in honour of the wedding by Madame de Montesson, states that "every countenance beamed with satisfaction, save that of the bride, whose profound melancholy formed a sad contrast to the happiness which she might have been expected to evince. She seemed to shun her husband's very looks, lest she should read in her the indifference she felt towards him." The marriage was, in every respect, unfortunate. From the day of their union, in January, 1802, down to September, 1807, when Louis and Hortense finally separated, they remained together in all not more than four months, and that at three separate periods, with long intervals between. The present Emperor of the French is the issue of this marriage

We may pass over briefly the marriages of Louis XVIII., and Charles X., who, when Counts of Provence and Artois, were married, more than thirty years before their accession to the throne the former to Marie Josephine Louise, and the latter to Marie Thérese, both Princesses of Savoy, and sisters, who lived and died in obscurity and exile. Nor need we do more than advert to the marriage of the ex-Queen of the French, Marie Amélie de Bourbon, Princess of Sicily, to Louis Philippe when, took place on the 25th November, 1809; or to the nuptials of the Duke of Orleans, in May, 1837, with the amiable Princess of the House of Mecklenburg-Schwerin, who loved to mourn the sudden and untimely death of her husband. Both Princesses have found a hospitable refuge and secure asylum in England, and respect for their virtues forbids us to lift the veil which shrouds their misfortunes. May the fate of the youthful Eugénie be more fortunate than theirs! and may the day speedily arrive when France may know how to work out her political regeneration without sending into life long and dreary exile the women who, while sharing the throne, have tempered the severities of kingly rule!

LE CHAMP D'ASILE.

[The Champ d'Asile was a wretched swamp in Texas, where a colony of old officers of the Empire took refuge. In this dreary home, long after the blessings of peace had been restored to the troubled nations, the refugees strove to enliven their joyless existence with the remembrance of past triumphs, and hopes for the future which they knew to be illusive, until they perished, one by one, through privation and disease.]

Come, sound the watering-bugle. To stable, boys, halloo!
Let's keep our ancient customs, though with never a jot to do.
Pierre has swept out the rattlesnakes, and for a good half-mile,
You'll scarcely step on a stout wild-cat, or a middling crocodile.
Here's a fire in the Palais Royal, and regular holiday fare,
Lacoste has killed a forest-pig, and had a waltz with a bear.
Let's have a rouse, for once, and a chat of many an old campaign—
And drink to our—Pardieu, *his* health—yonder, in St. Helène.

Ay, pledge him, you of the chasseurs, and you, bold cuirassier,
And you, my dauntless lad of the line, that fright the monkeys here:
And you, last limb of his loved Old Guard, the stay and pivot and soul
Of Friedland, Jena, Montmirail, of Lodi, and Arcol.
But hoard up that immortal name; let's call him one, or he,
I'll be bursts, with one last eagle-swoop, from his prison of the sea
Till the star that knows but brief eclipse lights but a broken chain
On that leprous spot in the whole fair sea, accursed St. Helène

Come, let's be merrier, comrades! Himself declared 'twas base
To a soldier's spirit to borrow tints from fortune's various face
See him prancing on Marengo, or plashing through the mire;
Or laughing, with a soldier's jest, at the feeble bivouac fire.
They have his war worn frame, 'tis true, to torture as they will,
But here his great soul sits with us, and calls us "children" still.
Shout! Drink ye' drown the screech-owl song that knells through
Heart and brain,
Ever recurring funeral chaunt, woe—*captive*—St. Helena.

O Battle god! are we betrayed? Are not thy paths august?
Shall we, ennobled once by thee, shrink back to worthless dust?
O Battle-god! is this thing sooth? We that have toyed with death—
Have wrestled down the giant wars, and gulped the sulphurous breath
Of guns, not sword-length distant; and even thus made bow
Banded Imperial dindems: can it be just, that, now,
Borne safe through that blood-baptism, such lives should wither and
wane—
Ours in a Texian wilderness—and *his* at St. Helène?

The old red lion's asleep at last—it took twelve men to slay:
Cowards and fops insult the dust of courtier-murdered Ney.
Many are fallen, and some have fled, and hope for France is none;
And we, boys, camp in a wooded swamp, in the setting of the sun.
We jest, and chatter of fields to come, and, from the croaking bougies,
The monk-bird screams, and mowing shapes copy our wild carouse
Great thoughts shall come to the heart of France—grant dust to the
silver Seine,
But never, never, *never* more, the *Man* from St. Helène.

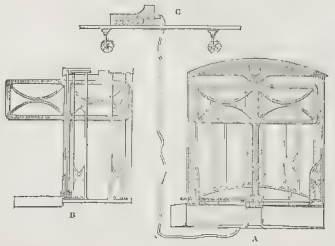
H. SPICER.

NORTON'S PATENT INDICATORS OF NUMBERS AND DISTANCES.

At the fourth ordinary meeting of the Society of Arts of the present season R Stephenson, Esq., M.P., F.R.S., Vice-President, in the chair—Mr James Norton, the patentee, read a paper illustrative of his invention; and it is a singular circumstance to be recorded that, in the present day, otherwise so remarkable for progression, no successful efforts have hitherto been made in this department of invention, particularly in reference to vehicular accommodation in large towns.

The invention is classified under three heads.

1. As a registry of numbers, applicable to all places where money is received, or where numbers are required to be registered on entrance—viz., railway stations, public meetings, gardens, steam-boats, toll bridges, &c.; it is also applicable to divisions in both Houses of Parliament.



The Engraving A represents a side view of the Indicator, or revolving gate, and B an end view One improvement in this Indicator over the ordinary turnstile, consists in the facilities afforded to great crowds of persons passing through, as the person in charge is not required to depress a lever with his foot, as by the present plan, on the ingress or egress of each passenger. The mode by which this is effected is as follows:—At the bottom of the standard, or revolving shaft, carrying four radial arms, are fixed two crowned ratchets, the one within the other, each having four teeth, with the inclinations opposite Each ratchet has a locking bolt attached to separate tread plates, viz. ingress and egress, which are hinged to the flooring, and borne up by a spring. When the ingress plate is depressed, the bolt attached to it is withdrawn from the ratchet, so as to allow the gate to revolve sufficiently for a person to pass through, and then the plate rises by the force of the spring below it, and the bolt resumes its fast or locking position, registering only one person at a time. A further and more minute description of this and other parts of the patent may be seen in *The Civil Engineer and Architects' Journal* Another improvement comprised in the patent refers to the application of the principle to omnibuses, steam-boats, &c., and to all places where economy of space is important. The Engraving B is a front elevation, and C a plan view of this indicator

That any invention which should be a check upon the frauds of conductors is important to the proprietors of omnibuses, may be understood by the fact that a fraud of only 3d. per journey would amount, in the metropolis alone, to a sum exceeding £5,000 per annum

The greatest novelty, however, in this part of the invention, consists in the power possessed of communicating the indication to any place or distance required, as shown in Engraving C. This is a very important feature, and its application to various purposes would be found of the greatest advantage. For instance, in the different Exhibition buildings now spreading all parts of the United Kingdom, the extraordinary result of the Great Exhibition of 1851, also in theatres and other places, not only the numbers going in and going out at each door could be indicated; but in any central or other room, the aggregate numbers entering and leaving, and

the numbers remaining in the building at any given time could be shown. From the central room, also, all the doors of the building could be simultaneously locked, if desired. The part of the patent could also be made available as a strong antidote to the overcrowding of steam-boats, because it could be so arranged that an inquiry for night see the numbers in a boat at any one time half across the river; thus furnishing a valuable security against accidents arising from overcrowding

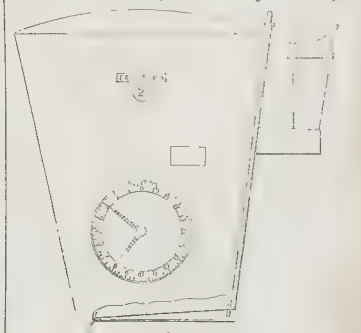
Secondly, the invention refers to the simple indication of distance, applicable to gentlemen's carriages and carriages on hire of every description, and which can be made ornamental; if necessary, it might be worn in the pocket, or placed in any part of the carriage. A motion is communicated by each rotation of the road wheel into the body of the carriage by an eccentric fixed upon the nave of the wheel, in various ways, to suit circumstances, and allowing for any lateral or perpendicular oscillation of the carriage

The Indicator, which may be fixed in any part of the vehicle, is shown in Engraving F, and indicates a distance travelled of three miles and six-

tenths of a mile. It is applicable to all diameters of wheels; and the ratchets, which are all of one size, differ only in the number of their teeth, to adapt them to various road wheels

By persons letting gigs or carriages on hire, the invention is available. According to the present plan, the proprietors have not any certainty as to the distance travelled by persons hiring the vehicle. The above would furnish such test: and in practice will be found of great importance, both to the proprietors and the public

In the third place, the invention is applicable to ordinary street cabs, distinguishing the productive and unproductive mileage, or the distance travelled with fares, and without. Motion is communicated from the road-wheel as before described; and in the drawing G on the dial, it



will be perceived there are two hands—one marked *productive*, and the other *total*. The latter shows the total mileage the cab has run; the former the mileage run with passengers. By this dial it therefore appears that the cab has travelled eight miles; three with, and five without, passengers The mechanism to accomplish this is connected to the seat or footing of a spring, which, when depressed by the weight of a passenger, causes that part of the instrument indicating the productive mileage and the fare to be paid, to be set in motion; and when the passenger leaves the vehicle the seat rises, causing the fare-hand to return to zero, and at the same time indicating to the proprietor of the vehicle the distance travelled with that particular fare; and that part of the instrument ceases to act until the next passenger enters the cab.

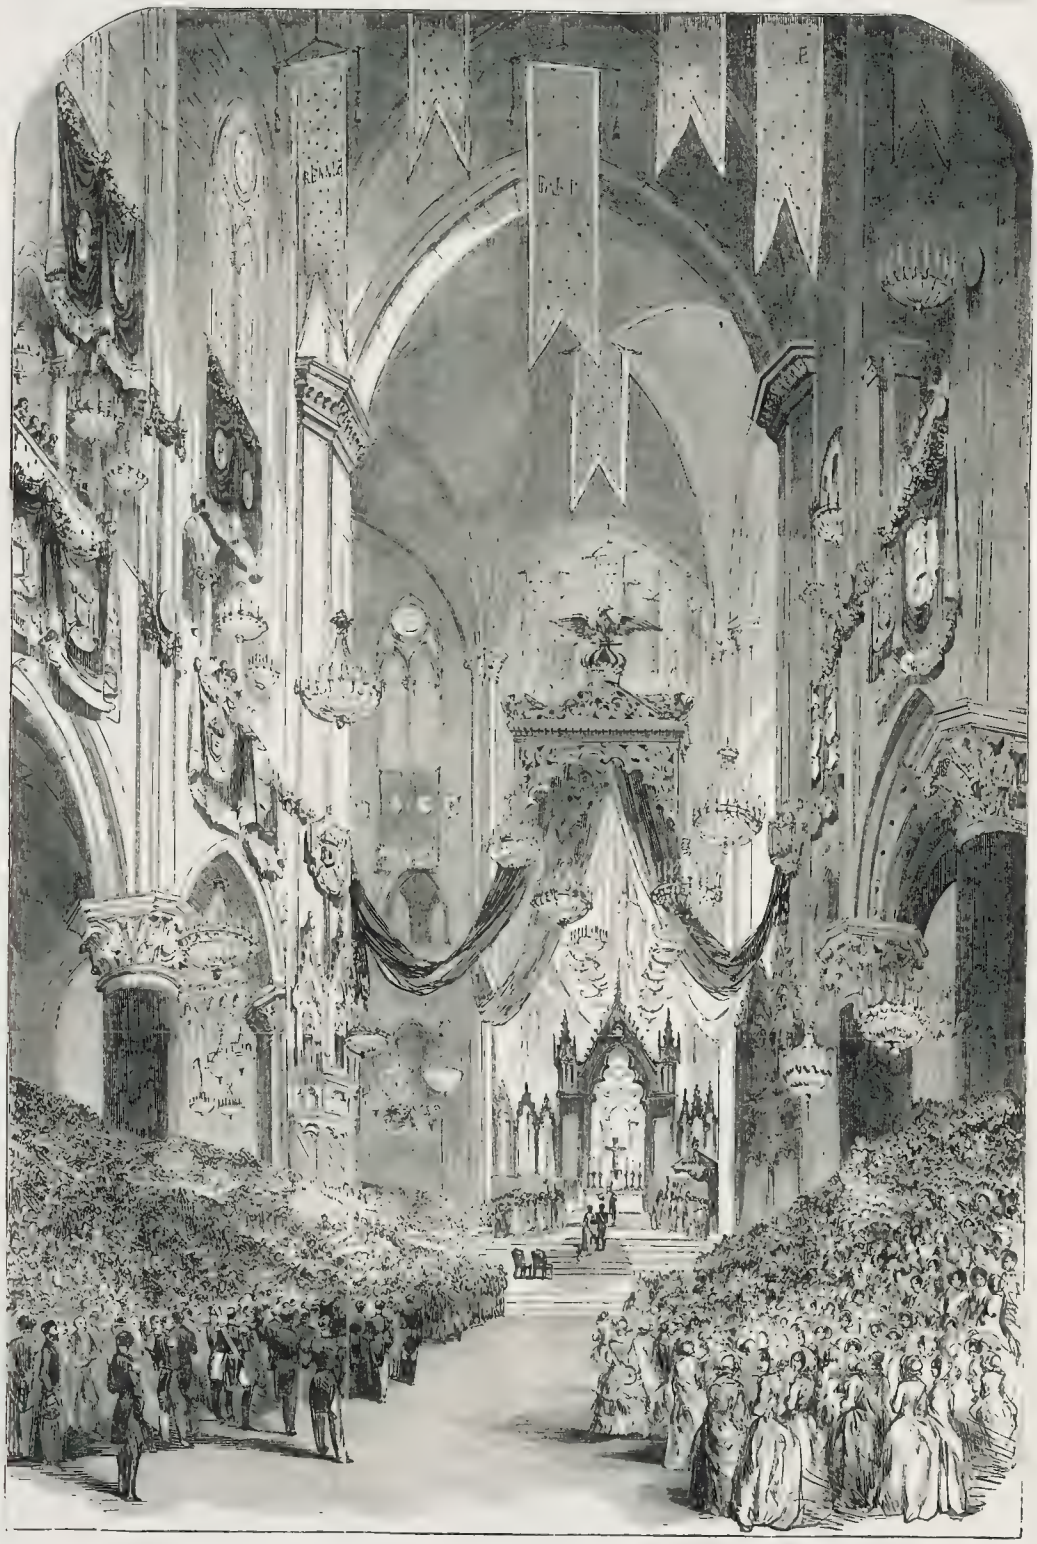
The Parliamentary fares being 8d. per mile, or fractional parts thereof, the "6d. fare to pay," marked in the drawing, shows that the passenger has travelled 2½ and not exceeding 3 miles When a passenger enters a cab, 8d. fare would be indicated, and when the mile was exceeded, 1s. fare would be shown, and so on—an additional 4d. for every half mile travelled.

MEMORIAL TO THE DUKE.—A meeting of the inhabitants of Plumstead has been held, at which it was resolved to offer a portion of Plumstead-common, amounting to fifty acres, to the commutee who have the management of the great national memorial of the Duke of Wellington, viz., a public institution for the education of the children of military men. As it transpired that the Board of Ordnance had some claims upon the ground, the meeting was adjourned to a future day, in order to afford time for conferring with the Lords of the Manor and the Ordnance Board

MONUMENT TO CHANTREY.—The vicar of Norton, in Derbyshire, is raising a subscription for the purpose of erecting, in the village of Norton, a plain granite obelisk to the memory of Sir Francis Chantrey. Norton was the birthplace of Chantrey, and in the churchyard he was buried, in a grave of his own making His grave is marked by two enormous flat stones, surrounded by an iron railing, and in the church is a tablet to his memory, with a medallion portrait by Weekes, erected at the expense of Lady Chantrey.

TESTIMONIAL TO THE EARL BROWNLOW. The address of the magistrates and deputy lieutenants of the county of Lincoln to Earl Brownlow, on his retirement from the Lord-Lieutenancy, has been presented to his Lordship by Sir Robert Sheffield. The address is signed by every gentleman of authority and standing in the county.

GREENWICH-PARK. A number of trees in this park have been examined during the past week, and an order has been given to have many dangerous branches lopped off. Men have been accordingly set to work for this purpose, and much of the wood that is now lying on the ground, denotes the danger the public have escaped whilst passing under that shade.



THE MARRIAGE CEREMONY IN NOTRE DAME.

THE TROUSSEAU OF THE EMPRESS.

The jewellery and toilettes of the Empress are very magnificent. M. Lemonnier, the jeweller, has prepared a *parure* of white pearls and rubies of a beautiful design, consisting of a small closed crown to be placed on the back of the head, of bracelets, and of a necklace *a plaques*: and another *parure*, in very rare black pearls, consisting of a bracelet ornamented with three large pearls, a necklace setting close to the neck, in the Louis XV. style, with, in the centre, an enormous pearl pendent, and a brooch with four black pearls pendent. He has also prepared a bracelet, consisting of precious stones of all colours, and a brooch in diamonds of oval form, the centre of which is formed of a very thin large diamond, destined to cover the portrait of the Emperor, and a pure diamond is pendent from it. This brooch is of exquisite beauty. The marriage coin is of massive gold, with the rim in diamonds. On one side are the initials of Napoleon III. and Marie Eugénie de Guzman; on the other is inscribed in diamonds the date of the marriage of their Majesties. The wedding rings are of thick solid gold. M. Fossin, another jeweller, who was intrusted with the arrangement of the diamonds of the crown, has made a crown similar to that of Charlemagne, of great beauty. He had also to supply

THE EMPRESS OF THE FRENCH.—MORNING COSTUME.

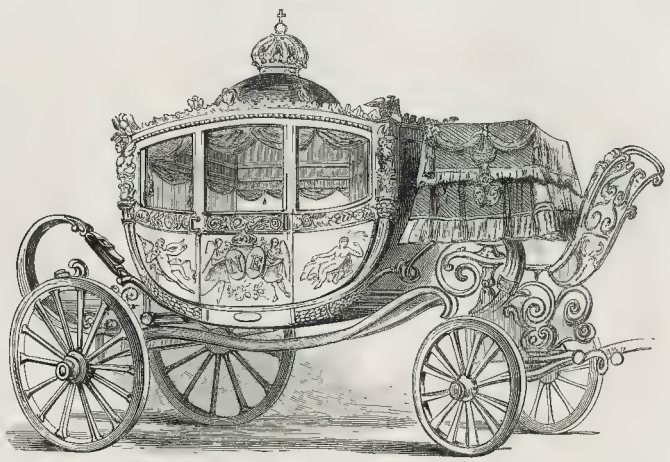
some very fine bracelets and brooches. It is he who has prepared the ornaments of the prayer-book of the Empress; the book is bound in white velvet, with silver ornaments, and on one side is an eagle surmounted with the Imperial crown in diamonds; on the other, the initials of her Majesty, surmounted with an Imperial crown, also in diamonds. Two dressmakers were charged with the dresses—Madame Vignon with those for the morning, and Mdlle. Palmyre with those of the evening. The former has made thirty-four of exquisite beauty. Among them are three morning *peignoirs*, richly embroidered, decorated with Valenciennes and Mechlin lace, and lined with silk of a rose, blue, and white colour; two *robes-de-chambre*—one in black velvet, with facings of watered silk of a sky-blue colour—the other in gros-de-Navarre, lined with white silk; a full dress of rose-coloured watered silk, with very long *basques*, ornamented with fringe and lace; and one of green taffetas, with flowers, ornamented with *plumes frisées*. Mademoiselle Palmyre has made twenty full dresses: one is in white brocade, with flowers of silk and gold, ornamented down the front with flowers of different colours; another has three flounces, embroidered with silk and silver; another, of velvet, is ornamented with flounces of blonde lace, decked with bees and crowned eagles in gold; one of blue velvet, ornamented with Alençon lace; one of black velvet, with flounces of gold *guipure*; one of pearl-grey satin, with nine flounces of Brussels lace; three court mantles of silk, watered with gold and silver—rose, blue, and white—one ornamented with gold blonde, the second with silver blonde, the third with white blonde, and all three decorated with tufts and flowers and feathers; another dress in tulle and satin, blue in colour, with feathers and roses; another, white, with tufts of violets and ribbons, ornamented with roses. The day dresses are *à basques à tailles*, very long, and *à demi-queue arrondie*; and those of the evening *à queue entière*, and the greater part *à corsages drapés*. For the civil marriage, Mdlle. Palmyre made two dresses, one in rose-coloured satin, covered with point d'Angleterre, ornamented at the bottom with *agraffes* of white lilac, with a *corsage drapé*, ornamented in the same way; the other, in white satin, covered with point d'Alençon, and ornamented with diamonds. The Empress wore the rose-coloured dress. The dress for the religious marriage was made by Mdme Vignon; it is in velvet *épingle*, with a train, and covered with point d'Angleterre; the corsage is *à basques*, decked with diamonds. Point d'Angleterre was chosen for this dress, on account of the veil, which could not be obtained in point d'Alençon. The head-dress was confided to Felix. It consisted of a diadem, and of a crown of diamonds and sapphires, mixed with orange-flowers. At the dinner, the Empress wore a *parure* of diamonds and rubies.

The Imperial Marriage.—The design and arrangement of the head-dress of the Empress was by M. Felix, the celebrated *coiffeur*, of the Faubourg St. Honoré, and was distinguished by its elegant taste. The new State liveries by Dusautoy, Rue Lepelletier, were very superb

Royal and Noble Marriages.—A German journal, in remarking that in former centuries marriages between reigning Princes and the females of noble families were not unfrequent, mentions that the ancestress of the present Royal family of England was the daughter of the Marquis d'Olbreuse, a French Huguenot. She married George William Duke of Hanover and Zelle in 1665, and from this marriage issued the Electors of Hanover and Kings of England.

The French Empress.—A gentleman in this city (Glasgow), who was for many years very intimate with Mr. Kirkpatrick, of Malaga, the grandfather of Napoleon's bride, informs us that the current reports respecting the family are, in some particulars, incorrect. Mr. Thomas Kirkpatrick was the Swedish Consul at Malaga, and not the British. Mrs. Kirkpatrick was a Swedish lady by birth, but her parents were British, and she was universally allowed to have been the handsomest lady in Malaga. A sister of Mrs. Kirkpatrick married Lieutenant-Colonel G. Thomson, of the Royal Engineers. Mr. Kirkpatrick had several children, one of whom married the second son of a Spanish Duke, who, on the death of his elder brother, succeeded to the family honours, and is the father of the French Empress. It thus appears that, except through her father, there is no Spanish blood in her veins; and this will account for her fair complexion and blue eyes. —*North British Daily Mail.*

Our Turkish Minister.—Lord Stratford de Redcliffe, on the retirement of the Earl of Derby's Administration, placed his resignation as Ambassador to the Ottoman Porte, in the hands of the Earl of Aberdeen. The noble Viscount has since been requested to retain the appointment in which his distinguished talents have rendered such important services; and it is believed that he will change his previously expressed determination.



THE IMPERIAL STATE CARRIAGE.

THE IMPERIAL STATE CARRIAGE.

The carriage which conveyed the Emperor and Empress to and from Notre Dame is of handsome construction, and richly carved and gilt, though more resembling a full-dress carriage than English notions of a state coach for a crowned head. It is entirely enclosed with plate-glass windows, so that the Emperor and Empress were distinctly visible. On the roof is a huge Imperial crown, the fresh gilding of which strangely contrasted with the tarnished appearance of the older gilding. There was the same contrast of old and new in the Imperial initials upon the centre panel. The figures at the angles are grotesque; and at the corners of the roof we have again the Imperial eagles.

Still, the furbished finery of the carriages had its effect, and the monotony of a mere military spectacle was varied by the resuscitation of the old Imperial state coaches. Few people supposed that the very carriages which conveyed Napoleon I. to be crowned, and the King of Rome to be baptised, were yet in existence. They were the distinguishing feature of the pageant of Sunday; although the gilded crown displayed on the high roof of the antiquated vehicle that bore the Emperor and Empress was, to the eyes of many thousand spectators, the only evidence that the expected procession was passing by.

CLOSEBURN.

(From a Correspondent.)

The circumstance that the daughter of Donna Maria Manuela Kirkpatrick de Closeburn is now Empress of the French, gives considerable interest to the accompanying Sketch of Closeburn Castle, copied from the sketch-book of one of the family.

Closeburn is situated in Nithsdale, on the left or east bank of the Nith, about ten miles north of Dumfries, and about four south-east of Drumlanrig Castle. There are three or four towns bearing the name of Kirkpatrick, but the family derives its name from Old Kirkpatrick, the Clota, near the source of the Clyde, alluded to by Tacitus in his "Life of Agricola," as one of the well chosen strongholds by which he protected his frontier—"Ponandis quæ castellis non alium ducem opportunitates locorum sapientius legisse." This Clota is a few miles east of Closeburn.

Closeburn (Clotesburn) Castle was built in 1222, by Ivan de Kirkpatrick, whose descendant, Sir Roger de Kirkpatrick, with the barbarity sanctioned by the age in which he lived, despatched the Red Comyn as he lay dying at the altar of the Grey Friars' Church, in Dumfries, wounded by the Bruce—The tale is mentioned by Hume and other historians; and, in a note to the "Lord of the Isles" on the stanza—

Vain, Kirkpatrick's bloody dirk,
Making sure of murder's work—

Sir Walter Scott enters into a somewhat lengthy discussion. After stating the fact that the Bruce and Red Comyn met at the high altar of the Grey Friars in Dumfries, that their difference broke out into high and insulting language, and that Bruce drew his dagger and stabbed Comyn; rushing to the door of the church, Bruce met two powerful Barons, Kirkpatrick of Closeburn, and James de Lindsay, who eagerly asked him "What tidings?" "Bad tidings," answered Bruce, "I doubt I have slain Comyn." "Doubtest thou," said Kirkpatrick, "I mak' sicker" (i.e. sure). With these words he and Lindsay rushed into the church and despatched the wounded Comyn. The Kirkpatricks of Closeburn assumed, in memory of this deed, a hand holding a bloody dagger, with the memorable words, "I mak' sicker."

Sir Walter then mentions a doubt raised by Lord Hailes as to the identity of the Roger de Kirkpatrick, since the Roger de Kirkpatrick who, with Lindsay, despatched the Red Comyn, is supposed to be the same as was, in June 1357, murdered by Lindsay in Caerlaverock Castle; whereas, says Lord Hailes, "the representative of the honourable family of Kirkpatrick, of Nithsdale, Roger de Kirkpatrick, was made prisoner at the battle of Durham, in 1346, and was alive on the 6th August, 1357; for on that day Humphrey, his son and heir, is proposed as one of the young gentlemen who were to be hostages for David Bruce. Roger de Kirkpatrick Miles was also present at the Parliament held at Edinburgh, 25th September, 1357, and is mentioned as alive 3rd October, 1357.

To this it is answered, that at the period of the Regent's murder there were only two families of the name of Kirkpatrick (nearly allied to each other) in existence, descended from Stephen Kirkpatrick, styled in the Chartulary of Kelso, 1278, Dominus villæ de Closeburn, filius et heres Domini Ade de Kirkpatrick Millitis, whose father Ivone de Kirkpatrick, witnesses a charter of Robert Brus, 1141. Stephen had two sons—Sir Roger, who carried on the line of Closeburn, and Duncan, who married Isobel, daughter and heiress of Sir David Torthorwald, of that Ilk. After some remarks, to show that the Torthorwald could not have been concerned in Comyn's murder, he adds—"Universal tradition, and all later historians, have attributed the Regent's deathblow to Sir Roger de Kirkpatrick, of Closeburn."

He remarks in passing, that the crest of the Torthorwald family, as it still remains on a carved stone, built into a wall in the village of Torthorwald, bears some resemblance to a rose. But this, most probably, was intended for a thistle, as the original crest of the family was a thistle, with the motto "Tich and I perse," which was exchanged by Kirkpatrick, of Closeburn, for the hand and bloody dagger, after the bloody deed which, in that barbarous age, was deemed honourable.—K.

CLOSEBURN CASTLE.

LITERATURE.

NAPOLEON THE THIRD. By A. DE LA GUERONNIÈRE, Editor of *Le Pays*, Journal de l'Empire. Translated by Lieut.-Colonel CHARLES GILLIESS. Vizetelly and Company, Fleet-street

We appraise our readers, by preserving M. de la Gueronnière's occupation, that he is a partial witness for Louis Napoleon. At the same time there is evidently so much of truth in his remarks, and they are so well accredited in France, that we should scarcely do our duty, as Journalists, were we not to lay some specimens of his work before our readers. The celebration of the Emperor's marriage seems an appropriate occasion for so doing; and as the work calls for no criticism, we shall merely make some extracts from it concerning Louis Napoleon :—

HIS PHYSICAL AND MORAL PORTRAIT.

His face, in appearance so motionless and inscrutable, is but the mask of the man within, ardent and powerful. Those eyes are dull, but as profound as the thought in which they dive, and which rises at times in their orbits, as the flame rises from the hearth whence it derives its fire. That brow is gloomy as fate, but as expansive as creative genius. Those lips are colourless, but full of expression; delicately turned; severed—scarcely sufficiently parting, and open just to allow the curt and precise expression of a will emanating from deep reflection, and inexorably resolved. That voice is indolent and drawling, but self-reliant; and the indifference which shows itself is but the excess of that confidence. Courage concealed by timidity,—resolution disguised by gentleness,—inflexibility softened by mildness,—policy hidden by good nature,—life under marble,—fire under [illegible] with the [illegible] of [illegible] sentimentality. [illegible] He [illegible] [illegible] ship. His words do not betray his thoughts; his actions do not betray his designs; his song does not reveal the ardour of his spirit; his demeanour borrows nothing from his resolution. All his moral nature is, by some means, constrained and overruled by his physical firmness. He meditates, but does not argue, he decides, but does not deliberate; he does not feel the throbbings of his pulse. His best friends do not know him intimately. He commands confidence, but never solicits it. On the eve of the expedition to Boulogne, General Montholon wished to follow him, and seeking to know his motives, he said to him. Each day he presides over the council of ministers, speaks little, listens to all, and upholds nothing. With one abrupt word he cuts short a question, as by a military "order of the day."

Hence the impossibility of associating a parliamentary ministry to his counsels. A parliamentary ministry would attempt to govern, and would never yield his authority, even on condition of reigning. With this inflexibility of will, nothing wilful or absolute in manner, he governs without wounding. Speech has been used on all sides to "severe critics." This maternal appreciation was perfectly just. Louis Napoleon Bonaparte has that goodness of heart which tempers, and often dissembles, the workings of the mind. Somewhat English in his gravity, serious, and concentrated, [illegible] his formal manner melts into kindness, which, in his case, is but [illegible] Many have derived themselves, mistaking his [illegible] kindness, and regarding his affability as common [illegible] on is the basis of his character—he is absolutely [illegible] and his best conceptions only so far regulate his actions as he thinks it lawful to authorise their use. Easy to excite, impossible to lead away, he calculates everything, even his enthusiasm, and, in spite of his audacity, his heart is but the vassal of his head.

In 1848, M. Antony Thouret proposed an amendment to the Constitution, for the expulsion from France of all members of families that had ever reigned. Louis Napoleon, then a member of the Assembly, on that occasion made the first display of

HIS DIPLOMATIC AGILITY.

Louis Napoleon Bonaparte, unmoved, in his place in the Assembly, listened quietly and composedly to all these suspicious allusions to his name and himself. After he had heard all and borne all, he asked permission to speak, and advanced towards the tribune. He was seen coming forward with measured step, careless of the malevolent looks which followed him, absorbed within himself in that inward strength which betrayed no sign of inner weakness. He mounted the tribune neither troubled nor disturbed him. Such as his attitude was before a hostile Assembly, such is he in the face of the most brilliant triumph of his popularity. When silence was at length restored, Louis Napoleon Bonaparte drew from his pocket a slip of paper containing only a few sentences. At every word he was interrupted by the grossest threats and the most insulting roars of laughter. He was as much excited as ever, and quietly putting back the slip of paper into his pocket, he descended from the tribune as quietly as he had mounted it, and resumed his seat without appearing to notice what had passed. His opponents never failed him. Such is the MAN: What was to be thought of a composure as strange as it was new? Superficial people, who do not look below the surface, imagined that they saw in it a proof of insensibility. "He is a dreamer," said M. Thiers; and this silly joke was much relished in the lobbies of the Assembly. But profound observers began to see more clearly into this mysterious nature, and recognised in this invincible power of self-control that faculty which enables a man to govern others by the empire of reason exercised over himself, and by that coolness which constitutes the heroism of warriors and statesmen.

HIS TACTICS

To retire in time, to advance at the propitious moment, such was the tact of Louis Napoleon in his conflict with the various parties who plotted his downfall. One step to the rear for two in advance; thus, with a leap, sudden, unforeseen, and rapid as lightning, he bounded over all impediment, and seated himself more firmly in power.

Thus it came to pass, when the executive commission tried to banish him, he refused the office of member of the Assembly, conferred on him by the department of the Yonne, when elected. They refused disarmed the Assembly and the Government. Two months after he returns, reinforced by a fourfold election, one of which nominates five representatives for Paris. Thus again, after his elevation to the Presidency of the Republic, he gives entire satisfaction to the Liberal and Republican feeling of the Assembly, in naming a ministry in which Messrs. Odilon Barrot and Bixio were conspicuous. Soon after he makes use of this same ministry to obtain the abolition of the same Assembly. Thus, also, one day he proves the formal disavowal, by M. Odilon Barrot and M. de Tocqueville, of his letter to Colonel Edgar Ney. A little later he dismisses the ministry, sends the message of the 31st of October, the last blow to Parliamentary influence. Thus, during the prorogation of 1850, he announced General d'Hautpoul, who had given umbrage to the majority and to General Changarnier. Thus he tolerates, without comment, the "order of the day" of the General-in-Chief of the army of Paris, who had assumed the tone of a master, and was a defiance of his authority: on the 10th January he dismisses General Changarnier from his command. Thus he accepts the hostile vote of the 18th January, 1851, and gives an apparent satisfaction to the Assembly; but, on the 24th of the same month, he writes a message in the Napoleon style, which throws all the blame of the crisis on the Legislative power, and makes the triumphant majority resent at leisure, by having ministers appointed, of which not a single one was a member of the Assembly. Louis Napoleon Bonaparte, therefore, whenever he has retreated, has done so to advance; he is not the man ever to advance only to retreat.

THE STATESMEN AND LOUIS NAPOLEON.—IN 1848, WHEN A CANDIDATE FOR THE PRESIDENCY.

A manifesto was [illegible] absolutely necessary. General Cavaignac had written his, in his six months' power, with the point of his sword, in the acts of his military dictatorship. What would be that of his dangerous competitor? Every one was curious. Louis Napoleon Bonaparte drew out with that precision of thought and style which stamps, as with a seal, all his writings. From deference, rather than choice, he deemed it advisable to consult an eminent statesman, M. Thiers, who, in a manner, had given his adhesion to his claims, in the hope of becoming Prime Minister to one whom he looked upon as a prospective King. M. Thiers regarded the manifesto of Louis Napoleon as a thing wanting even in common grammar, and, next day, he hastened to present him another, which the President read with the most polite attention. "Permit me to return it myself," said he, returning the manuscript. M. Thiers, little surprised, concealed his discontentment, and might have understood that the time was past when he harangued the French nation and Europe from behind the throne of a monarch, content to reign without governing.

His allies were not his friends. Louis Napoleon knew it well. The danger of the moment was to be warded off, and not to be played off. One day, in the month of August, if I remember well, Count Molé came triumphantly to announce, at solemn meeting of the Council of State, that the fusion of the two royal families was accomplished; and M. Molé was one of the Privy Councillors of Louis Napoleon: and those who received his communication were the advisers of his Government: but Louis Napoleon, in the midst of the applause, replied, "I am a sentinel, whose duty it was to guard his post until fresh ones came to take it from him; a Monk, twice a traitor to his country first, and then to his cause! This was the part, he added, that was to be played by the elect of the 10th of December,—for the heir of the Emperor Napoleon!

The day that the dismissal of General Changarnier was announced to the National Assembly, the leaders of the majority held a hasty meeting, and determined to make one last effort with the President. Messrs. Thiers, De Broglie, Berryer, Montalembert, set out for the Elysée. They were received with that affable and dignified politeness which inspires confidence, without per[illegible] with men of influence; he had to sustain the shock of the greatest eloquence, and most undoubted experience, of our times. He listened to [illegible] with the most perfect calmness. The eloquent men who were addressing him took up the subject one after the other, in the important interview. They expended all their powers to shake and convince him They offered peace, they declared war; they pointed to the lessons of the past, the difficulties of the present, the perils of the future; and they alternately made trial of supplications and threats. These torrents of words fell from their lips only to slide along steel. All were useless; nothing was changed. One of the friends, the most devoted to Louis Napoleon, was waiting, in the next room, with more curiosity than anxiety, the upshot of this visit, the result of which he was prepared for. He had the details from the Prince himself, who thus terminates his recital: "There was no argument, however far-fetched, that they did not bring to play. Only think, one of them went so far as to threaten me with the fate of poor King Charles X.: true, I was he who wished to be my Voltigeur."

HIS ASSISTANTS IN DECEMBER, 1851.

By his side, intimate in his councils and friendship, was a man who had been much distinguished in the last years of the monarchy. This was the Count de Morny, whose mind was as subtle as it was elevated, whose character was inflexible, and whose heart was noble as a true gentleman, by nature and education. M. de Morny had profoundly and attentively studied all the changes of the time since the election of the 10th December. His parliamentary experience and character, his acquirements, his [illegible] his authority, which his grace and superiority tended alike to make [illegible] accept, rendered him wonderfully apt to serve as the intermediary between the President and the majority. He represented political Bonapartism among the Orleanists and Legitimists around him, by whom he was much esteemed. He had endeavoured to effect a reconciliation in the minds of the enemies' ranks; he was an ambassador of peace. But when he saw that all was useless, and found before him the same blind factions which had formerly opposed, with the patriotism of a true statesman the ambassador turned soldier, and was the first to advise war, after having vainly tried to negotiate a union of the different elements of which the party of order was composed, a union which alone could render it invincible against Socialism.

M. de Persigny had his place marked out in this final struggle. He represented Bonapartism, militant and chivalrous. He had sacrificed all to [illegible] He had [illegible] his heroically for it. M. de Persigny, a statesman by character and [illegible] [illegible] business, had acquired an elevated principle of active life from the previous colleges in his person, and sentiments. Nearly impetuous and penetrating, he had felt the force of Bonapartism before he yet understood it. France and the Empire were to him inseparable; he did not for a moment doubt, and, after having been one of the first to [illegible] these two things, equally imperishable in his eyes, must be brought to [illegible] the law of [illegible] and the necessities of civilisation. M. [illegible] ages was a new [illegible] a family advance to one of the most important prefectures of France by his merit and his energy, he had made a deep impression on the President, whose rapid penetration needs but cast a look upon a man to appreciate him. M. de Maupas had not been mixed up, like M. de Persigny, in the struggles of Bonapartism, but he felt its power instinctively before he had acquired its faith. An enterprising nature, easily excited and warmed by what is grand and sublime, he was gradually conducted towards a cause whose object was to revive and strengthen the principles of authority, by personifying it in a ruler as popular as glory and as virtuous as law. Endowed with the spirit of government and order, he accepted without hesitation all that was necessary, and he comprehended without effort all that was generous. The firmness of his character, entrusted by the elegance of the man of the world, and the benevolence of a good heart, rendered him fit to govern others without mortifying them. He was one of those rare mortals who support and enforce authority without passing the bounds of moderation. The President of the Republic, by confiding to him the Prefecture of police in an hour of danger, not only made choice of a bold and resolute hand for the struggle, but who remained behind indistinct beforehand a clear head and flexible talents for a new ministerial institution, demanding the most eminent and extraordinary qualifications. General Leroy de Saint-Arnaud had just arrived from Africa: he had conducted with success a war which requires more than courage and military talent, and for which calculation, reflection, and prudence are needful. Africa is not only a field of glory, it is also a school for Government. Politics, as well as war, may be learned here. There Marshal Bugeaud became a great statesman; Lamoricière, Cavaignac, Bedeau, Changarnier, returned from it with aptitudes for Government, badly directed perhaps, but indisputable. General Saint-Arnaud, having scarcely alighted from his battle-horse, after the capture of Kabylia, took his seat as a minister of war on the benches of the Legislative Assembly: he possessed at once conception and decision. As prompt to conceive as he was resolute to execute, he was the man Louis Napoleon needed to lend an irresistible impulse to the army, when the day was come to strike a decisive blow for the salvation of society. The army of Paris, composed of picked regiments, was commanded by General Magnan, whose authority is as great as his renown is glorious, having under his command young, ardent, and devoted generals. This army was an invincible shield for the President to with stand Parliamentary assaults; but it was to say, as to the eternal honour, that it became also the protector of the country, of civilisation, and of religion. It was with these devoted adherents and these forces that Louis Napoleon prepared for the struggle.

HIS DEMEANOR IN DECEMBER 1851.

While the drama was unfolding itself, in the exact order of the preliminary plan, neither anxiety nor excitement was visible in Louis Napoleon. The events of the 2nd of December [illegible] him at the Elysée. Never had the Prince appeared more himself or affable. Having retired early to his private apartment, a few minutes of time, and a few words imparted to his friends, had restored him a sufficient settle all. Then he went to sleep, as sure and confident as he had been on the eve of Strasbourg and Boulogne, without even inquiring whether this night divided him from a triumph or a catastrophe.

HIS FAITH.

Writing from Ham to Lady Blessington, in 1841, he said—

How can I have no wish to leave my prison abode, for here I am in my place, *With the eagle or I bear, I must either have the obscurity of a dungeon or the light of power.*

What did Louis Napoleon intend by his enterprises of Strasbourg and Boulogne? Did he simply come to overturn a Government and take its place? Did he come, like Charles-Edward, at the head of his partisans, to stake his right and his sceptre on the chances of a battle? Did he come to decide, hand to hand, a party contest in a final duel on the banks of the Rhine and on the sea shore? No; the Bonaparte was not a pretender of an ordinary kind. He prepares nothing; he organises nothing. His plans are not warranted by any strategy. His efforts are connected with no secret understandings. He can reckon only a few inferior officers, who tender their swords and their allegiance. It is not on Paris, the centre of the territory, that he brings his action to bear, to ramify afterwards the whole of [illegible] he appears suddenly like his uncle, in a corner of the territory, and he believes his march will be one long, victorious, and popular procession. A few proclamations, a Constitution such are his impulsories of war—his [illegible] A decree. Friends, who consent to share his fate, constitute his army.

To obey destiny—to follow his star—to sound France with the sword of Napoleon—to [illegible] the flame of affection it contained for the name of Bonaparte and the Empire—to call upon the people to decide its fate with upon the system which, as he he loved, engraved all their favour and published in the name of the Emperor, such was what Louis Napoleon Bonaparte had faith in, and endeavoured to bring at once an entering sword in hand into Strasbourg, the 30th October, 1836, as in disembarking at Boulogne, the 6th August, 1840.

THE DUNGEON OF HAM.

The dungeon of Ham, far from appalling or saddening him, appeared to him as a fatality of his life, a halting place in the midst of the march of his fortunes. It was a scene decoration that rose up, at a given hour, and at the wish of the manager, on the stage of living history, and which was to assist in the representation of the supreme regret of the drama in which he was the hero. Ham was to him a resting-place on the road to the Elysée.

After his escape from the prison of Ham, the Prince Louis Napoleon had proceeded to England. It was in that country, whose manners and customs he admired, that he awaited with quiet patience and confident anticipation the return of his destinies. His first word to himself had never for a moment left him. A few days after his arrival in England he went to see his cousin, Lady Douglas, daughter of the Grand Duchess of Baden. "At last, you are free," said the young Princess to him: "[illegible] quiet? Will you lay aside those fallacies which have [illegible] you so dear, and the cruel delusions of those dreams which have brought such misery upon your race?" "I am free, indeed," replied the late prisoner of Ham, "I do not belong to myself: I belong to my name and my country. It is because my fortune has twice betrayed me that my destiny is secure of accomplishment. I bide my time." This was laborious enough. The star of Louis Napoleon was veiled from all eyes, even from those of his relations who best loved him; he, alone, saw and followed it.

These extracts will give some information and some new ideas about Bonaparte. He is a reflecting, resolute man, who has taken a wide, and yet correct, survey of France and Frenchmen. He inherits from the first Napoleon a complete confidence in his own abilities and his success; and it is, perhaps, for the public in France and here to make his success consistent with their welfare, and make him the instrument of social improvement, instead of an instrument, like the first Napoleon, of social destruction.

AUTOBIOGRAPHY OF AN ENGLISH SOLDIER IN THE UNITED STATES' [illegible]. Two volumes Hurst and Blackett

Looks which enable us to [illegible] ok at old subjects from new points of view, [illegible] obviously better [illegible] an those which treat of novel themes in a worn-out and obsolete style of remark: they have a freshness that interests our attention, and excites the reflective to trains of thought that [illegible] the past and present, and perhaps the future, in a chain of reasoning that may conduct to more direct conclusions than those hitherto accepted as orthodox. The title-page of the present work leads to an expectation of the sort. The writer is a Scotchman by birth, a hand-loom weaver by trade, and a British soldier by necessity. He left his home, after his discharge, in search of employment, for the United States, in 1846, where, having narrowly escaped the hardships of a whaler's life, he engaged himself for five years in the American service. His experiences of this service form the staple matter of his biography. As the writer appears not to have been without a smattering of literature, his story is told in an agreeable manner. From the account which he gives, we learn that the arrangements of the American service are much behind those in the British. In the former, the soldiers sleep two in a bed—a custom abolished here for the last twenty years; while the shortness of the period of service leads to indifference on the part of the American officer towards his men and their interests. The defects of the American system in this respect are, however, not without compensations. The dread of having cowardice imputed, and of losing one's character by it, becomes a powerful motive on the conduct of the American soldier. He is keenly sensitive, our author tells us, to the ridicule of his companions, whose good opinion he generally esteems more highly than that of his officer, to whom he stands, as above suggested, in rather an anomalous position. "To stand well in the estimation of his special comrades," our autobiographer testifies, [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] powerful incentive to the soldier's conduct in the field of [illegible] [illegible] [illegible] [illegible] [illegible] attack, the love of Bill, Tom, or Harry's approbation, or the dread of being called a coward, has often been the means of gaining the battle."

Desertion is, however, a common evil in the American service, owing to the misrelation between officers and men. The former are sometimes ignorant and brutal, and the non-commissioned especially often guilty of barbarous treatment. Foolish young officers often violently strike and assault soldiers on the most slight provocation, while to tie them up by the wrist, it is stated in the work before us, as high as their hands would reach, with a gag in their mouths, was a common punishment for trivial offences. The desertions occasioned by these causes among the troops for the obstinate resistance which the American troops, under General Scott, met at Churubusco; two or three attempts of the Mexicans to hoist a white flag having been made by some deserters, who, from desperation, killed the Mexicans attempting so to display it. The large number of officers killed in the affair was also ascribed to them; as, for the gratification of their revenge, they aimed at no other objects during the engagement.

A fearful example was made of the deserters taken at Churubusco; nevertheless, the practice continued. The following citation will illustrate the causes better than any statement of ours:

As the majority of these deserters were Irish, the cause commonly assigned by the officers for their desertion was, that as they were Catholics, they imagined they were fighting against their religion in fighting the Mexicans. There was a portion of truth in that view of the subject, but it came very short of the whole truth. I have good reason to believe—in fact, in some individual cases, I know—that the harsh and unjust treatment of their officers operated far more strongly than any other consideration to produce the desperate resolve. The various degrading modes of punishment, often inflicted by young, headstrong, and inconsiderate officers, in their zeal for the discipline of the service, for the most trivial offences, were exceedingly galling to the fiery, untameable spirit of the sons of the Green Isle. And I have not the slightest degree of doubt but that those barbarous modes of punishment in common adoption, and the want of sympathy generally existing between the officers and the men, were the exciting causes of the majority of these cases of desertion so lamentably frequent.

One of the modes of punishment practised while in the city, consisted in placing the culprit standing on a barrel in the open street, exposed to the heat of the sun all the day, and the derisive admiration of the street passengers. Of course a sentry was in attendance to shoot or ram him through with a bayonet if he attempted to escape from his uncomfortable position. Another punishment was that called the horse, or a high wooden horse; and I knew of one man losing his life in consequence of be ng compelled to sit for a series of days and nights in that position. The ungainly attitude, the long back, the sharp edge of the transmute steel, which was about eight feet high, on the hard pavement, and was so severely injured that he died shortly after in consequence

But the favourite punishment was that called the bucket and gag, which is administered after the following manner.—The culprit being seated on the ground, his feet are drawn up to his hams, and his wrists tied firmly in front of his legs, a round piece of wood is then inserted between his legs and arms, going over his arms and under his bent knees, a gag is then placed in his mouth, and tied firmly behind his head. In this helpless condition, unable to move, he is left for a series of hours, or even days, according to the humour of his tormentor. This revolting and disgusting punishment, which is often inflicted at the mere whim of the officer, has long been in use, and, I may say, still continues, a favourite mode of punishment in the American army.

The fact seems to be that Republicanism and military discipline are an ill-assorted couple. All manner of irregularities are engendered by the Democratic spirit, which, if not carried, and other neglectful as of the sick on the field, or in the hospital, or on board of transit vessels. In all these, and other respects, the condition of the British soldier is incomparably superior to that of the American. The provisioning of the Yankee troops is, indeed, thus expressed:— "The British soldier is treated like a man, the American soldier like a dog." Our author's reflections on this difference are as follow:—

In England the army is very perfectly organised and disciplined, and a strict subordination runs through all the various grades and ranks, from the highest to the lowest, rendering the evasion of the standing rules and regulations of the service an impossibility. In England the army is also a popular profession; and the nation generally is proud of the achievements in the way of modern warfare. The public, therefore, take some interest in the concerns of the army; and no abuse could long exist in it without showing the importance which it attaches to the subject of the army by the strictness with which the soldier is attended for a comparatively long period, and is discharged with a pension, in the event of his losing his health while in the service, unless such incapacity be the result of his own misconduct. This is a feature important, even in an economical view, that the soldier should be well taken care of, and the country may thus be said to have a direct interest in his well-being. Accordingly, he is provided with good quarters in commodio barracks, and supplied with a sufficiency of wholesome food. In case of sickness he is carefully attended, and no expense spared in promoting his recovery. On all occasions the complaints of the men are patiently listened to by his officers, for the purpose of affording him redress. Indeed, the utmost solicitude is shown by his Colonel or Major, and by the subaltern commissioned officers to which the soldier belongs, to discover if he has any just cause of complaint, that it may be removed. He never sits down to a single meal, either breakfast, dinner, or supper, without the customary [illegible] of some officer appointed for that duty, who asks if he has any complaints. Neither is all this mere matter of form: the desire of officers to promote their comfort, and protect them from every species of imposition and injustice, is well understood, felt, and appreciated by the great majority of British soldiers

The American army is composed of Germans and Irish, with a small portion of natives of the lowest caste, and a thin sprinkling of English and Scotch. The officers are all natives, and graduate for a certain period at West Point Military Academy before receiving their commissions. As the idea of a standing army is very unpopular in the States, and as the mass of the army are foreigners, the officers are allowed to govern or misgovern as they choose. The system of subordination according throughout the various grades of rank, on which the discipline and good government of an army principally depend, is very imperfectly developed in the American army. This evil arises partly from the want of equality in which the American officer has been educated, and partly from the difficulty of enforcing proper regulations, owing to the army being split into a number of petty detachments scattered at wide distances. The officers commanding these small bodies, thus removed from the inspection and control of their superiors, too commonly become the petty tyrants and oppressors of their companies. The American soldier's nominal pay is larger than that of the British soldier, but his comfort and health are not cared for as well as the British soldier's are, and no amount of pay can compensate for the deprivation. It would be much better for the American soldier to have more comfortable quarters, a more wholesome dietary, more liberal treatment when sick, and the sympathy and protection of his officers, even if this should be purchased by a reduction in his pay. At present the American soldier is only paid once every two months, and his pay being most commonly consumed in riot and debauch in a few days, its large amount is more an injury than a benefit to him.

Such is the professional lesson taught in this autobiography, and the details of its proof are interesting. There are also some descriptions of Indian and Mexican scenery, traced with a free and fluent pen, and some personal traits not wanting in manly characteristics. But it is on its utility that the book must rest its claim to attention. It is a voice from the army asserting the human in the militant, and, as such, merits both regard and respect.

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE, Oxford-street. MADAME [illegible] HAS THE HONOUR to announce that on MONDAY EVENING, FEBRUARY 7th, and during the following week, will be performed [illegible]

ROYAL PRINCESS' THEATRE, Oxford-street. MADAME [illegible] HAS THE HONOUR to announce that on MONDAY EVENING, FEBRUARY 7th, and during the following week, will be performed [illegible]

MR. ALBERT SMITH'S MONT BLANC every Morning, at Eight o'clock. Stalls 3s., which can be secured at the Box-office, every day, from 11 till 5. Four Area, 2s.; Gallery, 1s. A Morning Performance every Tuesday and Saturday, at Three o'clock.—Egyptian Hall, Piccadilly.

GALLERY of ILLUSTRATION, 14, REGENT-STREET. WALMER CASTLE and the DUKE'S CHAMBER are exhibited enormously large, by Dissolving Views, for the We Image in Chromatrope, including the Portraits of the Duke, Personal Presents, and Interior of the Castle, as used by the Duke. Daily, at 12, 3 and 8 o'clock. Admission 1s., 2s. 6d., and 3s.

SACRED ENTERTAINMENT.—On ASH-WEDNESDAY, FEBRUARY 9th, MR. BEALE will deliver an entirely new Lecture on the subject of Sacred Music, illustrated with Songs of Handel and other celebrated Composers, at the PHILHARMONIC ROOMS, 30, Oxford-street, commencing at Three o'clock. Stalls, 3s.; Unreserved Seats, 2s. Tickets may be had at the Philharmonic Rooms, 30, Oxford-street, and other Music-sellers.

MR. JOHN PARRY'S PORTFOLIO for CHILDREN of ALL AGES.—Mr. John Parry will give the first Entertainment on MONDAY EVENING, FEBRUARY 7th, at Sheffield, 8th, at Bradford, 10th, at Huddersfield, 11th, at Leeds, 12th, at Hull, 17th, at Durham, 18th, at Sunderland, 21st and 22nd, at Newcastle-on-Tyne, 23rd and March 3rd, at Edinburgh; and on Monday, the [illegible]

THE ILLUSTRATED LONDON NEWS

No. 608.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, FEBRUARY 12, 1853. [SIXPENCE.

ENGLISH AND AMERICAN LITERATURE.

THE PAPER DUTIES.

THE "general reader," which, in our age and country, is but another name for "the public," cannot fail to have noticed the remarkable fact that, within the last eight or ten years, the national activity of our Transatlantic brothers and friends has run strongly into literature. The Americans are no longer contented with the literary flowers and fruit that used to be imported from the old country. They have now astrong and a teeming growth of their own, which they have determined to make the most of. In almost every department of literature their young and rising writers have given to the world many works of the highest excellence and beauty. They have not yet produced a great poet; but they have produced men (like Mr. Longfellow and others) who promise, at no distant period, to reach the highest summits of poetic art. They have produced one great historian, Mr. Prescott; and several minor luminaries, not simply of respectable talent, but of unquestionable genius; an inimitable essayist, Mr. Washington Irving; and many who, if he had not arisen to overshadow them, would have deservedly ranked high in the world's opinion; an original philosopher, full of thought, of feeling, and of beauty—the philosopher of "self-reliance," of "compensation," and of "nature;" Ralph Waldo Emerson; a galaxy of novellists—amongst whom the names of Cooper, Hawthorn, and Stowe, are stars of the brightest lustre. In theology they have not been idle, as many well-known names can testify—especially those of Dwight and Channing. In addition to these, we have the names of Everett, Sparks, Bryant, Whittier, Willis, Parker, Goodrich, Webster, and many others, as well known in England as in America, to prove that the proverbial vigour of the Anglo-Saxons, in every intellectual art, has not diminished in the Western World, and that the Americans are fated to rival us, not only in political and commercial greatness, but in every worthy path of literary renown. This is right. The nursing mother lives again in her Transatlantic children; and Englishmen will be as proud of the result as America can be.

But there is one part of this subject which is of more immediate and practical interest to Englishmen than might appear at first glance, and to which we wish to direct the attention, not only of English authors, who know it and feel it already, but of English statesmen. Formerly the American booksellers, having no literature of their own, lived upon the productions of English writers. A man of genius in America had little chance of success, because he expected to be paid for his labour; and the bibliopolists of New York, Boston, and Philadelphia would not pay him, because they found it more profitable—pampered by the absence of an international copyright—to reproduce English books. American literary piracy ultimately became a bye-word of reproach. At present the case is reversed; and the whole race of English booksellers, with few exceptions worth mentioning, are greater literary pirates than the Americans. No sooner does a tolerably good book appear in America, than the whole tribe of English publishers pounce upon it, and rival each other who shall first stock the market with it. There is nothing to pay the author. The book trade goes on swimmingly; and the English public have cheap "Uncle Toms." In the meantime the English writer is at a greater discount than ever in his own country, and sinks a step lower in the social scale. From being under-paid he descends into the condition of being unpaid, and would, if he were wise, take himself off to the diggings, or devote his energies to trade or some recognised profession, in which the labourer is thought worthy of his hire.

In due time we shall, no doubt, have between Great Britain and the United States of America the long-demanded and imperatively-needed treaty of international copyright. There is, we believe, no real impediment in the way. The American booksellers are no longer opposed to it, and American statesmen look upon it with favour. In England, we know of no impediment but the apathy of public men. The English book trade would not object, for the vast majority of booksellers and publishers would rather see an end put at once to the present disreputable system, and start fair with books and authors on both sides of the Atlantic. The indifference of our statesmen to the question will, doubtless, be removed; for, little as they may love living English authors, they are not so dead to the patriotic senti-

AN IRISH PETTY SESSIONS.—(SEE NEXT PAGE.)

ment as to look with complacency on the near or even remote extinction of the literary property and supremacy of their country. But it is not only an international copyright that is required. Of itself, an international copyright would but aggravate the evil of the existing system as far as the position of the British author is concerned. Without paper, there can, in the present state of the arts and sciences, be no books. In America there is no excise or other duty upon that material. In America the manufacture is perfectly free, and broad-sheets as excellent as can be desired can be published at a profit for a penny, when similar sheets, no better in any respect, cannot be profitably issued in this country for three or four times the money. An international copyright, without the simultaneous abolition by the British Government of the Excise duty upon paper, would but give an impetus to American literature, and would place English booksellers and authors in a far worse position than before. We should be supplied with our books as we are with our cotton, from the Far West, unless, indeed, the inexhaustible ingenuity of the British mind should come to the rescue in that dire extremity, and invent a cheap and convenient substitute for paper. Already it has been suggested, though not proved, that such a substitute might be found in thin sheets of iron. The literature of Great Britain needs no protection, no pampering, no propping up of any kind. All that it needs is freedom. The Government, in point of reason, might as justly tax pulpits as tax paper. A pulpit is the vehicle from which a high class of public instructors issue their instruction. A book is but the vehicle of another class of public instructors, which a large class of persons consider almost, if not equally, valuable to society.

We are quite aware that the Excise-duty upon paper produces a very large revenue, and that the advocates for its repeal will again be met with the weighty objection that the Government, however well disposed, cannot afford to forego it. The impost yields nearly a million pounds sterling per annum; and official men are but too ready to make that reason an all-sufficient one; to talk of their good wishes, but to entrench themselves in an alleged impossibility of making such a sacrifice; and to meet the most urgent entreaties with the formidable *non juratur*. Yet, weighty as the objection may be, it is not weighty enough to be allowed to settle this question. It does not follow that the Government, by relinquishing this tax, would not be partly, or wholly, reimbursed by the increased employment which would thereby be given to larger bodies of the people. But, upon this part of the subject, argument has been exhausted. The facts are patent to all the world, and have been admitted, if we are not greatly mistaken, by the Chancellors of the Exchequer under the last two Governments, as well as by the leading politicians of all parties. With Sir Charles Wood and Mr. Disraeli the repeal of the Paper-duty was but a question of time. We trust the right honourable gentleman who is now at the head of the finance department is still better disposed to consider it, and that he will not only devote the energies of his powerful mind to the fiscal and economic bearings of the subject, but that he will also inquire into the past operation of the impost upon English literature, and weigh the probability of future injury that may yet result from it.

A SCENE AT AN IRISH PETTY SESSIONS.

Arriving at the village of ——, some two hours before Bianconi's car passed through on its route for Clonmel, I sauntered about in search of amusement during the interval. A crowd assembled round a modest-looking house, at the end of the main street, attracted my attention; a policeman told me it was "Petty Sessions" day, and invited me to enter the Court. Being anxious to witness the local administration of justice in Ireland, of which I had heard and read so much, I availed myself of the invitation, and took my seat amongst the spectators. The chair was filled by a portly rubicund personage, and with him sat a "stipendiary (who used an ear trumpet), and two others. As I entered, the clerk, having recorded the judgment pronounced in a previous case, cried: "Tymothy Nowlan against Barney Brannan." There was a buzz of excitement in the court, which subsided into a dead silence as the plaintiff and defendant took their respective positions to the front of the judicial seat. Tim Nowlan (the complainant), his head enveloped in bandages, rose slowly, and, leaning on the arm of his spouse, advanced with difficulty, as if his injuries were even more serious than they appeared to be; and they were followed by Paddy Phelan, their witness, an old, peaceable-looking farmer, who, as a mark of respect, was accommodated with a chair. Barney Brannan, or "Boulteen,*" as he was named, assuming a half smile, half-grin on the auditory, as much as to say, "Now I'm in for it," also came to the post, and he was attended by a small wiry-looking cur dog, which all his threats and all his wife's efforts could not restrain from sharing the fortunes of its master. The little brute burst from the grasp of Mrs. Brannan (who did not accompany her liege lord to the tribunal), and ensconced himself at Barney's feet, plainly indicating, by the expression of his physiognomy, that he was ready to take a turn with any adversary in his owner's defence. Both parties made a profound obeisance when they came in front of the Bench. And then, Barney Brannan, placing his shillelagh under his left arm, stood proudly erect, with his hands behind his back, an attitude which he rigorously maintained until called upon for his defence. He responded to the accusations of his adversary occasionally by a bland smile, and sometimes by a knowing wink at their worships.

"State your complaint, sir," said the Chairman to the wounded man.

"Ah, thin, it's myself, that's not able to say anything, yer Honours," replied Tim (delivering his answer with extreme difficulty, and gasping for breath between every word); "I'm fairly ruined by that villain; he didn't do as much hurt in my body—saving your honour's pre-ence," as id feed a hungry midge."

"Well, come, how did it happen, sir?"

"How did it happen? By gorra it happened no how at all, barring "the Boulteen" comin' among me unknownst, as I was sittin' I was sittin' quiet with my pipe, and kissin' my wife and murtherin' myself, when I could him to behave dacent av he could. That's all. Nelly can tell ye the rest better nor I can; for I'm not able to say any more." And Tim threw himself on Nelly's shoulder, and groaned dismally.

"Well, Mr. Brannan," observed the Chairman, with great dignity, "I'm sorry to see you here again so soon, sir."

"Thank yer honor, I know'd that, long life to you,"

"What have you to say in answer to this charge, sir?"

Barney planted one end of his sapling on the floor, and leaning with both hands on the other, he bent forward with great gravity and decorum before he answered: "Ye all know me, gintlemen, egg and bread, man and boy, for generations, except the stipendiary; and sure my uncle's son is his honor's right hand man; an' I defy the world to say I iver did anything mean, ye see, or my fathers afore me."

"Ah, that's not all you know about the matter," cried the deaf magistrate, who appeared nervously attentive to the proceedings, and occasionally blew into the ear-piece of a gutta-percha trumpet: "It's very extraordinary," he remarked to the Chairman, "it's very extraordinary. I had that trumpet from town yesterday, could hear perfectly with it last night, and find it quite useless to-day. It must have been left too near the fire; it really does me more harm than good."

"Well, yer honours, it's an odd story"

"You have sung to do with the stories," interrupted the justice.

"Aisier, why you beat the complament."

"Some years agone, come Michaelmass next," resumed Barney, "I and Corrigan and myself took a piece of Connors's farm, and when the reaping time came we cast lots, I got the right-hand sickle, and becourse Tim got the lift. Then, ye see, we agreed to go in co., and I won the toss for the first cut, and my part was finished and stooked that same day; it was the fair eve of Boulahy, but I had no more notion of goin' there the next day than the child unborn. I was sittin' quiet at home, when in comes a boy of the Feeneys, to say that they were to beat the Sullivans, and take the town from them to-morrow, and that they'd want the twenty Sweep men they lent us (the Brannans) to beat the Mullanys at the fair of Ballyhawnish. I can't go, sis I, for I have Tim Nowlan's oats to reap, and the wind's getting strong, an it'll be shed. No faction has a right to borrow men, says he, if they don't intend to pay them back; but I'm thinkin', sis he, that ye're afeard to meet "the Whang"* that's to head the Sullivans (" the Whang," yer honours, is Nelly Nowlan's own brother). Well, sis I, to the devil with the oats, no one ever had it to say that I didn't pay men or money when I could, and I don't care a "thraneen" for any Sullivan that ever stepped in shoe leather."

"Oh! d'ye hear him?" ejaculated Nelly. "It's little buisiness three like ye'd have to stand before 'The Whang,' av he got fair play."

"Well, I went," continued Barney, "to the fair, and 'The Whang' an I met and the world knows that I didn't get the worst iv id. From that day to this Nelly Nowlan's against me; an' it's not bekase the oats was destroyed by the storm, but bekase I bet her brother. Well, ye see, I went into the election the other day with Father Mick—and well treated we were, no doubt; and comin' home, does I meet his Riverence. 'Well,' says he, 'Boulteen, I forgive ye all ye ever did to me, ye behaved so well to-day. Ye're a real patriot. Here's a shilling to drink my health'——

"Oh, ye villain!" interposed Nelly; "Father Mick wouldn't look the side av the road ye travelled. Didn't he give ye the curse iv God last Sunday, for yer conduct at the election time to the congregation, that if that wasn't able for you, he'd give you his own curse next Sunday? And in troth, av he does, ye'll be trotting about the Moat of Mallow in a little black dog to the Day iv Judgment?"

"Hould yer tongue, woman!" roared Barney, not at all relishing the threat. "Father Mick 'ill do me no harm, I tell ye. Well, ye see gentlemen, I was in great humour, seein' I had the Priest on my side; and says I to myself, as I passed Tim Nowlan's house, 'I'll go in, an' make up with them, and be at peace with the world.' In I goes, an' bid them the time of day, and sat on the bed, beside Nelly, and lit my pipe. Well, 'Butty,' this little animal (pointing to the dog)—the best bit of flesh on earth, Master Charley (addressing the youngest Justice); yer Honour recollects the day he buckled the big water-dog? (Well, yer Honour neednt laugh, now; for, on my sowl, ye might put him to sleep in a patridge's nest, and the divil an egg he'd touch)—well, ye see, by course, Butty followed me in, an' wint to warm himself at the fire; and whatever came between himself and the pig in the corner, I don't know, but they up and at other in the middle iv the floor, and there was a rigular ruction. I lifted my legs out iv the way, and laid my hand on Nelly's shoulders to hinder myself from fallin into the bed, when she gives me a rap on the lug. I jumped up. Tim made a whack at Butty, an knocked him down. I made a blow at the pig, and Tim's head came between my stick and her back. 'Whoch!' says he, pitchin the handle of his stick. 'Whoch!' says I, doin the same. We at 'other; and I wasn't gettin the worst iv id, when that dacent man (pointing to Paddy Phelan) came in and sundered us.'

"Now, sir," said the stipendiary, "what did Butty say when he was knocked down?"

"The divil a word, yer honour," roared Tim, at the top of his voice.

"What did he do, then?"

"The poor fellow found Nowlan's heel in his mouth, and he bit it."

"A most barbarous method of fighting," rejoined the stipendiary, addressing Phelan, the witness. "You ought to be ashamed of yourself."

"I had nothing to do with it," replied Paddy, mildly.

"Then where is Butty? hasn't he been summoned?"

"He's there, yer honour," shouted Nelly (pointing to the dog and his master); "but 'twas 'Boulteen' did all the harm."

"Oh! I see," said the stipendiary, again addressing Phelan; "he, Butty and your's Boulteen. You should have been the defendant instead of Brannan."

"I saved Nowlan, yer honour."

"I was able to save myself," cried Tim (now completely recovered from his exhaustion); "there never was a Brannan able to handle me. I'll fight Boulteen for the whole matter this minute, ye see, if ther honours 'ill let me."

"A bargain, by gorra," exclaimed Barney; and the two men shook each other's hands most violently, in token of agreement, while the Court rung with laughter.

"There's no knowing how to decide on such contradictory evidence," remarked the stipendiary; "and as the men seem disposed to make it up, and have shaken hands, let there be peace, and an end of it."

"Shall it be settled as Mr. suggests?" asked the Chairman, of her colleagues.

"I have no objection," was the reply.

"Now, Mr. Brannan, remarked the chairman, with great severity of manners, you were clearly drunk, and I'll fine you five shillings. You're of an honest family, but you're quarrelsome in your drink, and I'll always punish you for such misconduct."

Barney made a bow, and was departing——

"Pay the money, sir, before you go."

"It's paid already, yer honour. Didn I sowld the butter, I lodged a sovering with the clerk, to be worked in, an' this 'ill make ten shillings."

"Fifteen!" cried the functionary appealed to, after referring to his book. "There were five shillings for striking the gauger; five more for pulling the preacher off the hogshead; this makes fifteen: will ye have the change?"

"No, thank ye, I'd rather lave it in, for fear I'd be short taken the next time."

"Won't ye bind him over to let me alone?" cried Nelly, "av ye don't do somethin' with him an' his dog, no dacent woman can live in the country."

The clerk quickly called the next case, and the parties were unceremoniously thrust out of court by the police.

"By Gorra," remarked a person beside me, "them —— is the true ould blood; the devil himself couldn't take a feather out o' any one that ever stood to them."

Just then I remarked the "stipendiary" exhibiting a piece of cork to the Chairman, which he had succeeded, after many efforts, in extracting from his ear-trumpet.

* "Boulteen" is the Irish name of the light staff of the flail which strikes the corn in threshing.

* "Whang" is the leather thong used to tie the brogues of the peasantry, it requires to be strong and tough.

THE IRISH INDUSTRIAL EXHIBITION. A letter from Paris says:—"The greatest interest is felt here with regard to the success of the Dublin Exhibition in May next. The Emperor takes the liveliest interest in its success, and has already several times inspected the works in progress for the Exhibition at the Royal Porcelain Manufactory of Sevres. They are truly beautiful—fully equal to the contributions to the Exhibition of 1851. Amongst other articles there is a magnificent table of fancy wood inlaid with painted Sevres porcelain of the most exquisite character, representing a hunting party in India, which, it is expected, will be the principal ornament of the Irish Exhibition. His Imperial Majesty has also commanded an equally attractive table to be made of the Beauvais tapestry and of Gobelin work from the Imperial manufactories."

THE GREAT DUKE AND MR. COBDEN.—The pamphlet of "1793 and 1853," contains a passage in which Mr. Cobden speaks of the Duke of Wellington's mind, and his "mercurial law" by which nature "dims the mental vision" as we approach the end of life. This assertion has been peremptorily denied by Mr. C. C. Greville, who says that, "So far as regarded the decadence of his mental faculties, the Duke received a reply, from no less a person than himself, by the assembly of troops in the neighbourhood of London, previously to the opening of the Exhibition in 1851, was the result of the orders of the Government. It was entirely approved by the Duke of Wellington, who considered that it was right to take every precaution, and to make such preparations in support of the civil power as might best insure the maintenance of the public peace. There was no exhibition of troops, and all military display was carefully avoided. The assertion in page 90, 'that the Duke, who at forty was incapable of fear, at eighty was subject to almost infantine alarms,' will obtain little credence. I have no hesitation in pronouncing the assertion to be wholly without foundation. During the whole course of my connection with the Duke I never saw him unnerved or labouring under the apprehension to which most men are liable when placed in circumstances of difficulty or danger. However grave the occasion, and in every situation almost in which a public man could be placed, he was the same superior to it, and so late as the 10th of April, 1848, when he had nearly completed his 79th year, he exhibited the same calmness, the same freedom from restlessness, which were remarkable in him 40 years before, the period at which it is admitted that 'he was incapable of fear.' That he so continued to the last day of his life is my deep conviction, my firm belief. Nothing was more beautiful than his courage. It was so unostentatious, so free from a desire to attract attention, so peculiarly his own."

STATISTICS OF WINTERS.—Severe winters were unusually prevalent between 1771 and 1791. In the first ten years of that period the months of January were excessively cold; the next ten years the winters maintained fully an average temperature, those of the next ten years were still warmer, between 1851 and 1821 they fell below the average; but since that time they have been generally above it.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

That there is "nothing new under the sun" the ceremonies of the Carnival form one of the many instances. Have you seen them once, dear reader?—then rest assured that you have seen just as much of them as the oldest inhabitant of the Boulevard du Temple.

Have you been at the *bal masqué*? (We have not, but we know quite as much about it as it is at all desirable or necessary to know.) Then you have been at fifty. Be assured that the *fadaises*, and imperfinences, and *impertinences*, that have saluted your ears there, have rung in those of your grandfather; and, unless the world turns upside down—a casualty which Messrs. Hind, Arago, and Co., will prove to you is out of the immutable laws of nature, *ce que, &c.*—will ring in your grandson's. Have you been at one of the *bals d'artistes*, and seen in their boxes Mdlle. Finette and Mdlle. Georgette, of the Palais Royal; Mdlle. Clémentine, and Mdlle. Alphonsine, of the Francais; Mdlle. Mimi and Mdlle Zizi, of I don't know where? and been told that the first two were *les plus folles, les plus spirituelles, les plus ravissantes, les plus capricieuses* (an attraction the more), *les plus séduisantes* actresses of low comedy, that ever did, that do, or that ever will exist? that the second two are *les plus belles, les plus gracieuses, les plus charmantes, les plus distinguées* (on the stage, *bien entendu*), *les plus beaux talents* of this or any other age? that the last two are *les plus piquantes, les plus spirituelles, les plus originales, les plus fantastiques, les plus amusantes trouvailles* of ancient or modern times? You may believe us, that, at any period of the last or the next few centuries, there were, and will be, Finettes and Georgettes, Clémentines and Alphonsines, Minnis and Zizis, as inimitable and incomparable as those you see before you. What does it signify that this *bonbon-box* is called Monte Christo one year, the Juif Errant another, and Uncle Tom a third? Has he any more analogy with the life and times of any one of those individuals than with those of any other? He has not always got the same procession, the same triumphal car, the same *mascrues*, catching cold, and making fools of themselves, in his train? And does he not always end his glories and his fatigues at the *abattoir*? To be sure, the eternal programme is occasionally diversified by some dangerous accident; now and then the woman, who, with bare neck and arms, stands on the triumphal car as Ceres, or Liberty, or some other equally unsubstantial divinity, trying to counteract the effects of the cold (invariably bitter at this concert) by copious libations, is seized with a raging inflammation, from the combined influence of the atmosphere and the spirits, and dies within a few hours;* but then this has been off the stage, and has had nothing to do with the *spectacle*. It is time all this should cease. Innocent and honest and genuine mirth have in themselves the elements of reasonable duration; but all this tom-foolery and masquerading, and forced and brutal excitement, requiring an unnatural stimulus to prevent its falling into utter insanity and weariness, must surely, ere long, give way before the march of civilisation and a consideration of the grave interests of a great and mighty nation.

The Empress is daily endeavoring by gracious and graceful acts to counteract the good-will which unquestionably failed to greet her elevation to her present position. Innumerable are the *entendeuyns* and *bon-mots* current on this topic, many of them more remarkable for their ill-nature than wit. Among these not thus objectionable is the following: a gentleman, relating some of the feats of Lorsemanship of the Empress, particularly dwelt on her boldness and skill in leaping: "Je crois bien," exclaimed one of his auditors, "elle a franchi la Barrière du Trône!"† The Emperor has desired the Duc de Bassano to apologise privately to all the members of her family in France for the passage in his speech on the support of her relatives, saying that neither she nor himself had any wish to deny the connexion, and that he used the phrase in ignorance of her having any near relatives in the country—where she has, in fact, several.

Of course the great topic of the day is the unwarrantable arrests that have taken place, and the still more unwarrantable manner in which they have been executed. *The Times*, in an article whose courage, straightforwardness, and generosity must add new consideration to the only bold and fearlessly conscientious journalist of the day, M. Emile de Girardin, attacks the measure with a vigour and audacity strongly new to the present state of journalism in France. Few acts of authority have, since the 2 *Décembre*, excited such indignant astonishment as this; and there is not a doubt that it will weigh immensely in the balance of the reaction, which we firmly believe must, ere long, take place.

The ball of the Senate was very brilliant as a *coup d'œil*, intensely hot, and frightfully crowded. The *cuisine courte* was *de rigeur*, except in the uniforms, which, in the generality of cases, contrived to elude the rule, though it had been duly promulgated. There will now be some time to balls, though a few private ones will be given up to the *mi-carême*.

On Thursday took place the *première représentation* of the long-looked-for comedy of Madame Emile de Girardin (Delphine Gay) entitled "Lady Tartuffe," at the Théâtre Français. The principal rôle by Mdlle. Rachel. Of this we shall give our readers a full account next week.

The principal theatrical attractions of the moment are the adaptation of "Jean Bolbec" at the Grand Opera, in which the *débutante* Madame Bosio has a great and deserved success—voice, method, and taste being all of real merit; and the charming little operetta at the Opéra Comique, "Les Noces de Jeannette." *Jean* has resolved to take unto himself a wife. *Jeannette*, young, pretty, sprightly, and sage withal, finds favour in his sight; the proposals are made and accepted, the hour for completing the contract arrives, and all is in readiness, when, alas for the constancy of man's resolution, *Jean se ravise*. Suddenly the charms and liberty of his bachelor life acquire a new value in his eyes; the village bells obstinately ring forth a *de-don*, which seems cruelly prophetic; and at last our hero ends his cogitations by taking to his heels, leaving bride and wedding in the lurch, and, seeking refuge in his bachelor home, where he contemplates with delight his rickety table, tumbles down, in his movements of satisfaction, on his broken chair, rolls heels over head in pulling out a refractory drawer, and, in short, thoroughly enjoys all the comforts of a well-regulated *ménage de garçon*. While thus agreeably occupied arrives the *délaissée* bride; neither furious nor piteous, neither storming nor weeping, but gentle, grave, and reasonable; demanding, without tears or reproaches, the motive of our friend's somewhat unusual mode of proceeding, and whether he can accuse any fault or misconduct on her part as its cause. *Jean* declares that his terror of marriage in the abstract is the sole reason of his change of purpose, but consents to sign a paper to this effect, which is neither more or less than a contract to marry her; upon his himself in terms calculated to terrify the most determined husband-hunter, which *Jeannette*, however, wishes to have, so as to be able to possess the power to refuse him, should he continue in the same unpromising state of mind, for the instance of their domestic life. This accomplished, he goes to join his companions, and, returning intoxicated, finds *Jeannette* installed in his *ménage* as its mistress. Furious, he raves and storms, abuses his would be helpmate, breaks the remains of his furniture, and retires to the loft to sleep off the effects of his wrath and potations. Meanwhile, *Jeannette* has sent for her own neat, clean, good furniture, sets the house in order, prepares a savoury repast for her lord and master, and makes ready to stand and deliver according to one of the terms of the contract. The result may be guessed. The comfort, the order of the house, the charms of the active, good-humoured little housewife, produce their due effect: *Jean*, in his turn, sues for the happiness he so brutally rejected, and he induces *Jeannette* to give the bridegroom a reproof as he was formerly repugnant. The music of this charming piece is as fresh and attractive as the libretto, and the success of both deservedly great.

Complaints are made that the list of 4812 persons who have received a mitigation of punishment in France, upon the occasion of Louis Napoleon's marriage, contains none of the names of those whose military services or political action have attracted public attention, which might render them influence favorable to the Empire. The persons selected to receive the Emperor's "pardon" are obscure members of the lower and middle classes—small tradesmen or journeymen in the towns, peasants and labourers in country districts. None of them have ever been tried or convicted of any offence, but wholesale deportation by proscription was carried into effect with such suddenness and secrecy, that in many instances their very existence remained a mystery to their families. Many of the names which occur in this list are those of young children—one is described as apprentice to a saddler, at the age of *ten years*. The immense majority of them belong to so humble a class and position in life that the idea of crimes exposing them to the penalties of high treason is ludicrously inapplicable to them. Three or four obscure

* Last year two of these women were thus carried off—the one on the night of the *Mardi Gras*, the other within two days after.

† The Barrière du Trône is one of the principal entrances into Paris.

provincial writers are alone exempted from the universal proscription of the independent press Nothing is done for the miserable beings who are gasping for life in the latitudes of Cayenne, or who have escaped to other and to freer countries. Such is the very partial and imperfect act of clemency which Louis Napoleon has thought sufficient for the celebration of his nuptials.

At the moment when a batch of the lower order of offenders is thus liberated from penal detention, a blow has been struck by the police at the higher ranks of society in the capital. On the night of Saturday last, or rather on Sunday morning, a considerable number of arrests were made in the best quarters of Paris. General St. Priest, Duke of Almazan, in Spain, a Lieutenant-General in the French army, formerly an Ambassador, and a leading member of the Legitimist party, was apprehended, and thrown into a cell in the prison of Mazas, while his papers were ransacked. In the course of the afternoon a message reached the General, informing him, with M. de Maupas's excuses, that he had been mistaken for his son—a gentleman well known in Parisian society by the name of the Duke of Almazan, but of no political importance. M. Réné de Rovigo, a son of Savary, M. Planiol, the Marquis de Mirbeau, some correspondents of English and German newspapers, and M Tanski, a Pole, who is naturalised as a Frenchman, and connected with the *Journal des Débats*, also formed part of this *razzia*. No charge of conspiracy was made against them, or, indeed—if any serious charge of the kind existed—the number of persons taken into custody amounts to 17 The alleged object of the arrests is to proceed against the parties for circulating what are termed "libels against the Emperor and Empress, and writings tending to endanger the pacific or friendly relations between the French and other Governments." The parties, too, are accused of "fabricating and propagating stories of a scandalous and indecent kind, affecting the reputation of the Emperor and Empress." The authorities will not cease until they discover the real author of the *jeux d'esprit* which have given such offence. Those now in custody are to be handed over to the tribunals to be prosecuted, whether for mere libel, or what remains to be seen. M. Tanski was, it seems, on terms of acquaintance with the ex-King Jerome Bonaparte and his son Prince Napoleon, as also with the Secretary-General of Police, and the French Ambassador in London.

Among the persons arrested were M. Carpelex, correspondent of the *Augsburg Gazette*, M. Mayar, of the *Cologne Gazette*, and M. Simon, of another German journal. MM. Vergniaud, Etienne, and Gerard, who are in custody, were in the employment of the *Lithographic Correspondence* establishment (Havas)

M. De Chantelauze, the son of one of the Ministers of Charles X., has addressed the following letter to M. Emile de Girardin:—

Sunday afternoon, Feb 6

Sir,—the police made a descent on my house at eight o'clock this morning I was absent. Five agents, who came, no doubt, to arrest me, broke all my locks and withdrew, having found no document which could compromise me. Be so good, sir, you whose courage never fails, to appraise your readers of these facts, and please to accept the expression of my most distinguished sentiments. B. DE CHANTELAUZE

40, Rue de Seine.

In the *Presse*, M Emile de Girardin expresses himself with some warmth against the examination of the papers of suspected persons by the police. This, however, is a course not peculiar to the present Government of France. It was practised under the Restoration, under the Constitutional Government of Louis Philippe, and even under the Provisional Government of the Republic of 1848; which professed to have so much regard for right and liberty. There is, in fact, no period of history for centuries past in which the French Government did not, in virtue of what is called a *jugement administratif*, exercise the power of arbitrary seizure of papers without the previous authorisation of a legal tribunal, or even of any high legal functionary. It is quite reasonable to object in principle to the exercise of power, but it would be wrong to impute it exclusively to the Imperial *régime*. All Governments in France have exercised it more or less, and all on the ground of its being necessary for their protection against secret machinations.

Addresses of felicitation on the Emperor's marriage continue daily to arrive from all parts of France.

On Ash-Wednesday the usual ceremonies were performed in the Roman Catholic churches, which were crowded from an early hour. There was not a place vacant in the large church of the Madeleine, from twelve to one o'clock.

The news of an insurrection having broken out at Milan produced considerable sensation upon the Bourse. The insurrection was regarded, by many as a pretext used by the Austrian Government to collect a larger army in Italy. The Three per Cents. opened at 73f, fell to 72f. 80c., and closed at 72f. 95c. for the end of the month

The Ministerial changes generally believed last week to be about to be consummated, are not (says the *Moniteur*) to take place. But if a modification of the Cabinet is postponed, it is not because the changes in question were not intended and desired, but because the means of accomplishing them failed. M. de Morny, who is said to have resumed an important position in the Imperial Government, refuses the honour until certain stipulations are conceded to him. Marshal St. Arnaud refuses to return and go to Africa unless he be invested with unlimited powers; but in that case the authority of the Minister of War over the colony and the army in it would be annulled, and no officer will consent to succeed St. Arnaud on such terms. The change in the governorship in the Bank of France, which has been often attempted, is a matter of still greater difficulty. The various consequences and the difficulties of such changes as these have induced the Head of the State to postpone them.

The *Moniteur* of Tuesday contained a long report on the financial situation of the country, from M. Bineau, the Minister. It is, on the whole, very fairly drawn up, and the facts are stated in a way to lead to no recrimination from his predecessors. M. Bineau expresses a hope that this year there will be an equilibrium in the receipts and expenditure; and states that the Emperor has resolved upon economy in the different branches of the public service, and that there will be no necessity for new taxes. This assurance after what had been said to the contrary, has produced a good effect; but at the course this evening, and only been to the extent of checking the fall, which was beginning to manifest itself rather seriously. The actual deficit for 1852 will be reduced to £1,120,000. The indirect taxes have recovered to £32,400,000, and are now within £600,000 of their amount in the most prosperous year of the reign of Louis Philippe (1846). Adding the deficit of 18[illegible] to that which had previously accumulated, the total is £30,500,000 M. Bineau then proceeds to state that, owing to the large amounts constantly receivable by the Treasury for the savings-banks and public establishments, and on which the Government allow interest, this position of the floating debt is not too heavy. With regard to the Mincome observes that its expenditure showed an estimated excess over revenue of £1,360,000, which has since been increased by supplementary credits to £2,100,000. He contends, however, that the probable receipts were placed too low, since the proceeds of the indirect taxes were calculated at £260,000 less than in 1852, whereas he hopes they will show a progressive and considerable increase.

A few days ago it was stated, that General Changarnier had written a letter to friends in Paris, in which he was represented as saying, "that he is profoundly convinced that war is inevitable in consequence of the armaments which are being prepared throughout all Europe, and that his friends the Bourbons ought not to lose time in concerting measures with a view to the restoration of Henry V." The General has written to the *Times* to say that he has not penned such a letter, nor anything resembling it

In execution of the decrees of the 22nd January, 1852, imposing on the Orleans family the obligation of selling all their real property in a year, the forests of Bourbon-Lancy and Bruadon, in the department of the Saône-et Loire, were sold a few days ago. The former fetched 900 000 francs, which, it is said, is about its real value; the latter, 2,800,000 francs, which is much under the estimated value. Peculiar circumstances have caused the sale of the estate of Amboise to be indefinitely postponed. The estate of Chateaubriand in the Maine-et-Loire, belonging to the Duke d'Aumale, has just been sold. The purchaser was the Marquis de Prégalis, and the price given 4,000,000 francs. The *employés* have been informed that they will be kept in their places.

BELGIUM.

In the Chamber of Representatives of Belgium, in its sitting of the 4th, the Minister of Foreign Affairs presented a bill calling for a credit of 60,000f., to be applied to the expenses of a Minister and a Counsellor of Legation to the Russian Government; "with which," said the Minister, "the Belgian Government is on the point of establishing intimate and constant relations."

ITALY.

We learn from Turin that, notwithstanding the Royal pardon, and the assurances which attended it, Dr Mazzinghi, immediately on coming out of prison, was ordered to leave the kingdom within five days, and to be expelled from it by force upon non-compliance. This announcement has produced great indignation among the public. The *Gazetta del Popolo* declares roundly that the King's pardon was nothing but a Jesuitical deception—a measure adopted merely to evade the consequences which the atrocious sentence against the Madiai at Florence has brought upon the Grand Duke of Tuscany.

GERMANY.

The commercial negotiations between the Cabinets or Vienna and Berlin are terminated. M. de Bruck waits at Berlin for the authority of the Austrian Government to sign the treaty of commerce concluded for twelve years. The clauses of the treaty are favourable upon the whole to free trade

The Emperor of Austria has granted a sum of 30,000 florins to Professors Rottger, of Frankfort, and Schonbein, of Bâle, the two inventors of cotton powder, for the communicant n of the secret of their discovery

A treaty has been concluded between the Switzerland and Austria for the junction of their telegraphic lines. The Austrian Government undertakes to construct at its own expense the lines connecting Milan, Como, Feldkirch, and Bregenz, as far as the frontier, while the Swiss Government engages to prolong its lines to its frontier to meet the former

A Frankfort journal, under date of Vienna 3rd, says—"The rise in the exchange at the Bourse yesterday, to more than 10 per cent, must be attributed solely to the fears of the speculators, who, notwithstanding the assurances to the contrary, which have been given by the competent authorities, see in the movement of troops towards the Turkish frontier, the forerunner to inevitable war."

GREECE.

The labours of the conference which assembled in London for the settlement of the question of the succession to the crown of Greece having been completed, the exchange of the ratifications of the convention concluded on the subject, and signed at London on the 20th November, by the representatives of France, Greece, Bavaria, Great Britain, and Russia, took place on the 1st inst

SPAIN

Letters from Madrid, of the 3rd inst., state that General Narvaez had resolved on not going to Vienna, but demanded previously an investigation of his conduct by court-martial. "The Government," says one of the letters, "is doing what it has been doing for the last ten years, viz. exercising every sort of coercion to gain the elections. It is thought that it will succeed in obtaining a majority. The Opposition journals continue to be seized almost every day, and the candidates cannot address the electors through the channels of the press. And this is called representative Government!" Narvaez and others who lately were powerful in Spain at their own discretion, now feel the inconvenience and mischief of despotic power. A Royal decree directs that in future the Royal corps of Halberdiers, and the squadron of Guards of the Princess should form but one corps, under the name of Guard of the Queen.

RUSSIA.

A letter from St. Petersburg states that on the morning of the 30th ult., there were 437 cholera patients in that city. In the course of the day there were 21 new cases, 40 cures, and 14 deaths.

A letter from Moscow says:—

The celebrated "Uncle Tom" is continuing his course through the world It is known in Russia by a French translation, most negligently done: the writer, who is, however, a man of talent, appearing only anxious to be first in the field The work has great success in Russia, and the police do not interfere with it. It so happens that in Russia at present extraordinary is quite the order of the day, and no one can enter any court in high quarters than by appearing a *quid novi*. For strange enough, the term uncle, brought into fash on by the Americans, is also perfect, Russian, and employed in the same sense of familiarity and affection Although no formal authorisation has been given to admit the work, yet it is not interdicted. At first, when only a few copies had arrived, they were passed about with the utmost re..ikirky from one part of the city to the other, the station for which [illegible] being fixed at two rou.. and not an instant longer. Hence [illegible] ..ay of Moscow actually read the work bit by bit, as they could best manage to obtain it At present, thousands of copies are in circulation both here and at St. Petersburg. A translation into Russian of an eminent writer is about to appear by the authorisation of the Government

TURKEY AND MONTENEGRO

The *Trieste Zeitung* of the 4th contains a letter which has something semi-official about it, and which says that George Petrovich, the Vice-President of the Montenegrin Senate, who left Vienna about a week since, was persuaded that it was not advisable that his countrymen should push their resistance to the utmost; on the contrary, Prince Daniel was advised to seize the first opportunity of effecting a decent compromise

The last number of the same journal says:—It is reported that the Montenegrins made a nocturnal descent into the camp of Derwisch Pasha (at Grahovo) in order to liberate the captive Wojevode. Although they massacred several Turks, whose heads they carried off, they did not effect their principal object. It appears that there was a regular battle between Omar Pasha's corps and the Montenegrins on the 1st, but it is not known how it ended. Forty-four thousand Turks are now operating against "the Black Mountain," but its heroic sons have already repulsed larger armies and better soldiers A part of Marmont's army attempted to enter Montenegro, but was quickly driven back.

There was some talk at Constantinople of the movements of Russian troops on the frontier of Moldavia. Russia had threatened to again occupy the principality, and a distinguished personage, charged with an extraordinary mission, was expected at Constantinople.

INSURRECTION AT MILAN.

On Wednesday morning a telegraphic despatch was received at the Foreign office, announcing that an insurrection had broken out at Milan on the 6th and 7th. The insurrection was at first suppressed, but again broke out with great violence.

The Austrian troops in the Arsenal were massacred by the insurgents.

Mazzini's proclamation was posted up everywhere through the city

On the morning of the 8th, the gates of Milan were closed, and the usual communication with the Swiss frontier was interrupted.

The following sub-marine telegraph despatch from Paris, arrived on the same day:—

"An insurrection took place at Milan on Sunday.

"The people rose suddenly in three parts of the town; five men were killed. An Austrian proclamation announces the re-establishment of order. But the Milan train had not arrived yesterday at the Swiss frontier.

"Milan is still closed, and it is believed that the fight has re-commenced. Mazzini's incendiary proclamation was everywhere posted up."

A despatch from Berne, of the 8th, states that, according to a despatch from the Swiss Consul in Milan, of the 7th, in the evening, the affray in Milan had been suppressed, and order promptly re-established.

The Submarine Telegraph Company received on Wednesday the following message from the English Minister at Berne to the Minister for Foreign Affairs in London:—

A telegraphic message from Bellinzona of the 8th instant, half past four P.M., announces that the gates of Milan were shut, and it was supposed the insurrection which had been suppressed, had re-commenced.

M. Kossuth has addressed the following proclamation to the Hungarian soldiers in Italy:—

IN THE NAME OF THE HUNGARIAN NATION.—TO THE SOLDIERS OF HUNGARY IN ITALY

Soldiers; Comrades!—My activity is unlimited. I am about to fulfil my intent My intent is to free my country, to make her independent, free, and happy. It is not by force we have been crushed. The force of the world would never have sufficed to crush Hungary. Treason alone did it.

I swear that force shall not conquer us, nor treason injure us again. Our war is the war of the liberty of the world, and we are no longer alone. Not only the whole people of our own country will be with us, not only will those once adverse to us now combat with us the common enemy, but all the peoples of Europe will arise and unite to wave the banner of liberty. By the force of the peoples of the world the tottering power of the tyrants shall be destroyed. And this shall be the last war.

In this war no nation fraternises more with the Hungarian than the Italian. Our interests are one, our enemy is one, our struggle is one. Hungary is the right wing, and Italy the left wing, of the army I lead. The victory will be common to both

I therefore in the name of my nation, have I made alliance with the Italian nation. The moment we raise the banner of the liberty of the world in the [illegible] a soldier in Hungary unite with the insurgent Hungarian nation, and the Hungarian soldier in Italy unite with insurgent Italy. Let all—whencesoever the alarm shall first sound—combat against the common enemy. Whoso will not do this, he, the hireling of our country's executioner, shall never more see his native land. He shall be for ever exiled as a traitor—as one who has sold the blood of his parents and of his country to the enemy

The moment of the insurrection is at hand, let not that moment find the Hungarian unprepared; for, should it take them unprepared should our nation not improve the opportunity—our dear country would be lost for ever, and our national flag would be covered with ignominy

I know that every Hungarian is ready for the war of liberty The blood shed by the martyrs, the sufferings of the country, have changed even children into heroes

No nation yet rewarded its brave sons so liberally as the Hungarian nation will reward hers. After the victory, the State property shall be distributed among the army and the families of the victims of patriotism; but the coward and the traitor shall die.

And I, therefore, make it known to you, soldiers, in the name of the nation, that whoever brings you the my order is expressly sent to you, that he may report to me the favourers of liberty in the army stationed in Italy, and that he may tell you, in my name, how you should organise yourselves

Accept the instructions that are forwarded to you by the nation through me, and follow them. Let it be so in every town and district of our own country and every where

Hurrah for arms! The Honveds and the Hussars have covered with glory the name of our nation. The world looks on the Hungarian flag as on the banner of Liberty. We will preserve that glory, and satisfy that expectation.

It is principally on you that the eyes of the world are turned, for your number is great. The arms are in your hands; a generous blood in your veins; the love of the country, and the thirst of vengeance on her executioners is in your breasts Your task is glorious and easy; for you are among a nation which will give its own millions of combatants against Austria.

From Rome to the island of the Sicilians—from the Sava to the country beyond the Rhine—all the people are unanimous in a cry joined to the clang of millions of arms. Let God be our judge! I vow with the tyrants! Long live the liberty of the people! Long live our country!

Brave ones! By this cry your voice will be like Joshua's voice, at the bidding of which the Jericho of tyrants shall fall.

So I order, in the name of the nation. Let every one obey. I will shortly be among you. *Au revoir.* God be with you. KOSSUTH.

February, 185-.

There appears to be no doubt that Mazzini is at the head of the movement. He has been in the canton of Tessino for the last month; and the proclamation issued by him has been placarded, not only at Milan, but in several parts of the canton of Tessino. Copies of the proclamation are known to be in Paris. It appears that the movement has not been quite so sudden as may at first appear. There was a good deal of previous agitation, evidently got up for the purpose of exciting the people, and preparing them for the movement. On the 2nd a rumour was industriously circulated that Louis Napoleon had been assassinated on the day of his marriage, and so generally was it believed that it created a tumult which threatened the public peace: and, ultimately, appearances were so alarming, that the authorities were forced to issue placards announcing that the report was wholly without foundation.

AUSTRALIA AND ITS TRAFFIC.—The General Screw Company's steamer *Hellespont* left Southampton yesterday for Australia: she has on board £300, 00 in specie and jewellery, sixty passengers, and a full cargo. The *Hellespont* is intended to leave on the 26th; and will be followed by the *Argo*, a new vessel of 18 0 tons, early in April, both for the same destination The following statement of vessels now out for the Australian colonies during the present month, has just been issued: Five ships, of 1224 tons, to Launceston; three ships, of 1471 tons, to Hobart Town; twenty-four ships, of 11,852 tons, to Sydney; fifty-four ships, of 20,874 tons, to Port Phillip; nine ships, of 3635 tons, to Adelaide, South Australia; four ships, of 2436 tons to New Zealand, one ship, of 780 tons, to Swan River; and one ship, of 700 tons, to Moreton Bay—total, 101 vessels, of 41,449 tons The undermentioned vessels had left various ports in Australia for England. On October 21, the *Oriental*, with 7119 oz., value £28,476; the *Albert*, November 4, with 4 lbs 4 oz., value £172,.00; October 28, the *Chowringhee*, with 63,713 oz., value £254,852; and the *Three Bells*, with 7,860 oz., value £31,212; November 16, the *Roxburgh Castle*, with 153,157 oz., value £604,628

IMMENSE SCREW-STEAMER.—The Peninsular and Oriental Company's screw-steamer *Bengal*, the largest steamer and ship at present on the waters, has had a trial trip from Southampton to the Isle of Wight, in which she averaged 11½ miles per hour. Notwithstanding her enormous length and bulk, she was as manageable as a boat. On returning to Southampton she raced with her Majesty's steam-yachts, the *Fairy* and the *Black Eagle*. The *Fairy* beat her, but it was in smooth water. The *Eppleton Castle*, with 153,157 oz., value £604,628

THE EMPRESS OF THE FRENCH.

To the Editor of the ILLUSTRATED LONDON NEWS.

PARIS, February 7th, 1853.

SIR,—I have just arrived here, and found in your excellent paper of the 29th January, an account of the family of the Empress. As it is not quite correct, I send you the following, thinking that it may be interesting to some of your readers:—

The Countess had three daughters; the eldest married Mr. Kirkpatrick, minister of the Countess of Montijo; the second Mr. Newmann, Consul of Prussia, in Malaga; and the youngest, Mr. Lesseps. The Countess of Montijo's youngest sister, who lives now in Malaga, married the Count of Casarrus, who had a sister who contributed very much to the death of Robespierre, according to Lamartine's account in the "History of the Girondins." Mr. John Kirkpatrick, brother of the Countess of Montijo, lives in Andalusia in Spain, where he is Consul of France. Mr. Newmann had several sons and daughters, some of them live yet, making the number of uncles of the Empress pretty large. The following are of this number, in direct line or by alliance:—Mr. William Neumann, living in Puerto Rico; Mr. Mathias Rinchn, Consul in Malaga; and Mr. Lara, Advocate in Malaga—all men of independent fortune. Mr. Lesseps was the father of Mr. Ferdinand Lesseps, Ambassador of the French Republic in Spain, and who was sent to Rome in 1849; from which place he was called back, after he had been entirely deserted and undone from headquarters. The Empress's only sister is married to the Duke of Alba and Berwick.

I remain, sir, your great admirer and old subscriber,

VERITAS.

[Upon the next page we have engraved a Portrait of the Empress from a drawing by a Parisian Artist. Her Majesty is portrayed in her bridal costume: a rich long robe of white silk, covered with point lace, studded and stomacher of diamonds, and a long veil of Honiton lace surmounted with orange-flowers.]

THE VALPARAISO AND SANTIAGO RAILWAY.

WE owe to the Daguerreotype, in the skilful hands of a gentleman at Valparaiso, a spirited Illustration of the inauguration of the Valparaiso and Santiago Railway.

The ceremony took place at Valparaiso on the 1st of October with all possible *éclat*, in presence of the highest functionaries of the city, both ecclesiastic and civil, the diplomatic corps, and a large concourse of spectators, both on foot and in carriages. General Blanco, so long the Intendant of Valparaiso, represented the President of the Republic at the ceremony. The Bishop of Conception, his clergy celebrated a Pontifical mass near the spot, and a stone with a suitable inscription was then laid to mark the commencement of the undertaking. Instead of digging the first sod, the ceremony in the present case, as it was took that had to be operated upon, was performed by a salvo of blasts, which were immediately answered by a salute from the battery on the fort.

After the ceremony a large party of the shareholders and their friends partook of a sumptuous banquet at Meillard's hotel. The "Valparaiso and Santiago Railway and its speedy completion," was toasted with loud huzzas, led by the English guests, and heartily responded to by the Chilians present. The undertaking is regarded as the begaining of a new era for Valparaiso. The Valparaiso journals state that there will be no lack of subscriptions to make up the capital necessary for its completion—a circumstance which denotes the confidence of the people in the stability of the Government. The Railway thus inaugurated, which will connect the great seaport of Chili with the capital, will be a monument to the enterprise and prosperity of the little Republic, the Government of which, by its loans and guarantees, has offered important facilities for the execution of the project. The distance between Valparaiso and Santiago is about ninety-four miles; but, as the country is rugged and mountainous, it will be necessary to follow the course of the valleys, and the distance by railway will consequently be considerably greater. It is expected that the line will be opened for traffic throughout in about five years

Valparaiso contains 40,000 inhabitants, and is said to be one of the most thriving seaports in the world. It has greatly increased in size and consequence of late years; and the discovery of gold, and the sudden

THE EMPRESS OF THE FRENCH, IN HER BRIDAL COSTUME.

influx of population into California, have given a further impetus to its trade and commerce. Its comparative proximity to Australia, and the abundance of its exchangeable products, will also enable it to carry on a most lucrative, and almost boundless trade with the Australian continent. The wheat of Chili is of the finest quality. The beef and mutton are proverbially good, and vegetables are cheap and abundant. The exports consist of copper, hides, wool, hemp, and plata pina. Large quantities of copper ores are shipped annually to England, and 100,000 marks of 8 oz. in bar silver. The returns from sales of English goods are said to be made mostly in bullion. Thirty thousand hides are exported annually from Valparaiso. About one million silver dollars come annually from Cobija to Valparaiso, to be shipped thence to England. Our trade with Chili is very large. Our annual imports to Chili and Peru are from 6,000,000 to 7,000,000 dollars. Santiago, the capital of Chili, contains a population of about 70,000. It is said to be the only capital in South America which is increasing in wealth and population. The climate of Chili is justly celebrated throughout the world, and that of Santiago is deemed delightful even in Chili. The temperature is usually between 60 deg and 75 deg. The climate is drier and colder at Santiago than at Valparaiso, where the mean temperature is 63 deg. There are several English miners on the Chilian side of the Andes, engaged in working the silver and copper ores.

The view given in the Illustration is taken from a suburb of Valparaiso. The stones upon the left of the picture are the *debris* of the blasting operations on the side of the hill, and sufficiently show the formidable engineering difficulties to be surmounted in the construction of the railway. Santiago is 1891 feet above the level of the sea.

There is a good deal of traffic at the present moment along the line of the proposed Railway. An omnibus proprietor of Valparaiso (and there are not less than eight of these vehicles in the city) has just ordered two coaches from the United States, to ply between Valparaiso and Santiago. They are to be constructed on six wheels, with a propeller to drag up and go down the steep mountainous roads between the two cities.

There are many neat and comfortable dwellings, surrounded by flower-gardens, on the hills around Valparaiso, which are chiefly occupied by the families of American and English merchants.

The Valparaiso papers, from which we take our account of the inauguration of the Railway, lead us to suppose that the inhabitants are not so engrossed by the pursuit of gain as to neglect the cultivation of one branch at least of the fine arts. They say

One of our principal houses in Valparaiso has received the Grand Piano manufactured by Collard and Collard to which was awarded the prize in the London Exhibition. The parties ask 2,000 dollars for it; and, with the natural love of music which the Chilenos possess, are likely to obtain their price. It is a well-known fact that scarcely any country—thanks to our prosperity imports, taking our population into account, so many pianos as we do. A bed, a piano, and a lamp are the first requisites in a Chileno household.

The construction of the Railway is expected to be followed by an increased development of the resources of the country, which cannot fail to add to the number of English resident merchants.

THREE VALENTINES.

BY MRS. T. K. HERVEY.

1.—THE EVE OF ST. VALENTINE.

How shall I woo her? 'Neath her glance
My spirit faints away,
Frail as a mote that dares to dance
Along the sunbeam's way.

Her lip hath never breathed a sigh,
No cloud is on her brow;
Swept on by lava streams am I—
She standeth 'midst the snow

By Love's sweet breath untouched,—unstirred,
She lifts her arching brows,
And carols like an untaught bird
Among the listening boughs.

O! she is radiant as a star.
Yet wayward as a breeze;
Changeful as Autumn echoes are,
Caught up by rustling sheaves.

At times, like gathering mists that steep
The sun forsaken earth,
Soft shades of dreamy sadness creep
Betwixt her and her mirth.

Yet in her every step of grace
The soul of freedom dwells,
And scornful beauty in her face
Love's faintest sigh repels.

How shall I woo her? 'Twere as light
To stay the wild wind's wailing
She stoopeth not to own the might
Of tender Love's prevailing.

2.—ST. VALENTINE'S DAY.

Behold me, love, beside thy lattice leaning,
Ere yet the icy stars have ceased to glow,
From thy full sheaves a little gladness gleaning—
A little hope, that melteth like the snow!

I know thou art a wavelet of the sea,
Ever from Love's delicious shore retreating,
Thy young life floats unto a silent lea,
No other heart unto thine own heart beating.

Is there no sadness in thy singing, love?
Seems not thy very freedom desolate?
Buildest thou not within a leafless grove—
Oh! tenderest bird—oh! dove without a mate?

Could I but shield thee from the cruel years,
Whose touch shall steal the bloom upon thy cheek,
Drowning thy sorrows in my own heart's tears,
In that dumb worship Love can never speak;

Could I but turn Life's serpent folds aside
Which coil around thine Eden even here,
Sweet would that poison be whereof I died—
My love and truth the only tempters near.

Oh! hear me! Turn thine eyes upon my face;
With love—*thy* love, alone will I depart.
One smile, and Spring will take cold Winter's place
Oh! hear me! for the ice is on my heart!

3.—THE ANNIVERSARY OF ST. VALENTINE.

'Tis long ago; the tale of woe
Is old as Memory's dreaming;
Soon, on my breast, my love confessed
Her coldness only seeming.

She told me how, with beating brow,
She leant beside the pane,
And caught the prayer I whispered there,
And breathed it back again.

She heard the sigh I poured on high,
The scorn within her sleeping;
While o'er the snows the sun uprose,
And showed her softly weeping!

One sound alone, of touching tone,
Her tenderness awaking,
Stole on her Night: it took to flight—
She felt her Day-spring breaking!

She turned—she heard the thrilling word,
Her soul made answer sweet;
No more forlorn, she blessed the morn
That found me at her feet!

COMMENCEMENT AT VALPARAISO OF THE RAILWAY TO SANTIAGO.—FROM A DAGUERREOTYPE BY MR. HELSBY.

ST. VALENTINE'S DAY.

AMATEUR CONCERT IN AID OF THE FUNDS OF THE NEWCASTLE-UPON-TYNE INFIRMARY.—(SEE NEXT PAGE.)

GRAND AMATEUR CONCERTS IN AID OF THE INFIRMARY AT NEWCASTLE UPON TYNE

THE magnificent saloon of the Assembly Rooms in this town presented a scene of unusual brilliancy on Tuesday evening, the 25th ult. and subsequently on Thursday evening, when two Grand Amateur Concerts were given in aid of the funds of the New Asylum Infirmary, under the distinguished patronage of their Graces the Duke and Duchess of Northumberland, the Earl and Countess Grey, Lord Ravensworth, the Hon. H. T. Liddell; with nearly all the nobility, gentry, and civic authorities of the two counties of Northumberland and Durham.

A committee, consisting of the Vicar of Newcastle, Dr. Headlam, Dr. Charlton; John Anderson, and Wm. Brandling, Esqs., was at the same time appointed, and under their able management, with the invaluable services of the Rev. C. C. Snowden, as honorary secretary, a selection was made of the chief nobility of their town and district.

The tickets issued were inadequate to the demand, and the committee consented to give a second concert. The spacious and lofty saloon of the Assembly-rooms was brilliantly illuminated, and around and above the circular recess at the end of the apartment where the performers were placed, a variety of tasteful decorations had been extemporised by Mr. H. Brandling, assisted by a party of ladies. The embellishments consisted of a drapery in the medieval style, which extended from the ceiling; and banners, bearing the names of the principal composers—Gluck, Haydn, Handel, Mozart, Bishop, Purcell, Mendelssohn, Czerny, Auber, and Meyerbeer—were tastefully grouped at intervals around the platform. Signor C. Pisroni was the conductor. The performers were twenty six ladies and thirty-one gentlemen, amongst whom were the Hon. Lady William-on, Hon. and Rev. F. R. Grey, Rev. Mr. Errington, Rev. Mr. Greenwell, &c. Rossini's "Barbière" overture was played by the Messrs. Walsham, L. Brandling, Anderson, and Bainbridge, on four pianofortes. Mrs. Ralestone, Misses Bainbridge, Wilkinson, and L. Brandling played a selection, composed and arranged by Miss Brandling, for the four harps. *(See the Illustration upon the preceding page).* Considerable curiosity was felt as to the effect which would be produced by the music from this ancient instrument, now coming into vogue after having been in very general disuse. Its tones were no doubt new to many, at the same time that they were familiar to all. The performers were evidently well able to bring out the full powers of their instruments—Miss Laura Brandling taking the leading part; and each sweep of the strings drew forth a group of fine robust chords, the four being handled with an exactness which made them sound as one. The "Farewell" of Miss Brandling, which is a fine and well arranged composition, was followed by a March, for which species of music the harp appears rather adapted. The audience testified their approbation by frequent applause; and much encore was given, alike in compliment to Miss Brandling and the manner in which the selection had been performed.

Some German amateur sing quartets. Misses Walsham, Brandling, Dobson, and Dalyell, executed a fantasia on themes from Meyerbeer's "Prophète," arranged by Pinsuti for four pianofortes and four harps, the latter played by the ladies mentioned above. Mr. Herrmann, Mr. Stephens, and Mr. Bell, performed solos on the violin, violoncello, and flute. Czerny's arrangement of Rossini's "William Tell" overture, for eight players on four pianofortes, was allotted to the Misses Walsham, L. Brandling, Lange, Brandling, Dobson, Carr, Dalyell, and Hewson. Messrs. Allison and Anderson played a duo on two concertinas. The array of local talent was altogether imposing; and the talent displayed by the amateurs is pronounced to have been of the highest order. The Vicar composed some appropriate lines for the occasion; and at the conclusion of Thursday's concert the Vicar complimented the conductor on the zeal and ability he had displayed. The selections were from the works of Rossini, Auber, Mendelssohn, Campana, Pinsuti, Donizetti, Meyerbeer, Crouch, De Beriot, Webbe, Kucken, Bellini, Sir H. R. Bishop, &c.

CALENDAR FOR THE WEEK.

SUNDAY, February 13.—First Sunday in Lent. Gloucce massacre, 1691.
MONDAY, 14.—St. Valentine's Day. Captain Cook killed, 1779.
TUESDAY, 15.—National Debt commenced, 1900.
WEDNESDAY, 16.—Ember Week.
THURSDAY, 17.—Battle of St Albans, 1461. Michael Angelo died, 1564.
FRIDAY, 18.—Martin Luther died, 1546.
SATURDAY, 19.—Galileo born, 1564.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

TO CORRESPONDENTS.

A CONSTANT SUBSCRIBER.—The present Emperor of the French is nephew of the great Napoleon, being son of Louis Bonaparte, ex-King of Holland.

A. F.—"The Right Honourable" Lord Crewe.

G. H.—After the Strasbourg affair, in October, 1836, Louis Napoleon was detained for a short time in prison in France, and then sent to the United States. In August, 1840, the Prince made his attempt at Boulogne, and, after its failure, was taken prisoner and tried for high treason: the sentence was perpetual imprisonment in a fortress in France, and the Prince was conveyed, in consequence, to the citadel of Ham, whence he effected his escape on the 25th May, 1846.

CLEMENTINE.—The French Princes hold their titles by right.

PISISTRATUS.—The Chancellor of the Exchequer becomes entitled to a retiring pension of £2000 a year, when he shall have held the said office for a period of not less than two years in the whole, either uninterruptedly or at different times.

META.—The name of "Deux ponts" was applied to the Duc de Bordeaux from his birth. The Hon. Diana Abney Hastings, sister of Count Odlleu, was married August 5, 1851, to the Hon. Edward Coke, brother of the Earl of Leicester.

INQUIRY RESPECTING THE ROOKE FAMILY.—If Herodicus will send his address to the Editor, he will forward it to a gentleman who can give him every information respecting the family of Admiral Sir George Rooke, that he may require.

W. J. B.—The register is compulsory.

W. L.—The surname of Viscount Ashbrook is Flower. His Lordship's arms are—"Arg. on a chev., voided at bottom three ravens, each holding in the beak an ermine spot, as many pellets. *Crest:* A demi-lion, per pale, erm. and ermines, gorged with a chain with a collar gemel or in the dexter paw a pellet, per. *Motto:* Mon conseil vrai."

B.—The arms of Viscount Bridport are:—"Az. a fret arg. on a chief or, three crescents sa. *Crest:* A cornish chough ppr. supporting with the dexter claw an anchor or. *Motto:* Steady."

A. W.—The earldom of Mountmorris is extinct. Viscount Valentia is now next in the family.

A CONSTANT READER.—Baronets of Nova Scotia are entitled to support arms, but English and Irish baronets are not.

A. R. W.—A person married to a baroness has neither arms and quarterings on an escutcheon of pretence, but he is not entitled to take her family name unless he obtain the Royal license so to do.

POPW.—"Short-Short-Hand" is published by Whittaker and Co. Arms of Pope-Wyndham:—"Arg. a chev. gu. between three roses of the last, seeded and leaved ppr. *Crest:* A squirrel sejant on chest on two wheels, or, fixed with fire ppr. *Motto:* Time et fide."

TRAFALGAR.—Shortly after the Duke of Wellington's death, we gave the detailed pedigree, showing, link by link, his descent from King Edward I. Nelson's Lineage and Pedigree may be seen in Burke's "Royal Families," Vol. II. 2nd edit.

A CORRESPONDENT, in answer to A, gives the following information: Guillaume Dode de la Brunerie, Marshal of France, was born in 1775, the son of a notary of Geoire: he served as engineer officer through the campaigns of Egypt, Germany, and Spain, and directed the works at the sieges of Saragossa (1809), and Badajoz (1810). After the disasters in Russia, he shut himself up in Glogau, and maintained himself there until the peace. In the year 1823 into Spain of 1823 he commanded a corps d'armée, and on his return home was created Peer of France with the title of Viscount. In 1840 he was nominated President of the Council of the Fortifications of Paris, and carried those great works through to a happy and successful accomplishment: he was the bâton of a Marshal of France, an honour not previously conferred since the time of Vauban on an engineer officer. Marshal Dode died in 1851.

AN OLD SUBSCRIBER.—You are entitled to quarter the arms of your paternal grandmother, who was an heiress, as well as those that came to her through her husband. The title of Marshal, and the decoration requires no payment of fees.

HERALDRY.—The arms of Anne, Countess of Mornington, mother of the first Duke of Wellington, were: "Quar. erly 1st and 4th per bend erm and ermines, a lion rampt. or 2nd and 3rd; as on a fesse arg. between three boars pas. sant, guardant, or; as many escallops gu."

MME. J. N. M.—Henri, Duc de Bordeaux and Comte de Chambord, was born 29th Sept., 1820. He married, in 1846, the Archduchess Marie Therese, daughter of Duke Francis IV., of Modena.

THE ILLUSTRATED LONDON NEWS VOLUMES, from the Commencement (May 14th, 1842) to December 31st, 1852, consisting of TWENTY-ONE VOLUMES, may now be had, in cloth and Reading Cases and Numbers, of the Complete Set, bound in strong paper, for exportation, £14 10s.; bound in cloth, neatly gilt, £19 5s. Any single Volume can be had separately. Price of Volume I., cloth gilt, £1 4s. Volumes XVII. 18s. each; XVIII. 18s.; XIX. 18s.; and XX. 18s.; and Part One Cover, at 3s. per Volume less. The price of a single Back Number, a month after the date of publication, 5d.; 6s. Covers for Binding the Volumes, 3s. 6d. Reading Cases, 3s. Portfolios, 2s. 6d. A fifty per cent discount to booksellers and agents.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, FEBRUARY 12, 1853.

THE British Parliament has commenced its usual Session, and the eyes of the world will be directed with more than common interest and anxiety to its deliberations. That august and venerable body is the hope of Europe. There is abundance of work before it—for it has not simply to devote its attention to financial and administrative reforms, of the highest importance, but to maintain unimpaired the dignity and influence of this country throughout the civilised world, at a time when the state of the Continent is fraught with no ordinary perplexity and peril. Happily the Corn-law question is no longer in the way to set class against class, and prevent or postpone the consideration of every other matter of public interest. Statesmen and minor politicians are freed from the long protracted annoyance of that ignoble strife. The arena is clear. An able Government, backed by a strong Parliamentary majority, is at the head of affairs, and there is every reason to believe that our domestic policy will be in accordance with the wishes and the necessities of a practical and intelligent people. In the home atmosphere neither darkness nor storm is visible. No classes of the people are now led away by theories about "five points," or any other great organic changes—but all are aware of the consoling truth, that whatever may be the defects or anomalies of the Constitution under which they live, it secures to them an amount of personal liberty unknown to the rest of Europe, and leaves the Englishman free to think, to speak, to act, and to prosper. But the state of our foreign relations is not so comfortable a subject of contemplation. Our very liberty, which we so dearly prize, isolates, if it does not alienate us, from the Powers of the Continent. Europe is covered with armed men. With two millions of soldiers under arms in Russia, Austria, Prussia, and France, war is possible at any moment. It is our first duty to be guarded against the chances of such a catastrophe; and the feeling of the country is such that the Government will be cordially supported, in and out of Parliament, in the measures they will take to secure our coasts against invasion, and to arm us effectually on the defensive. Should it unfortunately become necessary that we should be required to act upon the offensive as well as upon the defensive, there is reason to know that the old public spirit is as vigorous and indomitable as ever; and that England is as able to hold her own and make herself respected—and, if need be, feared—as in the brightest days of her annals. The Powers of Europe suspect, if they do not know this fact; and the more extensively it is believed, the greater security will this country possess against aggression. France is not the only possible disturber, as Mr. Cobden and others seem to imagine. The events of Lombardy, whatever may be their issue, show how uncertain is the peace of Europe. Italy is a great political volcano, ready for eruption; and Hungary seems to be little, if any, better. Not even the immense and highly-disciplined army of Marshal Radetsky was sufficient to prevent the outbreak at Milan; and while such discontents exist in any part of Europe as those which drove the desperate Lombards into a struggle with their alien masters, war may arise at a moment's notice. In such circumstances, the policy of England is clear. We are not quite such a nation of dotards as the amiable enthusiasts of the Peace party would represent us.

THE affairs of Montenegro assume daily a character of more importance. A Turkish army of nearly 50,000 men, in three divisions, have attempted, with varied success, to penetrate into the Montenegrin territory, and to occupy the country. Omar Pasha has summoned Prince Daniel to surrender, on pain of seeing his entire territory occupied by the Turkish troops. The Montenegrins are greatly outnumbered, and wage a most unequal contest with the whole power and resources of the Turkish empire.

The Turkish Government knew perfectly well that the campaign against Montenegro would bring special emissaries from the European powers to Constantinople; and that Russia, Austria, and France would eagerly offer their mediation, and counsel the Porte to respect the independence which the Montenegrins have so long enjoyed. The design of the Sultan, has, therefore, been by a *coup de main* to reduce the Montenegrins to submission, and thus to cut short the offers of diplomatic intervention. The Montenegrins, on the other hand, lost no time in sending embassies to Vienna and St. Petersburgh, and both Courts have made the strongest representations to the Turkish Ministry, but hitherto without diverting the Sultan from his determination to punish and subdue the fierce marauders who for so many years have waged an incessant border-warfare with his subjects. The chapter of accidents may still befriend the Montenegrins, if they can, for a few weeks, defy the army of Omar Pasha. Austria has assembled a large army on her Dalmatian frontier, and has sent General Leiningen to Constantinople with terms which have been rejected by the Porte, notwithstanding the threatening attitude assumed by the Austrians. The insurrection at Milan, and the general disaffection in the Lombardo-Venetian provinces, will compel the Court of Vienna to moderate its tone at Constantinople, and to withdraw some brigades from Dalmatia. Russia has not yet spoken out, and is probably waiting for the arrival of the French Envoy at Constantinople, before committing herself to any decided course of action. Baron Brénier may, indeed, find himself "master of the situation" at Constantinople; for the revolt in Lombardy has occurred at a moment when the diplomatic relations between France and Austria are little more than a series of mutual insults and affronts, and Louis Napoleon would not be disinclined to find in the East a plausible pretext for marching a French army across the Alps.

We believe that the British Cabinet is entirely of accord as to the policy which the honour and interests of Great Britain require her to pursue at the present juncture. That policy is to maintain the integrity of the Turkish empire at all hazards. No doubt, the excesses of the Montenegrins have been paralleled by acts equally savage and barbarous on the part of their neighbours on the Turkish frontier. Montenegrins and Turks have not scrupled by turns to invade each other's territory, whenever the lust of plunder or the desire to cut off a few heads became too strong to be resisted. Both nations have been equally cruel and equally faithless, although it has happened that, from the savage bravery of the Montenegrins, the poverty of their country, and the facilities which their mountains offer for retreat, they have been enabled to inflict more loss and mischief upon the Turks than they have sustained from the hands of the Mussulman. The interests of civilisation and humanity demand that this desolating border-warfare should cease; and if, as is asserted by the Turks, it should appear that the Montenegrins were the aggressors in this war, that they attempted to engage neighbouring states in their undertaking, and that they encamped upon the plains beyond the Turkish frontier, the people of England would see, without regret, this horde of robbers and assassins reduced into a Turkish pashalik, with the free use of their religion. The Montenegrins are Christians of the Greek Church, but Europe can have no sympathy with Christians who bring disgrace upon their creed by their savage passions and lawless rapacity.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, FEBRUARY 10

Month and Day.	Corrected Reading of Barometer at 32° and 9.0 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean of Temperature of the Day.	Departure of Temperature from Average.	Degrees of Humidity	Direction of Wind.	Fall, Inches
Feb. 4	[illegible]	42°	31°	37°	0°	91	N.E.	0·01
" 5	29·7	42	27	34	1°	94	N.E.	0·18

" 9	29·1	42	29	36	1°	86	E.	0·00
" 10	29·1	38	32	34	3°	98	N.E.	0·05

N.B. The [illegible] denotes below the [illegible] and the [illegible] above the average. The [illegible] on the seventh contains one cubic inch [illegible] of rain fell since the restoration of the barometer to its proper temperature.

The mean reading of the barometer for the week, at the height of 82 feet above the sea, was 29·416 inches. The reading descended to 28·870 inches on the 5th, and from this the readings rose low to the end of the week. The mean temperature of the week was 37°, being 1·2° below the average of 38 years. The mean daily temperature has been below its average on every day from February 1st excepting on the 7th, when it was slightly in excess; the mean daily defect being 2·8°. The temperature has varied during the week from 42° on the 7th, to 29° on the 9th. The average daily difference of temperature during the week was 8·2°. Snow fell on the 5th. The amount of rain during the week was 0·3 in. (three-tenths of an inch).

Lewisham, Feb 11th, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday, 1559 children were born: of these, 827 were boys, and 732 were girls. The average number of births in the corresponding week in the preceding eight years is 1507. The number of deaths registered in the week was 1220; the estimated number for the week was 1164, thus the actual exceeded the estimated number by 56. For many weeks the mortality has been less than its estimated amount. In excess in the present week is attributable to the great change of temperature which took place at the beginning of the month, and the rain that fell during the present time. Of consumption, 158 deaths are stated, the average is 137; to bronchitis, 130—its average is 96; to hooping-cough, 64—its average is 41; to typhus, 50—its average is 38; only 3 to measles, the average of which disease is 21.

THE LAST OF PROTECTION.—A meeting of the committee of the National Association for the Protection of British Industry and Capital was held at the South Sea House on Monday, "for the purpose of considering and deciding on the course which it might be expedient for the association to pursue;" the Duke of Richmond in the chair. A letter was read from Mr. G. F. Young, in which he says "I venture then very respectfully to suggest, as a subject deserving an early consideration, whether the time has not arrived, when, in reference both to personal character and to public considerations, which no one is able more justly than your Grace to estimate, the National Association ought to be dissolved. Its existence as a public body should now terminate, without compromise of its duties, and in a manner consistent with its character and that of its supporters." After several observations from various members, this opinion was adopted; thanks were moved to the chairman, to retaries, Mr. G. F. Young, &c., and the dissolution of the Association decided on.

CRYSTAL PALACE.—The adjourned meeting of the "working-classes" (with reference to opening the Crystal Palace on Sunday) took place on Wednesday evening, at Drury lane Theatre. Mr. Frideaux (in the absence of Mr. Henry Mayhew) occupied the chair.

THE LONDON ORPHAN ASYLUM.—The anniversary festival of the London Orphan Asylum was held on Tuesday. The Earl of Harrowby presided, and amongst those present were Mr. Sheriff Carter, Mr. Alderman Thompson, Mr. Hankey, Mr. Alderman Salomons, &c. The subscriptions and donations amounted to about £1800, amongst which were, from the Drapers' Company, £100; Goldsmiths' Company, 100 guineas; the Cordwainers' Company, £20; and the Duke of Wellington, £50. The asylum has been enlarged, so that it now affords accommodation to 600 children.

CLOSING OF ST. CLEMENT DANES' CHURCHYARD.—On Thursday, a crowded meeting was held in the vestry-room of St. Clement Danes—the Rev. W. Ellis, rector, in the chair—to determine whether a burial-ground should be provided, under the Metropolis Burial Act. After much discussion, it was resolved, by 50 to 11 votes, to request Lord Palmerston, as Home Secretary of State, to obtain an order in Council for the immediate closing of the burial-ground.

ZOOLOGICAL SOCIETY.—On Tuesday this society held its meeting, when Dr. Baird read a paper on a new species of emyda. Common [illegible] was also read from Dr. Gray, Mr. Adams White, Mr. G. W. Lord, &c.

CIVIL ENGINEERS' INSTITUTION.—The meeting on Wednesday evening was entirely occupied with a discussion on Mr. Josiah Richardson's paper, "On the Ventilation of Mines."

GEOLOGICAL SOCIETY.—A meeting of this society was held on Sunday, at No. 53, Berners-street. Dr. B. G. Babington, F.R.S., in the chair. A paper was read by Mr. R. D. Grainger, of the Board of Health, on the influence of noxious human effluvia in the production of disease. A discussion followed, during which the state of the sewerage of the metropolis was adverted to at some length; and a unanimous vote of thanks given to Mr. Grainger for his highly philosophical views.

THE NEW MINT OF AUSTRALIA.—The first appointments in the establishment of a branch mint in Australia have fallen upon Messrs. Welch and Drury, senior clerks of the census establishment, who are nominated as accountant and probationary duties at the mint. It is understood that the assay-masters will be selected from the Bank of England: and the necessary arrangements in the forming of a new mint for Australia are in progress.

THE ORDNANCE SURVEY.—About 1300 persons are at present employed on the Ordnance survey. They have now completed maps of several large towns in England, on a scale of sixty inches to the mile. Maps on the scale of six inches to the mile of several other large counties are preparing, as well as one-inch maps of Ireland and Scotland.

THE LORD MAYOR'S COURT.—A special court has been held at the new office, in Guildhall Chambers, to swear in the attorneys. Hitherto the business of the Court has been carried on by six aldermen and four barristers; but for the future it will be open to the whole of the profession who are freemen of the city.

DINNER TO DISSENTING M.P.'S.—A grand dinner is to be given on the 16th inst., at the Middlesex Club in London, to the Protestant Dissenters who are members of the House of Commons. Dissenters from all parts of England will attend the banquet.

LA SOCIETE FRANÇAISE DE BIENFAISANCE.—On Monday evening the twelfth annual ball in aid of the funds of this charitable institution took place at the Hanover-square Rooms, under the patronage of his Excellency the French Ambassador and other distinguished foreigners. A very numerous and most select company attended the *réunion* upon this occasion. Mr. Charles Boose presided over the orchestra, and dancing was kept up with much spirit until a late hour.

MUSEUM OF ORNAMENTAL ART.—The numbers attending at Marlborough-house during the month of January were as follows: 11,751 persons on the public days, and admitted as free; 624 persons on students' days, and admitted as students on the payment of 6d. each; besides the registered students of the classes and schools.

INSANITY AMONGST THE WORKING CLASSES.—An official report just published states that insanity has lately increased to such an extent amongst the working classes, that none but those whose duties bring them in contact with the sufferers can form an idea of its fearful spread. There are now no less than 404 chargeable to the parish of Marylebone. In St. Pancras, insanity also prevails to an unusual amount. The painful fact ought to be made the subject of official and medical inquiry, with a view to tracing its origin and retarding its progress.

THE MURDER AT BRIXTON.—Elizabeth Vickers has been fully committed for trial for the murder of Mr. W. Jones, of Acre lane, Brixton. A police-officer deposed to having seen marks of blood on the coach on which the deceased was represented to have died, on a pillow-case, and a sheet. Another witness deposed that a silver snuff-box, silver watch, and other articles of the deceased, had been left in pawn to him by the prisoner. They were identified by Mr. Jones's nephew. The prisoner was extremely violent during the investigation, flatly contradicting the witnesses. Her solicitor was obliged to interfere, and request her to be quiet.

LATEST INTELLIGENCE.

HOUSE OF LORDS. FRIDAY.

Their Lordships met at five o'clock.

The Marquis of CLANRICARDE gave notice of his intention, on Monday next, to ask the noble Earl at the head of the Government whether he had any objection to lay upon the table copies of the correspondence which had taken place between the Governments of this country and of France respecting the establishment of the French Empire?

THE POST OFFICE.

The Marquis of CLANRICARDE, in moving for the returns connected with the department of the public service, took the opportunity of complaining upon the appointment of Mr. Joseph Long to the office of President of the Money Order Office in Dublin, and of justifying the course he had pursued when acting as Postmaster-General in the appointment of gentlemen to important and responsible offices in the post-offices throughout the United Kingdom.

The Earl of HARDWICK defended the appointment of Mr. Long, who had been recommended to his notice by testimonials of the highest character as to his honour and ability.

Lord CANNING having assented to the motion, the returns were ordered.

THE SIX-MILE BRIDGE (IRELAND) AFFAIR.

The Earl of CARDIGAN wished to know what was the intention of the Government with reference to the soldiers charged with murder, while defending themselves from an infuriated mob, in the county of Clare, during a contested election? He had been informed that the Government had determined to prosecute those soldiers, and had instructed the law officers to take the necessary proceedings. If that be correct, it was quite contrary to the course determined on by the late Government. Nothing could be more discouraging to her Majesty's troops, when employed in such painful duties as those of keeping the public peace during contested elections, and of protecting voters, than to know that if they defended their lives against a furious mob, led on by Roman Catholic priests, that they were rendering themselves liable to take their trial for murder. He wished to know, in case the Government intended to prosecute, how those soldiers were to procure legal assistance, and how those expenses were to be paid?

The Earl of ABERDEEN said that nothing had as yet been decided upon in respect to a prosecution by the Irish law officers. The question was still under the consideration of the Irish Government.

The Earl of DERBY wished to know whether any determination had been come to in reference to the prosecution of the priests who were charged with having excited the mob to attack the soldiers?

The Earl of ABERDEEN said that that subject was also under consideration. Nothing had as yet been determined on. Adjourned.

HOUSE OF COMMONS.—FRIDAY.

The Speaker took the chair at four o'clock.

RELIGIOUS INTOLERANCE IN SPAIN.

Sir R. H. INGLIS asked the noble Lord at the head of the Foreign Office a question in reference to a decree of the Spanish Government, dated the 17th day of November, 1852, providing that no stranger, whether domiciliated in Spain or passing through it, shall be permitted to profess in Spain any other religion than that of the Church of Rome.

Lord J. RUSSELL stated that the noble Lord who preceded him in the Foreign Office had directed Lord Howden to ask for an explanation of the decree in question; and the answer he received from the Spanish authorities was, that the decree made no change whatever in the existing practice as regarded foreigners.

In reply to Mr. Monckton Milnes, Lord JOHN RUSSELL stated that the Spanish authorities had offered a piece of ground at Madrid for a Protestant cemetery, but objections existed as to its eligibility. On the subject of the religious service to be performed at funerals, a correspondence was at present going on.

In answer to Mr. Hildyard, Mr F. FEEL made an explanatory statement on the subject of the mortality which had taken place on board four vessels, chartered by the Emigration Commissioners, between Liverpool and Melbourne, in Australia.

In answer to Lord Dudley Stuart, Lord PALMERSTON expressed a hope that the parish authorities would not be deterred, from considerations of expense, from taking the first step towards the removal of the metropolitan graveyards. The state of most of those graveyards was a disgrace to a civilised community. The matter would continue to undergo the anxious consideration of the Government.

SIR C. WOOD'S SPEECH AT HALIFAX

Mr. DISRAELI said, not seeing the right hon. gentleman the President of the Board of Control in his place this evening, he thought he should ask him whether the following passage in his (Sir C. Wood's) recent speech at Halifax was correctly reported:—

"Take our nearest neighbours. Such a despotism never prevailed in Europe, even in the time of Napoleon the First. The press gagged, liberty suppressed; no man allowed to speak his opinion; the neighbouring country of Belgium forced to gag her press; no press in Europe free but ours, which, thank God, has not forgotten how to use its ornaments of the country."

In answer to a question from Mr. Spooner, Lord J. RUSSELL said that the statement alleged to have been made by Mr. Sadlier as to the abandonment of the Ecclesiastical Titles Bill was incorrect, for Mr. Sadlier had written to him to say that he had been incorrectly reported.

In answer to a question from Mr. Ashhurst, Lord J. RUSSELL said he would have no objection to lay on the table of the House all papers connected with the case of the Madiai.

Lord J. RUSSELL, in answer to a question from Lord D. Stuart, said, that Lord Stratford would immediately proceed to Turkey to resume his official duties.

The CHANCELLOR OF THE EXCHEQUER obtained leave to bring in a bill to authorise advances from the Consolidated Fund, to discharge money borrowed for the metropolitan improvements, on the security of the town estates, and to charge the same on the London-bridge approaches fund. Adjourned.

His Excellency the French Ambassador and the Countess Walewska returned to London from Paris yesterday.

WE regret to learn that Sir Edward Bulwer Lytton is confined to the house by a severe, though, we trust, temporary indisposition, arising out of a painful injury to his arm.

THE Speaker's first Parliamentary dinner will take place on Saturday next, the 19th instant.

THE CITY SOLICITOR At a Court of Common-council for the City, held on Thursday, Mr. Charles Pearson was re-elected City Solicitor; but with a general understanding that he is to refrain from acting in any schemes or companies, and to devote all his time to matters connected with his office.

RECOMMENCEMENT OF ACCIDENT.—A report of considerable circulation early yesterday morning that a dreadful railway accident had occurred, by which twenty-five lives had been sacrificed. The *locale* was variously stated on the Great Western and upon the Great Northern. An unusual delay in the delivery of the northern mails having induced a belief that the frightful story was more or less true, we are happy to give the most positive contradiction to the report. On the Great Western no casualty occurred. There was a break down on the Trent Valley branch of the North-Western, occasioned by the failure of a goods waggon, but no mischief followed beyond the delay of the mail. On the Great Northern line a collision took place, during a heavy snow-storm, between a goods train and a train of empty coal waggons. The rails were torn up for some distance, and at present the traffic is confined to a single line of rails.

STOCK-EXCHANGE FAVOURS.—A scene of considerable excitement occurred yesterday in the Stock-Exchange. It appears that a certain gentleman has for some time past been practising upon many brokers, not excluding those of high standing from participation in his favours. It seems he yesterday renewed his attempt, but his intended dupe had got an inkling of the character of his customer, and by a ruse got him within the precincts of the Stock-Exchange, when he was speedily seized, and a large quantity of flour having been procured, with a due proportion of decayed eggs, the reverend culprit was well besmeared. In that guise he was marched a considerable distance up Old Broad street, and pilloried against the church as a warning to evil-doers.—*Standard*.

FOREIGN.

FRANCE.—The British Ambassador at Paris (Lord Cowley) has been honoured by his Sovereign with the Grand Cross of the Order of the Bath.

Of the persons arrested on Sunday and Monday last, only fourteen connected with newspapers are to be prosecuted.

M. Guizard, formerly Councillor of State, one of the most influential of the Republican party, has refused similar Government offers to those accepted by M. Laroche-Jequelin, the Legitimist.

The Duchess of Vicenza, after being personally waited on by the Empress, and urged to accept a highly honourable position in the household of the Empress, steadily declined to accept the proffered honour.

The annual report of the Bank of France has just been issued, which is of the most favourable character.

The Four-and-a-Half per Cents closed at 105f. 20c.; and the Three per Cents at 79f. 30c., with a buoyant market.

THE INSURRECTION AT MILAN.—We are again without later intelligence from Milan. All communication between that city and the Swiss frontier would appear to be still closed, and the circumstantial accounts of an inference not unfavourable to the insurgents.

On the 4th, numerous arrests took place at Milan, where the utmost desolation prevailed. On the 5th, upwards of 200 families had sought refuge in the canton of Tessin. It was believed that the Government had discovered an extensive conspiracy, and that the vigorous measures taken by the police compelled the revolutionary leaders to commence the contemplated insurrection before their plans were matured.

The *Zurich Gazette* states, with respect to the insurrection, that about 500 men, armed with pouiards, attacked the troops and gendarmerie on Sunday last, and that there had been about 300 killed. A similar occurrence, it says, had taken place at Rusiul; but no details were as yet known. The *Basle Gazette* states that similar movements had broken out in several towns of Lombardy. These accounts are probably exaggerations. The insurrectionary movement at Milan is at an end, at least for the present. Austrian troops have succeeded in putting down the *emeute*; but the discontent which prevails in that and many other towns of Lombardy leads to the belief that it will break forth again, at no distant period, and with increased vigour.

A letter from Vienna states that the affair was sharp while it lasted, but that the insurgents were without efficient leaders, and for the greater part without fire-arms. Many important personages had been arrested at Milan, and several summary executions had taken place, but this was the case only with persons who were taken in the act of rebellion. It is said that the Austrian Government has sent to that of France a list of Italians in Paris who are suspected of having been concerned in getting up the insurrection. Several Italian refugees have suddenly left Paris, and these, probably, were the persons to whom the despatch of the Austrian Government refers.

TURKEY.—Athens journals to the 27th ult. have arrived. Great financial embarrassment existed in the country, owing to the scarcity of specie, arising from the large purchases of corn rendered necessary by the scarcity. With the view of obtaining specie, the Government had listened favourably to propositions made to it for establishing mortgage banks to lend at 8 per cent., and had nominated a commission to collect information on the subject.

THE OVERLAND MAIL.—TRIESTE, Feb. 10.—The *Egypte* steamer arrived here this afternoon, at one o'clock, from Alexandria, having accomplished the distance in 146 hours.

By this conveyance we learn that Pegu had been annexed to the British empire, by a proclamation dated the 20th of December last. It concludes by an intimation that in case the King should still refuse to make peace, or in any manner to molest our new Burmese territory, he will be expelled from his throne.

The Burmese do not manifest any intention of yielding, and therefore an advance upon Ava appears to be inevitable, which will probably be effected as soon as the necessary means are obtained for the transport of the troops.

The Overland Mail does not furnish any other news of public importance.

Commercial affairs are dull, but money is easy.

Exchange at Calcutta is 2s. 1d. at the highest.

At Canton, 120 rebels have been hung during the last month.

IMPERIAL PARLIAMENT.

On Thursday, Parliament re-assembled for the despatch of business.

HOUSE OF LORDS.

Their Lordships assembled at five o'clock, the Lord Chancellor presiding. The attendance of Peers was tolerably large. The Earl of Derby and the late Ministers occupied the front Opposition bench.

The Earl of WINCHELSEA gave notice that, on an early day, he should move for a committee to inquire whether the system of education adopted at Maynooth was reconcileable with the spirit of the Protestant institutions of the country?

Lord St. LEONARDS laid on the table a bill, the object of which was further to diminish the expenses of suitors in Chancery; three bills relating to proceedings in lunacy, declared to lessen the expense and generally facilitate these proceedings; likewise a bill to amend the law of bankruptcy, one of the objects of which was to abolish the 1st, 2nd, and 3rd classes of certificates. The noble and learned Lord also introduced a bill to effect improvements in the criminal laws. These bills were severally read a first time.

POLICY OF THE GOVERNMENT.

The Earl of DERBY rose and asked the noble Earl at the head of the Government for some information in reference to the measures intended to be proposed by the Government during the session?

Earl FITZWILLIAM said, although there was a natural anxiety throughout the country to ascertain the intentions of the Government in reference to many important questions, he hoped that the noble Earl (Aberdeen) would not be tempted into a statement respecting the policy of the Government, on what might be considered the first night of the session. Such a course would be unprecedented.

The Earl of ABERDEEN said that, before their Lordships adjourned for the Christmas recess he intimated the intentions of the Government upon the great leading questions that occupied public attention. During the recess the Government had given these questions their most mature consideration; and in respect to most of them, if not all, measures would be shortly submitted for the approval of Parliament.

The Earl of DERBY pressed for a more definite statement.

The Earl of ABERDEEN having, however, declined to give any other response, their Lordships adjourned until Friday.

HOUSE OF COMMONS.—THURSDAY.

The Speaker took the chair at four o'clock, when the following members of the new Administration took the oaths and their seats on their re-election:—Lord John Russell, Sir William Gladstone, Sir Cardwell, Mr Strutt, Sir George Grey, Admiral Berkeley, Sir W. Molesworth, Lord Dunkellin, Lord Drumlanrig, Mr Baines, Mr. W. Cowper, Mr. Charteris, Sir J. Graham, Mr Villiers, Mr. Sidney Herbert, Lord E. Bruce, Lord Mahgrave, Lord Alfred Hervey, Sir A. Cockburn, Sir R. Bethell, Mr. Monsell, Mr. Thomas Baring and Mr Grenfell also took the oaths and their seats for Huntingdon and Windsor. Mr. John Russell, as leader of the House, took his seat about the middle of the Ministerial bench, with Sir James Graham on his right and Admiral Berkeley on his left, the other members of the new Administration sitting in different parts of the side of his Lordship on the Ministerial benches.

A new writ was ordered to be issued for the county of Perlar, in the room of Mr. Maule, who, since his election, had accepted the office of Surveyor-General of the Ordnance.

Sir JOHN PAKINGTON said that on the 24th he would bring the subject of the Australian colonies, and the transportation of convicts to those colonies, before the House.

Mr. BROOKE gave notice that he would on an early day move for leave to bring in a bill to repeal the grant to Maynooth.

Lord HOTHAM gave notice that he would on an early day move for leave to bring in a bill disqualifying certain judicial officers from sitting or voting in the House.

Mr HENRY DRUMMOND gave notice that he would on the 24th move for leave to bring in a bill to facilitate the sale and transfer of land.

MINISTERIAL STATEMENT.

Lord JOHN RUSSELL, on bringing up papers with respect to the acts of the Government in regard to Greece, said he did not think it necessary to make an general statement of the policy of the Government. With respect to the order of business, it was their intention to bring forward the estimates without delay, and he might state, that it was not their intention to increase the number of men in the navy, army, and ordnance, beyond the vote taken before the recess; but there would of course be an increase in the estimates of those of last year. It was their intention to bring in a bill to enable the Legislature of Canada to dispose of the clergy reserves (Cheers). On an early day he would move a resolution to remove the Jewish Disabilities (Loud cheers). He also intended to propose certain important resolutions on the subject of education, which would further and promote education, a subject of the greatest interest and importance (Loud cheers). On that occasion he would state what the Government intended to do with respect to the reports which had been made with regard to the Universities of Oxford and Cambridge. The present Government intended to adopt the policy of the late Government in declaring that transportation to Australia should cease. The late Lord Chancellor had given notice of his intention to propose the consolidation of the statutes with respect to criminal law, and that subject would receive the serious consideration of the Government, and that particularly with reference to transportation to Australia. Immediately after the Easter recess the Chancellor of the Exchequer would make his financial statement. In a few days he would state what measures he would propose with reference to legal reform. It was the intention of the Government to appoint a committee to consider the relations between landlord and tenant in Ireland. There was another important question, to which the Government had directed their attention, and that was the representation of the people in Parliament.—(Cheers)—and they would bring in a bill on the subject, but not until the early part of next session. They proposed to ask for a renewal of the income tax for one year in its present form; and, considering the declarations which were necessary before any alteration took place, they could not propose any alteration in the present session of Parliament; but at the commencement of the next session, the Government would bring in a measure on that important subject. With respect to bribery and corruption at elections, which were rarely found out during the late general election, he would propose that a tribunal of inquiry should take place, and a measure would be introduced by the Government.

COURSE OF PUBLIC BUSINESS.

Mr. HAYTER stated that on Monday the Lord Advocate of Scotland would bring in a bill to facilitate proceedings in the Sheriffs' Court of Scotland; on Tuesday the Under-Secretary for the Colonies would bring in a measure on the subject of the Clergy Reserves in Canada, and on Friday, the 18th inst., the First Lord of the Admiralty would bring forward the Navy Estimates.

Sir JAMES GRAHAM wished to know whether it was the intention of the Government to take any steps in reference to the Ecclesiastical Titles Bill, which Lord John Russell deemed of such importance to the religion which he professed?

Lord J. RUSSELL said that there was no intention, on the part of the Government, to make any proposition whatsoever in respect to the Act Sir F. THESIGER inquired whether it was the intention of the Government to introduce any bill to abolish Grand Juries in Ireland?

Lord PALMERSTON replied in the negative.

Sir J. DUKE asked whether it was the intention of the Government to bring in a measure to put a stop to the betting-office system.

Lord PALMERSTON said the subject would meet with his best attention, but he was not as yet satisfied as to any practical measure for the accomplishment of the object, as it was desirable to attain.

Mr. BANKES asked whether the Government intended to introduce any measure for the reform, or, had would be much better, for the abolition of the Ecclesiastical Courts?

Lord J. RUSSELL said that when the report of the commissioners appointed to consider this subject was presented, it was the intention of the Government to deal with the question. Adjourned.

THE COURT.

WINDSOR CASTLE. The return of the Court to Buckingham Palace is now definitively fixed for Monday next. The hospita ities of the Castle were brought to a close on Thursday last—the thirteenth anniversary of her Majesty's marriage—by a grand concert, to which a distinguished circle were invited. Schiller's "Lay of the Bell" was performed on the occasion.

On Sunday the Queen and the Prince, with the Duchess of Kent, the Prince of Wales, the Princess Royal, and the Princess Alice, attended divine service in the private chapel of the Castle.

On Monday her Majesty held a Privy Council. The Archbishop of Canterbury and the Duke and Duchess of Wellington arrived at the Castle, on a visit to the Queen.

On Tuesday her Majesty and the Prince Consort drove out in an open carriage and four. Viscount Hardinge and Sir James Graham were added to the Royal suite to-day.

On Wednesday, the Queen and the Prince again took carriage exercise. Her Royal Highness the Princess Alice and Prince Leopold, arrived on a visit to her Majesty. The Archbishop of Canterbury, the Duke and Duchess of Wellington, and Sir James Graham left for London.

THE PRIVY COUNCIL.—On Monday, at three o'clock P.M., the Queen held a Privy Council at Windsor Castle. His Royal Highness Prince Albert, and nearly all the members of the Ministry were present. At the Council her Majesty pricked the list of High Sheriffs for the English and Welch Counties for the present year. The Most Noble Arthur Duke of Wellington (Master of the Horse to the Queen), Lord Brumbridge (Comptroller of her Majesty's Household), and the Hon. Charles Pelham Villiers (Judge-Advocate-General), were, by command of the Queen, sworn of her Majesty's most honourable Privy Council, and took their places at the Board.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary have returned to Kew from visiting the Earl and Countess of Wilton, at Egerton Lodge, Melton Mowbray. Her Royal Highness came to town on Wednesday, and paid a visit to their illustrious relative, the Duchess of Gloucester.

THE NEW HOUSES OF PARLIAMENT.

ST. STEPHEN'S PORCH.—ST. STEPHEN'S HALL.

THESE grand portions of the splendid pile of the New Palace at Westminster have very recently been completed, and were opened at the commencement of the present session of Parliament. Their location in the plan of the building is due west of the Great Central Octagon; and they form a continuous chain of approaches to the Octagon, and thence to both Houses of Parliament, from Old Palace-yard.

WESTMINSTER HALL, which is a dining hall, by King Richard II., used as a banqueting hall of high festivity, at coronation feasts; employed, also, as a court of justice in cases where not only religious and titled persons were arraigned and adjudged, but even a King himself consigned to the scaffold; and in the periods between many of the Royal festivals alluded to, the gathering place for members of the bar and their clients while attending the courts of law situated on the west side of the hall—forms now the chief hall of entrance to both Houses of Parliament. This use of the fine old building renders it important in every point of view; and hundreds of persons will see this history-famous apartment, who, probably never would otherwise have thought it worth Lawful while to visit it for its associations. Its roof is celebrated as amongst the finest of the open timber-framed roofs of Europe; and in the graceful sweep of its arches, and the details of its tracery, is, perhaps, unequalled. To render it available for its present use, the Hall was shortened, we believe, one bay, or space between arch and arch; and St. Stephen's Porch added at the southern end. The south wall and window was therefore taken down; and the window restored, and placed in St Stephen's Porch, where it still forms a conspicuous feature, both externally and internally, and in the great window shown in our illustration. Two flights of steps—one the whole width of the hall, the other the width of the arched opening into the porch lead into the latter portion of the New Palace, which is covered and sustained by a groined roof of stone. A flight of seven steps, leads through a doorway in an exquisite screen, westward into the street, opposite St. Margaret's Church; and another flight eastward, through a similar door, into St. Stephen's Hall. It is proposed by Sir C. Barry to place statues on pedestals on each side of Westminster Hall, and these would add greatly to its effect, we lament the ugly openings which were made in the roof some years since, on occasion of the Exhibition of Princes, &c., to let more light into the Hall; but we trust that when the whole of the arrangements are completed, these will be blocked up, or made more in unison with the character of the woodwork of the roof.

ST. STEPHEN'S HALL. Entering from the arched doorway mentioned in our notice of St. Stephen's Porch, the eye is arrested by the noble proportions and fine details of this Hall, lighted by windows placed some way from the floor, and thus allowing ample space for frescoes, or other wall decorations hereafter, the clustered columns, groined roof, sumptuous bosses, and delicate tracery and mouldings of the arches, form a striking and beautiful coup d'œil, which, when still further enriched by marble statues, stained glass, and pictures, will be truly magnificent. The groining of the roof is very fine: the largest bosses represent events in the life of St. Stephen, and are most powerfully modelled and sculptured; the smaller bosses comprise angels, the apostles, foliage, &c., all of the most elaborate character. Above the doorways are spaces filled with demi angels, holding fleurs-de-lis, roses, and portcullises, crowned. Similar images are in the hollows between the pillars, and quatrefoils fill the spaces between the great arches of either end. Short octangular pedestals are at the bases of the columns between the windows and entrance doorways, and on these will be placed marble statues, three of them—Hampden, Lord Falkland, and Lord Chancellor Clarendon—being already purchased and placed in their niches. The rest of the statues are to fill the alcoves, the second by John Bull; and the third by C. Marshall, A.R.A.; and they are all highly expressive. (Representation of them will be found in our Eleventh Volume, page 112.) Other statues are, we know, in hand, and probably will soon be completed. Between the pedestals are stone benches or seats, for the use of persons waiting. These floors of Minton's encaustic tiles, laid with alcoves of black marble. The spaces under the windows and over the doorways are covered over. It is scarcely necessary to say that the design of the beautiful portions of the New Palace we have this week illustrated is by C. Barry, Esq., that they have been most skilfully executed by the Messrs. Lucas, and sculptured work are due to the skill and taste of Mr John Thomas.

THE NEW HOUSES OF PARLIAMENT.

WESTMINSTER HALL, AND ST. STEPHEN'S PORCH.

(SEE PRECEDING PAGE.)

THE NEW HOUSES OF PARLIAMENT.

ST. STEPHEN'S HALL.
(SEE PAGE 127.)

MUSIC.

SACRED HARMONIC SOCIETY.

The honourable mission of producing the sacred works of the great masters in the strictest integrity, without reference to religious difficulties, and regarding such performance purely as an artistic question, must command the support of the great body of intelligent and tolerant amateurs in the country: and it is, therefore, not surprising that Exeter Hall was crowded to excess on Ash Wednesday to hear, for the first time, Mozart's sublime "Requiem," executed in its entirety in London, and under Costa's direction. Although every note of this composition is familiar to the professor, and to the cultivated amateur, it has only been presented in detached pieces from time to time at our public concerts. It has been given at Musical Festivals; but objections have been frequently made to the words, which touch too closely on doctrinal points not in accordance with the Protestant faith. Once at the Norwich Festival an attempt was made to perform the Requiem, under the English title of "Redemption," but it was a signal failure. To the Continental travellers the Requiem is well known, being performed at the funerals of celebrities on almost every grand occasion. The touching story connected with the writing of the Requiem, and the discussion as to the authenticity of a portion thereof, owing to the dishonest claim of a treacherous pupil of the composer, have been noticed in every biography of Mozart. But we may accept without reserve the opinions expressed both by Mr. Holmes and Mr Hogarth, in their learned, as to the paternity of the "Requiem" being solely that of Mozart, without even a reference to the elaborate pamphlets on the subject, by foreign disputants. The work also contains within itself the proof of the Mozartian inspiration. It is unmistakably and peculiarly his own melodious flow, as well as harmonious disposition and orchestral treatment.

Wednesday's execution, as regards orchestral reading, was one of the finest we have ever heard in this or any other country. It would be almost invidious to indicate special ties of ability, whether in the wood and brass-players or in the stringed band, whilst doing justice to the brilliancy and crispness of the latter, is not the obligato bits of the former be overlooked for their purity of tone and precision of attack. The choral singing was in many respects admirable for its massive energy. There were some mishaps, but the spirit of the text was evidently felt, if the intricate notation were not so perfectly conquered as might have been desired, especially in the fugues. Such a work as the "Requiem" is peculiarly adapted to the powers of Costa, exacting as it does in turn devotion, faith, hope, despair, glorification, and exultation. It is a terrible musical picture, too intense and gloomy, perhaps, for a mixed assemblage, requiring its awful *mise en scène*, the yawning grave, to be at hand, to make the auditory acutely alive to its portentous and soul-searching sublimities.

The effect of a bold, vocalist was assigned to Miss Louisa Pyne, Mrs. Wilkins, Mr Hobbs, and Mr Lawler. The latter was strongly in the rendering of their parts, the two first are too light for the music, and Lawler was wanting in force and grandeur. The lovely "Recordare" in F, the tri-octaved "Benedictus" in B flat, the "Tuba Mirum" in the same key, and scarcely the justice done to these quatuors, which their surpassing beauty called forth. A repetition of the "Requiem" may possibly ensure more decision from the principals.

Prior to the funeral service, Mendelssohn's "Lobgesang" (Hymn of Praise) was performed to perfection. Miss Louisa Pyne and Miss Williams quite enchanted the hall by their delicious style of singing the duo, "I waited for the Lord," with chorus. The chorale, "Let all Men," was also nobly done by the choralists; and the exciting theme of the cantata was effectively enunciated "Benedicite" in flat, the "Tuba Mirum" in the same key, and scarcely the justice done to these quatuors, which their surpassing beauty called forth. A repetition of the "Requiem" may possibly ensure more decision from the principals.

Prior to the funeral service, Mendelssohn's "Lobgesang" (Hymn of Praise) was performed to perfection. Miss Louisa Pyne and Miss Williams quite enchanted the hall by their delicious style of singing the duo, "I waited for the Lord," with chorus. A repetition of the "Requiem" may possibly ensure more decision from the principals.

MUSICAL WINTER EVENINGS

The director of the Musical Union opened his short winter campaign last Saturday, with Mozart's quartet in D, No 10; Mendelssohn's quintet in A, Op. 18; Schubert's trio in E flat, Op. 100; and Beethoven's sonata in A flat, Op. 26, in which is the funeral march. Eloquent exponents of this we...selected chamber were found in Mr. Goffrie, Mr. Mellon, as first violinist; in the classical profundity and sentiment of Charles Halle, as pianist; and in the refined expression of Piatti, as violoncellist; while Herr Goffrie and Mr. West, called upon at the eleventh hour to play the last quartet, and Mr. Mellon was of value as the second violin. Mdlle. Clauss and Herr Pauer are engaged for the ensuing concerts.

NOTES OF THE WEEK.

Letters from St. Petersburgh and the journal the *Abeille du Nord*, which is some devoted to matters musical, dwell on the rapturous reception given to Madame Viardot during her re-appearance in the Russian capital, where she was such an especial favourite six or seven years since. Her voice is declared to be in the finest condition, and the personal attraction of Verdi's "Luisa Miller," produced at the Imperial Academy of Music (Grand Opera), had been moderately successful. Madame Angelina Bosio, Mdlle. Masson, M. Guyenard, Derfy, Jacques and Morelli sustained the chief parts. The pieces most liked were the cavatina of Bosio, in the third act, and the unaccompanied quartet, in the third act (re-demanded). The romance of the tenor, and the duo of soprano and bass, in the last act, were likewise encored.

We learn from Rome that Verdi's new opera, "Il Trovatore," is detained by Signora Ronconi, Signor Gaggi, and Bonarelli, the tenor. Lablache is enthusiastically received, and the composer called for several times.

The Bach Society, of which Sterndale Bennett is conductor, and Dr. Stegall honorary secretary, had a meeting at the Mortimer Street Rooms last Monday.—The English Glee and Madrigal Union (Mrs. Endersohn, Miss Williams, Messrs. Lockey, Lawler, Lazier, H. Barnby, and Phillips) gave their first of a series of six vocal concerts, at Willis's Rooms, last Monday. The subscription is larger this year than in any previous season: a proof how popular is the revival of this exquisite school of English vocalization. The selection was from the works of S. Smith, R. Cooke, Horsley, Wilbye, Webbe, J. L. Hatton, Sir H. R. Bishop, Spohr, Purcell, Lachner, S. Bennett, &c.—On Ash Wednesday there were evening concerts at the Lyceum and Sadler's Wells theatres. The vocalists who assisted in the former scheme at Mr. Wood's concert were Madame Florentini, Mdlle. Favanti, Mrs. Sims Reeves; the Misses Messent, Mdlle. Rose, Harper, Poole, Alberti, Stabbach, R. Etzwidium, M'Alpine, Dolby; Mdlle. Doria, Madame L. Lablache; Messrs. Sims Reeves, Brandt, Corri, G. Tedder, Manley Leffler, J. Lablache; besides Madame Pleyel, Mdlle. Adini Comelli, Mr. Thomson, Case, Lazarus, Hardy, and Nabish, as solo instrumental stars; with J. Mori, backler, and Willy as conductors, and Mr. Greenbank leader of the band.—Mr. F. Chatterton, at sadler's Wells, secured the Misses Birch, G. Hodson, Lizzie Stuart, A. Taylor, F. Rowland, Partridge, and Rainford; T. Williams, Hanford, Thomas, Sharp, Collins family, Mr. B. Wells, Signor Negri, and Mr. J. L. Hatton.—Mr Hobbs, the tenor, delivered, at the Princess's Concert-room, a lecture on the leading features of Sacred Music, illustrated with songs of Handel and other celebrated composers, on Ash Wednesday.—On Thursday, Mr Lindsay Sloper, the accomplished composer and pianist, gave the first of his annual series of three concerts of chamber Music, at the Queen Anne-street Rooms, assisted by Messrs. Benedict, Lucas, Ringrose, Dando, M. Rousseau, Piatti, Herr Pauer; Misses K. Fitzwilliam, Rainford, A. Dolby, L. Barnby, Messrs. Sims Reeves, T. Bodda, Ciabatta, &c.—Mdme. Pleyel had an evening concert last night, at the Greenwich Lecture-hall, assisted by Mdme. Fiorentini, Miss K. Fitzwilliam, Miss Alleyne, Mr. Sims, and Mr. F. Bodda.—Mr. Henry Russell has been preparing his musical entertainment, the "Emigrant's Progress," this week at the Strand Theatre.—Mdme. Pleyel (the pianiste) and Mdme. Fiorentini (the prima donna) have been creating it appears, a prodigious sensation in Birmingham and Cheltenham: the forces her immediate performances, and the latter by her splendid singing. Jullien's farewell tour, prior to his departure for the United States, has been one unceasing round of successes, with the aid of Mdlle. Clari, Sedlatzek, Briccialdi, Harper, Pratten, Winterbottom, &c.—Mrs. Plummer, the vocalist, and Mr. Mercader Mitchell, the blind composer, gave an evening concert, last Monday, at the Edmonton Assembly Rooms.—Under the patronage of Mr. and Mrs. Murdoch, Miss Lascelles, Madame Zimmermann, Mr. T. Williams, Mr. A. Pierre, Mr. W. Bolton, Herr de Becker, Mr. W. Mason (the American pianist), Mr. J. Wenzel, and Mr. Lindsay Sloper, assisted at this concert, which went off with great satisfaction to the numerous auditory.—Handel's "Judas Maccabeus" will be performed by the Sacred Harmonic Society, Friday, instead of Wednesday next, with Misses Birch, Deakin, F. Huddart, Messrs. Sims Reeves, T. Williams, and Phillips.—In the notice of Madame Fiorentini's singing at Torquay, in last week's number, the name of Signor Mouticini was misprinted by mistake. It should have been Maria Marcolini, a pupil, from Bologna, a pupil of the Conservatoire.

A deputation on the subject of Burnham Beech, consisting of Mr. Williams, M.P., Mr. Hunt, Mr. Jones, Mr. Jones, Mr. Smeedon, Mr Wilson, and Mr. Neate, had an interview with Sir William Molesworth on Wednesday.

THE THEATRES, &c.

ST. JAMES'S.

On Saturday, MM. Barrand and Léon Laya's vaudeville of "L'Etourneau" was produced. The situation is similar to that of Mr. Planché's "Court Fool." But Mr. Maxwell gives to the piece here a pathetic interest, which considerably increases the effect of the situation. On Monday this great actor had another of these exciting characters to impersonate, in a new piece entitled, "La Chevalier des Jeux," produced at the Palais Royal, and written by MM. [illegible] Miche. There are in the part great movement, and a wonderful accumulations of mental diseases and embarrassments wrought to a terrible climax by a succession of accidents, which had no real importance save in the imagination of the agonized. The *Vascond Noctor de Bout Rimes* is a modern knight-errant, whose services are at the disposal of all fair ladies in difficulties. The lady in this case is *Madame de Merlemont* (Mdlle. Lambert), to whom he has made an apology, and to keep the secret from her jealous husband that she had been abroad to visit a convent. He is driven to the [illegible] of pretending a sudden [illegible] having his own as a [illegible] purpose, for [illegible] pocket-compromising [illegible] Madame, of course, the [illegible] person [illegible], of course the husband, [illegible] the packet, and [illegible] [illegible]. Of course, he [illegible] [illegible] [illegible]

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The Printers' Pension Society will hold its annual dinner this year on the 16th of April, under the presidency of Dr. Layard, and with a list of distinguished stewards.

An extensive military penitentiary is in course of construction at Avignon. All persons condemned by courts-martial in central France and in Corsica will be sent to this establishment.

The late Prince Gustavus of Sweden has left among his papers a funeral march, composed by himself and dedicated to himself. That more ambitious *dilettante*, his Royal Highness the Prince of Saxe-Coburg, is announced as having finished a new opera, entitled "Toni."

An increase of ten steam-vessels to the United States navy will be proposed in the Senate.

The Brothers Rothschild have contracted for a loan of £9,360,000f to Piedmont, and another of 15,080,000f to Tuscany.

The deliveries of tea in London last week were 509,518 lbs., being rather less than those of the preceding week

Paul Ledru, an upholsterer of Paris, has been fined 100f. and sentenced to six months' imprisonment, for wearing a *fleur-de-lis* in his button-hole and on his shirt-bosom

The chairman of the Cambridgeshire Quarter Sessions recently stated that in seventeen cases for trial, the value of the property stolen was only 17s. 2½d., and that the cost for trying would not be less than £150

The carpenters and joiners of Bristol, in consequence of the emigration mania, have addressed a circular to their employers generally, in which they solicit an advance of 6d per day on their present wages

The *Swift* brought home a skeleton, found in Peru, supposed to have been interred for centuries, with a variety of native domestic and other articles. The skeleton, &c., will be sent to the British Museum.

The *Bhemar* arrived at Liverpool from Sydney, after a passage of nineteen days, having sailed on the 3rd of November. She brings gold to the value of £2,800

The statement of the threatened strike of shipwrights in Woolwich and Deptford Royal Dockyards is incorrect. No shipwrights have left the establishment.

The house of Mr. T. Rawack, of Hamburg, has suspended payment for about £10,000. This event has been caused by his death. The winding up, it is supposed, will not be unfavourable

Abd-el-Kader has arrived at Broussa, a town ten leagues from Mondania, at the foot of Mount Olympus, where he is to reside

A lady at Malvern left her home for a short time, and returned in about three months, when she noticing that her pianoforte was out of condition, sent for a tuner, who discovered that a rat had taken up his quarters in the interior, having constructed a commodious nest with the coverings of the hammers, portions of silk, &c.

The Rev. Hugh Stowell has denounced the practice of tobacco-smoking. He says, "Never myself will I hire a curate who indulges in it. I never now make inquiries for a curate, but I invariably inquire is he a smoker of tobacco; if he is, I instantly reject his application."

The Hon. Henry Pepys, a son of the late Lord Chancellor Cottenham, while hunting near Aylesbury, received a fall which dislocated his collar bone, and fractured his wrist, but he is going on favourably

As the Earl of Caledon was returning from hunting, when within two miles of his residence, he met one of his own tenants in a gig, and the horse took fright, the latter became restive against the shaft of the gig, which in the struggle broke, and he was thrown on the ground, and killed on the spot His Lordship was thrown, but escaped with a slight injury.

Sir Edmund Tekkat has been so ill for some days past as to be unable to attend his usual duties as Secretary of the Board of Trade.

According to the *North British Mail*, gold has been found on an estate belonging to the Duke of Hamilton, in the Island of Arran

The cultivation of tobacco in Algeria has proved most successful. In 1851 only 284,912 kilogrammes were produced; in 1852 the quantity had risen to 599,199 kilogrammes

Viscount Goderich, M.P. for Hull, has been lecturing in the Mechanics' Institution of that town, on the poetry of Alfred Tennyson

Several farms on the Saufield estates, Elgin, lately have been let; one at a rise of £20 on the present rental; another at an advance of £30; and all the rest at a proportionate increase.

It has been ascertained that 200,000 people daily arrive at and quit London by rail. The North-Western Company runs 300 trains per day, and employs 11,000 servants

A Bible yet preserved, written on palm-leaves, is at Gottingen, containing 5378 leaves. Another Bible, of the same material, is at Copenhagen. There were also, in Sir Hans Sloane's collection, more than twenty manuscripts, in various languages, on the same material

On Sunday morning last the customary pastoral letter or "Lenten Indult" of Cardinal Wiseman was read in all the Roman Catholic churches and chapels of London, proclaiming the arrival of the usual "indulgences."

Mr. T. B. Sprague, B.A., the senior Wrangler, and first Smith's prizeman of the present year, is the grandson of a late member of the corporation of London, whose name he bears

Lieutenant W. M. Walker, of the United States' navy, has visited Woolwich Dockyard, and inspected the ships of the Admiralty

There have been two more falls of cliff on the South Devon Railway—the last a very extensive one

A lady advertised lately in the *Times* for a housekeeper, and received in the course of two posts upwards of 900 replies

Amongst the various articles that have advanced in price through the weather is ice, which has risen from 14s a ton to 18s. a cwt., the former being its price four months ago.

The children of the Liverpool Victuallers' School, having received an invitation from the lessee, attended the Theatre Royal, Drury-lane, on Thursday, at two o'clock, to witness the pantomime and other entertainments

The steamer *Les Parisiens*, plying on the Rhone, recently exploded between Lyons and Avignon: two soldiers and two workmen were killed, and several other persons wounded

A remarkably fine salmon has been exhibited at a fishmonger's shop in New Bond-street. It weighs 30 lb., and it is very rare to get such a fish so early in the season.

Alfred Clarke has been acquitted, at Liverpool, of stealing the £1000 in the Branch Bank of England, in that town, in November last

A large fish of the whale species has been caught, about 35 miles off Brighton, and brought to shore. It is about 14 feet long, and 10 feet in circumference.

Snow fell at Southampton on Wednesday, for the first time during the space of two years.

The Hon. Mr. Bent has obtained a verdict of £100 damages against Mr. Oliveira, M.P. for Hull, for a libel

A convention between England and the Republic of Chili, for the reciprocal abrogation of differential duties, has been signed at Santiago of Chili

The Marquis of Londonderry, on Tuesday, dug the first turf for the commencement of a railroad between Seaham and Sunderland

At a meeting of the City Aldermen on Monday, it was decided that the gaming-rooms at Guildhall should not be destroyed, but only reduced in number

It appears by the latest returns of the mortality in the town of Croydon, that the number of deaths from fever has very greatly diminished

The Lord-Lieutenant of Ireland had offered to restore Earl Roden to the Commission of the Peace, but the latter has replied in such terms that Earl St. Germans has withdrawn his offer

Thomas Mackett has been committed for trial for the wilful murder of Eliza Lee, aged 26, by throwing her into the Regent's Canal, near Camden Town, on the 31st ult

As the cortége of the Bœuf Gras was passing over the Pont Neuf a young man, seated on the parapet of the bridge, fell backwards into the river, and was drowned.

As the fairs now in progress throughout Ireland, cattle bring high prices, owing to the smallness of the supplies in comparison to the demand

Mr. Danbeny, of Macdalen College, Cambridge, has been unfortunately drowned in the Cam, near Ely, while rowing with a friend. The "gig" got on a weir, and capsized.

Mr. Dunn—so notorious for his absurd claims on Miss Burdett Coutts—sought an action in the Court of Queen's Bench, on Wednesday, against the banking firm for the sum of £100,000; but, when the trial was about to commence, he withdrew the record, and so ended the case.

The Mormons have a number of disciples in Southampton. They believe in the necessity of baptising adult converts by immersion. The place where they are baptised are the private baths in Westbury.

The electric telegraph from Paris towards the east of France is now in full operation at the French frontier. It is not yet established with Kehl and from that place branch lines diverge in all directions

The splendid mansion of Lochaell, in Argyleshire, has been totally destroyed by fire, but how it arose is not known

The whole of the labourers of the extensive parish of Stratford-sub-Castle, near Salisbury, have turned out, for higher wages.

HER MAJESTY'S SLOOP "RATTLESNAKE," FITTED FOR THE NEW ARCTIC EXPEDITION.

jesty the Queen, which is forwarded as a present from his Royal Highness Prince Albert to the Rev. Mr Nobbs, at Pitcairn's Island. The picture will be left in charge of the Commander-in-Chief in the Pacific.

The *Rattlesnake* left the Nore at 9 A.M. on the 8th inst., in tow of the steam-vessel *African*, for Portsmouth and the Arctic regions.

THE BŒUF GRAS, AT PARIS.

The heroes of this year's procession are *Oncle Tom*, *Shelby*, and *St. Clare*; the first of which our Artist has here portrayed. The procession took place on Sunday, in the order of the programme. It was got up with more than the usual display, and was on the whole an interesting sight. At the head of the procession were two men, dressed in the costume of the middle-ages. They were followed by twenty drummers and two drum-majors, in the uniform of the Volunteers of the Republic, and thirty-four musicians in the uniform of the Zouaves. Next came a number of men on horseback in various uniforms, and some in the costume of the old nobility. These were followed by six Druids, dressing in white, and immediately preceding the Bœuf-gras, which was escorted by men bearing banners. The car, which came next, was richly gilt, and was drawn by six horses splendidly harnessed. Old Time, Cupid, &c., filled the car as usual, and it was escorted by men on horseback. The Boulevards were rather dull, very few masks were seen, and there were not, as in former years, any very dashing equipages

The procession was resumed on Tuesday The *cortége* proceeded to the Tuileries at one o'clock, to pay their respects first to the Emperor, and then to General Magnan and the Minister of State. An immense crowd followed. The Emperor and Empress appeared at the balcony. The band played, out of compliment no doubt to the Empress, amongst other airs, the Cuban "Tango," a special favourite in Spain, and the "Jota Arragonesa," which all the world has heard of. The Emperor and Empress bowed repeatedly to the multitude, and there were partial cries of "*Vive l'Empereur!*"

A deputation from the *cortége* was received by the Emperor, who paid the usual fee on the occasion; and, after appearing again for some minutes in the balcony, the Emperor and Empress retired, and the *cortége* went their way to pay other visits. The weight of *Oncle Tom* is 2700 livres.

MARDI GRAS, AT PARIS.—THE FAT OX "UNCLE TOM."

PARLIAMENTARY PORTRAITS.

MR. DIGBY SEYMOUR, M.P. FOR SUNDERLAND.

It was remarked on the occasion of the last general election what an unprecedented number of lawyers offered themselves as candidates, and what a large proportion of those candidates succeeded in their aim. When a barrister has attained to position and practice, it is natural that he should seek, through a seat in the House of Commons, the promotion and the honours which are the legitimate objects of his professional ambition. It is very rarely that we find a practising barrister seeking this road to eminence until after he has attained to such an amount of business as will at once justify the devotion of time to his parliamentary duties, and place him above the influence of the vicissitudes of public life. Whether it be that of late years the incomes realizable by practising barristers have become more equalised, or that a multitude of recent instances attest the greater rapidity of promotion attainable by comparatively young and unknown men, certain it is that the old custom has been so far broken through that it is no longer considered either presumptuous or imprudent in a barrister still with his position to make, if he seizes opportunity to go into Parliament.

Mr. William Digby Seymour, M.P. for Sunderland, is, to a certain extent an example in point. He has been little more than six years and a half at the bar, and although recognised as a man of considerable professional ability, he cannot be said to have already attained eminence; yet we find him the representative in the House of Commons of a large and important borough, whose peculiar connection with the shipping interest would seem to require that its affairs should be watched over by some person practically acquainted with the peculiar pursuits of the inhabitants. Mr. Digby Seymour is certainly much better qualified for such a position than many of the young barristers who successfully seek the favour of borough constituencies; for he is a man of varied acquirements, and of great ability, activity, and energy.

MR. DIGBY SEYMOUR, M.P. FOR SUNDERLAND.—FROM A DAGUERRÉOTYPE BY BEARD.

Mr. Seymour is the third son of the Rev. Charles Seymour, vicar of Kilronan, in Ireland, by his second wife, Beata, sister to the late Fergus Langley, Esq., of Loch Frin, in the county of Tipperary. The rev. gentleman was a cadet of the family of the Seymours, of Ballimore Castle, in the county of Galway. Mr. Digby Seymour was born at Clifden, Connemara, in the county of Galway, in the year 1822, so that he is still a very young man. At fourteen years of age he was sent to Trinity College, Dublin, where he was not long in distinguishing himself. He obtained honours in Hebrew and classics at the term examination; and, on taking his degree, an ethical moderatorship, and while still in Dublin, he became a member, and ultimately president, of the Historical and Literary Institute of that City. Subsequently, having chosen the bar as a profession, he entered at the Middle Temple; and, in due time was called, in June, 1846. He chose the northern circuit, and soon obtained a fair share of practice.

A man with the energy and activity we have described Mr. Seymour as possessing, was not likely to remain long in obscurity. His acquirements, general ability, and popular manners, had already favourably impressed his professional brethren, and he was looked on as one who would not wait for the ordinary routine in order to force himself into notice. Among his other qualifications, was that of a no ordinary capacity for public speaking, and some platform speeches of his at Exeter-hall soon attracted the notice of the influential bodies who make that building the arena for their religious discussion. As an Irish Protestant, Mr. Seymour held very strong opinions on the policy of successive Ministries with respect to the endowment of Maynooth; and a congeniality of sentiment on this much-vexed question soon rendered him an especial favourite with some of the chiefs of the Protestant party in London. His marriage, in 1847, with the second daughter of Mr. Joseph John Wright, a solicitor, in Sunderland, and Deputy-Lieutenant of the county of Durham, first led, we believe, to his political connection with the borough, and to the thought of his becoming its representative. Mr. Seymour was intimately connected with Mr. George Hudson, once the Railway King, and for a long time, as now, representative of Sunderland. When that gentleman, was made the scapegoat not only for his own railway financial offences, but also of those of many who had profited by his patronage, but joined in the cry against him when the explosion took place, Mr. Digby Seymour was not one of those who deserted the deposed monarch in his misfortunes. He did his utmost to obtain a fair hearing for Mr Hudson against the clamour which gave full notoriety to his misdeeds, but overlooked the palliative circumstances. This conduct was the more marked from the fact that the politics of Mr. Seymour are entirely opposed to those of Mr. Hudson on all questions with the single exception, perhaps, of those affecting the Roman Catholics.

Mr. Seymour was still continuing his professional career, when, at the last general election, he started as candidate for Sunderland on the Liberal interest; his friend, Mr. Hudson, the former member, being the Conservative candidate. Mr. Hudson polled 868 votes, and Mr Seymour, 814; Mr. Fenwick, the unsuccessful candidate, mustering 654 votes Mr. Seymour, in the course of the contest, made some able and spirited speeches, which lead to the inference that if his tact be on a par with his ability, he will succeed in the House of Commons. He avows himself a thorough Liberal, adopting the chief articles of the Reform creed, and is favourable to a large measure of Parliamentary reform. He is not only an opponent of the Maynooth grant, but also of all special endowments for religious purposes.

Besides a species of college exercise, written some years ago, while he was President of the Historical and Literary Institution in Dublin, entitled "An Address on the Genius and Study of Rhetoric," Mr. Seymour published about a year and a half ago, a bulky pamphlet on the modes of employing capital in the west of Ireland. This is a valuable treatise, very practical in its character, and highly creditable to its author, for the application and research it displays. Mr. Seymour's attention was more particularly turned to the best modes of cultivating flax, and of producing beet-root, with a view to the manufacture of sugar. The latter subject, more especially, is thoroughly investigated in its scientific and practical aspect; and also with reference to its fiscal bearings In studying the subject, Mr. Seymour had made himself acquainted with the various processes employed by the beet-sugar manufacturers of France, Belgium, and, in his treatise, he explains the connection between the production of sugar and the advancement of agriculture In doing this he has conferred a benefit on the Irish landholder, who is informed of the manner in which the manufacture of beet-sugar is made remunerative in the hands of proprietors who look for their profits, not solely to the sale of sugar, but also to the fattening of cattle, and the other advantages arising out of the fertilizing properties of refuse matter.

RECEPTION OF THE NEW LORD-LIEUTENANT OF IRELAND BY THE CORPORATION OF DUBLIN.

ARRIVAL OF THE NEW VICEROY IN DUBLIN.

THE reception and public entry of the new Viceroy, the Earl of St. Germans, by the citizens of Dublin, on Thursday, the 3rd, proved an interesting event in the week's history, which our Artist has pictured in the accompanying Illustrations. The weather, which had been very severe in the morning, cleared up at noon, and was during the rest of the day remarkably fine for the season.

At about one o'clock, the *Prince Arthur*, Government mail steamer, hove in sight, when the troops in attendance were drawn up in single files between the landing place at the jetty and the entrance of the terminus of the railway. The artillery was posted at the eastern side of the St. George's Club-house, for the purpose of firing the usual salute on the landing of his Excellency. At about a quarter-past two o'clock, the *Prince Arthur* rounded the eastern pier of the harbour, and the guns of the club-house fired a salute, which was returned by the approaching steamer. As the *Prince Arthur* neared the jetty, a Royal salute was fired by the cruisers in the harbour. On coming alongside the jetty, his Excellency was recognised on the quarter-deck, accompanied by his Countess, their son, the Hon. H. Eliot, R.N.; the Hon. Major Ponsonby, his Excellency's private secretary, and suite.

Previous to their landing, they were waited upon on board by several of the nobility and leading gentry. On their landing on the jetty, the troops presented arms, the band struck up "God save the Queen," and the artillery on the neighbouring height fired a salute of 21 guns. The Viceregal party having reached the terminus platform, they were conducted to the elegant state carriage, and, the nobility and gentry and the members of the suite having occupied three other first-class carriages forming the special train, they proceeded at a rapid rate for Dublin at twenty minutes to three o'clock. Although the arrival was expected before two o'clock, the special train conveying the Earl and Countess of St. Germans and suite, and consisting of the Royal state carriage and three first-class, did not reach Westland-row station until shortly before three o'clock.

On stepping on the platform the Lord Mayor congratulated his Excellency on his safe arrival. The City Marshal then handed the keys of the city to the Lord Mayor, and they were presented by him to the Viceroy, who immediately returned them to the Chief Magistrate. His Excellency and Countess, after receiving the congratulations of their friends, left the station—his Lord-ship preceded by the Corporation, followed by the Countess and Major Ponsonby, and surrounded by a brilliant staff of officers in full dress. Outside the station there had assembled a large crowd of persons, who received the Viceregal party with every demonstration of respect. Throughout the street, from the station to the castle, crowds had assembled from an early hour to witness the arrival.

On reaching the street her Excellency entered one of the Viceregal carriages, and the noble Earl, mounted on horseback, surrounded by his staff, and accompanied by the civic equipages, with some private carriages, and an escort or guard of honour of Dragoons, proceeded at a walking pace; and great was the admiration of the graceful manner in which his Excellency managed his spirited charger as he proceeded through Lincoln-place, Nassau-street, Grafton-street, and College-green (as shown in the Illustration), and up Dame-street. As the cortége passed the University a large body of the students cheered the noble Earl. His Excellency's reception was extremely cordial; and the cheering continued until his Excellency had reached the entrance to the Castle-yard, where a loud shout was given, to welcome his Lordship to his regal home.

In a few minutes after his Excellency's arrival at the Castle, the Lord Mayor, aldermen, and members of the Town-council were admitted to a private reception; the Chief Justice of the Queen's Bench, the Attorney-General, and the Solicitor-General were also honoured with a private reception. The cathedral joy-bells rang a peal immediately after his Excellency entered the Castle.

On Monday, the Lord Mayor, attended by the members of the Corporation in their robes of office, was introduced for the purpose of presenting the usual congratulatory address upon his Excellency's elevation to so distinguished a post in the Government of this country. At half-past twelve, the Provost, Fellows, and Scholars attended for the same purpose. In replying to these addresses, two important declarations were made by his Excellency. In his first reply, his Lordship stated, with respect to the abolition of the Viceregal Court, that he had not seen, within the last eight years, any reason to change his opinion from the support he then gave in his place in the Senate to the continuance of the Court; an avowal which will render his Lordship very popular with a large portion of the Dublin community. In his reply to the Provost, his Excellency stated that after the lengthened investigation of the subject, he felt convinced of the desirableness of measures calculated to extend collegiate education to a much larger portion of the youth of Ireland than at present enjoy it.

THE VICEREGAL PROCESSION PASSING FROM GRAFTON-STREET TO COLLEGE-GREEN, DUBLIN.

OBITUARY OF EMINENT PERSONS.

THE RIGHT HON. JOHN NICHOLL, D.C.L.

DR NICHOLL died at Rome on the 27th ult., in the 68th year of his age. The right hon. gentleman was only son of the late Right Hon Sir John Nicholl, D.C.L., F.R.S., of Merthyrmawr, county Glamorgan, Judge of the Arches Court, by Judy, his wife, youngest daughter of Peter Birt, Esq., of Wenvoe Castle. He received his education at Westminster School, and Christ Church, Oxford, where he graduated a first class in Classics. In 1824 he was called to the bar; in 1826 took the degree of Doctor of Civil Law; in 1834 became Queen's Advocate-General, and was appointed, in 1841, Judge Advocate-General, which office he held until 1846. For some time, previous to 1841, he was Master of the Faculties; and during many years he sat in Parliament for Cardiff.

The family of Nicholl is one of considerable antiquity and influence in the county of Glamorgan. The representative of the senior line is Mrs. Jane Hawkins, of Tredunnock, county Monmouth, only daughter and heiress of the late William Nicholl, Esq., of Tymawr and the Garn. The head of the branch of which the Right Hon John Nicholl was a scion is the present Hugh Nicholl, Esq., of the Hill, Glamorganshire; and from the same stock spring the Nicholls of Dimland Castle, who have assumed the additional surname of Carne.

The gentleman whose decease we record was born August 21, 1797, and married, Dec. 14, 1821, Jane Harriot, second daughter of the late Thomas Mansel Talbot, Esq., of Margam Abbey, by whom he leaves several children

THE RIGHT HON. DAVID BOYLE, OF SHEWALTON

THIS able and accomplished Judge, who held with such high repute the first judicial office in North Britain—that of Lord Justice General of Scotland, and Lord President of the Court of Session—died on the 5th inst., at his seat, Shewalton, in Ayrshire, aged eighty; having survived only nine months his retirement from the Bench.

A member of the learned Judge, with an engraving of a bust of his Lordship, by Park, appeared in the ILLUSTRATED LONDON NEWS for January 29.

David Boyle was the intimate friend of Sir Walter Scott, and enjoyed in a remarkable degree the love and esteem of his contemporaries. It is impossible to over-estimate his abilities as a Judge, or his amiable qualities as a private gentleman.

He married, first, 24th December, 1804, Elizabeth, eldest daughter of Alexander Montgomerie, Esq., of Annick Lodge, next brother of the 11th, 12th, and 13th Earl of Eglinton, and by her (who died in 1822), had eight children—five sons and four daughters. He married, secondly, 4th July, 1827, Emma Catherine, eldest daughter of the late Hon David Smythe, of Methven Castle, Perthshire, a Judge of the Court of Session, and had by her three sons and a daughter

The Right Hon David Boyle was a Privy Councillor, a Keeper of the Crown and Regalia, a Director of the Royal Academy of Scotland, and a Deputy-Lieutenant for the county of Ayr.

LADY THERESA DEASE.

THE death of this venerable and much-respected lady occurred on the 4th instant, at Richmond, Surrey. Her Ladyship was born February 19, 1762, and had consequently almost entered on her ninetieth year. She was the daughter of Arthur James, seventh Earl of Fingall, and married the late James Dease, Esq., of Turbolstown, county Westmeath

FRANCES CATHERINE, LADY MUNCASTER.

HER Ladyship, whose death was announced last week was the youngest daughter of the late Sir John Ramsden, Bart, of Byrom-hall, county York, by the Hon. Louisa Susan Ingram Shepherd, his wife, daughter and co-heir of Charles, Viscount Irvine. She was born June 18, 1805, and married, December 1, 1825, Lowther Augustus John, third Lord Muncaster, by whom, who died April 30, 1838, she has three surviving sons (the eldest, Gamel Augustus, present Lord Muncaster) and two daughters

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The following have recently been made:—The Rev J. Davies, to be Canon Residentiary, of the cathedral church of Durham *Rectories*:—The Rev. F. C. Blomfield, M.A., to St. Andrew Undershaft; the Rev. F. Vandermouten to Thorley, Hertfordshire; Rev. F. F. Gilbert, to High Halden, Kent; Rev G. J. Blomfield, to Bow and Broad Nymet, Devon. *Vicarages*:—The Rev. Edward Pridmore, M.A., to St. Breage and St Germoe annexed, near Helston, Cornwall. *Incumbencies*:—Rev. T. L. Stewart, to Lanlivery, near Austell, Rev. Thomas Thackeray, to Usworth, near Gateshead

THE GOVERNMENT DECISION ON CONVOCATION.—It is now under-stood that the Government has assured both the Archbishop of Canterbury and the clergymen anxious for the revival of Convocation, of its determination to interfere, if Convocation attempts to enter into business beyond that which has been already transacted in framing an address to the Crown, or if any factious attempt be made to reject the proposals made by the Archbishop. The address will be presented on the 16th, and the prorogation will immediately follow Anxious that the Government should take an equally wise course in the matter of the Colonial Churches Bill, and of the Court of Appeal (which certain bishops are about to recommend), we understand that the joint committee appointed by the two Houses of Convocation to report in the present session having undertaken to introduce a Clergy Discipline Bill, their labours have ceased.—*Daily News*

CONVOCATION OF CANTERBURY.—HER Majesty has intimated to the Archbishop of Canterbury her intention to receive the address of the clergy and prelates of the Convocation of the province of Canterbury on Wednesday, the 16th inst., at Buckingham Palace.

ARCHDEACON RAYMOND is about to resign the Archdeaconry of Northumberland, together with the stall he holds in this cathedral The Archdeacon of Lindisfarne will succeed him.

CATHEDRAL TRUSTS.—At a recent meeting of the Leicestershire Church Union, it was resolved—That this meeting is deeply sensible of the evils caused by perversions of cathedral trusts from their prime devotional and educational purposes, and earnestly desires to see our cathedral establishments restored to the position of models for their several dioceses in all the departments of their agency; and that this meeting, therefore, rejoices in the attention which has been called to this important subject by the proceedings in the case of Whiston *v.* the Dean and Chapter of Rochester."

Lord Bateman has appointed the Rev. Robert Montgomery, of Purey Chapel, one of his Lordship's domestic chaplains.

The new schools for St. Thomas, Charterhouse, are so near completion, that they be opened on Tuesday next, the 17th. After the ceremony, the friends of the institution will dine at the Albion Tavern, Earl Granville in the chair. There will be room for nearly 300 children.

THE SONS OF THE CLERGY.—The Archbishop of Canterbury has fixed Wednesday, May 11, for the celebration of the 153rd anniversary festival of the Sons of the Clergy. During the past year, the sums granted were as follows:—Apprentice fees, to schools, sons five, daughters twenty-seven, £1065. To other professions and trades, sons eighteen, daughters three, £220; making together, £1285. Outfits, to sons on going to office or in the colonies, sons thirty, daughters thirteen, £ 0. Educational grants at schools or colleges, sons thirty-eight, daughters six, £747; making together £1337, and giving a total of £2622, disbursed during the year 1852

A CORRESPONDENCE has taken place between the Marquis of Lansdowne and Mr Christopher. The latter gentleman, in a speech at Lincoln, asserted that "on one of the days preceding the discussion and division of the House of Commons on Mr. Disraeli's Budget, there was a large meeting of the Whig party held at Lansdowne house, for the purpose of considering what was to be done on Lord Derby's overthrow." The Marquis denies this in the strongest manner. "No such meeting took place; no such meeting was proposed to be held Had any such meeting been proposed, I should have objected to its being held at my house." Mr Christopher apologises for this assertion, and regrets having made any statement not founded on fact; but says that the matter was the subject of general conversation at the Carlton and other clubs, and this led him to make the remark he had made

SHERIFFS APPOINTED BY HER MAJESTY IN COUNCIL FOR THE YEAR 1853

BEDFORDSHIRE—Henry Littledale, of Kempston Grange, Esq

MERIONETH—Thomas Arthur Bertie Mostyn, of Kylan, Esq.
PEMBROKE—Adrian Nicholas John Stokes, St. Botolphs, Esq.
RADNOR—Jonathan Field, of Esgairdrainllwyn, Esq

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

In the early part of the week the market for Consols was decidedly firm, and a full average number of transactions resulted. The receipts of the reduction of the National Debt—was transacted, at steadily improving prices; but, owing to the accounts from Milan, to the effect that an insurrection had broken out there, the demand for stock has since fallen off, and the quotations have not been supported. The Unfunded Debt has ruled very inactive, large sales having materially reduced the premium; whilst India Bonds have fallen to some extent. An impression has got abroad that numerous persons are selling Exchequer Bills for the purpose of investing in Consols, under the supposition that prices are about to take a start; but our opinion is that that the proceeds of the sales in question are about to be applied to commercial purposes, which, in the present state of things, appear more likely to realise a much larger return than National Securities

The demand for money out of doors has continued active, at from ¼ to ⅜ per cent upon first-class securities. Most of the brokers are liberally supplied with cash on "call," at 2 per cent.

Notwithstanding that gold is somewhat dearer in New York than in London, 150,000 dollars have arrived from that port this week, and £46,000 in gold have been reported from Australia. The shipments, since we last wrote, have been heavy, upwards of £600,000 having been forwarded to India, Australia, and 100,000 to the Continent, principally at the beginning of the year. Russia has drawn from us £1,400,000, and it is not probable that we shall be compelled to send away large additional sums before the stronger sight disbursements. Bernards close upon New York we may observe that no change can be reasonably expected in the money market until the spring shipments of goods from this side have been fully commenced. Intelligence has been received from Sydney, how the Premier of Australia during the next two or three months; nevertheless, we do not anticipate any material addition to the stock of bullion in the Bank England for some time, aware as we are that much of the gold from Sydney, &c., will be returned to the colony in speci

On Monday, the Three per Cents Reduced were done at 100¾; the Three per Cent Consols, 99⅞; the New Three-and-a-Quarter per Cents, 103⅛. Consols for Account 99⅞. South Sea Stock marked 111. Exchequer Bills were 60s. to 58s. prem. Prices were well supported on Tuesday, and the opening on Wednesday; but they closed heavily, and the Three per Cents Reduced were marked 100. On Thursday the Three per Cents Reduced were done at 100; the Three per Cent Consols, 99⅝ ⅞; New Three-and-a-Quarter per Cents, 103⅛; Consols for Account, 99⅞. Exchequer Bills, £1000, were 58s., 57s., 55s.; and Small 58s to 57s. prem. Bank Stock has realised 220. India Bonds have sold at 60s. to 65s prem. Long Annuities have been 6 7-16.

The Treasury contracts for £200,000 for the West Indian Islands, at four per cent, have been taken at from £100 to £100 17s. 6d. The new Life Annuity tables issued by the Commissioners for the Reduction of the National Debt, now stop at £30 3s. 6d., instead of £104 6s. 11d. as heretofore

We have to report a very inactive market for all Foreign Bonds. In the general quotations, however, no material change has taken place The Turkish Loan has continued at a discount, although it is stated that a minimum of 160 francs per share will be presented to the bondholders when the principal sum of Messrs Devaux and Co., the contractors, have received a letter from Constantinople, in which it is intimated that the Sultan "has an unconquerable aversion to a loan of fifty millions of francs will on a guarantee, and for so long a period as twenty-three years. His Majesty considers such a one disadvantageous, and totally different from the ten years' loan." Thus, the Porte has refused to ratify the obligation, although deposits have been paid upon it. We are informed that funds have now been transmitted to London and Paris to settle this disagreeable business. On Thursday, Austrian 5s per Cent Scrip was done at 2 prem. Brazilian five per Cents. were 103; Grenada Deferred, 13⅛; Russian Five per Cents., 109¾; Russian Four and a Half per Cents., 103⅜; Swedish Loan, 1¼ dis.; Ditto, 4 dis.; Spanish Three per Cents. Deferred, 22½; Equador Bonds have been taken at from £19 to £19 17s. 6d. The New Life Annuity tables issued by the Commissioners for the Reduction of the National Debt, now stop at £30 3s. 6d., instead of £104 6s. 11d. as heretofore

Mexican and South American Stocks have been steadied with Consols The transactions have not been extensive. It is stated that the dividend of the Mexican Loan, 15 to 17; South Australian Land, 48 to 50; North British Mexican, 1¾ to ⅞ pm; Scottish Australian Investment, 1¾ to 1¼; Union Bank of Australia, 21½ to 22½; Oriental Bank, 46 to 47; London Chartered Bank of Australia, 4 to 4¼ pm.; English, Scottish, and Australian, 1¾ to 1⅞; Bank of Australia, 7 to 7½ pm. Great Nugget Venture, 1¼ to 1½ pm. Australian Agricultural, 1 to 1¼ pm. Steam, 82 to 85; Peninsular and Oriental Steam, 80 to 85

Railway Shares have been steadied with Consols The transactions have not been extensive. It is stated that the dividend of the London and South Western Railway will be at the rate of four per cent per annum. The Midland dividend is expected to be at the rate of 5 per cent per annum, after reserving a balance of £15,000. The dividend upon the Great Western line will be four per cent The following are the official closing money prices on Thursday

ORDINARY SHARES AND STOCKS.—Bristol and Exeter, 103; Caledonian, 6¾; Chester and Holyhead, 2¾; Dublin and Belfast Junction, 6; Eastern Counties, 6⅞; Ditto, E. and H., 4½; Eastern Counties, 10⅞; East Lancashire, 77; Edinburgh and Glasgow, 79; Edinburgh, Perth and Dundee, 77. THE MARKETS.

CORN EXCHANGE [Friday].—The supplies of English wheat up to our market this week have been on a moderate scale, and the trade has been confined to fair country and very inferior condition. Fresh up this morning, the supply to hand ... the show of samples of fine quality. The attendance of buyers being ... numerously attended. In prices, however, we have no change to notice ... sent to nothing was doing The imports of foreign wheat have been only ... good heavy parcels sold slowly, at full currencies. In all other kinds next to nothing was doing Floating cargoes met a dull inquiry at barely late rates. Fine barley scarcely ... very scarce, and quite unsaleable on Monday. Grinding and distilling sorts sold at late rates. The demand for malt was tolerably firm, at full currencies. Pale ... sold very slow, sale for oats, the prices of which were with difficulty supported. Beans, peas, and flour are ... very dull inquiry.

ARRIVALS. English, wheat, 1260; barley, 3020 malt, 2003; oats, 1610; flour, 1750 Irish ... 90. Foreign, wheat 1410, barley, 600

MARK LANE, Friday.—The supply of wheat ... this week ... Kent and Essex ... ditto, and ... ditto, and ... ditto, and

Dr. Ross, Rev. Dr. Hanna

OPENING OF THE BRITISH INSTITUTION.

The Exhibition of Works by Modern Artists, opened on Monday, contains 589 subjects in painting, and twenty in sculpture. As a whole, if it be pronounced as of an average character, it certainly does not present any evidence of improvement, either in respect of the spirit or treatment of art, upon many exhibitions of like kind which have preceded it. A very large proportion of the paintings are landscapes, a department in which the arts of this country are justly allowed to hold a foremost rank, and the individual specimens by popular hands display the usual facility of handling and happy realisation of prescribed effects. But even in this branch we observe here, as on too many occasions lately, a neglect of the grander lessons and the more inspiring aspects of nature, and an amplification of small specialities which the artist may have been led by chance or the accident of success, to adopt, under the erroneous notion that they constituted the elements of "a style." The cold tone of our modern landscape school has been remarked upon before by critics of acknowledged authority, and but too truly is the charge confirmed by a survey of works of this class in the present collection. It may safely be said that out of scores of landscapes here brought together, there are not two which pretend to show the bright face of nature, lit up and warmed by the rays of the life-giving sun. Mountain, wood, and lake scenery we have in abundance, all painted with more or less accuracy and success as regards the actual copyism of material; but, with scarcely an exception, taken under a cold and forbidding condition of atmosphere. Why this should be we cannot pretend to say; why, with the glorious example of Claude ever before them, and the still more glorious temptations afforded by actual glimpses of nature in her happiest moods constantly coming across them, our artists should persevere in this cold, hard treatment of a mistress so gracious and inexhaustible in her resources, we are at a loss to divine. Certain it is, however, that the fact is as we state it, and that whilst it continues to be, our landscape painting can never pretend to aspire to the rank which it might otherwise claim. In historical subjects we have, as usual, few in this exhibition, and none of prominent merit. On the other hand, in the *genre* line, are a great variety of pieces, many of which are extremely successful in their way. The works of sculpture claiming attention are few, and will be noticed individually hereafter.

The place of honour over the chimney-piece in the South Room, is occupied by an "Organ Boy," by R. Buckner, an everyday subject, very ordinarily treated. Beneath it is a very beautiful view of "Dort," by Stanfield, R.A., painted with exquisite delicacy of finish, and in a quiet and harmonious tone. At this end of the room, also, are a view of the "Isle of Staffa," by Copley Fielding, a dark and stormy scene, vigorously realised; a view of "Llyn Llydan, North Wales," by A. W. Williams, remarkably well executed, but cold in treatment; and a "Welsh Farm," by Sidney R. Percy, upon which much careful study and finish have been bestowed, but also unsatisfactory to the eye on the same account as the last. In the west angle, at this end of the room, is, perhaps, the most attractive work in the Exhibition, an attempted realisation by Sant (which we Engrave) of Shakspeare's pathetic tale of her who "never told her love." The artist has treated the subject in his own way, presenting us with a study of a female of considerable beauty and intelligence, earnestly contemplating a miniature which she holds in both hands. The expression is that of intent scrutiny, as of one inquiring if ought of sympathy exist between the original and herself; but there is none of the pining melancholy, or the statuesque patience which the poet typifies in this delicate creation. The figure, which is only quarter length, is dressed in a robe of rich deep blue, with a veil over the head, and the background is of a deep brown colour, which serves well to bring out the face and hands. The same artist has another of those female studies of a domestic character in which he has frequently been so successful. It represents a young mother, contemplating with wrapt solicitude and admiration her infant doubtless her first-born—who is asleep, mouth open, extended across her lap. The features of the juvenile are, indeed, a "perfect picture" of infant life. The expression of the mother is, perhaps, slightly over-studied, betraying more of reflective anxiety than of the unalloyed delight of new maternity. Nevertheless, the group as a whole is a highly pleasing one. The drapery throughout is pure white, slightly set off with a blue ribbon round the lady's wrist, and a little buff and pale green drapery in the back ground

Nieman presents us with a view of "Stonehenge" under a rather peculiar aspect The sun has just set, the tip of the pale blue moon is just peering on the horizon, and the sky is loaded with clouds much of the colour of, and apparently as impervious as, the stone blocks beneath. His large picture, entitled "Moss-troopers," exhibits a wild moor scene, under a bleak sky, with a little light trailing in the distance: but the figures of the horsemen are too small, as compared with the size of the canvas, to give a name to the picture. From the same hand, we have a view of "Norwich by Sunset," very skilfully and agreeably treated.

J. Danby has two landscapes which claim to be exempted from the general remarks upon this department made at the outset of the present notice, viz. "Inverary Castle—Loch Fine" and "Sunset off the Hill of Arran;" both suffused in golden light; the latter is, upon the whole, the best performance.

Lear has a very remarkable view of a remarkable historical spot, "The Mountains of Thermopylæ." The bold sharp outline of the mountain range is defined with great breadth and truth; and we understand that the colour, which strikes the spectator at first as being preternaturally blue, is strictly faithful. This clever picture, which we engrave, has been purchased by Mr Beadon, the police magistrate.

"SHE NEVER TOLD HER LOVE."—PAINTED BY J. SANT.

PAINTED BY E. LEAR.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, February 12, 1853.

THE ILLUSTRATED LONDON NEWS.

No. 609.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, FEBRUARY 19, 1853. [SIXPENCE.

THE MINISTERIAL PROGRAMME.

ABOUT the last Ministry all was dim, vague, and uncertain. We had magniloquence of promise, and impossibility of performance—the vaunting conjuror—the inexorable bottle—the grinning audience. It and its measures "loomed," but neither itself nor its measures ever took a satisfactory and palpable shape. With the present Ministry the case is very different: all is fair, clear, and above board. Nothing looms; nothing is left to bucolic imagination to play with, or to civic common sense to be puzzled over. It has taken office in order to get through the national business; and it has taken the earliest befitting opportunity to explain what business is in its estimation the most pressing, and the manner in which it proposes to deal with the various questions before it—some of which do, and some of which do not, admit of postponement.

Taking these measures in the order in which they were ranged by Lord John Russell, the mouthpiece of the Administration in the House of Commons, we find that no further increase of men for the army, navy, or ordnance will be demanded; that the increase voted before the Christmas holidays is considered sufficient; and that although the estimates for military and naval purposes for the year 1853, will considerably exceed those for 1852; Great Britain will be put on the defensive, and fully prepared for all chances and contingencies, at a much less cost than might have been anticipated. The militia, instead of being an unpopular, is already a popular force; the artillery, that great arm of the service, has been, or will speedily be, rendered as effective as any artillery in the world; the marine force, of which the value to a country like Great Britain can scarcely be over-estimated, will be placed on the highest scale of efficiency; and the naval forces—men and ships—will be quietly made as worthy of the Great Britain of 1853 as the men and ships of 1806 were of the Great Britain of that epoch: so that, if necessity arise, the countrymen of Nelson will have no reason to dread that the naval glory of their empire has become a tradition of the past, instead of a living and fruitful reality. The serene, strong man, whom it is dangerous to assault, may go through the world quietly. A nation, strong, and known to be so by all the nations that surround her, is in the same happy predicament; and the peaceful intentions avowed by the French Emperor in his speech to the Senate, and to be supported by the immediate reduction of the French military forces to the extent of 20,000 men, may have a more intimate relation to the "preparedness" of the Government and the people of this country than the innocent lambs of Mr. Cobden's fold are prepared to admit, or to imagine.

The interests of our great, though yet imperfectly developed, empire in America will receive the immediate attention of the Government. A bill to enable the Legislature of Canada to dispose of the clergy reserves of that province was introduced by Mr. Peel, on Tuesday night. Some legislation on the subject is urgently called for, unless we are prepared to alienate the affections, if not the allegiance, of the Canadians. Upon this subject public opinion will have full opportunity to declare itself hereafter. In the meantime, it will be as satisfactory to Canada as to the rest of our colonies to know that the right of local self-government is to be so solemnly recognised.

There was one portion of the abortive Budget of Mr. Disraeli that had the merit of justice and common sense, although it pleased Mr. Rigby in the *Quarterly Review*, to deny it both. We mean the portion relative to the light dues, pilotage, and other matters affecting the shipping interest. The new Ministry have resolved to take up this question, and have left it in the competent hands of the President of the Board of Trade.

The disabilities affecting the admission of the Jews to Parliament form a question that no Ministry, honoured and strengthened by the presence of Lord John Russell in its councils, can consistently or prudently neglect. To that question the leader of the House of Commons is pledged. The House of Commons itself, whose constitution and privileges are more immediately involved in it, has more than once decided in favour of the admission of Jews. It has decided that, if Jews may be jurors, electors, aldermen, Lords Mayor, sheriffs, and county magistrates there is no reason why they should not be members of Parliament. The House of Lords has denied the claim as often as the House of Commons has affirmed it. The support of so Conservative, so cautious, so highly-respected, and so influential a statesman as the Earl of Aberdeen will, possibly—when the question is again affirmed by the Commons, as it is certain to be—induce the Peers to reconsider, and to settle it as the voice of the country demands.

After the estimates and the Budget shall have been voted, Lord John Russell has promised to introduce a question, with the advocacy of which his whole life and career are identified—the great, the crying, the imperative question of the education of the people. The Government does not pledge itself to do much in this cause. Unfortunately, the difficulties are many and grievous. The religious element is so important, and in the state of the public mind upon religious questions so formidable for any Minister either to confront, to parley with, or to ignore, that the warmest and most sanguine friends of education cannot hope that anything very great or very effectual will be done. But the wedge is already in its destined place; and if Lord John Russell do but drive it in a little further, he will deserve well of the present, and of a future generation.

Scarcely less important than the question of education—which is, in its essence, the preventive of crime and the stoppage of the cultivation of criminals—is the question of transportation and of

GRAND STATE BALL AT THE PALACE OF THE LUXEMBOURG.—(SEE NEXT PAGE.)

secondary punishments in general. It is the first duty of a great nation to prevent its young children from becoming criminals. If it neglect this duty, its next is to manage and to reform the criminals, whom, to some extent, it has been the means of fostering, either by its neglect, or by some inherent vice in its laws or in its civilisation. We are glad to see that the clumsy, ineffectual, and unjust system of transportation is to be abolished, as far as regards Australia. We trust, however, that the Government will not stop at this reform; that it will see the injustice of burdening our other colonies with our criminals; and that, like a good and wise parent, it will not impose upon strangers the duty of looking after its bad children. The Lord Chancellor has already announced that he is preparing a codification of the criminal law. This is a great undertaking; and if, in addition to this, the Aberdeen Administration shall carry or introduce a measure for the utter abolition of transportation, for the due punishment or reformation of criminals, so that neither punishment nor reformation shall operate as an injustice upon the destitute or suffering classes who are not criminals, they will do sufficient, even without other measures of reform, to be entitled to the gratitude of the country.

Reforms in the administration of the law are not to be lost sight of. The example set by the Russell Administration, and followed with praiseworthy effort by the Administration of Lord Derby, will still be operative upon the strictly Liberal, yet strictly Conservative Government of Lord Aberdeen. Common law, equity, and ecclesiastical courts law—very different from, and often opposed to, both—will all receive their due. That last not come before Parliament so speedily as the first two, because the Government will await the report of the commission which has been appointed to take evidence on the subject, before proceeding to legislate upon it.

It would be a strange Ministry and a strange Parliament, if Ireland and its grievances were not included in the programme of the Session. Ireland will vindicate its right as heretofore. It will stand upon the dignity of its misery, and its claims will be allowed as far as practicable. A further amendment of the law of landlord and tenant in that portion of the empire, and a bill with respect to ministers' money, are the subjects selected by Government for parliamentary consideration this year. They will, no doubt, receive it.

Such are the measures which the Government is proposed to carry through during the present Session, with the exception of the Irish bill for the amendment of the law of landlord and tenant, and others, which await the report of a committee before legislation will be attempted. The only other great object is the Budget—of that it is, of course, unnecessary to speak. The Government itself does not, in all probability, yet know what it will propose. The country will await the result with confidence in the sound sense of the present Chancellor of the Exchequer; but with a steady determination, nevertheless, to weigh the Government in the fiscal balance, and to test its usefulness by its financial ability.

One subject of interest to large masses of the people has been postponed until the year 1854. Lord John Russell is pledged to introduce a measure of Parliamentary Reform. The country is well inclined to wait for it. There is no very urgent demand or necessity for it. The people are not so theoretical as they were before the year 1848. It is true that many persons who ought to have a vote in the election of members of Parliament have no vote; but those persons are free, which is more than can be said for the citizens of a neighbouring state, which possesses universal suffrage, with the ballot in addition. It is not only the rich who know and who are grateful for this, but the poor. We believe, therefore, that the postponement of the Parliamentary Reform question will excite no very vehement regret in any quarter, and that generally it will be received with more satisfaction and acquiescence than with the opposite feelings.

GRAND STATE BALL AT THE LUXEMBOURG.

THE grand ball given by the Prince, Senate to the Emperor and Empress, on the night of the 7th inst. was more than mere festive compliment—it was raised to the dignity of an historical scene, by being the first occasion on which the young Empress appeared since her marriage before the assembled rank and wealth of the capital. The Palace of the Luxembourg was on the occasion transformed into a vast series of *salons de fête*. Brilliant with hangings, flowers, hangings, and decorations. A large gallery, formed by the old Salle du Trône, the former Chamber of Peers, and another large room, was fitted up as a vast ball room fitted up with consummate taste. Immense mirrors placed in the recesses of each window; whilst other glasses encompassed with garlands of flowers, were placed along the walls at both sides. In the centre of this ball-room was erected a fountain, decorated with flowers and shrubs, and having a deep edging of roses all round it, which produced a most happy effect. During the whole night, the waters, springing up from innumerable jets, sparkled in the blaze of light, and added a most pleasing variety to the scene. Magnificent lustres were suspended from the ceiling, and even both sides of the gallery, besides a vast number of wax tapers being placed at various points in lofty girandoles. At the end of the gallery was raised an estrade, on which were placed two chairs of state for their Majesties. The erection was surmounted by a canopy of crimson velvet and brocade, made by Chaudet for the throne of Napoleon I. Draperies of crimson velvet, sprinkled over with bees, hung on both sides Two columns, surmounted with gilt eagles with outstretched wings rose on the right, and as many on the left, and splendid silver vases served as the ornament to the steps leading to the estrade. Eagles were also embroidered in gold on the chairs of state

After o'clock the Emperor and Empress, after having had a reception of the Diplomatic Corps, left the Tuileries, escorted by a detachment of cavalry. On the arrival of the cortège, at the Luxembourg, their Majesties were received at the grand entrance by the President of the Senate, the Vice Presidents, the members of the bureau and the Grand Referendary, whilst behind, along the hall, and up the stairs, were ranged the senators. Every member of the Senate was in succession presented to the Empress. Their Majesties were then conducted in state, preceded or followed by the great officers of the Empire, to the Grand Gallery, where the chairs of state had been placed for them. Prince Jérôme Napoleon, Prince Napoleon, and the Princess Mathilde already arrived, and took their places near their Majesties. Prince Lucien Bonaparte and the Princess Camerata were also present, as were the Diplomatic Corps, the Ministers, all the senators, &c. The Empress was dressed in white satin, trimmed with fringed ribbons. She wore a magnificent pearl necklace, and had violets in her hair. The eagerness of the ladies to behold her was extraordinary, and amidst so many women remarkable for beauty she undoubtedly shone forth pre-eminently. She seemed in excellent spirits, and her cheek, in place of being pale, as was observed at the evening of her marriage at Notre Dame, had the clear bright colour of perfect health. In a few minutes after the entrance of the Imperial pair, the Emperor descended from the estrade to open the ball. It was not without difficulty that sufficient space could be procured to allow the quadrille to be formed. The Emperor danced with Madame Troplong, the Empress dancing with Count Regnaud de St. Jean d'Angely, Vice-President of the Senate. Their Majesties took two turns in arm through the rooms, and at half-past eleven proceeded to the Imperial supper-room, where their Majesties presided at a table set out for two hundred ladies, all admitted by ticket to the ball. Half-past twelve the Emperor and the Empress retired, and the company remained later, and dancing was kept up until a late hour to the sound of Strauss's enlivening band, until [illegible] on Monday. A considerable sprinkling of English uniforms were [illegible] the Empress directly addressed to the militia.

For the [illegible] the splendour of the guests were attired only in Court costume [illegible] as official costumes. It is calculated that in the course of the [illegible] 5000 persons were present. Even before their Majesties [illegible] the rooms [illegible] the crowd at last became so dense, that it was almost impossible to move, and had [illegible] oppressive.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The speech of the Emperor, at the opening of the Senate, promises peace in the most unequivocal terms; and the disavowal in the *Moniteur* of the "Lettres Français," though somewhat tardy, tends to the same conclusion *Tant mieux*; but we strongly suspect that if this demonstration be sincere at present (which the reduction of the army, much more than the declaration, would lead us to credit) it is that the ideas of the Government have very recently undergone a considerable modification. We will not say whether the active measures of defence on the part of England have had any thing to do with this modification; but we do not consider them altogether foreign to it. With regard to the rest of his ideas and intentions, Louis Napoleon troubles his auditors as little as may be, and contents himself with some contemptuous allusions to the partisans of liberty, of whom and of which he disposes very summarily.

Madame de Maintenon said there was nothing so difficult as to amuse a person who was no longer amusable Granted But the next most difficult point is to amuse without possessing the materials for so doing; and this is, alas! dear readers, *à-peu-près* our case at present There is literally nothing going on in vain we stretch our ears in your service; in vain we consult all the gossips of our acquaintance (in our position of *feuilletoniste*, we are obliged to cultivate the genus, to which we have, personally, rather an objection); the result is *nul*. To be sure we get a few bits of scandal—*chut* thrives in soil which can produce nothing else, and, like perfumers' and confectioners' markets, stands all climates; but it suits not all tastes, and pleases only the most vitiated, most vitiated, so for *yours* it can have no charms.

It is bitterly cold not the brisk, bracing, frosty cold which fosters the blood and gives tone to the whole system; but that raw, gloomy, sulky, dirty, foggy, east-windy cold, which the French call *un froid noir*, which creeps into your very marrow, in-doors and out, and makes your eyes and nose red, leaving the rest of your face of a livid purple, or of a sallow paleness. A grey fog hangs between you and the sky, and closes up the vista of every street; not dense and yellow like our worst London fogs, but a second-class fog like our common ones quite enough to make us wonder at the cool assurance with which Parisians abuse ours, and assert that *here* such a state of atmosphere is unknown. This reminds us of an anecdote—a true one—related by an Englishman, who, arriving for the first time in France with the firm conviction that the sun shone there every hour of the three hundred and sixty-five days, encountered, some time after quitting Calais in a diligence, a fog so thick, that the conducteur, wholly incapable of directing his horses, was compelled to descend and walk at their head. "I thought," said our innocent traveller, who had followed his example, "that you had no fogs in France." "C'est vrai," replied the John, with imperturbable *aplomb*, "we have none of our own; this comes from England" The fact is, fogs are now less frequent than in London, and the tint is different; but we have seen as dense ones as we ever witnessed there; and maintain, that though here the summer climate is decidedly superior to our own, the winter is not one whit better

The new style of male costumes seems likely to produce a revolution in male physiognomy, and the bizarre visages, which of late years have become the almost distinguishing mark of a Frenchman, will probably have to give way before the invasion of velvet coats, *culottes courtes*, and lace ruffles. Fancy a black beard descending on the flimsy folds of a *fabot de point d'Alençon!* No doubt there will yet be mighty struggles: many a man who has succeeded for years in passing for a *beau garçon* by the aid of a well trimmed moustache may find one who has concealed his natural uncomeliness by planting out the ugly country; will revolt at the notion of displaying the naked truth, and will resist, as long as possible, the evidence of the ridiculous mirror. But it must at last be too glaring, and either the Tuileries or the beard must be resigned.

We promised our readers that they should have this week an account of the great theatrical event of the day—the appearance of Madame Emile de Girardin's comedy, "Lady Tartuffe," for which occasion boxes had been engaged three months back. On Thursday evening, accordingly, the Théatre Français was crowded to excess: stalls rose to three and four times their usual value; the mention of boxes was scouted by those who had them to let, and the very places were paid for at prices of the best. The plot of the piece may be given in a few words; but the analysis of the characters—more especially of that of the heroine—becomes a much more delicate and complicated matter, and which no description can adequately render

Mlle. Virginie de Blossac (Lady Tartuffe) is a woman, young, beautiful, passionate, interested, ambitious, gifted with extraordinary powers of dissimulation, perception of character, an unscrupulous determination to use any means of furthering at once her passions and her interests that may present themselves, joined to a grace and fascination so fatally alluring, that, even when unmasked, she ceases not wholly to be seductive. Unmarried, she passes for a young widow, and, while her interest and ambition urge her to leave no means untried to win the hand and fortune of the gouty *Maréchal d'Estigny*, her heart—oh, this syren has a heart, such as it is—appears to seek a return of the passionate affection that for years has burned in her bosom (but, however, to the exclusion of certain distractions) for *Hector de Rennerville*, who is enamored to *Jeanne de Clerm nt*, the sweetest little rose-bud that ever bloomed in the garden of innocence. To ruin *Jeanne* in the eyes of her lover and of the world is the amiable device that occurs to our heroine, and an unfortunate circumstance which presents itself so aids her scheme, that for a moment *Jeanne's* own mother—all, all but *Hector*—doubt her maiden purity. An explanation, however, clears up every suspicion: *Hector*, resolved to be revenged, lays a trap for the fiscal natur; monster, into which, blinded by her passion, and forgetful of her prudence, she falls, and stands exposed in her true character.

The plot is unquestionably somewhat meagre for a five act comedy; some of the situations are weak. There are certain *longueurs*: and we could have wished that the Censor, while correcting the political passages, had cut out certain pleasantries decidedly of questionable on the score of morality; but these defects apart, the piece is one containing remarkable merit. The character of *Virginie de Blossac* is too complicated, too finely drawn, too much the result of close study to be generally comprehended, or fairly judged. Some will be fascinated by her serpent graces, others revolted by her diabolical wickedness; she will have as many admirers and haters as Becky Sharp, to whom she bears a striking resemblance in many points, though in one, strength, of passion, she is wholly dissimilar

Mdlle. Rachel played the part to the life: grave, saintly, prudish, reserved in the beginning, diabolically, fatally attractive when, unsuspicious of danger, she believes she has succeeded in winning *Hector* self-possessed, insolently calm, haughtily assured, retreating like a lioness at bay—which, even though forced to her last retreat, awes her enemy when detected; she never for a moment was cast down, weakened in the performance of one of the most trying parts ever confided to the genius of an actress But her triumph, signal as it was, did not the least eclipse the success of the *débutante*, child though she be, who performed the part of *Jeanne* Mademoiselle Dubois, at the age of fifteen took, on her first appearance, the place of *première ingénue* of the Théâtre Français, by the infantine grace, the virginal freshness, the *naïve* innocence of her acting. Through all the dark plots and infernal contrivances of *Lady Tartuffe*, the little sylph comes and goes, smiling and singing, loving and beloved, like a little bird fluttering among the limed twigs which are spread to entrap it, but from the contact of which some kindly wood-spirit guards its light wings

The success, though great, was not wholly unmixed—the extreme resiliency of the dialogue not always conceal ng the *longueurs*, and the faults occasionally coming to the surface. The merits of the piece are, however, so unquestionable, that, even if it fail of obtaining a very large share of general popularity, it cannot fail fully to sustain the literary reputation of its gifted authoress

OPENING OF THE LEGISLATIVE CHAMBERS

The opening of the Legislative bodies took place on Monday, in the Palace of the Tuileries. The ceremony took place in the same apartment the Salle des Maréchaux, where the Chambers were opened in February last, and with the same formalities as on that occasion The Emperor was accompanied by the Empress. The speech of the Emperor is as follows

Senators and Deputies,—A year since I called you together in this place to inaugurate the Constitution promulgated in virtue of the powers which the people had conferred on me. Since that period calm has not been disturbed. The law, in resuming its sway, has brought the return to their homes of the majority of the men who were made the subject of necessary severity The riches of the nation have increased to such a point, that that portion of our floating capital the value of which can be estimated, amounts to about two milliards The activity of labour develops itself in every branch of industry. The same progress is being produced in Africa, where our army has just distinguished itself by heroic [illegible] The form of the Government has been changed, without any shock, [illegible] The fundamental principles Great wrongs have been undone, [illegible] the prevention of any new tax, and without a loan. Peace has been maintained without weakness. All the Powers have recognised the new Government. France has now institutions which can defend themselves, and the stability of which do not depend on the life of one man

These results have not cost great efforts, because they were in the public mind for the interest of all. To those who would doubt their importance, I will reply that scarcely fourteen months ago France was destined up to the hazards of anarchy. To those who may [illegible] that a wider field has not been given to liberty, I will reply, that liberty never aided in founding a durable political edifice; it crowns it when it has been consolidated by time. Let us, besides, not forget that, though the immense majority of the country has confidence in the present and in the future; there still remain incorrigible individuals, who, regardful of their own experiments, of their past terrors, and of their disappointments, obstinately persist in paying no attention to the national will, deny the reality of facts, and in the midst of a sea which every day grows more and more calm, call for tempests, in which they would be the first to be swallowed up. These occult proceedings of the different parties have no purpose but to show their weakness; and the Government, instead of being disturbed at them, only thinks of [illegible] the firm determination to [illegible] expenses and immunities, and to devote to useful purposes all the resources of the country, to keep up with good faith international relations, in order to prove to the most incredulous that the new era [illegible] Formal intention to remain at peace if we may believe it, for she is strong enough not to desire our war.

You will see, Gentlemen, by the budget which will be presented to you, that our financial position has never been better for the last twenty years, and that the public revenue has increased beyond all previsions Nevertheless, the [illegible] army, already reduced by 30,000 men in the course of the last year, is about to be immediately reduced 20,000 more.

The majority of the laws which will be presented to you will not go beyond necessary exigencies, and that is the most favourable indication of our situation. The people are happy when Government do not find it necessary to resort to extraordinary measures.

Let us, therefore, thank Providence for the visible protection that it has accorded to our efforts; let us persevere in this course of firmness and moderation, which never wearies without irritating, which leads to good with out violence, and so prevents all reaction Let us always reckon on God and ourselves, as on the mutual support which we owe to ourselves, and let us be proud to see in so short a time this great country pacified, prosperous at home, and honoured abroad.

After the delivery of the Emperor's speech, Prince Jérôme and a great number of the members of the Senate and Legislative Corps took the oath of fidelity.

The President announced that he had received from M. Bouhir a letter, conceived in terms so improper, that he considered it his duty to abstain from reading it in public. "M. Bouhir," he said, "is free to give in his resignation, but it is not permitted that he should protest against the will of the nation and the Constitution." M Bouhir exclaimed against the interpretation ascribed to his words; but the President ordered him to be silent, and declared that if during the next fifteen days he had not taken the oath required by the Constitution he should be considered as having resigned.

The Senate sat on Tuesday under the presidency of M. Troplong, who addressed to an eloquent speech, in which he enumerated the great and numerous benefits resulting from the establishment of the Empire

The sensation produced by the speech of the Emperor was favourable, but the slight effect that it produced at the Bourse had already in some degree subsided. The pacific assurances given by the Emperor obtain credit; but there is a large party in Paris who believe that it will not be easy to maintain peace for a very long time, and very little confidence is placed in the financial statements of the Government. The Bourse was more animated on Wednesday. The explanations given by Ministers in the British Houses of Parliament on Monday night were regarded as a pledge of peace by the speculators, and a considerable rise took place in the value of public securities

The Minister of War has addressed a circular to the Generals in command of divisions on the carrying out of the new reduction of 20,000 men in the army. The reduction is to take place in the army of Algeria and of Italy

The Count de Haussonville (son-in law of the Duke de Broglie) has been taken into custody, but since released, for an expression disrespectful to the Emperor

The speech of Sir C. Wood at Halifax does not seem to have offended the French press and people so much as it scandalised the right hon. gentleman's late colleagues and friend, the Marquis of Clanricarde, and the ex-Chancellor of the Exchequer. The *Journal des Débats* says:—"The incident which had been got up out of a phrase in a speech addressed by Sir C. Wood to the electors of Halifax, has been set at rest, to the satisfaction of all sensible persons. It has not produced the slightest [illegible] contrary to the hopes of Mr. Disraeli. *Au fond*, it was nothing but a petty manœuvre of Opposition; and, after a few dignified words from Lord John Russell, the whole of this wretched affair fell to the ground (*est tombée dans l'eau*), and the House passed on to another [illegible] The "interpellation" here referred to is that of Mr. Cobden on the letter of Lord Mount Edgecumbe; and the few words uttered by Lord John Russell "will," according to the *Débats*, "be accepted everywhere as a new guarantee for the maintenance of peace."

The *Moniteur* publishes the explanatory letter of Sir C. Wood, which there is every reason to believe was furnished in manuscript to the French Government.

M. Billot, author of the "Lettres Français," has written a letter to the *Constitutionnel* declaring that he does not desire a European war, but merely a war with England, "the enemy of France, the enemy of Europe, the enemy of the human universe." M. Billot recommends an alliance with the other powers of Europe against England, to avenge Waterloo and tear up the treaties of 1815. The *Constitutionnel* ridicules the idea of these powers allying themselves to France against England, and says whether it is probable that, if the French were to go to London, or attempt to go there, Austria, Prussia, and Russia would remain quiet spectators of the fray. They would, on the contrary, says the *Constitutionnel*, make a common cause with England against France, and there would be a general war in Europe, the issue of which no man can foresee

THE INSURRECTION AT MILAN.

We are still without full and circumstantial details of the late insurrection; but so far as the facts are known they may be embodied in the following narrative:—On the night of Sunday, the 6th inst., the first day of the Carnival, the Austrian officials made so many arrests in Milan as to excite apprehension that all was known, and no less than 300 persons were thrown into the dungeons across the Piedmontese frontier. Nevertheless, on the appointed day, the desperate attempt was made. A company of young men, armed with sword-sticks and polgnards—the only weapons which Austrian rigour has left to its Lombardian subjects—assembled in small parties, sallied out in the evening, threw themselves upon sentries and patrols, filled the streets with an excited populace by their cries, pressed upon the guard-house, and were only narrowly prevented seizing the citadel. Simultaneously with this attack upon the citadel, an assault was made upon the viceregal palace, in another quarter of the town; but the guard seems to have been prepared, for we are told that "the rebels were received with a brisk fire, and driven in disorder." It appears that the garrison were then ordered to clear the streets, and executed the order with little difficulty. Official accounts represent that the citizens showed no sympathy with the insurgents, and took no part in the struggle—that tranquillity was restored before nightfall—and that leading insurgents hanged or shot on the morrow. But against this representation, we must balance the statement that Hungarian soldiers in the Austrian garrison sided with the people, in obedience to Kossuth's proclamation (since, however, declared to be a forgery); that the address of the Italian National Committee was placarded on the walls: that [illegible] was renewed on the 7th; and that, on the evening of the 8th, some half-dozen soldiers were killed or wounded. To this counter, statement should be added the facts, that the gates of the city continued closed, "a vigorous realization of the state of siege" proclaimed, a

cordon of troops drawn around Milan, and railway communication with the frontier States suspended

At Monza, a town six leagues distant from Milan, there is reported to have been also a brief but desperate and unavailing attempt upon the garrison

The *Mi lan Gazette* of the 11th. says

Yesterday, four other individuals, convicted of participation in the émeute of the 6th, one of whom was armed with an iron shod bludgeon and the three others with knives, were sentenced to death and executed. Public tranquility continues to prevail, both at Milan and in the provinces The four culprits above-mentioned were a tavern-keeper, a professor of gymnastics, and two journeymen carpenters. They were all hanged

The Gazette contradicts the following report Milan, 11th

Many officers the same as that on Good Friday. No bell is allowed to toll except the bell of the Sacristans at the *Sancta*, and at the Elevation of the Host. A great silence reigned in the city, which is not disturbed by the challenges of the sentries. Many persons are thrown into prison Troops have been lodged in the palace of the Duchess Visconti The most rigorous orders are given to the Generals Venus The presence of General Benedek sufficiently explains the intentions of the Austrian Government towards us

It appears that the insurrection must have been much more serious than was admitted by the Austrians, as the troops are said to have bivouacked outside the walls It seems that seventeen of the ringleaders at Milan were hanged at the castle, with their faces towards the city, the morning after the atrocities were committed. The same authority speaks of the rioters as novice refugees.

The following proclamation has been addressed by Marshal Radetzky to the inhabitants of the Lombardo-Venetian kingdom

In the evening of the 6th a gang of malefactors, armed with daggers, attacked isolated officers and soldiers with murderous intent, killing two, and, more or less dangerously, wounding fifty four. (By telegraphic dispatch from Milan we learn that nine privates and three officers were killed.) Filled with the horror inspired by that most detestable of crimes, "hired assassination." I am necessitated to employ severe measures against the city of Milan, and therefore ordain

1. The city is to be placed in the most rigorous state of siege, which, however, in its consequences, will be maintained with the very greatest leniency.

2. All suspicious strangers to be dismissed from the city.

3. The city of Milan has to provide for the maintenance of the wounded as long as they live, as also for the families of the killed.

4. That the ringleaders and instigators of the crime which has been committed are delivered up, the city of Milan will have to pay the extraordinary expenses attendant on the unusual exertions of the garrison; from this contribution, however, such individuals as are notoriously attached to the Government—whatever class of society they may belong to are exempt.

According to the result of the inquiries which are being made, a reserved punishment will be inflicted on the city of Milan, or a contribution raised

6. To calm the fears of the public, it is made known that no disorder has taken place in any other part of the kingdom.

Verona, Feb. 9, 1853.

A letter from Florence of the 10th, announces that some rioting had taken place at Orvieto, in the Roman dominions. It appears that an individual was stabbed, that stones were thrown into the windows of a church, that menaces were uttered against the authorities and several inhabitants known to profess Conservative opinions.

Although the revolutionary movement was pretty much confined to Milan, it can hardly be supposed that the year 1853 will be brought to a close without further disturbances. Hungary is full of the emissaries of the democratic party

SPAIN.

The result of nearly all the elections is known. The combined oppositions have not been able to return more than 70 or 75 members. The Ministerial majority will consequently be considerable. Among the important personages who lost their election were MM. Olozaga, Rios Rosas, Pacheco, Moyana, Nocedal, &c. The Opposition, on the other hand, have gained some names, such as MM. Mon, Pidal, Cortina, Seijas Lozano, Rios Rosas, &c.

It is not yet known whether the Queen would open the Session of the Cortes in person.

Cabinet Councils were frequently held. The projected reform of the Constitution was one of the most arduous and interesting questions with which the Cabinet was occupied

Five Madrid journals were seized on the 10th, by order of the Fiscal of the Press

The Spanish Government has resolved to increase the number of gendarmerie in Madrid. A new battalion of 200 mounted gendarmes will raise the effective of the force to 8000 foot and 1500 horse. The immediate motive of this measure is not stated, but it is unfortunate that this increase should coincide with the administration of an liberal Cabinet

The Government had received despatches from the Havannah, dated the 5th ult., at which period Cuba enjoyed the most perfect tranquility The Captain-General was then on a tour through the populous districts of the island.

GERMANY

According to intelligence from Vienna, Austria is said to be determined to take measures against Switzerland and Piedmont, which she regards as two hotbeds of revolt.

Last Saturday Lord Bloomfield signed a treaty with the representatives of the Anhalt principalities of Cöthen and Dessau, by which the latter become parties to the international treaty already existing between Prussia and Great Britain for the reciprocal protection of copyright

According to an instruction issued by the Prussian Minister of the Interior, no Poles will in future be sent to France when expelled from Berlin Belgium and England are the two asylums indicated for them.

The cholera has not only made its appearance in Breslau, but seems to increase in virulence From the 18th of December till the 1st of February 86 cases were known, of whom 55 died. On the 2nd of February there were nine new cases and nine deaths; on the 3rd, fourteen new cases and eight deaths. Six thousand children are mentioned in the returns as still at school free of charge

The understanding between Prussia and Austria has for the moment ceased The Swiss canton consents to pay a reasonable pecuniary indemnification to the banished monks.

TURKEY AND MONTENEGRO.

The latest accounts from Montenegro state that no further hostilities were likely to take place between the Montenegrins and the Turks, Prince Daniel having expressed himself willing to accept the Turkish ultimatum.

AMERICA

(From our own Correspondent.)

WASHINGTON, D.C., Jan. 31, 1853.

The Session of Congress is a short one. On the 1st of March business must be closed by twelve o'clock at night, and the industrious representatives of the people return to their various homes. Bills which have been retarded by laziness or design are forced through in a no very seemly manner; and thus, as in other countries which shall be nameless, measures which will not bear examination are passed, with all their imperfections, partialities, and favours.

If there is any one simple enough to suppose that this Republican land is free from the cramping, monopolising, and hoodwinking spirit of the Old World, he is erroneously mistaken. All bodies of men in whose hands power is placed, are liable to abuse of it for personal advantages. In Europe we have a sort of hereditary right in those who govern to profit by the perquisites appertaining of old to their station; but here, the right is simply the right of opportunity, and strength, or cunning; and of all the places on the face of the earth, there is no small spot on which more barefaced corruption grows and prospers faster than in Washington

I am not here uttering the sentiments of a foreigner—for foreigners remain a very few days residence before they can learn enough of the wire-working behind the scenes—but I respect the universal sentiment of Americans, both honest and corrupt, who admit the great increase of abuses in office and in Congress, regretting or explaining them each after his own fashion

I have been told, by men in office here, that an incredible amount of fraud and forgery is practised upon the Government Congress passes a bill or bills authorising grants of lands to be made to men who served in the war. This has been a fruitful source of fraud from all parts of the Union. Again, this Government took upon itself the payment of certain claims—as, for instance, upon Mexico. There became the subject of fictitious demands to a large amount, supported by forgery and false testimony; and, owing to the influence of men, to whom an interest was given, and who were most probably entirely innocent of any fraud on the part of the claimants, the money was in some cases actually paid over to them, while instances can be adduced of men having just claims being almost denied their rights, merely because they did not think it necessary to give an interest in them to certain influential parties. Thus, you see, even in America, the land of liberty, as it is called, justice is something more than a favour.

However, this *is* a land of Liberty, in more senses than one; and the proof of it lies in the fact of the immense property of the whole people. Laws trammel the operations of industry in a multitude of ways —by fa-vouring classes, by establishing monopolies, by unequal and unjust taxation, or by interfering in the natural enterprises of men. One of the multitudinous papers of this country has a very significant motto, to the effect that the *world has been overmuch governed*. And nothing can be more true of our old Europe. I often look back with wonder and sorrow at the insufficient reward which the toiling millions receive there; at the amount of energy uselessly employed; at the waste of labour; and at the diminution of general wealth and prosperity, which must be the fruit of so many restrictions and so much over government. In this happy country the road is pretty clear for the development of human industry. I do not know but I am right when I say that opportunities are so great that business rather presses upon men than that men press business on. There is no lack of energy in many; but there is an amount of laziness, or a love of "loafing," as they call it here, which cannot be surpassed, or equalled, perhaps anywhere. An European's estimate of energy is different, I apprehend, from that of an American. The former struggles, his life through, amidst incredible disadvantages, arising from laws, prejudices, and social position, to make an independence. The latter flies from speculation to speculation, shunning steady toil as he would a pest; scheming, plotting, planning, projecting, and inventing; now, in Washington [illegible] about Congress, to get a grant to build ships to Liberia or Shangai; now, in San Francisco, speculating in mines, establishing a bank or "hell," or planning a revolution in Sonora; now, in New South Wales, prospecting for gold; and, anon, now in Cuba, bargaining sympathy against a sugar estate, or off to Japan, for the first fruits of the peaceful intercourse a powerful fleet may establish with its people Jonathan has to work hard, in a measure, to keep up with the pace of improvement and prosperity; I think European habits of steadiness not without their advantage in this country. Indeed, the merchants of its great cities fully admit that fact, and in terms infinitely more powerful than I have stated. There is in Jonathan an amount of restlessness and passion, which he constantly mistakes for energy: it is much nearer bewilderment at the press of business opportunity. Every new scheme he hears of, he runs after, rarely sailing to carry out himself those which have preceded it; and, when the dreaded moment for work—steady, plodding work—is come, he looks round for a man in need, or procrastinates the enterprise until he finds one. The number of these (self-styled, energetic) speculators is surprising. A more idle, loafing, procrastinating, drinking, smoking, lying set of fellows, can scarcely be met with elsewhere. They have promises for everybody; but are generally so unbusiness-like and lazy, that it is difficult to get them to pay the slightest attention to those [illegible] to their engagements. Occasionally [illegible] business, its very soul [illegible] the amount of this speculative spirit, with its hosts of schemers, is a natural consequence of the great prosperity and resources of the country; yet I cannot help thinking the lazy spirit, and strong passions, are to be traced to the great use of spirits and the inordinate chewing of tobacco. Still, it is a glorious country where man has such full opportunity for the development of his faculties and his industry; and, although the loafer and the schemer may find their trade succeed to their hearts' content, the industrious man, native or foreigner, can scarcely fail to get on, if he be prudent and steady. I hear Americans, who have been in Europe, and have seen the never-ceasing energy of the European, attribute it to the climate, which they designate a "working climate." But the industry of the Old World may be attributed to other habits and training, rather than to climate. Here, the chances of fortune are numberless, the restrictions few, there are intense disparities on the hardest toil, consummate skill, business shrinks, and habit carried to the utmost perfection. Brother Jonathan has good traits, but his social system, like his climate, is rather raw, and will bear, and will receive, improvement.

In anticipation of the new President's inauguration, people are beginning to flock into Washington. We may expect, as we approach March, an unusually great crowd. It is difficult in the winter season to obtain accommodation, although houses are building up by dozens. There is not one man who is erecting three houses of good size He had some fifty applications for them before they were covered in. And so it is in every lot, where a man is seen laying two bricks together Rents are high, and provisions board in

THE AUSTRALIAN CLIPPER-SHIP, "MARCO POLO."

zine, so that not only does the light from the ventilator diffuse itself over the whole, but air is freely admitted. The saloon doors are panelled with stained glass, bearing figures of Commerce and Industry, from designs by Mr. Frank Howard. In the centre of the saloon is a table or dumb-waiter, made of thick plate glass, which has the advantage of giving light to the dormitories on the deck below. The upholstery is in embossed crimson velvet. The designs have been prepared and their execution superintended by Mr. Rainford, of Liverpool; the stained and decorated glass by Messrs. Forrest and Bromiley, also of that town.

The berths in separate state rooms are ranged in the 'tween decks, and are rendered cheerful by circular glass hatch-lights, of novel and effective construction.

Messrs. James Baines and Co., of Liverpool, are the enterprising owners of the *Marco Polo*, which was built by Mr. Smith, of St. John's, N.B. She is commanded by Captain Forbes; and is announced to sail for Melbourne on March 6.

HIS HIGHNESS ABBAS PACHA'S PALACE, AT BENHA, AND THE SITE OF THE INTENDED RAILWAY BRIDGE OVER THE DAMIETTA BRANCH OF THE NILE.

Benha, whose immense mounds of rubbish testify to the extent of this once important city of the Pharaohs, and which continue to yield up numerous beautiful bronzes and ancient works of art, is now a wretched village, but has near it a Palace of the Pacha, and is selected as the spot where a bridge will first span the waters of the Nile. Our Illustration represents the Palace on the left. About three years since a small house stood in its place, but in less than twelve months the present residence was erected. It is furnished partly in the European and partly in the Turkish style, and has about 3000 acres attached, 800 of which are already laid down as garden ground, and planted with olives, mulberries, libakhs (*Acacia Nilotica*), and other trees. To irrigate these lands and supply the Palace, a 100-horse power engine, built by Fawcett and Preston, of Liverpool, has been put up by his Highness' able engineer, Mr. Scully, who is now engaged in erecting another of 140-horse power for the same purpose. This will be the largest hydraulic engine in Egypt. In the gardens are numerous animals—a hippopotamus (lately arrived), giraffes, ostriches, deer, sheep, goats, &c. A pheasantry is building. Between the engine and the white building (a disused cotton factory), on the right, the railway is to cross the river, which is here about 800 feet in breadth at low Nile, and a quarter of a mile at flood, at which latter time it is from thirty-five to forty feet in depth. The bridge will be of iron. Tubular girders, on which the engine and carriages will run, supported on hollow iron piers, and stone abutments. From near Cairo to Benha, and to Tantah, celebrated for its great fair, the Pacha constructed a road, which is now to serve as the bank of the railway, and thereby renders any further earthwork unnecessary on this portion of the line. The works are not proceeding rapidly. Great part of the rails and chairs (metal) are delivered, but no commencement had, at the date of our sketch, been made towards laying the permanent way of the Cairo division, though the road is in a fit state to receive it. Platelayers were, however, expected to arrive immediately from Europe.

The exertions of the Government seem directed almost exclusively towards completing the district from Alexandria to the Rosetta branch of the Nile, on account, it is reported, of the probability of the Mahmoudieh Canal silting up so as to render it for a time unnavigable by the transit steamers. Abdallah Bey is removed from the railway divan to the head of the transit. Abderruchman Bey, late Governor of Suez, eminent for his attainments as a linguist, succeeds him. He is supposed to be favourable to English interests. The country around Benha is very flat, and nearly destitute of trees; but, now that the Nile has receded within its banks, has a smiling though monotonous appearance, being covered with burseem (a clover) of a brilliant green, springing wheat, beans, and cotton; which latter gives cover to numerous wild boars.

The dark lines shown in our Engraving, projecting from the west bank, are stone groynes, made for the purpose of directing the water to the opposite side for the engine, and to give sufficient depth for his Highness's steamers to approach the landing-stairs.

By a letter received on Monday, from Alexandria, dated February 2, we learn that Abbas Pacha had returned from his trip to the Upper Country, and was staying at Benha.

PALACE OF ABBAS PACHA, AT BENHA, AND SITE OF THE INTENDED RAILWAY BRIDGE OVER THE DAMIETTA BRANCH OF THE NILE.

MR. BARTLEY.

FEW leave-takings of the stage have been more graceful and honourable, either to actor or to the public, than that of Mr. Bartley. Honoured by the patronage of Royalty, supported by a crowded audience of admirers and well-wishers, this equally excellent man and artist closed his scenic career by a farewell, the good taste and modesty of which were in harmonious accordance with his whole life, before or behind the curtain. Few other actors in our recollection have ever undervalued themselves. Mr. Bartley, for the last twenty years, had it in his power to command a far higher salary and a far more prominent position as a player than he ever stipulated for; but he went on rating himself at what he only thought his fair worth; so that lessees had in him their best and easiest bargain. The first step for the last quarter of a century made by any one who has taken a national theatre with a view to render it a temple of art befitting the nation, has been to engage Mr. Bartley as stage-manager. The securing him was a proof of the integrity, solvency, respectability of the concern. Still his terms and his estimate of himself continued the same—far below their real standard. We have dwelt on this point both from its professional singularity and because it is an index to the man

In his farewell address, Mr. Bartley adverted to the fact of his having been recommended to the London boards by Mrs. Jordan. What a host of pleasant memories must have passed through his mind as he uttered the words! At the time he came under the notice of that most charming of all charming actresses, he was one of the *corps dramatique* at Margate, where, in the summer of 1809 (the days of Margate hoys), Mrs Jordan was starring, and where he was patronised by other stars; by the beautiful Duchess of Devonshire; by the scarcely less celebrated Countess of Jersey; by Lady Argyll (dear to Dublin memories), and by the beautiful Mrs. Duff. These were brilliant days for Margate, and brilliant auspices for a young actor. He was introduced to a London audience as *Orlando*, to Mrs Jordan's *Rosalind*. For five years our *Falstaff* was the juvenile lover and stock prologue speaker of the Theatre-Royal, Drury-lane, and something more; for whenever gout or accident prevented Bannister from wearing the sock, he was replaced, and with success, by Mrs. Jordan's *protegé*. In fact, Mr. Bartley was stepping largely into public favour: but, while thus progressing, he found that nature was playing him a trick and that he was acquiring a rotundity of figure inadmissible, according to orthodox canons, in theatrical lovers. Experience had shown him that comedy was his forte. With Wroughton, Bannister, and Dwyer, in the higher walks—with Suett, Dowton, Cherry, Collins, and others in the broader walks—in full possession of the field, every avenue to the object of his ambition was blocked up—so he wisely threw himself upon the provinces. During the following seven years, from 1807 to 1814, we find him as lessee, or acting manager, or simply as performer, in Glasgow, Dublin, Manchester, Liverpool, and Birmingham, enjoying a high reputation, and perfecting himself in those broader comic walks which brought him side by side with Dowton, Fawcett, Munden. At Birmingham, in 1814, he married Miss Smith, the reigning tragic actress of the day, who was there on a starring tour; and in the year following he re-appeared, with great and instant success, at Drury-lane, in *Falstaff* ("Henry IV."), selected by him as his closing part. Thenceforward, with the exception of a lucrative trip to America, Mr. Bartley occupied a leading position on the London boards; and what with his winter engagements at the two larger theatres, and his memorable summer management for Mr. Arnold, at the Lyceum, (of which Miss Kelly, Wrench, Harley, and he were the main pillars, he for years did not cease to "burn the midnight oil;" since in the Easter weeks, when playhouses were closed, he used to deliver, and with admirable effect, a popular and eloquent course of astronomical lectures, the gratification derived from which was largely enhanced by his felicitous manner and delivery.

MR. BARTLEY, LATE OF THE PRINCESS' THEATRE.

When the memorable difficulties and embarrassments of Covent-garden Theatre, in 1829, threatened the close of that establishment, and the walls were placarded with bills of sale, Mr. Bartley headed a deputation of the actors, asked for admittance at a meeting of the creditors, made a proposal from himself and brethren, to aid in the restoration of the performances. This proposal was accepted. Mr. Charles Kemble, at the same moment, came forward and threw himself into the gap his brother proprietors had left vacant. The bills of sale were removed; the theatre opened under Mr Charles Kemble's management, who immediately (upon Mr. Fawcett's retirement from his share of the direction of the theatre) appointed his old acquaintance, Mr. Bartley, his acting manager. His highly-gifted daughter, Miss Fanny Kemble, appeared; the fortunes of Covent-garden changed; and the season 1829-30 proved one of the most lucrative the theatre had known for many years. From that time, however the lessees changed, no change was known in the stage-manager. Mr. Bartley held his post with Laporte, Bunn, and Polhill; and when Mr. Macready and Madame Vestris embarked in turn in the hazardous speculation of reviving the legitimate drama, each, as we have already hinted, secured Mr. Bartley for their stage-manager, as their main stay and support

Domestic calamities now intervened. The sudden death, in 1843, of Mr. Bartley's only son, a fine intelligent youth, prematurely cut off at Oxford, withdrew him from the stage, never, as he then thought, to return. The loss of his sole remaining child, a daughter, as suddenly and unexpectedly as that of her brother, was followed by the demise of his clever and fascinating wife; and thus one of the most domestic of men, whose happiness had centred in his home, was left alone in the world.

Still, return to the stage, though urged upon him as a solace and occupation, was far from his thoughts. During the years 1848, 1849, and 1850, he was honoured with her Majesty's commands to read at Windsor Castle and Buckingham Palace, the translations of "Antigone" and "Œdipus," to which Mendelssohn had put music: in compliment for which her Majesty honoured Mr. Bartley's execution of the Royal command, with a valuable diamond ring. He also, about that time read a similar translation of "Athalie," at both the Philharmonic Concerts, and at Exeter-hall, on occasions when her Majesty and Prince Albert honoured those performances with their presence. In 1850, he had the honour of being commanded to represent *Sir John Falstaff*, in "King Henry IV.," in the course of the theatrical entertainments entrusted to the care of Mr. Charles Kean, at Windsor Castle. This brought him once more in connection with his art in the autumn of 1850, and facilitated his partial return to the stage, the public being naturally desirous to see the plays as illustrated before Royalty, and chosen for its special delectation. On Mr. Bartley's occasional appearances at the Princess' Theatre since that period, it is unnecessary to dwell, they being fresh in the recollection of the public. He took his farewell benefit on December 18th last, being the fiftieth anniversary of his acting. At the conclusion of the performance Mr. Bartley delivered a valedictory address, characterised by excellent taste. The opening is full of touching truthfulness:—

Ladies and Gentlemen (said Mr. Bartley), this night fifty years ago—this very night—the night of the week and the date of the month—I had the honour to appear in London, and to make my bow before your sires and your grandsires. Believe me, it is something more than mere vanity that induces me, now that the long play is over, to offer one parting word to their children. The years behind me are very many—those before me are few indeed; and I quit the mimic scene to prepare, as is the common lot, for another, a more real, and a final leave-taking. As I stand before you here, grateful for the kindest appreciation of the poorest services, it is impossible for me not to recal vividly the expectation and hope with which my boyish heart, half a century ago, beat when I first trod the London boards. The hope I entertain now is, that whatever may have been my imperfections as an artist, I have not thrown discredit upon my art. The expectation that I feel not, I trust, an unwarrantable one—is that I may at length retire into privacy with the good wishes of my latest, but certainly not my coldest and least indulgent patrons.

As we have stated above, Mr. Bartley here, as he has ever done, underrated himself. He has left no one to replace him. *Falstaff*, bluff *King Hal*, and a host of Shakspearian and other characters, of what may be termed Elizabethan and classic date, have lost their sole living exponent. Few are the actors who have been so varied and so sufficient in their talents. Though he had fashioned himself on the best models, he was no imitator. He has played their own choicest parts alternately with the master spirits of a now by gone generation of actors; and not only was not found wanting, but was recognised by the public as their worthy and fitting competitor; and as an elocutionist in the best sense of the word, as a natural, but finished, graceful, impressive, and expressive speaker and reader, he, in his sixty-ninth year, is still without a rival. He has quitted the stage full of honours and of honourable recollections. His parting tribute to Mr and Mrs. Charles Kean, a tribute well deserved, speaks the heart of the man, ever kind himself, ever warmly susceptible of kindness in others. He retires into a circle of friends who know his merits and appreciate his worth, and takes with him, in his retirement, the cordial esteem and sympathies of the great patron, the public.
